It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Origins of English History.* By Charles Elton. (Quaritch.)

THIS is the season for presents; and Mr. Elton's work is a delightful book, which will be a most welcome New Year's gift to all the students of the history of this country, whether they regard themselves as Teuts or Celts, as Aryans or the representatives of races that occupied the West of Europe long before the first Aryan waggon had approached the shores of the melancholy ocean. The author tells us in his Introduction that the work is the result of an attempt to re-arrange in a convenient form what is known of the history of this country from those obscure ages which preceded the Roman invasions to the time when the English accepted the Christian religion and the civilising influences of the Church. In my opinion, he has eminently succeeded; and the work, with all its varied information and wealth of references to works of importance on all kinds of questions bearing on the history and ethnology of this country, will be found a most useful and valuable volume. It is divided into twelve chapters, of which the first introduces the objects of the work, and touches on prehistoric Britain; but the reader soon finds himself in the midst of the problems of ancient geography, and especially accompanying the learned and intrepid Pytheas, of the fragments of whose diary Mr. Elton has made a very serious and vindicating study, which takes up most of the second chapter also. In the third chapter he shows how the account given by Pytheas to the reading public of the Greek world developed a demand for, and a supply of, romances about Britain and the North of Europe, and how these romances at length created scepticism as to all travellers' stories, and filled the Greek mind with a difficulty in distinguishing between truth and fiction in geography. The next chapter recapitulates the foregoing ones, and brings the reader more closely into contact with the Celts. Then follows a chapter on the Gauls in Britain; the sixth is entitled Celts and non-Celtic Tribes; and the next follows up the same subject into the domain of pre-Celtic ethnology. It treats, among other things, of the Pictish succession, and is, perhaps, altogether the most interesting part of the book. The eighth is devoted to customs of inheritance and family religion, dealing in part with a subject which Mr. Elton has long since made his own, as many of the readers of the ACADEMY will at once perceive; but, for the

sake of those who are not acquainted with the author's previous works, I may state that he has written on the Tenures of Kent, on the Law of Commons and Waste Lands, and on the Law of Copyholds and Customary Tenures of Land. The result, so far as the present work is concerned, is that he has, owing to his complete grasp of this difficult and intricate subject, treated it in so lucid a manner as to make it easily intelligible to an outsider. The ninth chapter is devoted to the Britons of the Interior, and the succeeding one to their religion and that of the Celts generally. The eleventh is on the Roman Province in Britain, and the last on the English Conquest. These cover altogether 415 pages, and then we have twenty-five pages of extracts from ancient authors, showing the extent of their knowledge of the geography of Northern and Western Europe. To this is appended an exceedingly handy chronological list of Greek and Latin writers to which references have been made in the work, amounting to more than 130 separate articles. Then comes the Index, but not the end of the book, for the volume closes with ten most interesting maps, which are copies of the following old ones:—(1) Spain, from the Latin Ptolemy printed at Rome in 1478; (2) The World of the Ancients, from the same; (3) Eastern Europe, from the Latin Ptolemy printed at Strassburg in 1525; (4) Northern Europe, from the *Historia de Gentibus Septentrionalibus* of Olaus Magnus printed at Basel in 1567; (5) Gaul, from the Latin Ptolemy of 1478; (6) The British Isles, from the same; (7) South-eastern Britain, from the *Tabula Peutingeriana*; (8) Germany, from the Latin Ptolemy of 1478; (9) The Isle of Thanet, from Dugdale's *Monasticon*, edition of 1655-73; (10) The British Isles, from the Latin Ptolemy of 1525.

It will be seen that we have very little space left to go into details, and that is all the more difficult to do to the reader's advantage on account of the great variety of matter in the book. Among other things, it may be mentioned that an investigation like that to which Mr. Elton has devoted himself in this work must, to a great extent, be based on the results of Celtic philology; but, as the study of Celtic in the scientific sense is a comparatively new one, present results every now and then have to give way to more exact ones. Mr. Elton has neglected no aid which Celtic philology could supply; but possibly he may be charged with having too recklessly accepted theories, though I, at least, cannot be severe on him, as the linguistic theories most likely to require material revision or abandonment come from a book of my own. Taking this, however, into account in all its bearings, I do not see that his main arguments would be much affected by it; and the author is not a man to think that he has produced a perfect work which future research is not likely to go beyond, but rather to aim at making a work which should prove a contribution to our knowledge and a help to further study. This he most certainly has succeeded in doing.

As to the religion of the insular Celts, he seems to be perfectly right in regarding the fairies of Wales as the Celtic pantheon degraded; and to the many interesting remarks he has on Nudd, the Welsh equivalent of the

Irish Nuadha and of the Nodens of the temple at Lydney Park, in Gloucestershire, I would add one which seems to connect him with Llyr or Lludd. Now Llyr is the Welsh for Lir—as the word is written in Irish; in both languages it seems to mean the sea, and is the name which appears in English as Shakspeare's Lear, father of Cordelia. The latter is usually in Welsh a daughter of Llyr; but the oldest allusion to her in the Black Book of Carmarthen, a MS. of the twelfth century, makes her father's name Lludd, or, as it is there written, Lud, which is not to be supposed a mistake for Llyr or for Nudd; for it is required to rhyme with the latter, there written Nud. But how the attributes of Llyr or Lludd were differentiated from those of Nudd, who was also god of the sea, nobody knows; and it is remarkable that, while the latter is called in Irish Nuadha Airgetlamh, or Nuadha of the Silver Hand, as to which hand there is a very curious story in Irish literature, Cordelia is called Creidylat, daughter of Llud Llaw Ereint, where *llaw ereint* means exactly the same thing as the Irish epithet of Nuadha, and may be rendered literally *manus argenteae*. No account has ever been given of the meaning of either Nudd or Lludd; and the epithet referred to suggests that Llud Llaw Ereint is an early corruption of Nudd Llaw Ereint, which in its N and Ll would violate the alliteration usual in such cases. If so, it would follow not only that Lludd and King Lud are later editions of Nudd, but that the attributes of Nudd and Llyr were originally the same, or, in other words, that those were names of one and the same sea-god, or of the sea itself. But this and the other questions connected with it would require a volume, so I shall stop here.

In the same chapter (x.) Mr. Elton brings the Irish account of "The Isle of the Blest," or the Plain of Pleasure, into its proper connexion with the rest of Celtic mythology. I may mention that there can be no mistake as to its being the Elysium of the dead, and that going into it meant nothing less than death to ordinary mortals; it was only by special favour that a mortal might enter it otherwise. This, I think, is proved by a passage in the story called the Sick-bed of Cuchulainn in the Book of the Dun: it is to be found at pp. 43-50 of the facsimile, and was edited by Mr. O'Curry in the *Atlantis* for July 1858. The hero, Cuchulainn, had been invited to go to this strange country by Liban, one of its lady dwellers, but before going himself he asks that Lóig, his charioteer, might be allowed to accompany her to see what that land was like and to return to describe it to him. Mr. O'Curry does not seem to have quite seen the force of the words, which appear to give the following sense:—

"Liban then comes up to Lóig and seizes him by the shoulder. 'Thou wilt not, O Lóig,' said she, 'proceed to-day in life unless a woman protect thee.' 'That is not exactly what we have been most used to up to this time, to be defended by women,' said Lóig. 'Alas, and ever alas, that it is not Cuchulainn that is in thy form this moment,' said Liban. 'It were well with me were it he that were in it,' said Lóig. They proceeded then until they reached the side of the island, where they saw the bronze skiff waiting for them. They then step into the ship and land on the island; they go

to the door of a house, when they see a man coming towards them," &c.

Nobody can help seeing the striking similarity between this and Charon's ferry, though the difference is sufficiently great to forbid us thinking that the Celts borrowed in this instance from the nations of the Mediterranean.

Mr. Elton believes that the Celts found more than one race in possession of this country when they first came here; the later of the two non-Celtic races he would call Finnish. I had also once thought the non-Celtic inhabitants were Finnish, but gave up that view on account of the absence of all historical reference to them in the West of Europe; but the author finds a fresh argument of considerable force for their former presence over a great part of the West in the rights of inheritance of the youngest child, which he discusses with great ability and clearness in the eighth chapter.

I have here and there noticed a misprint and an occasional slip, like that about Ogams in North Wales (p. 335); there is in fact only one Ogam inscription extant in North Wales. Lastly, I may say that I would go even farther than Mr. Elton in the non-historical character he ascribes to Arthur, but I cannot agree with him in regarding Cunedda in the same light. How this suggested itself to him will appear from the following passage (p. 278), where he says:—

"Edeyrn son of Nudd was the child of a god of darkness . . . ; but he also appears in Welsh history as an ancestor of the King Cunedda, as a Knight of the Round Table, as a bard who became a hermit, and as a holy person to whom a chapel at Holyhead was dedicated."

The fact, however, is that here two sets of names have been confounded—viz., those compounded with *teyrn*, a prince, which gets reduced to *teyrn* and mutated into *deyrn*, as in Catotigirn-i, later Catteyrn, Cuno-tigirn-, Cyn-deyrn, and the like; and, on the other hand, the Latin name Aeternus, of which old inscriptions in Wales give the genitives Eterni, Eterni, and Eternali. The Nennian Genealogies distinguish the two. Cunedda's father is there called Aetern, his grandfather Patern (that is Paternus), and his father Tacit (that is Tacitus); while a son of Cunedda is called Etern—the family was *par excellence* a Christian one, and many Biblical names were used by others of its members. The names of the other class in these genealogies are Ritigirn, Catteyrn, and Outigir[n], which become later respectively Rhydeyrn, Catteyrn, and Eudeyrn—the last would seem to have survived as Edeyrn. On the other hand, false etymology has led to Etern, which is now Edern, being sometimes written Edeyrn; but it has not been able to touch the pronunciation, all the former set being accented Rhydeyrn, Cattéyrn, Cyndéyrn, and so on; while the latter is Edern as in the places called after the saint of that name, such as Llanédern, in Lleyn, and Bodédern, near Holyhead. It would, however, be unreasonable to expect everybody to be conversant with the subtleties of Welsh phonology; and Mr. Elton may console himself with the fact that the same error has lately been committed by one of the very first philologists in Europe. I allude to Prof. Ascoli's remarks

on Welsh names of the *teyrn* group in a letter which I have before me, owing to the author's kindness, in an extract from the *Rivista di Filologia e d'Istruzione Classica*, p. 40.

But these and the like are minor matters which do not perceptibly diminish the great usefulness and value of Mr. Elton's book, which must have cost him many years of hard reading. I am far from competent to give an opinion on many of the subjects discussed in the volume; but it is my belief that it will prove to be the most important work of its kind which has appeared in this country for many years. The style is attractive, and the whole appearance of the book bespeaks its having been got up regardless of expense.

JOHN RHYS.

*An Introduction to the History of Educational Theories.* By Oscar Browning. (Kegan Paul, Trench & Co.)

MR. MAGNUS's project of an "Education Library" starts hopefully. The present volume is the first of a series intended to meet the wants of that daily increasing class of teachers who desire to know something of the history, literature, and philosophy of their profession. No movement of our time is likely to prove more valuable in its ultimate effect than that of which the appearance of this series is in part the symbol and in part the result. The Universities of Cambridge and of London have instituted examinations intended to encourage the systematic study of the principles of education. Skilled teachers everywhere are discovering that, both for themselves and their assistants, enthusiasm and scholarship alone make a very insufficient professional equipment; and that, with whatever natural gifts a schoolmaster be endowed, he will be all the better for supplementing them with some knowledge of the aims and experiments of famous teachers, and with a careful study of the best things which have been written on educational methods. Perhaps the great danger to be feared in connexion with the publication of a series like this is the too rapid multiplication of treatises to meet an immediate demand. If we are ever to have a real educational literature at all comparable in philosophic insight and practical usefulness to that of Germany and France, it must have time to grow, and should be the slow product of improved study and experience. It cannot be manufactured to order or all at once; and we may hope, therefore, that the conductors of the "Education Library" will not hasten to complete their work, but will only add to their series, from time to time, works of real value—the mature conclusions of the best minds which have been directed to the subject. There is a yet greater evil incident to the publication of a "series," which one may hope will be avoided in the present case. We have of late become familiar with the aspect of "sets," in uniform size and binding, of literary biographies, of scientific treatises, of monographs on great artists and philosophers. Thus it happens that Milton and Defoe, Raffaele and Meissonier, Dryden and Hawthorne, are discussed with exactly the same fullness of detail and in books of the

same size. It is inevitable that great matters should often be dealt with too briefly, and that small matters should be amplified, in order to meet the exigencies of this mode of publication. The plan is obviously destructive of all sense of literary proportion in the reader's mind, and is calculated seriously to mislead students, especially the young, as to the true rank of the immortals, and the relative merits of the contributions they have made to the world's work. It is to be wished that when Mr. Magnus is fortunate enough to get material for a really great book he will have the courage to publish it; and that when—as must often happen—the subject, though important, is narrow and special, and the thought meagre, he will have the still greater courage to add to his series a little volume whose size shall correspond fairly to its worth.

Having thus relieved myself by a protest against the application to the teacher's library of that Procrustean process of publication which has already wrought such manifest mischief in the departments of literature and art, it is pleasanter to say of Mr. Browning's volume that it forms a fitting introduction to the whole series, and an admirable *carte du pays* for the student of educational methods and theories. In some cases—notably in those of Comenius, Locke, Rousseau, and Pestalozzi—his sketch, while sufficing to give a just general impression, will serve mainly to stimulate the appetite for fuller knowledge and for an acquaintance with the works of the author himself. In others, as in the chapters on Greek and Roman theories of education and on the methods of the Jesuits and the Jansenists, Mr. Browning's full and careful summary includes most of the facts which have any practical value for the uses of the modern teacher. The description in the first chapter of the ideal of early training which prevailed among the Greeks is particularly vigorous; and the account in the second chapter of the opinions of Oato, of Cicero, and especially of Quintilian, is not less distinguished by insight and by fairness. The classification of later writers and thinkers as humanists, realists, and naturalists, though convenient, will appear to many readers to be somewhat arbitrary, and would probably have been disavowed by the writers themselves. There are enough of common elements in the schemes of Comenius and of Montaigne, of Sturm and of Locke, to make it dangerous to separate them, by lines too sharply defined, into distinct classes. What Mr. Browning says of Montaigne is to some extent true of every educational reformer. "He naturally emphasises the side of education which in his own day was much neglected." But this does not at all imply that the special truths which a given writer does not emphasise are therefore by him disregarded. Nevertheless, the broad distinction is sufficiently marked to justify this rough classification for practical purposes. John Sturm, for example, of whom Mr. Browning gives a lucid account, and to whom he ascribes a large share of influence in determining the course so long pursued at Eton and at English grammar schools, fully deserves the title of "humanistic," if by it is meant that his whole scheme was designed to teach the "humanities," and that he

recognised no other form of mental cultivation than language. It is especially interesting to those who desire to recognise the claims of other subjects, and to take a wider view of what is possible and desirable in a school, to read Mr. Browning's estimate of the worth of this traditional discipline. He quotes with approval Locke's warning against the making of Latin themes and declamations, and especially of verses:—

"If anyone will think poetry a desirable quality in his son, and that the study of it would raise his fancy and parts, he must needs yet confess that to that end reading the excellent Greek and Roman poets is of more use than making bad verses of his own in a language that is not his own. And he whose design it is to excel in English poetry would not, I guess, think the way to it would be to make his first essays in Latin verses."

To this Mr. Browning adds the result of his own large and special experience:—

"No seriously beneficial change in our public school education can be looked for, unless the worship of this idol is once for all abolished."

It would be easy to give reasons for differing here and there from Mr. Browning's judgments. Those who value Ascham's *Schoolmaster*, not only for its practical suggestions, but also for the striking picture it gives of the intellectual and scholastic life of the Elizabethan age, may be disappointed to find his work dismissed so summarily; and others might desire a fuller recognition of the work of Fröbel and of Jacotot. But there can be no doubt that, in the main, Mr. Browning has hit the essential meaning and spirit of the work done by each of the great educational reformers, and that he has shown much skill in describing it. He is the master of a very clear, concise style, free from rhetorical ornament, but full of life and interest; and he has the art of conveying, in neat, pregnant aphorisms, the characteristic dogmas of the various writers of whom he gives an account. *E.g.*—

"The child must learn to distinguish knowing from thinking or believing"—*Kant*.

"At home one can learn only what is taught himself, at school even what is taught others"—*Quintilian*.

"Give no rules until you have given the matter, the author, and the language. Rules without matter confuse the understanding"—*Ratich*.

"Ask much, retain what you are told, teach what you have retained. A man who teaches another teaches himself"—*Comenius*.

"'Tis not a soul, 'tis not a body, that we are training up, but a man, and we ought not to divide him"—*Montaigne*.

"The greater part of the errors of mankind arise rather from reasoning on false principles than from reasoning badly on the principles which they adopt"—*Arnauld*.

"There are three forces which educate a man—nature, men, and things; of these, only the second is in our power"—*Rousseau*.

To these extracts, which will serve to indicate the range of suggestion and speculation traversed in the book, I add some shrewd and characteristic sentences in which Mr. Browning appears to me to have estimated very happily the character of Rousseau's influence and the value of his work:—

"The effect of Voltaire and Rousseau upon

the Revolution was very different. Voltaire, by nature a benevolent man, ever ready to sacrifice himself in the defence of innocence or weakness, spent his energies in destructive criticism, and has obtained the reputation of a cold heartlessness which he little deserved. Rousseau, weak, sentimental, and selfish, poured out in his writings that universal philanthropy, that love for the human race, which he never showed in any action of his life. Thus his influence was much deeper and has been more lasting than that of Voltaire. *Emile* is not a constructive book. It is difficult to extract from it a definite theory of education; but its insight into the sorrows of childhood and the shortcomings of the age, the enthusiasm which glows in its pages, the beauty of its flowing style, have been most stimulating to thought on educational subjects."

J. G. FITCH.

#### "ENGLISH MEN OF LETTERS."

*De Quincey.* By David Masson. (Macmillan.)

It is to the honour of the author that this volume fails to give entire satisfaction to the reader. The materials for an impressive biography are not to be found in the life of a man whose early education and after-career were wholly desultory—if, indeed, even the term desultory can properly be applied to a life in which it is seldom possible to trace the signs of any actuating purpose at all. But Prof. Masson had personal relations with De Quincey, and is too true to the old ties to see fully the ruin of his life. However, our author gives us in small compass what is regarded as known of De Quincey, adding something from his personal recollections, but mainly relying on Mr. Page's *Life* and the autobiographical statements of De Quincey himself. To the latter, indeed, Prof. Masson's affectionate loyalty gives more weight than they seem to deserve, though he is himself somewhat perplexed by "the mingling of *Dichtung* with *Wahrheit*." But how can we trust De Quincey's assertions, if otherwise unsupported, when we find him in mature life gravely printing and publishing a statement that, when between thirteen and fourteen years of age, he "speedily acquired a special facility in *speaking* and *writing Greek*"? It is possible, though improbable, that he could write something which he was pleased to suppose was Greek, but it is certain enough that he could not speak even that. Where was he to find interlocutors? Not at the Bath Grammar School; though there, as he tells us, he was not put into the highest class because he was backward in Greek. Again, his statements about his doses of opium require a very robust faith; if, however, they are to be accepted, they explain where his money went, and how it came about that he kept his wife first, and afterwards his young children, living in great penury, though he was the eldest surviving son of a father who left a clear £1,600 a-year. He says of himself that he consumed from 8,000 to 12,000 drops of laudanum per diem—that is, from 16½ to 25 ounces, which, at one shilling per ounce, would cost from rather over £300 to nearly £460 a-year. Further, since laudanum is opium dissolved in proof spirit, he would at

this rate be drinking from two-thirds of a bottle to a whole bottle of proof spirit daily—a monstrous dose in itself, apart from the opium taken with it. Whether we accept or reject De Quincey's story, what becomes of his reputation?

Prof. Masson devotes a third of his book to an estimate of De Quincey's literary merits, giving him the praise which is undeniably his due for the universality of his interest in all things human, resulting in encyclopædic information on most diverse subjects; and also, of course, for his style. Indeed, so unflagging vivacity and lucid directness of meaning, perhaps the last qualities to have been expected under the circumstances, this opium-drunkard is unsurpassed. His "skilful use of Latinisms and other neologisms" is also defended with vigour and success by Prof. Masson. But only warm partisans of De Quincey will tolerate the forced affectation of humour which would "take Josephus by the button and address him as 'Joe' through a whole article." There is no "profanity" in it, but it is painfully suggestive of the least happy style of Dickens.

Passing from the style to the matter and substantial value of De Quincey's work, we find that he left, says Prof. Masson, "about 150 magazine articles." He had dreams of writing a great philosophical work, a *History of England*, and a treatise on political economy; the two latter, at least, he was well qualified to achieve successfully; moreover, he had private means which ought to have secured the necessary leisure, and he lived more than seventy-four years; but the works were never produced, owing to that absence of moral force which Prof. Masson recognises even in what he did write. The Professor contrasts him in this respect with Carlyle, and accepts his own description of himself as "in a special sense a purely intellectual creature." But why is a man besotted with opium to be more highly esteemed than another besotted with alcohol? and can a sot be a purely intellectual creature?

To be compared with Carlyle on the ground of moral force would be hard on men of much more "grit" than De Quincey. But let us compare him with John Stuart Mill, who is also mentioned by Prof. Masson. In Mill we have a man distinctly not of genius, but of great moral vigour, whose life was organised by relation to a definite purpose. In the result his work has made a visible mark; his books are of authority, and form an essential part of the studies of the statesman, the philosophical speculator, and the man of science. De Quincey as certainly had genius of a high order, backed by great knowledge and an unusually good memory, and the happiest power of clothing his thoughts in language at once interesting and intelligible, and in every way charming. Yet Prof. Masson tells us that in Edinburgh probably but one soul in 2,000 knows that he is buried or even that he lived there; while, of the select 100 who are acquainted with the fact, ninety-nine are indifferent to it. In other words, the man of genius is fast being forgotten, and his friend is not only sorry, but surprised.

But the reader will note Prof. Masson's allusion to the "hurry of magazine writing,"

and the remark previously referred to, that "De Quincey may be described in an off-hand manner as the author of 150 magazine articles" "any one of which will 'well repay perusal.'" By help of the light thus gained he will perceive the reason why genius, accompanied by many favourable circumstances, resulted in this case in producing so little work that is likely to survive. Magazine articles afford valuable means of discussing new views of difficult questions; but, where the question is really difficult, it will perhaps always be impossible, under the conditions of magazine writing, to present views of any value in a form that shall not be somewhat unsatisfactory, though it may adequately fulfil the purpose of stimulating discussion. But, when once the interest of newness is gone, an article of this kind must soon be forgotten; for, while the butterfly reader will be deterred by the subject, the student in the next generation will find it superseded by more comprehensive and systematic works. This is the fate that his moral feebleness has brought upon De Quincey. If untimely death or the struggle for a livelihood had rendered his life and genius thus ineffectual, we should have been sorry for him and for ourselves alike; but chagrin and even anger will mingle with sorrow when we find that his splendid powers were thwarted by his shameful servitude to opium.

ROBERT L. LEIGHTON.

*The Poetical Works of Oliver Wendell Holmes.* In 2 vols. (Sampson Low.)

FOSTERED by the fate of Burns, of Byron, of Leopardi, and of many other sweet singers, a theory sprang up that the best bards die young; that forty is a fatal Rubicon they cannot overstep. But this opinion has been thoroughly falsified by the long lives and undiminished powers of the greatest and most truly representative poets of the present era. The threescore years and ten allotted as the limits of human life have already been attained by Victor Hugo, by Mr. Tennyson, and by Mr. Browning; and yet they are still producing work of the highest and most characteristic type, as if they had passed through the Fountain of Jouvence. Oliver Wendell Holmes, one of the most deservedly popular of Transatlantic writers, notwithstanding the fact that he is laden with a similar weight of years, has quite recently presented the public with a volume of verse which in every respect equals, if it do not, indeed, surpass, his former productions. "My Aviary," in this last publication—*The Iron Gate and other Poems*—is not only in its author's most spontaneous vein, but embodies some of his happiest imagery; the stanza telling how the dying gull

"Sees his comrades high above him flying  
To seek their nests among the island reeds,"

while he lonely bleeds to death upon the crimsoning waters, contains thought deep enough for tears. As choice a specimen of the veteran author's more characteristic manner, and less admirable only because it belongs to a lower note in the diapason of song, is the charming "modernised version" of "The Archbishop and Gil Blas"—a poem that in these volumes has, for some reason, been relegated to another section

than that in which it originally appeared. The very cordial reception which *The Iron Gate* met with in Europe has possibly induced Dr. Holmes to issue this present collection of his *Poetical Works* here. Although upwards of half-a-century has elapsed between the dates of the first and last poems in this collection, no reader will be able to detect any sign that the author's is the "worn-out lyre" he bewails, for his latest lyrics are as sharp and clear and as polished as was the first stirring poem of his very first volume—his brilliant and patriotic "Old Ironsides."

To criticise a complete collection of Dr. Holmes's poetry at this late date would be a somewhat invidious duty, for the public has long since passed its own judgment. Many of his pieces, especially his sparkling *vers de société*, are literally "household words" to every reader and reciter of the English language. "The Last Leaf," "My Aunt," "The Comet," "The Treadmill Song," "The Stethoscope Song," "The Mysterious Visitor," and a long list of other pieces are as well known as the best of Hood's humorous verse. Of course these are not Dr. Holmes's best productions, but they are the most popular. Far better, and yet not nearly so widely known, because they only appeal to a more limited class, are those naive and sweet lines entitled "The Last Reader," running thus:

"I sometimes sit beneath a tree,  
And read my own sweet songs,  
Though naught they may to others be  
Each humble line prolongs  
A tone that might have passed away  
But for that scarce remembered lay.

"I keep them like a look or leaf  
That some dear girl has given;  
Faint record of an hour, as brief  
As sunset clouds in heaven,  
But spreading purple twilight still  
High over Memory's shadowed hill.

"They lie upon my pathway bleak,  
Those flowers that once ran wild,  
As on a father's careworn cheek  
The ringlets of his child;  
The golden mingling with the gray,  
And stealing half its snows away.

"What care I though the dust is spread  
Around these yellow leaves,  
Or o'er them his sarcastic thread  
Oblivion's insect weaves?  
Though weeds are tangled on the stream,  
It still reflects my morning's beam.

"It may be that my scanty ore  
Long years have washed away,  
And where were golden sands before  
Is naught but common clay;  
Still something sparkles in the sun  
For memory to look back upon. . . ."

These lines are so simple that they are likely to be overlooked amid the immense quantity of verse their author has poured forth; but for us they have an irresistible charm, and often, after having rioted amid the gorgeous poesy of the present era, we have turned back to this little lyric of Dr. Holmes's youthful days with renewed gratification. The chief drawback to Dr. Holmes's poetry, not to his popularity, is the excessive number of pieces he has thrown off about events of temporary interest, in this respect his many years of labour being against him. The reader can relish one or two brightly worded "occasional" pieces on the anniversary of a national event, but the most

catholic appetite is cloyed by an accumulation of fifty years' industrious manufacture of odes, lyrics, and ballads on the Receptions of Grand Dukes and Banquets to Foreign Ambassadors. Still it must be confessed that all these fugitive pieces are so neatly rhymed, so appropriate to the events they commemorate, and so besprinkled with pretty conceits that, were one called upon to exclude the less worthy, it would be difficult to know where to commence the work of excision. On well-worn themes Dr. Holmes, though saying little, perchance, but has been said a hundred times before, always contrives to fashion the trite into something that looks, even if it be not, new. Here is a threadbare toast, for instance, for the "Meeting of the Burns Club," freshly told:

"Thus while within the banquet glows,  
Without, the wild winds whistle,  
We drink a triple health—the Rose,  
The Shamrock, and the Thistle!  
Their blended hues shall never fade  
Till War has hushed his cannon—  
Close-twined as ocean currents braid  
The Thames, the Clyde, the Shannon!"

And, again, surely the "mute inglorious Miltons," though often told of, lose nothing in Dr. Holmes's retelling of their fate; his

"Alas for those that never sing,  
But die with all their music in them,"

is at least as good as any other lament for the forlorn state of "The Voiceless."

The general reader, of course, admires Dr. Holmes for his humour and satire, and not for his sentiment; and it must be confessed that in these popular forms of verse he is nearly unique. His satire is always tempered with kindness, is never personal nor spiteful, and probably never annoyed a single person—in that respect being almost unparalleled in the history of satiric verse. His muse is somewhat old-fashioned at times, especially in his earlier volumes, not being altogether unconscious of Collins and his followers. Overflowing with a most copious supply of metaphor and simile, Dr. Holmes has no need to reproduce the thoughts of others, nor to dress up the trite tropes of bygone bards in new rhymes. Yet occasionally some of his earlier half-sportive, half-pathetic pieces remind the reader of Præd—his "Grisette," for instance, not being quite unsuggestive of the English poet's "Josephine," while his "Star and the Water Lily" coincides in thought with "The Blind Girl's Song" in Bulwer's *Last Days of Pompeii*. But such resemblances are few—fewer, probably, than could be detected in the works of any poet of the present age who had written so much. If Dr. Holmes copies anyone it is himself, for one who writes so often "to order" cannot always be original. It is not his readers' fault, but his own, that Dr. Holmes is believed to turn out verse whenever required in the way he describes:

"It costs him no trouble,—a pen full of ink or two  
And the poem is done in the time of a wink or two;  
As for the thoughts,—never mind,—take the ones  
that lie uppermost,  
And the rhymes used by Milton and Byron and  
Tupper most;  
The lines come so easy! at one end he jingles 'em,  
At the other with capital letters he shingles 'em,—  
Why, the thing writes itself, and before he's half  
done with it  
He hates to stop writing, he has such good fun  
with it!"

The lines just quoted are not, happily, fair samples of Dr. Holmes's humorous verse; for a good specimen of his work in that way we may safely refer to the already mentioned version of "The Archbishop and Gil Blas." Another recent poem of his calling for especial commendation for its vigorous action and natural pathos is "Grandmother's Story of Bunker Hill Battle:" it is certain to find favour as a recitation.

The publishers may be congratulated upon the production of this very presentable collection; it is certain to render Dr. Holmes's popularity still wider, bringing, as it does, within so portable a form the contents of his various volumes, and placing within reach of his many English admirers the whole of his poetical works.

JOHN H. INGRAM.

#### NEW NOVELS, ETC.

*A Laodicean; or, the Castle of the Stancys.* By Thomas Hardy. In 3 vols. (Sampson Low.)

*Zoe: a Girl of Genius.* By Lady Violet Greville. In 3 vols. (Bentley.)

*Frau Frohmann, and other Stories.* By Anthony Trollope. (Isbister.)

*'Neath Southern Skies.* By W. Graham. (W. Poole.)

*Sketches by a Curate.* By Robert Overton. (Newman.)

*The Shalonski Family.* By Eugène Toor. Translated from the Russian by C. J. Cooke. (Remington.)

MR. HARDY'S new novel is a love-tale of the orthodox type. Paula Power, the heroine, is introduced to us as the only child of a lately deceased railway contractor, who had amassed great wealth and purchased Stancy Castle, a half-ruinous structure that once belonged to a family of great antiquity and former importance in the county. The heiress determines to have her castle restored; and, circumstances having thrown in her path a young architect of universal knowledge in all the different schools, she resolves to entrust to his hands the execution of her designs. It is needless to say that, from the position of professional adviser, George Somerset—such is the name of Mr. Hardy's hero—soon advances to that of lover, and, after pressing his suit with due energy, is accepted on a kind of probation. Paula is gifted with more than a woman's share of the quality of indecision; and although she gives Somerset leave to declare his passion, yet she will not give him any positive assurance that his love is returned, leading the young architect to believe that in a speedy and successful restoration of Stancy Castle lies his best chance of attaining happiness. It is at this point in the story that the course of true love is interrupted by the machinations of the villain of the piece, who appears under the name of Thomas Dare, and who may be described as a Flibbertigibbet of more mature years and endowed with more brains than Sir Walter Scott's creation. It happens that Dare is the bastard son of Captain De Stancy, who, after the death of his father, Sir William De Stancy, will repre-

sent that ancient family, whose place in the county had to a certain extent been usurped by the daughter of the wealthy contractor. The younger De Stancy becomes George Somerset's rival; and in due time, owing partly to the good offices of Abner Power, a long-lost uncle who makes an opportune appearance, partly to Paula's romantic liking for everything that recalls the past, he develops into a most formidable rival. At this crisis Dare forges a telegram in George Somerset's name, addressed to Paula, asking for an advance of one hundred pounds in order to pay some gambling debts. By this manoeuvre Dare succeeds in giving a violent shock to the heroine's affection for the architect, and villainy is for a time successful. But of course only for a time. On the very morning appointed for the celebration of the nuptials the whole truth is brought to light, and Paula, unceremoniously breaking off her contemplated marriage with De Stancy, hastens to make the only reparation to the injured Somerset. In the delineation of his characters Mr. Hardy has not been altogether successful. George Somerset is held up as an Admirable Crichton; and yet we feel constrained to admit that he remains throughout the author's pages a singularly uninteresting character, for whose trials it is difficult to feel any special sympathy. But lay figure as he is, the hero is in better keeping with his part than the heroine. Paula Power is meant to be a paragon of all mental and physical perfection; to our way of thinking she is a commonplace young lady, not untainted with purse pride, and endowed with illimitable capacities for developing into a shrew. Among the minor characters, the old baronet and the Dissenting minister are sketched with vigour and truth. Before taking leave of Mr. Hardy, we must protest against his most realistic presentment of the conversation to be heard at a farmers' ordinary (see vol. iii., pp. 245-48). It is very likely that coarse and vulgar natures would discuss the matrimonial and domestic arrangements of a great heiress in the language reproduced by the author, but it is surely no part of the functions of art to make use of such dialogue. The descriptive portion of *A Laodicean* is not very full, but is, as might have been expected, generally effective.

*Zoe* is the story of an unconventional heroine, who, after being for a long time the sport of fortune, is at length made happy by becoming the wife of an equally unconventional hero. The authoress' drawing is clear and distinct; and, although her canvas is rather crowded with figures, yet these are so disposed as not to mar the general effect. Sir Hugh Warkworth is an excellent Tory country gentleman; Lord Melrose a charming study of a chivalrous young Englishman; and last, but not least, Colonel Elliston is a really natural villain. It would be difficult to conceive more readable sketches of the life led by English county families than are to be found in Lady Violet Greville's pages.

It is impossible for the most ill-natured critic to deny to Mr. Trollope a very large

share of the faculty of making bricks without straw. The five stories comprised in the collection entitled *Frau Frohmann* have obviously made a previous appearance in some serial, and, as might be expected, are woven of but slight material. Not one tale can be fairly said to possess a plot; the characters are, one and all, commonplace, and yet it is undeniable that these 416 pages form very pleasant reading.

The author of *'Neath Southern Skies* formally apologises in a Preface, craving the indulgence of readers, firstly, on the score of having written this tale at the age of two-and-twenty; and, secondly, on that of being what publishers and hack writers term an amateur. The apology was quite gratuitous. Although Mr. Graham's pages exhibit here and there traces of crudity, yet the book is written in an easy, untrammelled style, and may be pronounced on the whole a welcome addition to the literature of fiction.

*Sketches by a Curate* comprises a dozen short stories, dealing for the most part with scenes from low London life, written in a somewhat jerky style. It is not for us to impugn the veracity of the author's description of himself, but we must say that the tone in which this curate treats of things sacred has a strong savour of blasphemy. The book is padded with some passable verses, palpably modelled on the style of Mr. Swinburne.

The translator of *The Shalonski Family* may be congratulated on the manner in which he has acquitted himself of his task. Whether the literary merit of the original is such as to justify the labour which Mr. Cooke must fain have bestowed on his translation is another question. The incidents of Eugène Toor's story are laid during Napoleon's invasion of Russia, and the book is apparently meant for the amusement and instruction of young ladies between fifteen and twenty. As to the general merit of *The Shalonski Family*, we can only say that the drawing of character is bold and generally true to the life, and that the author displays a rare power of analysing the emotions; but we fear the reader who opens these pages in the hope of enlarging his acquaintance with Russian social life will be disappointed. A noteworthy feature of the translation is the Russian names, which Mr. Cooke has written and accented with scrupulous fidelity to the originals.

ARTHUR BARKER.

#### BOOKS OF TRAVEL.

*War, Waves, and Wanderings: a Cruise in the "Lancashire Witch."* By F. Francis. In 2 vols. (Sampson Low.) This book begins suddenly on Helezi Hill, in the midst of the Zulu War, and ends abruptly at San Francisco. Where the author and his party came from to South Africa, or whither they went from the Golden City, is left a mystery. One expects them to go round the world, but they don't. The whole object of the voyage is wrapt up in obscurity. Except the name of the author, which may be a *nom de guerre*, the reader receives no clue as to the party on board. Initials only are given for names. The first chapter starts with the ominous words "The Prince Imperial is dead." We then have an account of the finding of his body; after that, a

sketch of camp life, in which Forbes (of the *Daily News*), Prior (of the *Illustrated London News*), and the Honourable "Algy" Bourke (of the *Daily Telegraph*) are mixed up with the military heroes of the campaign. Then follows the Battle of Ulundi; and the smoke of the fighting has scarcely cleared away when we find ourselves on board a yacht, off Durban, which turns out to be the *Lancashire Witch*. The party on board seem not to have made up their minds about their destination, but they go first to Bembatooka Bay, in Madagascar. They return, via the Island of Johanna, to the mainland of Africa, at Zanzibar. From Africa, they ultimately sail eastward, calling at the Seychelles Islands, and across the Indian Ocean to Singapore, thence to Siam, where they make an expedition up country, or it would be more correct to say "up water," where they wait for tigers that never appear. From Siam they go straight to Japan, this last country occupying a good deal of the book. Crossing the Pacific to San Francisco occupies a chapter, which is wholly filled with a long account of the Battle of Tash-Kessan, in the last Russian War, in which Baker Pasha is highly extolled. From San Francisco the yacht and its party sail north to Alaska, where they visit Cook's Inlet, Chignick Bay, Port Moller, and the Seal Islands, at which places the hopes of sport among bears and reindeer were only partially realised. It is on returning to San Francisco from this region that the yacht disappears again into thin air as suddenly as she rose up at Durban; and the reader is left with a vague idea that it is only a phantom ship he has been following. The two volumes describing these wanderings are very pleasantly written, and show that the *Lancashire Witch* must have had a very happy party on board, the author himself evidently being an acquisition on such a voyage. It might be critically remarked that, considering the extended space gone over, and the interesting places visited, there is but a homoeopathic dose of information infused into the pages of the work. We have yacht life, with accounts of hunting at the various places touched at, and here and there glimpses of the people and of the region. The little that is given of this latter kind is good, and it makes the reader regret that there is not more. The writer, it can be seen, is a man of ability, who can observe and note well what comes before him. Some good extracts might be made if space permitted. The following short and pithy opinion of a man in San Francisco may be worth quoting, as it bears on the question of the Panama Canal. This American said:—"Look here! The world isn't going fooling all around the Horn, when it can cut across the Isthmus for a few hundred million dollars. It stands to reason; look at the map."

*The Two Hemispheres.* By George G. Chisholm. (Blackie and Son.) This is a popular account of the countries and peoples of the world, illustrated with more than 300 woodcuts printed in the text. To compile such a book, to the extent of nearly 1,000 pages, must have required no common measure of industry on the part of its author. So far as we have tested it, he seems to have applied to the best authorities, and to have exercised a wise discretion as to what ought to be left out. Of course there are mistakes, one or two of which it may be as well to notice for the benefit of a new edition. P. 104, the life members of the French Senate are not elected by the Chamber of Deputies. The section on "India" we have read through carefully; and, on the whole, we consider it a distinct advance upon any similar article we have seen. But two popular errors are reproduced—that the mass of the Muhammadan population is of foreign extraction; and that suicides under the car of Jaganath used to be common. It is also an error (though

a pardonable one) to say that the Santhals are of Dravidian origin. This ought to be the neighbouring tribes of Oraons and Paharias, not the Santhals. We should not have drawn attention to these little points if we had not formed a high opinion of the general accuracy of the book. It is handsomely printed and bound, and has an unusually full Index. Altogether, it would form a useful and safe present to any young person who is curious to fill up the outlines of school geography.

*From Sword to Share; or, a Fortune in Five Years at Hawaii.* By Capt. H. Whalley Nicholson. (Allen.) Capt. Nicholson, an ex-army man in search of some employment, was advised by a friend, already embarked in the business, to try sugar-growing in the Sandwich Islands. He went there, and now writes, in a jaunty style, an account of what he saw and heard, for the benefit of those English gentlemen who, in these times of compulsory retirement, are eager to earn their daily bread by labour were it only procurable. The chief exports of the Hawaiian group are sugar, rice, and coffee; but of these the writer recommends sugar, and shows how in five years a capital of £1,500 will produce a net profit of £6,650. Unfortunately, it is too soon to know the result of his own farming, and it does not appear that these tempting figures are founded on the experience of his friend. Whether they can be trusted or not, there are few more attractive countries than the Sandwich Islands, with their lovely scenery, rich vegetation, perfect climate, and amiable and hospitable inhabitants.

*With the Cape Mounted Rifles: Four Years' Service in South Africa.* By an ex-Cape Mounted Rifleman. (Bentley.) We had fondly hoped that we had seen the last of the books on the late South African wars, but we are disappointed. A gentleman who served for four years in the Frontier Armed and Mounted Police, and in the Cape Mounted Rifles—a corps which sprung out of the Mounted Police—now gives us his experiences in the Transkei and Basuto Wars. His single object in venturing into print is to give the friends of the many and gallant men who are serving in the Cape Mounted Rifles a general, plain, and straightforward idea of the life experienced in that popular corps. The public generally are not likely to ask for another book on a subject already exhausted. The book is neither better nor worse than many of its predecessors. Had we no other information on these wars it might be read with interest; but it is not wanted. The writer touches on what will be one of the most difficult problems in the future of government in South Africa—namely, how to deal with and control the swarming native populations when they are prevented from destroying each other, and multiply at a rate out of all proportion to the increase of the Europeans.

*My Old Playground Revisited.* By Benjamin E. Kennedy. (Hurst and Blackett.) It is difficult to find anything to say of such a slight book as this, except that it is very well printed and got up. It is the narrative of a three months' trip through the best-known parts of Italy by an elderly gentleman and his wife, who seem to have known how to enjoy themselves. We have all the little details about hotels, railway trains, carriages, couriers, and luncheon baskets, which really make up three parts of foreign travel, but which most travellers agree to forget. Of novelty there is absolutely nothing, except perhaps the passage of the Spligen in the first week of May. Still, Mr. Kennedy is readable, by virtue partly of his *savoir vivre*. We have not learnt anything from him, but we part with him (if he will allow us to say so) in the same kindly spirit that he himself displays throughout.

*The Land of Dykes and Windmills.* By Frederick Spencer Bird. (Sampson Low.) Mr. Bird has made an amusing book out of odds and ends of information about Holland. Sometimes, as when he tells us that pipe factories flourished most between the years 1720 and 1721, we fancy that either he or the printer must have made a mistake; and often, when we read a sentence like this—"In the various museums of Holland may be found many interesting objects illustrative of bygone times"—we feel that the author's strength does not lie in originality of thought; but pedantic accuracy and philosophical reflection can well be spared in a book which is full of amusing anecdotes and interesting notes. There is also a great deal of information scattered through the book; and, if it is not to be implicitly trusted in detail, few will read it without learning more of Holland and Hollanders (as Mr. Bird calls them) than they knew before.

*The Nightless North: a Walk across Lapland.* By F. L. H. Morrice. (Kent and Co.) A record of personal experiences, eating, drinking, and sleeping, on what must have been a weary walk, from the Arctic Sea to the Gulf of Bothnia, by the river valleys of the Tana and Torneo. The author expressly disclaims all historical and scientific illustrations, useful statistics, and moral reflections; consequently, the reader's impressions, on closing the book, are little more than perpetual daylight, bad fare, and mosquitoes. The author and his friend had determined on the walk at any cost, and, like Englishmen, persevered in spite of want of sleep and starvation. However, they made light of their wretchedness while in Lapland, and perhaps this amusing record of misery may lead others to think twice before attempting a similar trip.

*Alpine Climbing: Narratives of Recent Ascents of Mont Blanc, the Matterhorn, the Jungfrau, &c.* By the Author of "The Mediterranean Illustrated." (Nelson.) This is a slovenly compilation, and answers but imperfectly to its present title. Among "recent ascents," we find Mr. Anderson's ascent of the Lesser Schreckhorn in 1857, and five ascents in or before 1845, including a passage of the Tschingel wisely left anonymous. These are mixed up with accounts of some of the exploits of Mr. Wills, Mr. Whympier, Mr. Leslie Stephen, and Prof. Tyndall—exploits "improved" from the original, according to the taste and judgment of an editor who appears to have no practical knowledge of his subject. The original part of the volume is full of bad geography. A writer with Mr. Ball's account of the Alpine chain in the *Encyclopædia Britannica* at his disposal has no excuse for offering such a sketch as that which opens the volume. We quote one sentence: "The Helvetic Alps send down their roots into the heart of Switzerland, and include the Grabenhorn, 15,440 feet." Many of the heights given throughout the book are inaccurate. Misprints abound. Thus we have Wetterhorn for Matterhorn (p. 87), Graisen, Gerner-grut, Bergliasloch, Bletschhorn, Mittalhorn, Tauggwald, Mr. Hincheliff, Anthonmatten, Alphansalph, Mademoiselle Formaren (Miss Forman), and many more. The compiler thinks "Spitzte" is a German word, for he repeats it five times on one page. He turns Zumstein into "Zurnstein," and "believes the Parrot Spitzte has never been ascended." The ascent of Mont Blanc, he tells us, "usually occupies the best part of three days." He quotes temperatures with no warning to readers accustomed to a different thermometric scale. The illustrations are in themselves of various merit, running from a ludicrous pseudo-scientific cut of "striated rocks and roches moutonnées" to fair rough sketches of the Matterhorn and the Dru. But the same carelessness affects

them. The frontispiece should be "From the Buet," not the Brevent; in the view called "The Matterhorn" (p. 58) no such peak is visible! All these blunders are the worse in that they have been made twice over. The book, though it contains no mention of the fact, is a reprint of one issued in 1878 by the same publishers under the title of *Alpine Adventure: Narratives of Travel and Research in the Alps*. The binding and title-page have alone been changed!

BEFORE railroads existed, English tourists in Italy were forced to spend much of their time in looking at the country. Of late years they have been too much confined to picture galleries; and fashion has forced many, whose tastes lay plainly elsewhere, to an exclusive devotion to the Oldest Masters. A reaction seems now to be setting in. Some of our travellers are returning to nature, and remembering that it is still possible to drive, and even walk, about the most beautiful country in Europe. The Sections of the Italian Alpine Club are coming handsomely and practically to their aid. Principally by means of the exertions of these bodies, the mountains of Pistoja (of which Prof. Colvin gave an eloquent sketch in a recent number of the *Portfolio*) have been thrown open as a summer residence; the mountains of Carrara and the Pania della Croce have been rendered accessible to those who wish to enjoy the views which suggested not a few passages in the *Commedia*; and Vallombrosa and Camaldoli have now more or less comfortable inns. The Italian Club makes a further contribution to the wants of travellers by issuing from time to time, in the shape of local handbooks, useful pocket volumes dealing each with a particular district or valley of the Tuscan Apennine, and throwing together practical hints as to roads, paths, and inns, with historical sketches, references to local customs and the local poetry in which this region is so rich, and chapters on natural history or botanical catalogues which may be useful to the specialist. The two last issued—the *Guida illustrata del Casentino* (Firenze: Nicolai) of Signor C. Beni, and the *Guida della Val di Bisenzio* (Prato: Lici) of Signor Bertini—are both favourable specimens of their class. Each has a map and useful itineraries. It is, perhaps, a pity that these books are not brought more under the eyes of English travellers on the spot by local booksellers. When will the Italian Club bring out an intelligent Guide to walks in the hills near Rome? In no city does the foot-wanderer find a greater choice of country brought within his reach if he knows how to profit by trains or tramways.

#### NOTES AND NEWS.

A NEW poem by Mr. Tennyson, on "The Charge of the Heavy Brigade," will appear in the February number of *Macmillan's Magazine*.

A NOVEL by Mr. William Black will be published in *Harper's Magazine* during 1882. It is entitled "Shandon Bells," and will be illustrated by Mr. William Small.

A NEW novel, in three volumes, by the author of *Lady Audley's Secret* will appear early next month.

MESSRS. MACMILLAN AND CO. will publish about Easter a Life of the late Prof. Clerk Maxwell, by Prof. Lewis Campbell, of St. Andrews, who knew him intimately in early life, with an account of his scientific work by Mr. William Garnett, who was for six years associated with him as demonstrator at Cambridge; and a collection of his poems, many of which will be published for the first time. The volume, which will be illustrated with portraits, dia-

grams, and sketches of scenes in Maxwell's early life, will be likely to interest a considerable circle of readers.

MESSRS. J. AND R. MAXWELL will issue next week Capt. Marryat's novels in penny books, uniform with Miss Braddon's abridgements of the Waverley Novels. They will also publish cheap editions of Miss Mary Cecil Hay's *Brenda Yorke* and Mr. W. S. Hayward's *Diana's Defender*.

*Stories from Browning* is to be the title of a volume, somewhat like Lamb's *Tales from Shakespeare*, which Mr. Frederic May Holland, of the United States, the teller of the story of *Sordello*, has compiled, and which Messrs. George Bell and Sons have, at Mr. Furnivall's instance, agreed to publish in England.

THE Dante Society of Cambridge, Massachusetts, of which Mr. Longfellow is president and Mr. Lowell vice-president, has decided to abandon the proposed publication of the hitherto inedited Commentary by Benvenuto da Imola on the *Divina Commedia*. This resolve is due to the fact that the present Lord Vernon, as announced a little while ago in the ACADEMY, has taken steps to carry out his father's design by placing his own copy of the same Commentary (the Laurentian MS.) in the hands of an editor at Florence for immediate publication. Lord Vernon hopes to be able to issue the work complete in the course of the present year. As the Dante Society adds, "Other tasks remain; and other services may be rendered by the society to students of the supreme poet."

MR. C. K. SALAMAN, the veteran composer, has in the press a book on *Jews as They Are*. It is quite free from controversy, and chiefly deals with the actual condition of Jews in Europe in the present century. Two most interesting chapters discuss the position of Jews in England since 1828, and the history of the Jewish community in Rome, where they were long kept in a state of subservience, which only ended when the Ghetto was abolished in the present century. Mr. Salaman's long and successful musical career brought him into connexion with all the more famous Jews of this century, and he has therefore had special opportunities of describing their life.

MR. J. C. JUTA, the well-known publisher and bookseller of Cape Town, is about to establish an agency in London, which will be carried on by Mr. J. C. Juta, jun., in conjunction with Mr. J. L. Heelis, who has been for more than twenty years head of the foreign department at Messrs. Longmans'. As far as we are aware, this is the first instance of an African publishing firm having a London agency.

ALL historical students will be glad to hear that the Bristol and Gloucestershire Archaeological Society have obtained permission from Lord Fitzhardinge to print the MSS. of John Smyth, the antiquary, and also the MS. register of St. Augustine's Abbey at Bristol, which are preserved in the muniment-room at Berkeley Castle. The MSS. of John Smyth, written in the early part of the seventeenth century, consist of two parts: first, the Lives of the Berkeleys; second, a descriptive account of the Manor of Berkeley, to which is appended a collection of old Gloucestershire proverbs and folk-lore. Concerning the former, we may quote the words of Mr. J. H. Cooke, of Berkeley, who has had the custody of the MSS. for many years:—"In this work he [Smyth] gives a complete biography of every Lord of Berkeley from Robert Fitzhardinge down to his own time, twenty-one in number. The events and transactions of each lord's life are given, with some variations, under the following heads:—(1) His birth and course of youth; (2) his husbandries and hospitalities; (3) his foreign employments; (4) his recreations and

delights; (5) his purchases and sales of land; (6) his law suits; (7) his alms and devotions; (8) his miscellanies; (9) his wife; (10) his issue; (11) his seals of arms; (12) his death and place of burial; (13) the lands of which he died seised. The statements under each of these titles are verified by marginal references to the documents and authorities from which they were taken." The Smith MSS. will make three volumes in all, of about 400 pages each, including a copious Index. It is proposed to issue an edition of only 500 copies, at £1 each volume, the subscriptions being confined to members of the society. Sir John Maclean has undertaken to edit the work, with the assistance of Mr. Cooke. The printing of the register of St. Augustine's will be taken up later.

THE first number of a new religious periodical, entitled *The Christian Leader*, has just appeared at Glasgow. It presents a varied and interesting list of contents, including papers and poems by the Rev. C. M. Birrell, Mr. G. Barnett Smith, the Rev. T. Dunlop, Mr. A. J. Symington, Mr. Matthias Barr, the Rev. D. Macrae, &c. This periodical, which aims at a higher standard than most of our religious publications, will appear weekly, at the price of one penny.

THE Rev. Dr. Whittemore has resigned the editorship of *Golden Hours*, and has been succeeded by the Rev. J. Jackson Wray.

MR. WALTER RYE has, at the request of the Wandsworth Vestry, examined all their old deeds, and has put forth an abstract of them, "Notes on the Deeds relating to the Parish and other Charities of Wandsworth, in the County of Surrey." The most generally interesting document is the first formal constitution of the Wandsworth Vestry in 1627, which contains a provision that Parliament would now find useful—namely, that, if any of their number "shall behave himself unreverently & unfitting the place by unseemly speeches or usage," the majority may, after once or twice warning, "remove the same party soe . . . offending, and . . . chuse another of the better sort of parishioners in his place."

PROF. ARBER asks us to make known his new address, 1 Montague Road, Birmingham, and to say that he will continue there his publications of Early- and Tudor-English poems and treatises as time and opportunity offer. The fourth and fifth volumes of his *English Garner*—which is to stretch to ten volumes—will be ready in a month. The fourth will contain Oocleve's Letter of Cupid, Underhill's "Hot Gospeller," Fox's "Imprisonment of the Princess Elizabeth," "Alcilia," Dowland's "Three Books of Songs or Aires," James I.'s Book of Sports, "The Recovery of the Bristol Ship Exchange from the Pirates of Argier," and many other tempting pieces. The fifth volume will be mainly devoted to Sir John Hawkins's voyages, Bodenham's "Trip to Mexico" (1564-65), Sir John Davies's Poems, Dugdale's interesting "Arrival of King James into England" (1604), from which we last year quoted the paragraph about Shakespeare's company, "the means folk" whom the august monarch had affably condescended to patronise, &c. &c. Prof. Arber also promises three fresh reprints in his "English Scholar's Library": Joy's "Apology to Tyndale"—that is, attack on him—(1534-35); Barnfield's "Affectionate Shepheard" (1595); Cooper's Answer to Martin Marprelate's "slandorous vntuethes" against Bishops; &c. May Mr. Arber long live to combine the two occupations of professor and publisher! He will do good work, we are sure, in both.

THE following is the programme of the Positivist Society, which meets in Newton Hall, Fetter Lane, for the early part of the present year. The Sunday lectures (at 8 p.m.) will be

given by Prof. Beesley during January, and during the four following months by Mr. Frederic Harrison, Mr. Vernon Lushington, and Mr. Cotter Morison. On Wednesdays (also at 8 p.m.) there will be a course of elementary classes on the history and philosophy of science. These will be opened on January 11 by Mr. Percy Harding, on the subject of geometry, who will be followed in April by Dr. A. Senior, on physics and chemistry. The Positivist Society meets for discussion, under the presidency of Prof. Beesley, on the last Friday in each month, at 8 p.m. Admission to all lectures and classes is free.

THE Carlyle Society, "formed for the purpose of affording to disciples and students of Carlyle a means of meeting together, and of investigating and discussing the religious, political, and social problems treated of in his writings," meets upon the first Friday in every month, except August, September, and December, when a paper suggested by Carlyle's teaching is read by a member; a discussion follows, in which visitors of all opinions are invited to take part. Persons desirous of joining the society are invited to apply to Mr. C. O. Gridley, 9 Duke Street, London Bridge, London, S.E.

AN entertaining article might be written upon the Analytical Table of books issued during the past twelve months, which Messrs. Sampson Low have compiled from their fortnightly *Publishers' Circular*. But we must confine ourselves to a few statistical comments. The new books published in 1881 number 4,110, the new editions 1,296; total, 5,406, as compared with 5,708 in 1880. The decrease is considerable, and is more noticeable as following upon a decrease in 1879, when the total was 5,834. On the two years the aggregate decrease amounts to 428, or 7.35 per cent. It is interesting to observe that nearly one-sixth of all the books are published in December; next in order come April, November, October, February; January and September are last. As regards subjects, theology is well at the top with 945; educational and novels are almost exactly equal (682 and 674); then follow juvenile, arts, &c., history with biography, and serials. As compared with the previous year, the decrease is proportionately much larger in new editions than in new books. Juveniles have fallen very heavily; so have miscellaneous, including pamphlets; and political economy to a less extent. The great advance is in novels, in history, and in *belles lettres*. Just one-half of the law books that appear are new editions, and one-third of the medical works. The same proportion of one-third holds good also for novels; while in *belles lettres* the proportion rises to two-fifths. Only 111 volumes of poetry were produced during the year, as against 446 novels. It must be remembered that these classes are somewhat roughly formed.

AMONG the nominations and promotions in the Legion of Honour on the occasion of the new year are the following: Officers—M. Himly, doyen de la Faculté des Lettres de Paris; M. Carriot, inspecteur de l'Académie de Paris; commander—M. Bertrand, professeur au Collège de France, secrétaire perpétuel de l'Académie des Sciences; chevaliers—M. Blavet, ancien professeur de l'Université; M. Landrin, conservateur du Musée d'Ethnographie au palais du Trocadéro. The two last are also connected with the Republican press.

MR. FURNIVALL'S letter, in our number of November 26, on Mr. Radford's identification of the Pitti Andrea del Sarto as the origin of Mr. Browning's pathetic poem of that name has pleased the Italians. The *Fanfulla della Domenica* of December 4 (Rome) gives an account of the letter and other items of our Browning news; and, after noting that the poem was sent to Mr. Kenyon instead of an

unprocureable copy of the picture, adds:—"Così il mondo dell' arte ebbe due fortune; di avere una copia di meno, e un capolavoro di più;" which is, we take it, as neat a putting of the case as can well be imagined.

THE MS. of three tales by the late Alexander Herzen, hitherto unpublished, has lately been discovered at Moscow. One of these, entitled "Legenda o Sv. Fedor" ("A Legend of St. Theodore"), appears in the December number of the *Russkaya Mysl*. The other two, entitled respectively "Pervaya Vstrecha" ("The First Meeting") and "Vtoraya Vstrecha" ("The Second Meeting"), will be published in future numbers of the same magazine. The MS. formed part of memoranda kept by the author during his residence at Viatka.

IN answer to an enquiry from M. Gaidoz in the *Revue critique*—whether the weird sisters of *Macbeth* have any analogy in Teutonic legend—M. E. Beauvois writes, quoting many prophecies of future greatness (and especially of future kingdoms) in Scandinavian mythology. He suggests that the Song of Darrad, in the *Njála*, deserves to be translated into English, as illustrating very closely the mixing of the charm in "Macbeth" (IV. i.).

DR. BULMERINCQ, of Wiesbaden, formerly Professor of Staats- und Völkerrecht at Dorpat, has been called to the Chair at Heidelberg vacated by the death of Bluntschli.

THE complete works of Bernardino Zendrini, whose early death is deplored by all lovers of Italian literature, have been published in seven volumes under the editorship of Tullio Massarani and Giuseppe Pizzo (Milano: Ottino).

PROF. ZUPITZA has just published a second enlarged and improved edition of his *Selections from Anglo-Saxon and Early-English Literature*—"Alt- und Mittelenglisches Übungsbuch" (Wien: Braumüller). His text is 104 pages, and his glossary 87; that is an indication of the careful way in which the whole work is done. He starts with Bede's "Caedmon's Hymn" in the seventh century, and the runes of the Ruthwell Cross, ends with a bit of Lydgate's "Guy of Warwick," about 1420 A.D., and in between has a choice selection of extracts. One seeming inconsistency in the expansion of contractions has caught our eye in turning over the pages: in the pathetic "Moral Ode," pp. 51-62, the regular form "and" occurs six times, the irregular one "end" five times; yet over ten pages scores of expansions of "&" are printed *end*, giving the text a very odd look, while only the last half-page has *and* eight times.

A QUARTERLY Review of Serbian, Croatian, Bulgarian, and Slovenian literature will this year appear at Agram, under the editorship of Dr. Iwan von Bojnitzić.

PROF. ALEXANDER BÜCHNER has published a monograph, under the title of *Hoffmann et le Roi Carotte* (Caen: Le Blanc-Hardel), in which he seeks to prove that M. Sardou borrowed the plot of *Le Roi Carotte* from one of Hoffmann's tales.

#### A CKNOWLEDGMENTS.

WE have the following pamphlets, &c., on our table:—*Caer Pensauelcoit*: a Long-lost Unromanised British Metropolis: a Re-assertion, by the Author of "A Primaevial British Metropolis," with a Sketch Map (Reeves and Turner); *Guide to Selecting Plays*; or, *Managers' Companion*, giving a complete description of 1,500 Pieces (Samuel French); *The Nephew as Uncle*, translated from Schiller by T. C. Wilkinson (Newman); *Ashbury Church, and other Poems*, by the Rev. Joseph Oakden (William Poole); *Our Arms in Zululand*: being the Three Great Battles of the Zulu War

in Verse, together with "The Death of the Prince Imperial," by Bertram Mitford (Griffith and Farran); *Magnetic Disturbance, Aurorae, and Earth Currents*: a Discourse delivered at the Royal Institution by Prof. W. G. Adams; *The Exact Numerical Quadrature of the Circle effected regardless of the Circumference, and the Commensurability of the Diagonal and Side of a Square Demonstrated*, by James Steel (Wyman and Sons); *The Communicability to Man of Diseases from Animals used as Food*, by Dr. Henry Behrend (Office of the "Jewish Chronicle"); *The Public Library and the School Children*: an Appeal to the Parents, Clergymen, and Teachers of Boston, by James M. Hubbard (Boston, U.S.A.: A. Williams); *A Manual of Political Questions of the Day*, with the Arguments on either side, by Sydney C. Buxton (published by the London and Counties Liberal Union); *Our Commercial Policy*, with an Enquiry into the Present State of Trade, showing our Losses in the Past Thirty-five Years, and Decline among Nations, by Mr. Spencer Greatly (Norwich); and *Fair Trade v. Free Trade*; or, which System will best promote the Financial and Commercial Interests of Great Britain, by Peleus (Kerby and Endean); *The Coming Crisis*: a Word of Warning, by S. (Edinburgh: MacLaren); *The Rt. Hon. James Stansfeld, M.P., on the Failure of the Contagious Diseases Acts* (published by the National Association for the Repeal, &c.); *Thoughts on the Source of Life*: also Recent Speculations on Electricity and other Subjects, by an Octogenarian (William Ridgway); *The Problem of Philosophy at the Present Time*: an Introductory Address delivered to the Philosophical Society of the University of Edinburgh, by Prof. Edward Caird (Glasgow: MacLehose); *The Relation between Ethics and Religion*: an Address at the Opening of the Session 1881-82 of the Manchester New College, London, by Dr. James Martineau (Williams and Norgate); *A Reply to Dr. Allon's Critique in his "Church of the Future"*: being an Appendix to "Loss and Gain in Recent Theology," by Dr. James Martineau; *Living Words*: Two Addresses from the Chair of the Congregational Union of Ireland, 1880 and 1881, by the Rev. James Stirling (Belfast: Cleland); *Some New Light from the Scriptures*, by James Johnstone (Edinburgh: Gemmell); *Sunday-School Work*: its Magnitude and Comparative Results (W. B. Whittingham); *Criticisms on Certain Passages in the Anglican Version of the New Testament, as Revised*, by the Hon. Colin Lindsay (Burns and Oates); *The Revised Version—"The Oracles of God"*: a Lecture delivered before the Sunday Lecture Society by George G. Wild (published by the Society); &c., &c.

OF foreign books we have received:—*Zwei Bücher zur Socialen Geschichte Englands* von Adolf Held, aus dem nachlass herausgegeben von Georg Friedrich Knapp, mit dem bildniss Adolf Helds (Leipzig: Duncker und Humblot); London: Williams and Norgate); *Die Geschichte des Montanismus*, von G. Nathanael Bonwetsch (Erlangen: Andreas Deichert); London: David Nutt); *Die Volkswirtschaft in ihren sittlichen Grundlagen*: Ethischnociale Studien über Cultur und Civilisation, von Dr. Georg Raschinger (Freiburg-im-Breisgau: Herder); *Die Christliche Anschauung der Ehe und ihre modernen Gegner*, von Dr. Carl Thönes (Leiden: Brill); *Die Willensfreiheit und ihr Verhältnis zur Göttlichen Präscienz und Providenz bei den Jüdischen Philosophen des Mittelalters*, von Dr. Ludwig Stein (Berlin: Baer); *Die Wirtschaftliche Lage Cuba's* anknüpfend an die Entwicklung der Insel, von Franz G. de Larriaga (Leipzig: Duncker und Humblot); London: Williams and Norgate); *Studien zu Lessings stil in der Hamburgischen Dramaturgie*, von Dr. Max R. von Waldberg (Berlin: Köhl); *Repertorium der Englischen Sprach und Litteratur*

*Geschichte für Candidaten und Studierende der modernen Philologie*, bearbeitet von Dr. John Wilkins (Berlin: Köhl); *Ueber den Unterricht in den neueren Sprachen, spezieller der englischen, an unseren Universitäten u. höheren Schulen*, von Dr. David Asher (Berlin: Langenscheidt); *Séance de Rentrée des Cours de la Faculté de Théologie Protestante de Paris: Allocution de M. le doyen Lichtenberger; Leçon d'Ouverture de Prof. Bonnet-Maury* (Paris: Fischbacher); *Un Autografo di Ugo Foscolo*, pubblicato a cura di Leo Benvenuti (Bologna: Zanichelli); &c., &c.

## OBITUARY.

WILLIAM HARRISON AINSWORTH.

THE death of Mr. William Harrison Ainsworth, which occurred at Reigate, in Surrey, on January 2, breaks another of the links connecting the present generation with the days when Dickens and Thackeray earned their laurels, and were surrounded by a brilliant band, most of whom are now departed, and not a few of whom are forgotten. Mr. Ainsworth's pleasant home at the Kensal Manor House was the scene of many re-unions, which have now historic interest from the name and fame of the friendly artists and men of letters whom he gathered round his hospitable board.

Mr. Ainsworth was born in King Street, Manchester, on February 4, 1805. His father was a successful solicitor, who had both literary culture and public spirit, and gave his son the advantage of a good education. Talent was hereditary both on the father's and the mother's side, though it may be doubted whether the grave lexicographer, Jeremiah Ainsworth, or the reverend divine, Ralph Harrison, would have altogether approved of the direction in which their descendant displayed his abilities. Young Ainsworth was placed at the Grammar School of his native town, where his handsome figure, genial manners, and ready wit made him a favourite. Of his school-days he has left a picture in *Mervyn Clitheroe*—a novel which is to a certain extent autobiographical. Private theatricals, in which he took the part of dramatist, stage manager, and general factotum, were more to his taste than his father's profession, for which he was intended. Some of his early productions were printed in *Artisan's Magazine* and similar miscellanies. When he went to London to complete his legal education, his bent to literature was already very decided. His marriage, in 1826, to a daughter of Mr. John Ebers, the lessee of the Opera House, tended still further to determine him to remain in London and to attempt a literary career. He became a publisher, but the experiment was a very brief one. In his twenty-fifth year he conceived the idea of *Rookwood*, though various causes delayed the writing of it until 1834. Its success was striking, and, though the story is unequal, was deserved. The account of Turpin's ride to York will always hold its place as a masterpiece of descriptive writing. The publication of this story brought Mr. Ainsworth to the front rank of popularity; and, though his subsequent writings have not all enjoyed an equal degree of public favour, he remained to the last one of the most widely read authors of the English-speaking race. To reprint the long list of his published books is unnecessary here.

As to the quality of his work, there will always be difference of opinion. His *Jack Sheppard* was assailed by a storm of invective, and he was accused of glorifying theft and robbery. The higher regions of analysis and description of character he scarcely professed to attain; but his work was eminently readable, and gave with vivid precision a sense of at least the external aspect of the times and places with which he dealt. Perhaps, from an artistic

point of view, his finest work is *Old St. Paul's*, where the picture of a plague-stricken city is given with a lurid power that combines the grotesque and pathetic elements of such a situation. Several of Mr. Ainsworth's novels dealt with the history and traditions of his native country. In *The Lancashire Witches*, he has skilfully used the artistic material afforded by the grim tragedy of the judicial murder of the Pendle witches. In *Guy Fawkes* he has drawn a picture of the English Catholics under Stuart rule; the *Leaguer of Lathom* deals with an episode of the Civil War; *Beatrice Tyldesley*, with the so-called "Lancashire Plot" of 1694; *Preston Fight*, with the rising of 1715; *The Manchester Rebels*, with the story of the fatal Forty-five; and *Mervyn Clitheroe*, with Manchester as it was at the beginning of the present century.

In September 1881, the Mayor of Manchester (Mr. Alderman Baker) gave a banquet in honour of the veteran author. When replying to the toast of his health, Mr. Ainsworth said that nothing had more delighted him than to be styled the "Lancashire Novelist." It is a designation he had well earned, and it is the one by which he is most likely to be remembered. Lancashire has produced some notable writers of fiction; but Mr. Ainsworth was probably the first to recognise the artistic potentiality of the rude life that throbs alike through the traditions of its past and the incidents of its busy modern times.

WILLIAM E. A. AXON.

## MAGAZINES AND REVIEWS.

*Macmillan's Magazine* contains the end of Prof. Masson's admirable biographical sketch of "Carlyle's Edinburgh Life." Mr. Ffoulkes, in an article on "English Church Courts," gives some interesting details of his own ecclesiastical biography, but does not help matters much by suggesting alternative Communion offices in the English Church. Mr. Raven writes "More Diversions of a Pedagogue;" a good collection of school-boys' blunders is always irresistibly funny, and Mr. Raven has an appreciative manner of telling them which adds to the effect.

THE *Antiquary* (Elliot Stock) shows no signs of decay. In truth, the opening number for the new year is a distinct advance on most of its predecessors. Mr. F. C. Penrose's paper on St. Sunnafa—a mythic lady on whom both Ireland and Scandinavia have claims—is most interesting and curious. It would seem not unlikely that the relics believed to be the remains of this holy maiden were, in fact, the bones of some cave dweller—whether human or not, who shall say? Her legend, as Mr. Penrose points out, has several points of contact with that of St. Ursula. It is the opinion of some persons, not ill qualified to judge, that she of the 11,000 virgins is but a modern and pale reflection of the Hertha of pre-Christian days. If this be so, the legend of St. Sunnafa may be no copy of that of St. Ursula, but possibly owes its origin to a remote belief common to the whole Teutonic family. The account of the funeral of James III. (the Old Pretender) will be new to most persons. We do not think that so full a narrative of what took place in his honour, after death, has ever appeared in English before. It is therefore to be regretted that Mr. Theodore Bent has not given precise references to the sources from which his narrative is taken. The sketch of the Low Countries written by an Englishman in the time of James I. will be found very amusing by our Dutch cousins. It is a satire, but by no means a slanderous one. The industry and bravery of the men and the chastity of the women are honestly allowed for. The writer

seems to have been astonished that almost everybody bore coat-armour in the Netherlands. He held the opinion, then universal and now popular, that arms betokened "nobility" in the strict sense. Whenever heraldry shall have become a science, instead of the abject nonsense it now is, for the most part, it will be understood that armorial-bearings were the right of every free man. Ditmarsh, the Netherlands, and Biscay are instances in point. Mr. John Shavin Bayly has sent some additions and corrections to Haines's *Manual of Monumental Brasses*. They are very useful. It is important that this valuable catalogue should be posted up and made as complete as possible.

THE last number of *Le Livre* for 1881 contains an excellent portrait of Voltaire, printed in blue ink, from the original of La Tour, by heliogravure. It is far more characteristic than the more familiar and extremely monkey-fied presentment. The number is worth buying, if only for this portrait. It contains, however, some articles which are quite worth the subscription, independently of the illustration. There are short accounts of two Parisian literary societies—the "Amis des Livres," by an anonymous member of the guild; and the "Spartiates," by M. Arsène Houssaye. The first-named prints; the second "dine en causant et cause en dinant," but has a literary character in virtue of the law which obliges new members to compose either a sonnet or a short prose discourse on their defunct predecessors. The Spartans seem to include but one English member, the present Lord Lytton. Mr. Ashbee contributes a paper on the Tanjore Library, and M. de Montaignon an obituary of Baron James de Rothschild, his colleague in the editing of the well-known *Poésies françaises des XV<sup>e</sup> et XVI<sup>e</sup> Siècles*, whose untimely death is such a loss to French literature.

WE are glad to see that M. Gaston Paris has at last begun, in the *Romania*, his studies on the Romances of the Round Table. His father's theories much needed revision, and the son's long-promised work on the subject has been anxiously expected. But it exists, unhappily, only incomplete in his own head. He proposes to issue a series of tentative independent essays, and then, after these have been discussed, work them into a whole. The first has just appeared, on Lancelot, and will be followed by others on Erec, Iwain, Yder, Gauvain, Percival and the Graal, the history of religion in England, the lays, Nennius and Geoffrey of Monmouth, Merlin, Sir Tristram, &c., and, lastly, the prose Romances. M. Paris draws a sharp line between the earliest cycle of Arthur romances—those of adventure and courtesy, with a slight mixture of love—and those of the later cycle, best known to us, which centre round the guilty love of Lancelot for Guinevere (quite unknown to the first set), and the search for the mystic Graal. He then sketches and discusses the earliest French *Lancelot* preserved only in the German *Lanzelet* of Ulrich de Zatzikhoven, and searches for traces of the early hero elsewhere. The article is a most able one; though we think the suggestion of a set of lost Anglo-Norman romances as a missing link between the Welsh poems and the actual French romances rather risky. In a review in the same *Romania*, pp. 599-601, M. Paris contests M. Weidner's theory of a common original for the verse and prose short *St. Graal*, and upholds the orthodox view that the prose version is taken from the verse one.

# "RARE" IN THE SENSE OF "UNDER-DONE."

OUR request for information as to the use of the word "rare" in the sense of "underdone" has brought us so many letters that we can only acknowledge them *en masse*, and give their general purport. That a so-called "Americanism" should turn out to be genuine English vernacular is no new thing; but we confess to surprise that this particular word should be common almost throughout the length and breadth of the country, and in Ireland as well. From Scotland we have heard nothing.

Mr. Lewis Sergeant has heard the expression "rare done meat" in Yorkshire; Mr. R. Elliott, of Rishworth Grammar School, writes that "rare" in the sense of "underdone" is still used in the dialect of Sheffield, and is there applied to meat; Mr. C. S. Wake, of Hull, writes that the word is not by any means uncommon in the Midlands, and that in Yorkshire it is pronounced *rear* or *rere*; Mr. Robert Blair, of South Shields, writes that "rare," or, as sometimes pronounced, *rere*, is in common use in that town and the neighbouring district; Mr. Robert Brown, Jun., of Barton-on-Humber, writes that "rere" is frequently used in North Lincolnshire, and that he has heard a woman apply the term to the leg of a duck; an anonymous correspondent states that "rear" is still in common use among homely people in Lancashire; Mr. William H. Sewell writes that it is certainly not long since he heard the word (always, however, pronounced *rear*) used in Suffolk as applied to meat, but never to a soft-boiled egg. He adds that Major E. Moor, in his *Suffolk Words* (s.v.) takes the same view. The word is also to be found in Dr. Charnock's Glossary of the Essex dialect. In addition to the above, we have been told that "rare," as applied to meat, would be readily understood in Cheshire, in Surrey, and in Cornwall. Prof. William Wright, and three other correspondents, attest its use in Dublin and throughout Ireland; and Mr. H. Courthope Bowen says that in the West Indies "rare" is almost as common as "raw," adding that "there is no reason whatever to suppose that the word in this sense has been imported thither from the States."

As regards the appearance of the word in dictionaries, we quote the following from various correspondents:—

Nares.—"Rear, a., under-dressed: not yet quite disused as applied to meat.

'There we complaine of one reare-roasted chick,  
Here meat worse cookt nere makes us sick.'  
Har. Epig. iv. 6."

Halliwel.—"RARE, underdone, raw. *Var. Dial.*;" and "RERE, firm, but not too hard, as applied to meat, &c."

Halliwel also gives two quotations (one from Topsell's *Beasts*, 1607, p. 275), in both of which "reere" is used of an egg.

Bailey (1724) gives, as a "country" word, "Rare Boil'd, hat boiled."

As to the derivation of the word, we are indebted to Prof. Skeat for the following letter:—

"2 Salisbury Villas, Cambridge.

"A very little enquiry and consideration will prove at once that this word is certainly not borrowed from Danish. In the first place, the Danish modified *o* would never have become *a* in English. In the second place, it is surprising that anyone should rush to a conclusion without first investigating the history of the word. For that history see *hrer* in Stratmann's *Old English Dictionary*. The word is, of course, not Danish, but English, from the Anglo-Saxon *hrér*. We find *hrér henne ag*—i.e., a rare hen's egg—in Cockayne's Anglo-Saxon Leechdoms, vol. ii., p. 272; where we also find the advice *ne let geyrnan that ag*, do not let the egg coagulate. As

usual, *é* comes from *ó*, and *hrér* is from *hrór*, active; cf. *hréran*, to move. And since the *é* is a modified *ó*, we see that *hréran* is cognate with the Danish *røre*. The explanation, that the word at first meant 'not coagulated,' or 'partially fluid,' is right enough, as the above extract shows. The word also appears as *rear*; and compare *reeremouse*, a bat, named from its quick fluttering. 'Rare' is properly applied to eggs, but also to underdone meat.

"WALTER W. SKEAT."

The following letter is also interesting, though not for its philological importance:—

"Eton College.

"This Americanism is explained by Mr. Lowell in the Introduction to the Second Series of the *Biglow Papers*. He says:—

'I do not believe, with the dictionaries, that it had ever anything to do with the Icelandic *hrar* (raw), as it plainly has not in *rareripe*, which means earlier ripe. And I do not believe it for this reason, that the earlier form of the word with us was, and the commoner now in the inland parts still is, so far as I can discover, *raredone*. Golding has "eggs reere-roasted." I find *rather* as a monosyllable in Donne; and, still better, as giving the sound, rhyming with *fair* in Warner. There is an epigram of Sir Thomas Browne, in which the words *rather* than make a monosyllable:

"What furie is't to take Death's part,  
And rather than by Nature, die by Art!"

"FRANK H. RAWLINS."

## CORRESPONDENCE.

### HOTTENTOT MYTHOLOGY.

London: Jan. 3, 1882.

Mr. Max Müller's article in the January number of the *Nineteenth Century* will draw the attention of all mythologists to Dr. Hahn's most interesting work—*Tsuni Goab, the Supreme Being of the Hottentots*. It is seldom that we find the religion and the myths of a savage, or, at all events, of a very uncultivated, people examined with such minuteness and knowledge. As the book will probably be reviewed in the ACADEMY, I may perhaps be allowed to draw your readers' attention to the point of central interest in the work—the meaning of the name of Tsui Goab, or Goab, and the origin of the myths about him.

For many years all students of the mythology of the lower races have known this being under various names, all of which were translated "Wounded Knee." According to Callaway and Moffat, "Wounded Knee" was said to have been a famous chief or medicine man, or both, whose name was derived from an accidental injury to his knee. His grave, or graves, was adored in the usual fashion, with offerings of honey, or of boughs, or even by the gift of a stone thrown on the cairn. All this certainly looked very like the adoration of a dead man, and was not unwelcome to mythologists who conceive that ancestor-worship is no small element of religion. The researches of Dr. Hahn prove that the Hottentots, or Khoi-Khoi, as they prefer to be called, do hold the opinions about Wounded Knee ascribed to them by Moffat, Appleyard, Callaway, and others. Dr. Hahn also proves, by ocular evidence, that ancestor-worship is part of the actual religion of the Khoi-Khoi (pp. 112, 113). Once more (p. 103), he says that the deeds of the dead men of our own generation are celebrated with hymns and dances, precisely as are the deeds of Tsui goab. In these circumstances it would scarcely have been rash for a mythologist to regard Tsui goab as really a medicine man of some generations back. I will presently give the reasons which have always made me doubt the correctness of this view. Meanwhile, for quite other reasons, Dr. Hahn discards it. He is a philologist, "reared in the school of Pott;" and Wounded Knee, as the name of a god, is puzzling to a philologist. There is nothing about the Dawn or Sun or Thunder in "wounded knee." But Dr. Hahn has discovered (p. 123) that goab means not only "knee," but also "Dawn." He then remarks, "it is now obvious that goab in Tsui goab cannot be translated with 'knee.'" Why is it obvious? It is true that, construing Tsui = wounded, we get little sense out of "wounded-dawn;" but that only makes knee seem the better rendering. But Dr. Hahn prefers to find a

meaning for Tsui that will go with "Dawn." "Tsui" means what is sore, a wound is "sore"—and "the colour of a wound is red, and thus *tsu* can signify red. . . Tsu-goab, therefore, verbally translated, is the *red-morning*." Can this mode of proving that Tsu means red—a proof absolutely destitute of evidence—satisfy anyone? The syllogism is: Tsu means what is sore; some sore things are red; therefore, Tsu means red. The same sort of reasoning demonstrates that Tsui goab's adversary, Gaunab, being derived from a root meaning to destroy, can be "nobody else but the Night" (p. 125). In contrast with this, take Dr. Hahn's other statement (p. 85): "Here we have the key to the original meaning of the word Gaunab. He was at first a ghost . . . whose greatest aim was to harm people and (gau) destroy them. Some people are said to die from the influence of this evil spirit." That is a belief universal among the lower races, but seems to have no necessary connexion with night. Nor is it logical to say Gaunab means a destroyer, Night destroys, therefore Gaunab can be nobody but the Night.

Mr. Müller, in his interesting essay in the *Nineteenth Century*, rather rejoices over Mr. Spencer, because the ancestral ghost of Wounded Knee has turned out to be no ghost, but the Red Dawn in disguise. The contention may be left to Mr. Spencer; but, in the meantime, may a humble "anthropologist" (a class opposed by Mr. Müller to "scholars") observe that all anthropological mythologists are not disciples of Mr. Spencer, nor of the Abbé "Bernier," as Mr. Müller calls the writer known as Banier to anthropologists. Mr. Müller says that there "are only two systems possible in which the irrational element in mythology can be accounted for." One, he says, is the theory of Euhemerism (and of Mr. Spencer); the other ascribes the irrational element in mythology to "the influence of language on thought." But this is a hasty dichotomy. If a man may speak for himself, I attribute most of the "irrational element in mythology" to the survival of savage ideas and practices, of which ancestor-worship is only one. Is it not obvious that, even if Tsui goab was originally the Dawn, all the stories of his having been a medicine man and an ancestor could only have arisen among a race which was familiar with ancestor-worship and with medicine men? Mr. Müller himself makes this very remark. And no more is asked for by anthropologists who find that most of the irrational things in Greek mythology are rational and probable according to the standard of belief among savages.

I must say, in one word, why I did not believe much in a real ancestral Tsui goab. First, he has too many graves for one man, however much buried; second, lame gods are common to the Brazilians, Australians, and Greeks, with their Hephaestus and Pan *κακόκρημος*, if a poor devil of an anthropologist may quote an author familiar to scholars. All these lame gods cannot have been "weak-kneed quacks."

A. LANG.

## PALMAM QUI MERUIT FERAT.

Westbury-on-Trym: Jan. 2, 1882.

A writer in the last *Saturday Review* (December 30, 1881) takes occasion, in the course of an able critical paper, to speak of "Herr Brugsch's now famous find at Thebes." I believed that I had long since made it clear that the honour of this discovery is solely due to Prof. Maspero. Permit me briefly to recapitulate the facts. An English traveller presented Prof. Maspero with photographs from the first pages of the funereal papyrus of Pinotem II., and stated that he had purchased the original document through a Theban Arab,

named Abd-er-rasoul. Hereupon, Prof. Maspero, in the month of March 1881, went to Thebes, his principal object being to discover the tomb from which that papyrus had been taken. He arrested Abd-er-rasoul; tried persuasion, threats, rewards, imprisonment, and all in vain. Finally, being called to Europe, he released the man; offered a reward of £500 for the discovery of the secret; and left Herr Emil Brugsch full authority to act for him in the event of any information being received. Scarcely had he embarked before a brother of Abd-er-rasoul went to the Governor of Kenh (the chief town of the province), claimed the reward, and gave up the facts. The Governor telegraphed to Cairo, and the Khedive at once despatched Herr Emil Brugsch to Thebes to bring away the treasure. The energy and skill with which this difficult task was accomplished by Herr E. Brugsch, assisted by Ahmed Effendi Kemal, have been publicly acknowledged in the warmest manner by Prof. Maspero.

It may perhaps be said that a secret betrayed is not a secret discovered; but, on the other hand, this particular secret would never have been betrayed at all but for the penetration and good generalship of the man who instituted the enquiry and offered the reward.

No one, I am assured, will be better pleased to have this matter placed before the public in its true light than Herr Emil Brugsch himself.

AMELIA B. EDWARDS.

## THE BIRTHPLACE OF WORDSWORTH.

London: Jan. 2, 1882.

I have seen Mr. William Wordsworth's letter (reprinted from the *Carlisle Patriot* in the *ACADEMY* of December 10, 1881) referring to my statement regarding his father's birthplace, and it does not, most certainly, "ease my mind" as to where the poet was born. Although Mr. Wordsworth's illustrious father showed him the room in which he supposed himself to have been born, there is no conclusive proof that he did first really see the light in "Wordsworth House." It is pretty nearly certain that Mr. Justice Lucock was living in that house in 1771, and I, therefore, still think that there is as much evidence in support of my theory that the poet was not born in "Wordsworth House" as in the supposition that he was.

Since my last letter I have acquired more particulars respecting Wordsworth's birth and early years, and these will be embodied in a series of illustrated articles which I have in preparation. Many people may think it scarcely worth while making such minute enquiries in what is comparatively so unimportant a subject, but small details go a long way towards forming an accurate biography. If any readers of the *ACADEMY* possess information, however small and fragmentary, respecting Wordsworth's early life, and will send me particulars, I shall be greatly obliged. I am specially anxious to learn anything relating to his attendance at the Cockermouth Grammar School.

JOSEPH S. FLETCHER.

## APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 9, 5 p.m. London Institution: "Commerce and Trade Routes of Prehistoric Europe," by Prof. W. Boyd Dawkins.

7.30 p.m. Aristotelian: Discussion, "Necessity."  
8 p.m. Royal Academy: "The Flemish Masters of the Sixteenth and Seventeenth Centuries," II., by Mr. E. Armitage.

TUESDAY, Jan. 10, 8 p.m. Biblical Archaeology: Anniversary Meeting.

8 p.m. Anthropological Institute: "The Entrenchments of the Yorkshire Wolds and Excavations in the Earthwork called 'Dane's Dyke' at Flamborough," by Gen. Pitt-Rivers; "The Discovery of Ancient Dwellings on the Yorkshire Wolds," by Mr. J. K. Mortimer.

8 p.m. Institution of Civil Engineers: Inaugural Address by Sir W. Armstrong, "National Defences."  
8 p.m. Photographic.

WEDNESDAY, Jan. 11, 8 p.m. Society of Arts: "The Industrial Resources of Ireland," by Mr. G. Phillips Bevan.  
8 p.m. Geological: "The Two British Types of the Cambrian Beds, and the Conditions under which they

were respectively deposited," by Prof. E. Hull; "The Devon-Silurian Formation," by Prof. E. Hull; "The Chalk Masses or Boulders included in the Contorted Drift of Cromer, their Origin and Mode of Transport," by Mr. T. Millard Reade.

8 p.m. Microscopical.  
8 p.m. Zetetical: "Vivisection," by Mrs. Anna Kingsford.

THURSDAY, Jan. 12, 7 p.m. London Institution: "Familiar Arts," by Mr. Hubert Herkomer.

8 p.m. Royal Academy: "The Flemish Masters of the Sixteenth and Seventeenth Centuries," II., by Mr. E. Armitage.

8 p.m. Mathematical: "The Invariants of a Certain Orthogonal Transformation, with Special Reference to their Use in the Theory of the Strains and Stresses of an Elastic Solid," by Mr. W. J. C. Sharp; "Complete Determination of the Real Foci and of the Vector Equation of a Given Ellipse with Respect to any Proposed Point," by Prof. Wolstenholme; "Some Formulas in Elliptic Functions," by the Rev. M. M. N. Wilkinson; "The Calculation of Symmetric Functions," by Mr. J. Hammond.

8.30 p.m. Antiquaries.

FRIDAY, Jan. 13, 8 p.m. New Shakespeare: "Constance," by Mrs. J. H. Tucker; a Paper by a Member of the Monday Shakespeare Club, Glasgow.

## SCIENCE.

*The Sikandar Nāma, e Bara*, or Book of Alexander the Great. Written A.D. 1200 by Abū Muhammad bin Yūsuf bin Mu'ayyid-i-nizāmu'd-dīn. Translated for the first time out of the Persian into prose, with critical and explanatory remarks, with an introductory Preface, and with a Life of the author collected from various Persian sources, by Capt. H. Wilberforce Clarke. (W. H. Allen.)

CAPT. CLARKE lays special emphasis on the following features in his translation of Nizāmi's *Sikandar Nāma*:—The cantos and couplets are numbered, rendering reference easy; each line of the translation agrees with the corresponding line of the Persian; a complete table of contents is given; while alternative renderings of passages, and copious notes elucidating difficult and obscure points, make the student's path as smooth and as easy as it is possible to make it by means of a translation. He adds that the poem is "required for the first examination in arts at the University of Calcutta, and the examination for the degree of honour." It is clear, therefore, that Capt. Clarke's principal aim in preparing this translation was a scholastic one, and from this point of view he deserves unqualified praise. His notes and various readings occupy half the page in the earlier portions of this portly volume, and no pains have been spared to supply the student with every possible explanation and illustration that could be obtained. As an educational work this version of the *Sikandar Nāma e Bara* will prove very serviceable. A few errors of the press may be detected; but, as a whole, the task has been executed with infinite care and laborious attention to details. It is no inconsiderable feat to translate an epic of 6,886 couplets. We are not disposed here to challenge the Persian predilection for length in poetry, except so far as it taxes the perseverance of the translator and the reader. It must be admitted that it needs a great poet to sustain the interest through 13,000 lines—and those only half the epic after all, for there is a Sea-Alexander book, or *Sikandar Nāma i Bahri*, as well, forming the counterpart of the portion which Capt. Clarke has compressed into 830 large octavo pages, giving a weight, including the cloth boards, of 3 lb. 6 oz. avoirdupois. The marvellous grace and flow of the Persian goes a long way towards rendering these prodigious epics endurable and even enjoyable, at least in

parts; but in English the charm is apt to disappear, and the length to evince properties of self-elongation.

We lately expressed a wish that Mr. Redhouse had translated the *Meznevi* into prose instead of verse; now we wish that Capt. Clarke had made use of verse, merely in the hope that the result might be more satisfactory and less satisfying than the prose in which he has cast his rendering. As an aid to the learner the book is valuable; but as an endeavour to bring Nizāmi to the appreciative attention of English readers, it is not calculated for success. Capt. Clarke quotes many wise sayings in favour of prose translations, and he is undoubtedly right in thinking that it needs a poet to translate a poet, in verse. But in prose versions some attention to style is necessary as well as to literal accuracy; and it is an injury rather than a service to a poet to introduce him to a new circle of readers in so very rude a dress as that in which Capt. Clarke attires Nizāmi for the first time. Every translation needs something of what Mr. Stopford Brooke calls "curious care" if it is to fill a place in English literature at all worthy of the reputation of the original in its own literature. There is plenty of care in Capt. Clarke's translation, but scarcely of the kind we mean. The following is a fair specimen of the style of this version of the *Sikandar Nāma, e Bara* :—

"When the men of Zang obtained intelligence that the army (of Sikandar) had come,  
The world became black to the eye of the men of Zang.

The two armies became arranged opposite (to each other);  
All compassionate feelings, risen to go, departed.

From the steel-nail hoof of the war steeds;  
From the agitation,—earth's foundations fell.

From much shouting, which came forth from the ambush,  
The (glass of the) sky (cracked and) fell upon the earth.

From the mace, heavy of weight, of the warriors,—  
The head of the fish and of the ox became heavy.

From the clamouring of noise, like the Resurrection Day,  
Flight came upon the beasts of the desert.

When their weapons were prepared for battle,  
The demon, on account of their uproar, became a flee-er.

They accepted the battle-place in such a place  
That the heat brought forth dust from (distressed) the men.

A land,—more waterless than red sulphur;  
An atmosphere,—more liver-scorching than hell.  
Neither in it cold water,—save pure poison (hot water, bitter and deadly);  
Nor in it warm affection,—save the sun.

By reason of large serpents (swords) the caves (wounds) came into commotion;  
In them (the caves) the day (of splendour) of markets as regards tumult (of bloodshed)

In that place of ghūls (the battlefield, void of water) they (the men of Rūm) made their abode (for embassy-sending);  
They (the champions on both sides) galloped like ghūls in every direction (for man-slaying, camp-guarding, and supply-bringing).

When the ox of the earth swallowed his own hump (half of the sun),  
The black lion (night) leaped forth from ambush (appeared).

The Bull of the celestial sphere (Taurus) went boldly to (appeared on) the horizon,  
And stars, like lions' teeth, came forth (fearful).

Night displayed from its own navel something like musk (darkness);  
The world laid aside the jewel of light.

The officer of the advanced guard (of the army), enemy-recognising, went forth;  
The watchman bound his loins on the guard-place (about Sikandar's tent)."

(Pp. 166-68.)

Whatever beauty there is in the metaphors of Nizāmi is destroyed by the explanations in parentheses, especially when the explanations are adorned with compound words formed after the German fashion expressly for this work. It is evident that a poem of which the half extends to 13,000 lines requires more skill in translation to commend it to the majority of readers than has been bestowed on the *Sikandar Nāma*. It is something to have translated a famous Persian epic poem for the first time; though it was not necessary to depreciate Mr. Robinson's little sketch, which has hitherto, in conjunction with its original by Dr. Bacher, been the chief source of popular knowledge about Nizāmi, and which is still likely to be of more general service, from a literary point of view, than Capt. Clarke's massive volume. The latter will not favourably impress those who are trying to form a just appreciation of Persian poetry at second hand; but it will help those who wish to learn the language and study its poetry for themselves.

STANLEY LANE-POOLE.

#### SOME BOOKS ON CHEMISTRY.

*A Treatise on Chemistry.* By H. E. Roscoe and C. Schorlemmer. Vol. III.—The Chemistry of the Hydrocarbons, or Organic Chemistry. Part I. (Macmillan.) Of the 695 pages constituting this first moiety of the third and last volume of Roscoe and Schorlemmer's new chemical text-book no less than 190 are occupied with the discussion of the methods and the philosophy of the subject. The systematic description of individual organic compounds—their occurrence, their production, their properties, and their reactions—begins with the methyl group, and then proceeds through nineteen sections, or 270 numbered paragraphs. In these we are presented with well-digested accounts of bodies containing from one to twenty-four atoms of carbon; the aromatic series, and those compounds which have, up to the present time, eluded classification, partially or wholly, being reserved, we presume, for the second and concluding portion of the final instalment of the work before us. It is difficult to praise too highly the selection of materials and their arrangement, or the wealth of illustrations which explain and adorn the text. In its wood-cuts, in its technological details, in its historical notices, in its references to original memoirs, and, it may be added, in its clear type, smooth paper, and ample margins, the volume under review presents most commendable features. Whatever tests of accuracy as to figures and facts we have been able to apply have been satisfactorily met, while in clearness of statement this volume leaves nothing to be desired. Moreover, it is most satisfactory to find that the progress of this valuable work towards completion is so rapid that its beginning will not have become antiquated before its end has been reached—no uncommon occurrence with elaborate treatises on natural science subjects.

*Inorganic Chemistry.* By W. Jago. (Longmans.) The number of elementary text-books of chemistry is the source of much perplexity to teachers and students alike. We are often

tempted to ask why the best characteristics of all such small manuals could not be gathered together in a single volume which should meet with general acceptance. Of course, four out of five of the booklets produced to meet the wants of science classes need not be consulted; their mode of manufacture is not such as to allow us to assign any value to their contents. But there are, on the other hand, a considerable number of small works on theoretical, and also on practical, chemistry which are distinguished by sound knowledge of the science, thorough grasp of the means and end of teaching, and judicious selection, and even invention, of telling experimental illustrations. Generally, these better books have, however, some defects. Those that deal with laboratory practice, for example, do not commend themselves in all their sections equally to experienced teachers. Possibly the authors' directions cannot be carried out by large classes of beginners demanding, it may be, the placing in unaccustomed hands of many pieces of fragile and costly apparatus. Again, sometimes quantitative work is insisted upon at the very beginning of the course, although the accuracy and exactness so essential to chemical manipulation must be reached by graduated lessons. The little manual before us belongs to the higher class of elementary text-books. It combines theoretical and practical chemistry, and treats these subjects from the double standpoint of sound science and the examination-room. The elements discussed are oxygen, hydrogen, nitrogen, chlorine, carbon, and sulphur. It is written with knowledge and commendable clearness.

*Strecker's Organic Chemistry.* By Dr. J. Wislicenus. Translated by W. B. Hodgkinson and A. J. Greenaway. (Kegan Paul, Trench and Co.) This "short text-book" of organic chemistry contains 769 large pages of closely printed text and twenty pages of Index. The author, Adolph Strecker, was about to begin the preparation of the sixth edition of the work when, on his sudden death in 1871, the task of revision was taken up by Prof. Wislicenus, of Würzburg. His revision was issued in 1875, and now the work has been reproduced in English, with alterations and additions by Messrs. Hodgkinson and Greenaway. It is difficult to judge fairly of such a book. The method of arrangement and the selection of materials are, in most particulars, satisfactory, but we do not find in the volume any striking marks of superiority over English manuals of similar scope. Here are the usual introductory observations on the elements of organic bodies; on organic analysis; on formulae and radicals and chemical structure; on the physical properties of organic bodies; and on the changes of organic bodies. Then we are led on to consider cyanogen and carbon dioxide and their derivatives. Next we are introduced to the methanes or paraffins and their derivatives. Afterwards, the aromatic series is described and discussed. Lastly, we have brief and, for the most part, imperfect notices of a crowd of important compounds, arranged (shall we say?) under the heading "Organic Compounds of Unknown Constitution." The fifty pages allotted to these bodies cannot be considered satisfactory, as the following examples will suffice to show. On pp. 731-32 there are seven lines given to chlorophyll; but they are so far from representing the present condition of our knowledge of leaf-green that they omit all reference to the results of Gautier, Hoppe-Seyler, Rogalski, and Pringsheim. On p. 734 we are told that the resin of *xanthorrhoea hastilis* is called "acaroid," and that amber is "formed in many peat-bogs, and consists chiefly of an amorphous substance, insoluble in alcohol, oils, and alkalis." This information, if so it can be called, is in the last degree

unsatisfactory. Better omit all reference to resins than notice them in this feeble way. On p. 742, the chinoline series of bases from cinchonine is pronounced identical with the isomeric series from coal. The use of the term "proteids" for the groups of substances to which mucin, elastin, &c., belong, and the separation of proteids from true albuminoids cannot be commended. And if we accept "gelatinous tissues" as a generic term, what shall be said of glutine being used (p. 753) for the main constituent of glue and gelatine? The notion (p. 512) that no substance having the properties usually assigned to lignin or lignose is associated with cellulose in hard woody tissues is too ludicrous to be entertained for a moment, particularly in the face of the researches of Hugo Müller and Cress. The volume before us is, we are bound to confess, printed with care; and we have not met with any of those errors in figures and formulæ which are so difficult to avoid in chemical text-books. Such mistakes as "hilum" for "hilum" (twice on p. 514) and "traganth" for "tragacanth" (p. 517) are of no consequence. A word of praise for the very full Index should not be withheld.

A. H. CHURCH.

## OBITUARY.

LEWIS H. MORGAN.

WE regret to announce the death of Mr. Lewis H. Morgan, the chief of American anthropologists, which took place at Rochester, in the state of New York, on December 17, after a brief illness following a long period of delicate health. For the following particulars of his life and works we are indebted to an appreciative notice in the *Nation*. A native of Western New York, at an early age he became interested in the remnant that still survives in that neighbourhood of the once mighty "Six Nations;" and he gained by intercourse with the Indians a thorough insight into the constitution of their confederacy, into their manners and customs, and, above all, into their curious system of tribal intermarriage. Together with some kindred spirits, he founded a "New Confederacy of the Iroquois"—a sort of antiquarian society, having as a subsidiary aim the promotion of a kindlier feeling towards the red man. The papers which he read before this society in 1844-46 have been since republished more than once, under the title of *The League of the Iroquois*. A visit that he paid to Lake Superior led to two results—one was his exhaustive and highly readable monograph on *The American Beaver and his Works* (1867); the other was his discovery that the system of tribal intermarriage in the "Six Nations" prevailed also among the American Indians generally. Subsequent investigations, conducted partly by means of schedules of questions sent out to missionaries and scholars in all parts of the world, induced Mr. Morgan to regard this system as a fundamental fact in the development of the human race. His theory, which first appeared in the "Contributions to Science" of the Smithsonian Institution for 1873, was published in 1877 in book form, under the title of *Ancient Society*; or, *Researches in the Line of Human Progress from Savagery, through Barbarism, into Civilization* (see *ACADEMY*, July 20, 1878). Mr. Morgan's last investigation was into the pueblos of New Mexico, from the study of which he concluded that the mound-builders were village Indians of New Mexican origin, and that the mounds were platforms for their long wooden communal houses. It was only on his death-bed that he received his very latest printed work, *Houses and House-life of the American Aborigines*, published by the Bureau of Ethnology of the Smithsonian Institution. The

writer in the *Nation* bears witness to the charm of Mr. Morgan's personal character and manners, and adds:—

"He was one of a group of learned and gifted men whom the University of Rochester naturally drew about it, and whose periodical meetings and constant co-operation maintained in that city an uncommon intellectual atmosphere."

THE death is also announced, by telegram, of another eminent figure among American men of science—Prof. John William Draper, perhaps best known in this country for his *History of the Conflict between Religion and Science* (1874).

## NOTES OF TRAVEL.

IF a Government vessel be sent out by the Admiralty this season for the relief of Mr. Leigh Smith's expedition, it is not improbable that Capt. A. H. Markham may have the command.

THE first part, containing seven sheets, is now ready of the large-scale map of Eastern Equatorial Africa, on which Mr. E. G. Ravenstein has been engaged for some three years and a-half for the Council of the Royal Geographical Society. When complete, the map will consist of twenty-five sheets.

THE French surveying expedition which was recently sent out to continue the operations of last season between the Upper Senegal and the Niger was wisely not allowed to land at the coast, owing to the epidemic of yellow fever which had so long prevailed there. They were transferred to a small steamer; and, as the river chanced to be high, they arrived at their destination, Khay, some seven or eight miles below Medina, on November 6. They thus accomplished in six days the journey of 500 miles, which, on a former occasion, had occupied six weeks. For some time Col. Desbordes' head-quarters will be at Khay, as that is to be the starting-point of the railway.

By a telegram from Brisbane we learn that Major-Gen. Feilding's transcontinental survey expedition reached Point Parker, on the Gulf of Carpentaria, on November 15, and was at Kimberley on November 24. They were expected at Brisbane on December 20. The reports still continue favourable in regard to the nature of the country traversed by the party, and it is thought that the Colonial Government will accept the route chosen.

THE January number of the *Monthly Record of Geography* gives us Mr. E. C. Hore's comprehensive memoir on Lake Tanganyika, which is a most useful contribution to the geography of East Central Africa, especially as it is accompanied by the author's own maps of the Lake. The remainder of the number is essentially Arctic in its character; in it we find Mr. Markham's paper on the *Jeannette* expedition, and Commodore Jansen's on the four voyages of the *Willem Barents* and the probable position of Mr. Leigh Smith. Among the geographical notes are some interesting particulars respecting the ice movements in the Barents and Kara Seas during last season, preceded by some observations as to the supposed position of the *Eira* and the movement for the succour of Mr. Leigh Smith. We are afterwards told that Mr. Schuer has visited the country of the Légha Gallas, and has been the first to see the great lake and river Baro. He was to start on his southward journey in December. Lieut. Hovgaard's letter, explaining his proposed plan for finding the *Jeannette*, shows that the writer had a more correct view of the situation than Sir E. Collinson, and, though, of course, now out of date, it is very interesting reading. In con-

clusion, we must not omit to mention that with this number is issued a preliminary map of Wrangel Island from the survey lately made by Lieut. Berry, U.S.N., on the occasion of the memorable visit of the steamer *Rodgers* last September.

MR. DALL's elaborate paper on the hydrology of the Behring Sea is concluded in the last number of Petermann's *Mittheilungen*. A careful consideration of the observation made by himself as well as by his predecessors leads the author to the conclusion that the warm surface water which enters the Polar Sea through Behring Strait is, at most, capable of melting 5,100 square inches of ice, and that its influence is consequently insignificant. No branch of the Kuro Siwo enters the Behring Sea, and the currents in the Polar basin to the north of it are mainly dependent upon the winds. There is no reason to suppose that these drift currents are capable of opening passages through the pack-ice which would enable exploring vessels to reach the Pole, or even a very high latitude.

## SCIENCE NOTES.

*The British Museum Meteorites*.—The magnificent collection of meteorites belonging to the British Museum has been lately re-arranged in the mineralogical gallery of the new Natural History Museum in the Cromwell Road. Mr. L. Fletcher, the Keeper of Minerals, has lost no time in issuing a Guide to the collection. This contains not only a catalogue of the entire collection of meteorites—classified as aërosiderites, aërosiderolites, and aërolites—but also a valuable introductory essay, which gives a concise, yet singularly lucid, account of our knowledge of these bodies. The Guide forms a pamphlet of thirty-nine pages, and we are pleased to see that the Trustees have issued it at the price of one penny.

AMONG the candidates for the Chair of Natural History in the University of Edinburgh, vacant by the resignation of Sir C. Wyville Thomson, are Prof. E. Kay Lankester, of University College, London; Prof. John Young, of Glasgow; and Mr. Patrick Geddes, now lecturer in zoology and demonstrator of botany at Edinburgh. The appointment, which will probably be made very soon, rests with the Home Secretary. The endowment (from a parliamentary grant) is only £160 a-year; but the income from fees is very large.

THE Association for the Improvement of Geometrical Teaching will hold its annual meeting at University College, Gower Street, on Wednesday, January 11, at 11 a.m., when, with other business, the code of rules drawn up in April last will be submitted for confirmation. The following resolution will be proposed:—"That the proofs of the propositions contained in book i. of the Syllabus be received by the association, and that the committee for elementary plane geometry be instructed to add a collection of exercises to the proofs of the propositions of the Syllabus." All persons interested in the objects of the association are invited to be present.

THE French Société nationale d'Agriculture has elected as president for 1882 the eminent chemist, M. Chevreul, who has reached his ninety-sixth year, and the fiftieth anniversary of whose connexion with the society it is proposed to commemorate. A scheme is also under consideration to present a gold medal to M. Pasteur for his services to agriculture.

It is announced that Herr Enke, of Stuttgart, is about to publish a monthly magazine devoted to science, under the title of *Humboldt*. The periodical will be edited by Dr. Georg Krebs.

## PHILOLOGY NOTES.

MR. HENRY SWEET's collection of Anglo-Saxon Charters, in his "Oldest English Texts" for the Early-English Text Society this year, will contain the only fifty-seven that he admits as genuine in the fore-Alfred time, and will begin with one in uncials of the seventh century, 692 or 693 A.D. Mr. Sweet classifies the Charters, first by age and then by dialect, and for the first time edits them critically. He rejects all documents preserved only in the monastic registers or *Chartularies*. As these cannot be relied on as genuine contemporary instruments, they must at least be second-hand, if not dozenthand; and so Mr. Sweet confines himself to the Charters on separate sheets. The Saxon ones are printed at full length; the Latin ones are abridged, their Saxon words only being all preserved, with enough Latin to make the Saxon clear. Mr. Sweet's Introduction to this book will contain a complete grammar of fore-Alfred English—a subject which has never before been treated.

M. DE LONGPÉRIER, of the Académie des Inscriptions, has sought to connect the discoveries of M. de Sarzec with the kingdom of Mesopotamia, ruled over by Chushanrishaithaim (Judges ii. 8, 10). The Hebrew word there translated "Mesopotamia" is *Aram-Naharaim* = lit. the Syria of the Two Rivers (more properly the Highland of the Two Rivers). The site of M. de Sarzec's discoveries is washed by both the Tigris and the Euphrates; and sculptures in bas-relief show that the national deities, to which the kings served as high-priests, were these two rivers.

At a recent meeting of the Académie des Inscriptions, M. Aymonier read a paper upon an inscription in the Ciam or Cham language, from Dambang-Dék, in Cambodia. The people known as Ciam were the dominant race throughout the peninsula of Further India before the invasion of the Khmers of Cambodia, and of the present inhabitants of Annam. They are still to be found everywhere in scattered communities. Their power and civilisation in the thirteenth century are attested by Marco Polo, who visited their central home, Ciampa. According to their own traditions, they received their culture from India in the first century A.D. M. Aymonier states that they have three dialects or languages—(1) the *datil*, or sacred language; (2) the *ciam*, or the vernacular proper; (3) the *bani*, a Muhammadan dialect, which has now superseded the other two. The inscription referred to is written in the second of these three. It contains the lament of a mother, whose daughter (a princess) has fled, abandoning her husband and children. M. Aymonier has also discovered in Cambodia several Sanskrit inscriptions, which may prove to be of extreme interest. One of these, copied in facsimile, is reported by M. Adolphe Regnier to be in classical Sanskrit of unusual correctness. As we have before stated, the Académie have presented a memorial to the Government praying that M. Aymonier should receive official support for continuing his investigations.

## MEETINGS OF SOCIETIES.

SHORTHAND SOCIETY.—(Tuesday, Jan. 3.)

CORNELIUS WALFORD, Esq., in the Chair.—A paper was read from M. Guénin, foreign associate and revising stenographer in the French Senate, on "The Origin of German Systems of Shorthand." M. Guénin attributed the origin of the system of Gabelsberger (1831-34) to those published in England by Roe (1802) and by Oxley (1821), and expressed an opinion that, to some extent, the system of Oxley could be traced in the popular German system.—An animated discussion followed the paper. The German members admitted that, in the sloping, or "script," system, Gabelsberger had

been anticipated in England. On the point whether there was evidence of plagiarism from the English systems, opinions were divided.

## FINE ART.

THE MEDALS IN THE BRITISH MUSEUM.

*Guide to the Italian Medals in the King's Library, British Museum.* By C. F. Keary, M.A., F.S.A.

*Guide to the English Medals.* By Herbert A. Grueber. (Printed by Order of the Trustees.)

MR. KEARY's *Guide* is not only of great value and interest to one who is studying the specimens of medals of which electrotype copies are now exhibited in the King's Library, but also contains an excellent introductory monograph on the subject.

This preliminary part treats of the various schools of medallists, and traces the change of style from the broad sculptural manner of the end of the fourteenth century to the more gem-like and less massive treatment of the sixteenth- and seventeenth-century artists. In the short period of little more than a hundred years, from about A.D. 1390 to the early years of the sixteenth century, the medallic art in Italy passed through the same changes of style which in the case of the larger and more important plastic works were spread over some three centuries. Mr. Keary shows that, apart from the general influences which gradually affected sculpture in Italy—the increasing desire, that is, for strong dramatic expression—the medallic art received a complete modification by the change which was introduced in the manner of producing the medals.

"The art of making dies, in the degree in which it was understood in the fifteenth century, would not permit the striking of coins otherwise than in very low relief; it was altogether unsuited to the production of medals, so that these were, in early times, always cast. A model was made in wax, and was first embedded in fine moulding earth or charcoal. This material must be so fine as to be almost palpable. When it had fitted itself into every crevice of the wax model, it was stiffened with some kind of lye, the wax was melted out, and into the mould thus left the metal was poured."

It is to this process that the earlier medals owe their special charm of vigour and largeness of effect. The easily moulded wax caught the first freshness and *verve* of the artist's conception in a way that the slow and laboured process of cutting a metal die could never do.

"The process of casting above described would leave the surface of the medal, and more so its edge, somewhat rough. To correct this, the whole piece was worked over with sand-paper or some fine instrument, and the edge was filed smooth."

No doubt the graving tool was used, but I doubt very much that the whole surface of the medal was worked over, as this would have very much injured the delicacy of the modelling. It is certain that the Italian fifteenth-century artists possessed the secret of getting sharp castings in bronze in a way that is now quite lost.

Mr. Keary points out that the practice of striking medals took the art out of the hands

of the sculptor, and made it a branch of the coin and gem-engraver's art.

"The sculptor in bronze modelled in clay and the medallist in wax; that was all the essential difference between them. The die-engraver's art demanded quite another kind of skill, and was more akin to that of the engraver of gems and crystals, or his who practised the finer kinds of goldsmith's work."

There was not even the unimportant difference which Mr. Keary supposes between the process of the early medallist and that of the sculptor in bronze; since even the largest pieces of bronze sculpture were executed by the *cire perdue* method in the same way as the smallest cast medal; the only difference being that, in order to save valuable metal, all models for bronze works of any size were made with a rough core, over which a skin of modelling wax was spread. Without this the casting would have been solid all through. That this process was used in England as early as the thirteenth century, we know from the record of the many hundreds of pounds of wax which were used by William Torel in the making of his three effigies of Queen Eleanor of Castile. An interesting description of this *cire perdue* method is given in Vasari's treatise, *Della Scultura*, cap. xi. The taste for engraved gems, both ancient and modern, which came in towards the end of the fifteenth century had a strong influence on the style of medals, and helped to make them, as Mr. Keary says, less sculptural and more pictorial in character; the reverses are often over-crowded with figures, and have subjects treated with necessarily unsuccessful attempts at perspective effects, and over-minute elaboration of detail.

The catalogue part of this book has the great merit of an excellent system of arrangement and Indices. The medals are grouped into three main divisions—first, those of the fifteenth century, a class which, roughly speaking, chiefly includes the cast medals; secondly, those of the sixteenth century, when metal dies were chiefly used. The third division is devoted to Papal medals of the fifteenth to the seventeenth centuries. A separate Index for artists' names, for persons represented, and for events commemorated makes it easy for the student to find any particular medal. The illustrations are well selected, and, like those of former British Museum handbooks, are done by a photographic process which ensures faithfulness in a way no drawing could possibly do.

The first medallist on the list is Vittore Pisano, who lived between A.D. 1380 and A.D. 1456. Nothing can surpass the grandeur of some of Pisano's portrait heads—that, for instance, of Pandolfo di Malatesta, Lord of Rimini—the reverse of which, by-the-way, a knight in armour with heraldic devices, strongly suggests some German influence. The half-length of Leonello d'Este is a marvel of life-like representation, and makes it easy to believe the unspeakably horrible stories told of Leonello's cruelty. Pisano's portrait of himself, which is rendered in a very simple and unidealised way, bears strong marks of truthfulness. Like Francia and Pollajuolo, who often signed their pictures *aurifex*, Pisano was not unwilling to let the world know of his many-sidedness, and so on

this medal, and on most of his others, he calls himself *PISANUS PICTOR*. Passing on to the works of later medallists, some are specially noteworthy for their portraits of illustrious men. Among the finest are that of Lorenzo de' Medici (No. 32), by Nicolo Fiorentino; Savonarola (No. 61), by an unknown hand; and a most stately half-figure of Michelangelo, at the age of eighty-eight, by his friend Lione Lioni (No. 98). For delicacy and refinement of execution, none perhaps surpass the head of Card. Bembo, by Pastorino of Siena (No. 147). Others are remarkable for their portraits of women, though, unfortunately, most of these immortalised beauties are otherwise quite unknown to fame. Nothing could be more gracefully simple than (No. 70) the half-figure of a lady called Giulia Astasia. A fine medal of Pope Julius II. (No. 78), by Caradosso of Milan, commemorates the laying the foundation-stone of the new Basilica of St. Peter in A.D. 1506. The reverse is interesting, as it gives Bramante's original design, with its short nave, in two orders, and two western campanili. None of the later Papal medals are finer than that struck by Gregory XIII., in A.D. 1579, to celebrate the triumph of the Church as manifested in the massacre of the Huguenots some years before. It is by Federigo Bonzagna. The half-length portrait of the Pope is extremely beautiful; there is much vigour and grace in the treatment of the reverse—a destroying angel, who, with cross in one hand and sword in the other, is slaying a crowd of flying men and women. It is finished with gem-like minuteness, and, in spite of its real artistic value, shows the greatest amount of deviation from the manner of the early sculptor-medallists.

Mr. Grueber, in his *Guide to the English Medals*, has wisely adopted a different system of classification to that used for the Italian series. They are arranged in simple chronological order, and not under artists' names; the fact being that the earlier "English" medals are either the work of foreigners or by unknown hands, while the later ones are of value rather as historical records than as works of art.

Mr. Grueber's Introduction contains an interesting description of the various processes by which medals in England were produced. In addition to medals cast or struck like the Italian ones, some few were cut out of a solid sheet of metal, and others *repoussé* from thin plates. Neither of these methods was, of course, adapted for medals of which a large number were required. In his account of the early Italian process, I doubt whether Mr. Grueber is right in stating that the moulds made of what Vasari calls "*terra sottile con cimatura*" could only be used once; it would also, I think, be more correct to give *ashes* as one ingredient in the mixture, instead of *charcoal*, which could hardly stand the heat of molten metal. Mediaeval Italian writers often use the word *carbone* as being the same as *ceneri*.

The English series, even admitting medals by foreign artists, does not begin till after the best period for them in Italy was almost past. A few exist as early as Henry VIII., rather hard and dry in style,

and probably of German workmanship. There are cast medals of Philip and Mary, with very fine half-figures on the obverse, but these Mr. Grueber attributes to Giacomo da Trezzo, a Milanese, who went to Madrid to work for Philip II. In his medal of Queen Mary he has evidently made use of the fine portrait of her painted by Antonio Moro now in the Madrid Gallery. Perhaps the most beautiful of those which are classed with the English series is the portrait medal of Mary Stuart—a work of the highest beauty and refinement. This, again, is by a Milanese artist, Primazza by name. Stephen of Holland, Nicolas Briot, and the Roettiers—all foreigners—produced most of the fine medals that were executed in England during the sixteenth and seventeenth centuries. Thomas Rawlins and Thomas Simon appear to have been the first natives of this country who reached any real excellence in the art. T. Simon's portrait of Charles II. is a very noble work; and the way in which this artist's application for employment in the Mint was made and rejected is a very pathetic story. The fact of his having worked for Oliver Cromwell was allowed to outweigh his artistic superiority, and his Dutch rivals—the Roettiers—were appointed in his place. The eighteenth-century medals are, with few exceptions, of little value as works of art. Croker's portrait of Queen Anne is certainly a fine head.

Towards the beginning of the present century a Roman gem-engraver called Benvenuto Pistrucci did good work at the English Mint; his work is exquisitely finished, but makes no attempt at that sculptural breadth of treatment for which the early medals of Italy are so remarkable. Since Pistrucci's time the numerous English medals that have been struck are a melancholy example of the degradation into which this art has fallen. Perhaps the lowest depth of absurdity was reached by the Ashantee War medal (1873-74). This exhibits, in the space of about an inch, a battle-scene in a tropical forest, between British troops and Ashantee natives. It is none the less a striking instance of what a medal ought *not* to be because the composition is vigorous and the figures carefully modelled—a fine work of art if the thing were a large cartoon, instead of being a microscopic bas-relief.

J. HENRY MIDDLETON.

#### THE OPENING OF THE PYRAMID OF MEYDOOM.

To open the Pyramid of Meydoom was one of the unfulfilled projects of the late Mariette-Pasha. Prof. Maspero takes Egyptologists by surprise in achieving this great work during the first weeks of his second year's campaign. For more than a month it has been known to a few of his private friends that he had a gang of fellaheen at work upon this pyramid; but the secret has been faithfully kept; and not till success was actually achieved was it even suspected in the public offices and hotels of Cairo.

The Pyramid of Meydoom, situate about a mile and a-half to the north-west of the village of Meydoom, is built in three stages, each inclined at an angle of 74° 10'. It rises to a height of 122 feet from the midst of a high hill of fallen masonry and rubble. The first stage shows a height of 69 feet; the second measures

20½ feet; the third, which is much ruined, measures 32 feet in height. The outer masonry is of admirable workmanship, and consists of polished blocks of Mokattam limestone. The general effect of the structure is very imposing. It has been aptly compared to the keep of a Norman castle, if we can imagine a keep built in three superimposed stages. Archaeologists have till now believed that this pyramid was inviolate. Dominating a vast burial-field containing the *mastabas*, or built sepulchres, of many nobles and "royal relatives" of Seneferoo, the last king of the Third Dynasty, it is supposed to be the pyramid of that monarch. It would in such case be of earlier date than the pyramids of Gheezeh.

Prof. Maspero began his work by opening a vertical trench down the northern face of the mound out of which the pyramid rises; the first result being to show that the masonry goes down to the level of the desert, and that the mound is entirely formed of accumulated sand and debris. Prof. Maspero believes this debris to be very ancient, and thinks it may even date as far back as the end of the New Empire. The entrance was found precisely in the centre of the north face of the first stage, about 20 metres above the level of the plain; which would give about 134 feet for the actual height of the first stage as now laid bare. This entrance was opened on the 13th of last month. It gave access to a descending passage about 1 metre 60 centimetres square. The incline of this passage is very steep, and for the first 10 metres it is lined with masonry finer, if possible, than that of the external facing. At a depth of 10 metres the passage strikes the living rock, and becomes in its continuation an excavated sloping shaft of the same dimensions as before. The pyramid, for at least half its height, is therefore formed upon a core of rock, around which the pyramidal structure is elevated. About 5 metres from the entrance there was once a "stopper" stone, which closed the mouth of the passage. This "stopper" has disappeared; but the construction of the passage shows that it was contrived quite differently from the portcullis-stones of the Gheezeh pyramids. There is no void in the roofing above where it was placed. It must, therefore, have been inserted after the mummy was laid in the sepulchre; then filled up to the level of the outer wall and covered with the same *revêtement*, so leaving no external trace. The removal of this stone must have been effected at a very distant time, there being three hieratic inscriptions of the period of the XXth Dynasty scrawled upon the ceiling at the very point which the stone formerly occupied. These inscriptions, written in accordance with a brief formula common to the epoch, merely record the visit of two Egyptian tourists—the scribe Sokari and the scribe Amenmes. Hence it would seem that the pyramid of Meydoom was open, and visited by the curious, as early as the XXth Dynasty. The descending passage has been cleared to the depth of 40 metres, without any landing, branch-passage, or chamber having yet been reached. Thus far, the structural arrangement seems to reproduce the internal plan of the Great Pyramid. The work is of extreme difficulty, owing to the want of air and light, and the overwhelming heat. The workmen faint from time to time, and have to be carried out. Prof. Maspero finds it impossible to stay inside for more than half-an-hour together.

AMELIA B. EDWARDS.

[This communication unfortunately reached us too late for insertion last week.]

# THE OLD MASTERS AT BURLINGTON HOUSE.

(First Notice.)

THE present collection, though it cannot compare in the number or beauty of first-class pictures with that of last year, is very varied, and contains many works of unusual curiosity and interest. So rare are the oil pictures of Alonzo Cano that the opportunity of seeing two fine works by this Spanish master is one which should not be neglected by any student of art. Of the sacred picture (219) belonging to Mr. Chapman Walker, there is not much to say, except that it is a characteristic example of the Spanish school; but Lord Penrhyn's "Portrait of a Man" (161) would be remarkable in any collection as an unusually fine portrait, full of grave and dignified character from head to foot, a striking and speaking likeness of a most "potent, grave, and reverend senior." Near it is an evidently genuine portrait by Sebastian del Piombo (156), much damaged, but fine and characteristic, of the face generally attributed to "La Fornarina;" and not far from it is a very beautiful picture of a lady playing on a guitar (153), assigned by Mr. T. Woolner, B.A., its present owner, to Paolo Veronese. Though it has much of the silveriness of that master, we see no indication of his peculiar touch; some of the passages of colour seem to show another hand; and, in the carefully studied action of the hands and the turn of the wrist, and in the refined drawing of the fingers, there is evidence of a desire to attain a different kind of perfection to that usually aimed at and reached by the great Venetian. In Mr. Boughton Knight's "Adoration of the Shepherds" (186) we find an unusually perfect example of the earlier manner of Mantegna; and in Mr. Leyland's "Virgin and Child" (188) an equally untouched specimen of the tenderly beautiful art of Lorenzo Costa. Col. Legh sends a striking unfinished picture of the "Sacrifice of Isaac" (206), which may be by Andrea del Sarto. There can be no doubt that the design is his, as it is identical with that of a picture by Andrea at Dresden, of which Col. Legh's is evidently a copy or replica. In "An Old Lady," assigned to Lucas Cranach (212), and belonging to Mr. Lewis Fry, we have a true curiosity. The old lady, whose brown dress and conical cap trimmed with gold lace are marvellous in themselves and marvellously painted, must have been a character in her day. She seems to have had a passion for a very peculiar kind of ring, set with a single stone curiously cut. These not only adorn her fingers, but her throat. On her face is an expression at once humorous and good-natured. The perfect preservation and freshness of colour of Mr. Young's "round" by Botticelli (196) should ensure it a place among the most interesting pictures in this exhibition; and the long and pretty picture, belonging to Mr. Budgett, of "Atalanta's Race" (195) should not be passed without notice. It is also ascribed, with, as it appears to us, very little reason, to the same master. Both by its naïveté and the type of the female faces, it is much more like Piero della Francesca.

In the English school, also, there are several curiosities, including some fine and comparatively unknown works by Hogarth. Among them is a small landscape (259), belonging to the Rev. F. K. Harford, which has an endorsement to the effect that it was bought of Mrs. Hogarth, January 4, 1781, and avowed by her to be the only landscape her husband ever painted. If the endorsement be genuine, the old lady (she was then about seventy-two) must either have forgotten his views in the parks or not have ranked them as pure landscapes. This is, however, possibly the only landscape he ever

painted with the mere intention of representing the beauties of nature. It is small, pretty and clear, but has no special merit. In Sir Henry Vane's "Portrait Group of Walter Vane, Esq., his Second Wife and Daughter, and his Eldest Son" (27) we have one of those early "conversation pieces" by which Hogarth earned his bread before he made his reputation as a satirist. Though it shows some skill in colour and execution, it is stiff and poor in drawing. In "The Graham Family" (275), lent by the Earl of Normanton, we have a mature and singularly fine example of a portrait composition of children. One little girl, in a beautiful brocaded dress, which she is holding out in the old dancing fashion, is doing her steps to a tune played by her brother on a small hand-organ. Her slightly elder sister holds the baby by the arm as if they were both pretending to join in the dance. All the faces are full of childish mirth, and the figure of the first-mentioned girl is particularly alive and sprightly. On the back of a chair a cat has jumped after the goldfinch in a cage, which is fluttering with fear. The cat, however, seems to have her cruel eyes fixed on the dancers rather than on the bird. This is one of the finest pictures of the kind that we know, admirable alike in colour, drawing, and expression, while it is brimming over with the spirits of the young people. As an example of straightforward portraiture and of Hogarth's wonderful certainty of touch, his likeness of "George Second Earl of Maccolesfield" (244), lent by the present Earl, is excellent. The completeness with which the effect of the richly figured waistcoat is got by a few deft touches reminds us of the pregnant sketching of Jan Steen, or even Franz Hals. The Earl of Maccolesfield also sends a good portrait, by Hogarth (248), of "William Jones, Esq.," father of Sir William, the Orientalist. Richard Wilson—the fine feeling, noble composition, and beautiful colour of whose work are apt to be lost sight of in impatience at its conventionality—is also unusually well represented. Though he may have had a formula for trees, and drawn a ruined castle from a Stilton cheese, there are few who give so perfectly the sense of Nature's peace, the glow of the evening sun, or the golden clearness of the evening air. Few have known how to arrange their masses of light and shade with more effect, to relieve tender foliage with rugged rock more deftly, and to throw more charm into a simple scene. He did not peer deeply into the secrets of Nature, or examine her works with minuteness; but he felt her music, and could paint it. Mr. James Price's "Landscape" (249) is, we think, the finest here, admirably composed, rich in light, and full of poetical rest. Particularly beautiful in colour and romantic in composition is Mr. T. Clare Ford's "Val d'Arria, near Rome" (39). That Turner not only admired Wilson, but thought him, even after his death, a serious rival in the public estimation, was shown in connexion with a work by the great man which is now hanging on the walls of Burlington House. Though within his range he could not have been easily beaten by Turner, this range did not include the possibility of such a work as this view of the Thames at Twickenham (175). Turner had, as Shakespeare had, and Wilson had not, a many-sided mind. It is not, for all that, a very characteristic picture, belonging to that early group of his work in which fidelity to the facts of the scene was the ruling motive. It has been poorly engraved by John Pye, and is interesting as a tribute to the genius of Pope, which Turner so greatly admired, and attempted so bravely, but feebly, to imitate with his clumsy pen. A somewhat similar tribute to another of his favourite poets (Thomson) is found in the altar engraved with that name in the large composition called "An Autumnal Morning" (41), belonging, like the other, to Mrs. Morrison.

This picture belongs to the order of "The Temple of Jupiter Hellenius" and the "View from Richmond Hill," and cannot be classed among his most successful efforts. "Pope's Villa" (175) is, however, perfect in its way, and so is another picture in a much finer and more characteristic way, which belongs to Sir Alexander Acland Hood, and is called "Sea Coast, Hastings" (179). The way of this is the way of the famous "Sun Rising through Vapour" of the National Gallery, to which it is scarcely inferior. Painted when the artist was thirty-five (1810), it does not attempt any gorgeousness of colour, but it shows a very effective use of a limited scale. In atmospheric effect, in transparency and pearliness, in truthful rendering of cloud and mist, of the very feel of the air, the wetness of the sands, and the freshness of the fish, it is alike wonderful. This is the only work of Turner's here which no other artist could have approached. One of his curiosities—the "Unpaid Bill, or the Dentist [not Doctor] reproving his Son's Prodigality"—exhibited at the Royal Academy in 1808, is one of those few, certainly clever, but out-of-element *genre* pictures which he painted at this time, if not in rivalry, at least in imitation, of Wilkie. It is not so good a picture as the well-known "Country Blacksmith" in the National Gallery; but it shows great patience and skill, especially in the representation of the rows of white glass bottles on the shelves, with the light not only reflected from their surfaces, but passing straight through them, and in the management of the light altogether. Very like a Vanderveelde in its sea, and an early Turner in its large sail full of amber light, is the bold, simple sea-piece of John Sell Cotman (14) belonging to Mr. James Price; and very like Louthembourg in its theatrical billows and rocks is Morland's "Wreckers" (270), owned by Mr. Walter Gilbey. There are, however, better and more characteristic Morlands here than this, the best of which is the same gentleman's "Gipsies" (26). Several fine landscapes by Gainsborough; Constable's noble "Lock" (181), belonging to Mrs. Morrison; some very fresh studies of Gillingham Mill, delightfully suggestive of "the country;" a charming early work of Callcott (3), belonging to Mr. Boughton Knight; and a good little specimen of George Vincent combine to make the present collection valuable for the study of the rise of landscape art in England.

In sentiment, there were last year finer works by Sir Joshua Reynolds than "Lady Smyth and her Children" (176), belonging to Mr. Stirling Crawford, but it is very rare to see so large a work from this master's hand in such a perfect state of preservation. We learn from Mr. Graves, of Pall Mall, through whose hands it recently passed, that, on being cleaned a short while since, it was found to have been covered with a coat of white of egg before varnishing, so that the varnish never touched the colours themselves. To this process is probably due the salvation of the picture, which is as though it has just left the painter's hands. The group of children is very original in composition, and the expression pretty; while the tenderness of the colour, especially, we think, in the figure of Lady Smyth, is remarkable. It may be observed that the pose of the head and arm, and the arrangement of the body of the dress, are very similar to those in the famous portrait of "Mrs. Braddyl." Of his more golden glory, a glory unfortunately nearly always accompanied by decay, the Earl of Normanton sends a beautiful example in the portrait of the "Hon. Mrs. Stanhope" (15). That the picture is now far richer in colour than was intended by the artist is suggested by the moonlight landscape behind, which could never have lit up the beautiful face with so warm a glow.

The collection, besides some other fine works to which we cannot draw attention now, contains Sir Joshua's large "Death of Dido" (131), lent by the Queen, and the designs for the window of New College Chapel, Oxford (129 and 132). The numerous fine works by Gainsborough and Romney we must also leave unnoticed for the present, stating only that the latter artist is seen to great advantage not only in design and sentiment, but in colour also; while by the former, the portrait of "Lady Mendip" (19) introduces us to an unusually "dear old lady," who carries not only beauty but distinction in her kind, well-bred face. The English school of animal painting is represented by three small works only, but they are choice. Two of these are by James Ward, silvery in tint and perfect in drawing. Of the two, we prefer Mrs. Morrison's "Woman Milking" (11), which is very sweet and delicate in colour, reminding us of Morland at his best; but Mr. Phipps Jackson may be congratulated in the possession of such a gem as his white horse in a gale of "Wind" (1). The third is an early work of Landseer, very strong in drawing and perception of bull-character. It belongs to the Rev. John Daubuz (20).

The early sketches of lions by Landseer can, as a rule, compare very favourably in drawing, if not in vigour, with those of Rubens, who probably had not the same opportunities of studying them alive; but Rubens' study of a young lion here (77) is probably not only the most vigorous, but also one of the most accurate, representations of this fine beast ever painted. It must have been painted direct from nature, and represents the suppleness of the body and kittenish spirit of the creature with singular force.

COSMO MONKHOUSE.

#### NOTES ON ART AND ARCHAEOLOGY.

MESSRS. CHAPMAN AND HALL are, we understand, about to publish an important and costly work on certain living English artists. It will contain portraits of them, and etchings—in some cases, we believe, by themselves; in others, etchings of their works; and the letterpress dealing with their lives and pictures will be written with their special authority, if not with their own hands. Mr. Herkomer will contribute an original engraving—partly etched, partly mezzotint—a proof of which was exhibited in the collection of his works at Messrs. Goupil's in the spring of last year.

According to a marvellous rumour which was floating about Berlin a few days ago, Prof. Maspero had lighted upon what is called "a Menes-Pyramid." Does this mean the pyramid of Menes himself, the traditional founder of the First Monarchy? or a pyramid of his Dynasty only? The rumour at present wants confirmation.

As considerable anxiety has been felt by those who are interested in the preservation of ancient buildings about the proposed "complete restoration" of the Dome of the Rock at Jerusalem by the Turkish authorities, it will be satisfactory to learn that Lieut. Conder writes to the Palestine Exploration Fund that there is no intention to do more to that structure than has been already done. The other repairs within the Haram are of such a character that they need occasion no anxiety to those who dread so-called restorations. Lieut. Conder also reports regarding a remarkable building he has come upon in his survey at Amman, the ancient Ammon, in which he has found round arches; but some of them show a slight inclination to be pointed, while others have the first tendencies of an approach to the horse-shoe form. The importance of this will be understood by those who are familiar with the controversy about the Dome of the Rock, the date of its construction being one of the points which has been fought over on data derived from its architecture, the slightly pointed form of some of its arches being one of the subjects of debate.

MR. RUSKIN'S Turner draughtsman, Mr. Wm. Ward, of 2 Church Terrace, Richmond, S.W., has lately produced twenty-five photographs to illustrate Mr. Ruskin's *Mornings in Florence*, part vi.; twenty-five for the Bible of Amiens; six sheets of photographs of snakes for *Deucalion*, part vii.; and photorettos of twenty-three receipts given by Pintoretto between 1559 and 1594 for money received by him from the Confraternity of S. Rocco for paintings.

We are glad to hear that the exploration of Buddhist ruins in the Peshawar valley, commenced in 1873 and 1874, is shortly to be again taken up. The Government of India have placed the services of a company of Bengal sappers and miners, under the command of a Royal Engineer officer, at the disposal of the Lieutenant-Governor of the Punjab for this purpose.

Two fine etchings after Mr. Alma-Tadema's pictures of "The Dinner" and "The Siesta" have recently been finished by Mr. Loevenstam.

MANY of our readers will be interested to hear that M. Clément Massier, the well-known *faiencier* at the Artistic Potteries of Villauria, has just received the distinction of chevalier in the order of the Crown of Italy. Besides M. Massier's personal merits as an artist, he has, perhaps, done more than any other living representative of the ceramic arts to revive and popularise the classic forms of Greek and Roman pottery.

THE following artists were appointed chevaliers in the Legion of Honour on the occasion of the new year:—MM. Braqueuon, engraver; Manet, painter; Lefevre, sculptor; Boulanger, the designer of the iron gates in the hall of Charles IX. in the Louvre; and Soty, architect. At the same time M. Emile Augier, of the Académie française, was appointed to the rank of grand officer.

THE subscribers of the *Gazette des Beaux-Arts* for this year are promised two bonuses. One is a collection of twenty etchings of the late Jules Jacquemart for 15 frs. instead of 40 frs., and the other the new album of the *Gazette* for 60 frs. instead of 100 frs.

MR. HODDER M. WESTROPP, author of *The Handbook of Archaeology*, has arranged to give a course of lectures on the archaeology of Rome in the rooms of the British and American Archaeological Society, 17 Via Prefetti, Rome.

MR. JAMES ANDREWS has written a letter to the *Avenir de Menton* of December 29, calling attention to certain remains of prehistoric antiquity near Mentone. These are circular fortresses on the summits of hills, with a diameter varying from 12 to 100 metres, built of large blocks of unhewn stone, the walls being from 2 to 4 metres in thickness, and from 2 to 5 metres high. Some half-dozen of them may be seen in the immediate neighbourhood of Mentone. They appear to have been the citadels of refuge for a people that preceded the Roman conquest; and, from the stone implements and fragments of rude pottery that have been found in some of them, they have been assigned to the Neolithic age.

THE antique torso which Frank Buchser discovered in Rome about a year ago, and which has been exhibited ever since in the Kunstmuseum at Bern, has been sold by its owner to the French Government, and has been sent to the Musée du Louvre. The Swiss artists grieve that this fine specimen of Greek art was not retained for Switzerland, but we hear that Herr Buchser obtained a cast from it for presentation to the Bern Museum.

M. VERESCHAGIN, whose works formed the subject of a paper in the *Gazette des Beaux-Arts* for February last, has an exhibition of his works now open at Paris. Its special attraction consists in pictures of the horrors of the Russo-Turkish War.

It has been determined to close the Government studios of the Ecole des Beaux-Arts. M. Antonin Proust has given the professors time to find new quarters, and announced that the *ateliers libres* will receive an allowance to enable them to have the students for whom the Government is pledged for the present year.

THE French Government has granted 50,000 frs. to the town of Orleans towards the cost of purchasing and restoring the house of Agnes Sorrel.

THE Municipal Council of Besançon has voted 3,000 frs. for a statue to P. J. Proudhon.

M. MEISSONIER has announced his intention to leave to the Louvre his two famous pictures of the "Graveur à l'Eau forte" and the "Cavalier à sa Fenêtre."

#### MUSIC.

"The Great Musicians." Purcell. By W. H. Cummings. (Sampson Low.)

DR. F. HUEFFER can scarcely have had any hesitation in choosing, as the biographer of Henry Purcell, Mr. W. H. Cummings, who has always shown the greatest interest and industry in all matters relating to the life of this illustrious English musician. In a short, but interesting preface, the writer shows clearly how both Sir John Hawkins and Dr. Burney not only neglected to gather stores of Purcellian lore easily accessible to them, but also made erroneous statements which have been the cause of no little trouble and confusion. After a brief account of the state of music during the Commonwealth, Mr. Cummings proceeds to tell us what little is known about Purcell's father, who died when the young Henry was just six years old. His uncle, Thomas Purcell, an able and industrious musician, adopted the orphan as his own son, and watched over him with the care and affection of a parent. He lived long enough to see the genius of his nephew fully acknowledged by the Court and by the great musicians of the day. Purcell's instructors were Capt. Cooke—"Master of the Children of the Chapel," so often mentioned by Pepys—Pelham Humphreys, and the illustrious Dr. Blow. "That Purcell studied under Blow is certain," says Mr. Cummings, "from the inscription on Blow's monument in Westminster Abbey, where it is stated that he was master to the famous Henry Purcell." The inscriptions on the monuments in the Abbey are not infallible; but there are other reasons, besides the one given, for believing that Purcell was a pupil of Dr. Blow. With regard to Purcell's appointment as organist of Westminster Abbey in 1680, in Mr. George Grove's *Dictionary of Music* we are informed that "Dr. Blow was displaced to make room for H. Purcell;" but Mr. Cummings states that "Dr. Blow magnanimously resigned the appointment of organist in favour of Purcell." There is another point, with respect to the composition of the opera "Dido and Aeneas," about which these two authorities differ. "It was written in 1680," says Mr. Cummings, "and to ascribe it to the year 1675 is a complete mistake." In the *Dictionary* we are told that it was written in 1675, and performed in that year at Leicester Fields, and again in 1680 at Chelsea. Mr. Cummings only proves by an advertisement in the *London Gazette* for 1680, and a statement in a poem published in 1690, that the opera was performed in 1680; but to make good his

assertion he must also show that it was not written and performed in 1675. This question of date is very probably one of the "many difficulties" alluded to by our author in his Preface.

Little is known of Purcell's life; but Mr. Cummings makes the most of his theme, and his descriptions of the published and unpublished treasures bequeathed to posterity are extremely interesting. The Preface to the "Sonata's of III. Parts," published in 1683, affords a striking proof of the composer's modest and retiring disposition. He adopted the plan followed at first by all true geniuses—i.e., "he faithfully endeavoured a just imitation of the most fam'd Masters." For the benefit of the English practitioner, he explains a few terms of art "perhaps unusual to him." The sentence explaining these terms is given thus in Mr. Cummings' book:—

"*Adagio* and *Grave* which imports nothing but a very slow movement: *Presto*, *Largo*, and *Vivace*, a very brisk, swift, or fast movement: *Piano* soft."

In the original edition it stands as follows:—

"*Adagio* and *Grave* which import nothing but a very slow movement: *Presto* *largo*, *Poco* *largo*, or *Largo* by itself, a middle movement: *Allegro*, and *Vivace*, a very brisk, swift, or fast movement: *Piano* soft."

In the latter form the order of words is better, and the sense certainly clearer. We cannot refrain from quoting two remarkable sentences from the Preface to the score of "The Prophetess," published in 1690. Of music and poetry Purcell says: "Both of them may excel apart, but sure they are most excellent when they are joyn'd because nothing is then wanting to either of their Perfections." Again, speaking of music in England, he says: "We are of later Growth than our Neighbour Countries, and must be content to shake off our Barbarity by degrees."

Mr. Cummings states that the music of "King Arthur" remained unpublished until 1843, but a score of the work was printed in 1773, with Dr. Arne's additional songs. This copy contains all the vocal music to be found in the edition of the Musical Antiquarian Society, published in 1843, with the exception of the duet at the end of the third act, "Sound a Parley," and several numbers of the fifth act. If the two editions be compared, many interesting differences of figured bass, notes, bars and orchestration, &c., will be discovered. Among the "Arne" additions (p. 34 of the score) is a song composed on the subject of Purcell's chorus in the second act, "Come, follow me."

Mr. Cummings notices a "great blunder" made by Hawkins, who says, in his *History of Music*, that Dryden wrote his "Alexander's Feast" for Purcell to set to music, but that the latter declined the task. It is quite true, as stated by Mr. Cummings, that this "St. Cecilia's Ode" was written two years after Purcell's death; but Dryden wrote a first ode to St. Cecilia in 1687, which was set to music by Draghi (Purcell's friend). This confusion of odes in the mind of Sir J. Hawkins may have led him to predicate of the second what was true of the first. It seems not at all unlikely that the first ode may have been offered to Purcell, who had already, in the previous year, composed the music for Dryden's "Tyrannic Love."

The sad and solemn scene of Purcell's death on November 21, 1695, at the early age of thirty-seven, is described by our author with much pathos. A chapter is devoted to Purcell's family, telling us what little is known about his two brothers, Edward and Daniel, and his six children, three of whom died in infancy. This interesting volume concludes with lists of the organists, the masters of the chorister boys, and the music copyists of Westminster Abbey, and with serviceable chronological memoranda.

J. S. SHEDLOCK.

## THE CAMBRIDGE EXAMINER.—Pub-

lished 15th of every month (except July and August).  
Papers for the use of Students preparing for the Junior, Senior, Higher Local, and Teachers' Cambridge Examinations.

Correspondence Class by highly Certificated Teachers in connexion with the Paper.

Post-free, 5s. 6d. per annum; Specimen Copy, 7d.

London: EDWARD STANFORD, 55, Charing-cross, S.W.

Cambridge: MACMILLAN & BOWES.

Quarterly, price 2s. 6d.

## THE MODERN REVIEW.

CONTENTS FOR JANUARY.

THE CHURCHES, ESTABLISHED AND NON-ESTABLISHED. By G. VANCE SMITH, D.D.

WESTCOTT and HORT'S NEW TESTAMENT. By J. E. OGDERS, M.A.

HERBERT SPENCER'S DATA OF ETHICS. By JAMES T. BERRY.

RELIGIOUS INSTRUCTION IN SCHOOLS. By J. HUNTER SMITH, M.A.

THE LEADING IDEA OF THE DIVINE COMEDY. By C. TOMLINSON, F.R.S.

RICHARD CORDEN. By S. ALFRED STRINHAL.

ARCHITECTURAL RESTORATION. By C. GRINDROD, L.R.C.P. Edin.

NOTES AND DISCUSSIONS. By JAMES DRUMMOND, B.A.; ANDREW MILLER; P. H. WICKSTEAD, M.A.; and C. B. LPTON, B.A., D.Sc.

NOTICES OF BOOKS. By J. HUNT, D.D.; H. LANE POOLE; &c.

Published for the Proprietors by

JAMES CLARKE & CO., London.

Just published, price 1s., post-free.

## REVISED TEXTS and MARGINS of the

NEW TESTAMENT affecting THEOLOGICAL DOCTRINES. By Dr. G. VANCE SMITH (one of the Revisers).

## POSITIVE ASPECTS of UNITARIAN

THOUGHT and DOCTRINE: Ten Lectures by Various Ministers. With Preface by Dr. JAMES MARTINEAU. 3s. 6d., post-free.

A CHEAP EDITION, in limp cloth, 1s., also post-free.

"An able and popular exposition of the bases of religion from the point of view of the free liberal churches."—*Modern Review*.

London: BRITISH AND FOREIGN UNITARIAN ASSOCIATION, 37, Norfolk-street, Strand.

Ready, Vol. I., 400 pp., small 4to.

## HISTORY of the IRISH CONFEDERATION

and the WAR in IRELAND, 1641–43. Now for the first time published. In 2 vols. With Portraits, &c. Edited by JOHN T. GILBERT, F.S.A., M.R.I.A. A very small number has been printed. Subscription, £1 5s. per vol.; large paper, £1 2s. per vol. Vol. II. will be issued in March, 1882. Subscribers' names received in London by B. QUARITCH, 15, Piccadilly; and in Dublin by the principal Booksellers.

Now ready, Vol. XII.—EGYPTIAN TEXTS.

## RECORDS of the PAST:

Being English Translations of the Assyrian and Egyptian Monuments. Published under the sanction of the Society of Biblical Archaeology.

Edited by S. BINDER, LL.D.

With an Index to the Contents of the Series. Cloth, 3s. 6d.

London: S. BAOSTER & SONS, 15 Paternoster-row.

## SKIRVING PORTRAIT of BURNS.

Just published, a New and Brilliant ETCHING by CHARLES LAWRIE—from the Original Crayon Drawing by ARCHIBALD SKIRVING—considered the most Characteristic Likeness of the Poet in existence.

Two sizes. No. 1, 8 by 11, proofs, 15s.; prints, 10s. 6d. No. 2, 10 by 13, proofs, 31s. 6d.; prints, 21s.—W. G. LATTERS, 34, Frederick-street, Edinburgh.

## RARE ETCHINGS, ENGRAVINGS, and

DRAWINGS by the most esteemed OLD MASTERS may be obtained at GEORGE LOVE'S OLD PRINT SHOP, 81, BUNHILL ROW, LONDON. The Engravings, &c., are in fine condition, and have formed portions of the most celebrated collections. A Catalogue of a small portion of the Stock will be sent on receipt of two penny postage stamps.

Established above 60 years.

## TO PROPRIETORS of NEWSPAPERS

and PERIODICALS.—WYMAN & SONS, Printers of the *Builder*, the *Printing Times*, *Knowledge*, *Truth*, *Capital* & *Labour*, the *Furniture Gazette*, the *Review*, and other high-class Publications, call attention to the facilities they possess for the COMPLETE, ECONOMIC, and PUNCTUAL PRODUCTION of PERIODICAL LITERATURE, whether illustrated or not.

Estimates furnished to Proprietors of New Periodicals, for either Printing or Printing and Publishing.—74 and 76, Great Queen-street, London, W.C.

## THE AUTOTYPE COMPANY,

74, NEW OXFORD STREET, LONDON, W.C.

(Twenty doors west of Mad's Library.)

NOTICE: The address changed as above in the re-numbering of Oxford-street.

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

AUTOTYPE represents permanent photography, with unique powers of artistic expression.

AUTOTYPE is celebrated for its noble collection of Copies of the OLD MASTERS, and for numerous fine examples of MODERN ART selected from the works of Reynolds, Turner, Poynter, Meissonier, Corot, De Neuville, Burne-Jones, Rossetti, Cave Thomas, &c., &c., &c.

MUSEO DEL PRADO, MADRID.

Subscription Issue of 397 Autotype reproductions of Paintings in this Celebrated Gallery, comprising 34 examples of Murillo, 48 Velasquez, 11 Raphael, 25 Titian, 16 Van Dyck, 22 Rubens, &c. For particulars and terms, apply to the MANAGERS.

"AUTOTYPE in RELATION to HOUSEHOLD ART." With Three Illustrations, 31 pp., free to any address.

PICTURES CLEANED, RESTORED, FRAMED.

To adorn the walls of Home with Artistic Masterpieces at little cost visit the AUTOTYPE FINE ART GALLERY, 74, New Oxford-street, W.C.

The Works, Ealing Dene, Middlesex.

General Manager, W. S. BIRD. Director of the Works, J. R. SAWYER.

## TRÜBNER & CO.'S LIST.

### TSUNI—IGOAM:

The Supreme Being of the Khoi-Khoi.

By THEOPHILUS HAHN, Ph.D., Custodian of the Grey Collection, Cape Town. Post 8vo, cloth, 7s. 6d. [Now ready.]

### YUSUF and ZULAIKHA:

A Poem by Jāmi.

Translated from the Persian into English Verse. By RALPH T. H. GRIFFITH. Post 8vo, pp. xiv+304, cloth, 8s. 6d.

### AN ESSAY on the PHILOSOPHY of SELF-CONSCIOUSNESS.

Comprising an Analysis of Reason and the Rationale of Love. By P. F. FITZGERALD. Demy 8vo, pp. xvi+196, cloth, 6s.

### A TIBETAN-ENGLISH DICTIONARY.

With special Reference to the Prevailing Dialects. To which is added an ENGLISH-TIBETAN VOCABULARY. By H. A. JÄSCHKE, late Moravian Missionary at Kyalang, British Lahoul. Royal 8vo, pp. xxii+672, cloth, 30s. [Just published.]

Now ready (Mr. GREG's last Work).

### MISCELLANEOUS ESSAYS.

By W. B. GREG.

Crown 8vo, pp. 260, cloth, 7s. 6d.

CONTENTS.

Rocks Ahead and Harbours of Refuge. Is the Popular Judgment in Politics more Just than that of the Higher Orders?

Foreign Policy of Great Britain. The Echo of the Antipodes. Verify your Compass.

A Grave Perplexity before Us. The Prophetic Element in the Gospels.

Obligations of the Soil. Mr. Frederic Harrison on the Future Life.

The Right Use of a Surplus. Can Truths be Apprehended which could not have been Discovered?

The Great Twin Brothers: Louis Napoleon and Benjamin Disraeli. Harriet Martineau.

### THE MIND of MENCIOUS; or, Political

Economy founded upon Moral Philosophy.

A Digest of the Doctrines of the Chinese Philosopher Mencius. The Text Translated, with Explanations. By the Rev. E. FABER.

Translated from the German, with Notes, by the Rev. A. R. HUTCHINSON, C.M.S. Hong Kong. Post 8vo, pp. xvi+294, cloth, 10s. 6d.

### THE BIOGRAPHY and TYPOGRAPHY of WILLIAM CAXTON,

ENGLAND'S FIRST PRINTER. By W. BLADES. Founded upon the Author's "Life and Typography of William Caxton." Brought up to the Present Date. Cheap Edition, crown 8vo, in appropriate binding, 5s.

### THE SOCIAL HISTORY of the RACES of MANKIND.

To be Completed in about Ten Volumes, 8vo.

Vol. V. The ARAMAEANS. By A. FEATHERMAN. Demy 8vo, pp. xvii+664, cloth, 21s.

### A HISTORY of MATERIALISM.

By Professor F. A. Lange.

Authorised Translation from the German by E. C. THOMAS. In 3 vols. post 8vo, pp. 350, 404, 384 and Index, cloth, 31s. 6d.

"Although it is only a few years since Lange's book was originally published, it already ranks as a classic in the philosophical literature of Germany."—*Pall Mall Gazette*.

### THE RELIGIONS of INDIA.

By A. Barth.

Authorised Translation by Rev. J. WOOD. Post 8vo, pp. 336, cloth, 16s.

### MANUAL of HINDU PANTHEISM, THE VEDANTASARA.

Translated, with Annotations, by Major G. A. JACOB, B.S.C., Inspector of Army Schools. With a Preface by E. B. COWALL, M.A., Professor of Sanskrit, Cambridge. Post 8vo, pp. x+130, cloth, 6s.

### A CRITICAL REVIEW of AMERICAN POLITICS.

By C. Reemelin,

of Cincinnati, Ohio. Demy 8vo, pp. xxiv+630, cloth, 14s.

### FRANCE and the FRENCH, in the SECOND HALF of the NINETEENTH CENTURY.

By Karl Hillebrand.

Translated from the German. Post 8vo, pp. 228, cloth, 10s. 6d.

### BRITISH ANIMALS which have become EXTINCT within HISTORIC TIMES,

with some Account of British Wild White Cattle. By J. E. HARTING, F.Z.S. 8vo, with Illustrations by Joseph Wolff and others, pp. x+258, cloth, 14s.; Large Paper, 31s. 6d.

### THE LIGHT of ASIA; or, the GREAT RENUNCIATION.

Being the Life and Teaching of Gautama, Prince of India and Founder of Buddhism. Told in Verse by an Indian Buddhist. By EDWIN ARNOLD, C.S.I., &c. Eighth Edition. Crown 8vo, pp. xvi+238, limp parchment wrapper, 2s. 6d. [Now ready.]

"The most sympathetic account ever published in Europe of the life and teaching of the Sakya Saint."—*Times*.

SATURDAY, JANUARY 14, 1882.

No. 506, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

## BISHOP THIRLWALL'S LETTERS.

*Letters to a Friend by Connop Thirlwall, late Lord Bishop of St. Davids.* Edited by Dean Stanley.

*Letters Literary and Theological of Connop Thirlwall.* Edited by Dean Perowne and the Rev. Louis Stokes. (Bentley.)

THESE two volumes, although twins in appearance, and ushered into the world by the same publisher at the same time, possess a very different interest for the reader. The former of them consists exclusively of letters written during the last ten years of Bishop Thirlwall's life to a young Welsh lady obviously of a highly cultivated mind, and with almost as great an appetite for study as the prelate himself. The series is fairly continuous; and if the letters of the Bishop's correspondent, or at any rate a selection from them, had been included in the book, the whole would have presented a charming picture of a quasi-paternal relation between two accomplished persons of different ages and sexes, united by the bond of an enthusiastic love of knowledge and a sincere mutual respect.

The other volume is of an extremely fragmentary character, and its contents of very various worth. The Bishop never liked letter-writing, and, except for some special purpose, rarely practised it. The best portions of this collection might perhaps more advantageously have been included in the *Remains*, already edited by Dr. Perowne. They are both too deep and too technical for a publication in which a reader looks more for the man than for the divine and the scholar. But as the collection extends over the whole period of the Bishop's life, from the time when he was a school-boy at the Charterhouse, even the least interesting portion of it becomes useful as the means of interpreting the character of the writer in the course of its development. With this view, and this only, we give two or three extracts selected from the correspondence with a Mr. John Chandler, who was apparently a family friend, interested in the precocious boy, who, "at a very early period, read English so well that he was taught Latin at three years of age, and at four read Greek with an ease and fluency which astonished all who heard him."

At the time of the riots and the arrest of Sir Francis Burdett in 1810, Mr. Chandler had probably hazarded some opinion on the events of the day. He was rewarded by a homily which must have nearly taken away his

breath; the lecturer had just completed his thirteenth year!

"I said, I think, in my last, that the region of politics is a baneful one, but I did not see the necessity of entering it. Permit me to explain myself more at large upon this subject. . . . For my own part, I am at present neither capable nor desirous of gaining sufficient information to form a decisive opinion. I am at present, therefore, neutralist. The representations of either party I am always inclined to believe in some degree exaggerated; and therefore abstain from, or rather take alternately both sides of, the question. I shall never be a bigot in politics."

In another letter written in the same year the child tells the same correspondent:—

"I read lately in the preface to a book containing the meditations of Mr. Pascal, a truly pious, learned, and ingenious character, that, after having made a great progress in the sciences, he at the age of thirty laid aside every pursuit in which he before excelled, and devoted the remainder of his life to the study and elucidation of the Holy Scriptures. How greatly would the imitation of so excellent an example redound to the honour and advantage of every scholar. For my own part, I intend, if I should live long enough to carry my designs into execution, to follow the example of the great man I have mentioned, and at an early period to abandon every literary and scientific pursuit for more noble and profitable studies."

But young Connop was not the detestable little prig the reader might infer from these early effusions. Ten years afterwards, the extract which we have just given was sent to him by the same correspondent, he having recently left Rome, where he had made that acquaintance with Bunsen which ripened into a lifelong friendship. In his reply, dated from Florence, he says:—

"I read with a smile the extract you give me from one of my early letters. I recalled with pleasure the ardour of resolution, the sensibility of the great and beautiful in morality which was one of the best features of my boyhood, and which, I hope, in spite of my more extensive intercourse with the world, I have not wholly lost. I was at the same time much amused by the sort of vow of which you remind me, and which, as I well remember, I made after reading, not the works of Pascal, but only a notice of his life, prefixed to an English translation of, I believe, his *Thoughts*. I was the more amused, as it happened that a short time before, during my stay in Rome, I had read the entire works of Pascal, and not only with deep attention, but when I was in a frame of mind perfectly fitted to receive the same impression which his *Memoirs* made upon me before his religious opinions, or, in fact, religion in general, had ever been presented to me as a subject for examination. . . . In the meanwhile, I think I may say that I have already begun to fulfil my boyish vow, not in the letter, but in spirit; not by devoting my time and attention to one particular book or class of books, the sure way to cramp the intellect and prevent the attainment of truth, but by fixing my thoughts frequently and earnestly on the great principles of religion and morality, and referring to them in ways more or less direct everything I read and observe."

The simple fact (which is even more evident from the *Primitiae*, of which we shall presently say a word) is that the child was animated by an intense love of truth—the germ of the impartiality which was so distinguishing a feature in his after-life—and

endowed by Nature with a singular aptitude for the acquisition of language and an acute perception of its various forms. His father was a respectable London clergyman in the days when Blair, Beattie, and Johnson were regarded as models of English composition, and when the production of English "themes" formed the staple of the early stages of a classical education. The elder Thirlwall was, like many other fathers, proud of the extraordinary talents of his son, and unwise enough to print and publish, under the name of *Primitiae*, a little volume containing the compositions of the latter, both in prose and verse, all produced between the ages of seven and eleven. The book, as a psychological curiosity, is a most remarkable one. The correctness of the diction and the platitudinous character of the sentiments would induce a reader, ignorant of the circumstances, to set it down, not as the work of an extremely clever child, but of a dull though well-meaning man. Its existence was a sore thorn in the flesh to its author throughout life. "I am sure," he says, when a septuagenarian, to his Welsh correspondent,

"that, if you had been aware of the intense loathing with which I think of the subject of your note, you would not have recalled it to my mind. . . . Let me entreat you never again to remind me of its existence."

In the year 1823, Thirlwall, having returned to England after visiting Italy, Portugal, and Spain, entered upon the study of the law in the chambers of Mr. Basevi, the conveyancer. This was done with a heavy heart. Some kind of employment at the university would, he says, have been much more to his taste. "There are but two worlds which have any interest for me—the world of nature and the world of books." His friend Dr. Peacock had sent him word of the impending vacancy of the Greek Professorship at Cambridge, caused by the promotion of Monk to a deanery. It is not clear whether he ever took any active step in consequence; but, at any rate, the position was filled, and, in the opinion of Thirlwall, well filled, by Dobree. There is a letter to Bunsen written at this time, much too long for us to insert here, which gives a complete idea of the sentiments which animated the future bishop on the subject of the profession which he proposed to follow. It was not the study of the law to which he felt any repugnance. Long afterwards he speaks of "the three years which he had devoted to the three branches of the law" as time "which he did not at all regret" (*Letters to a Friend*, p. 165). And from personal knowledge we must slightly correct the spirit of an anecdote given by the two editors. It was at a symposium in the rooms of a junior Fellow of Trinity (who himself was then doubting whether to go to the bar or remain in college) that Thirlwall said, "Nothing can be more agreeable than the pursuit of the law, so long as you have no practice." He then went on to describe, in his humorous manner, the life, not of a rising, but of a successful, lawyer; and wound up, *tout en badinant*, with the quotation from Sir Matthew Hale and the comment upon it which the editors have given (p. 58). When, just after being called to the bar, an opportunity offered of returning

to college as an assistant-tutor, he says, in a letter to his uncle, who apparently regretted the change of profession, or, at any rate, that it had not been earlier resolved on:—

"I see no reason for wishing that the change had taken place sooner. I am not sure that I could have employed my past time more profitably (by which I do not mean either more pleasantly or more lucratively) than I have done; and I am very sure that there is much less harm and danger in deferring than in precipitating all irrevocable steps."

And, in the same letter,—

"Society possesses two or three strong, stiff frames, in which all persons of liberal education who need or desire a fixed place and specific designation must consent to be set. Which of these frames is the best adapted to the nature of the individual, and allows him the largest and most commodious room for exerting his powers for his own and the public good is a question not in every instance very easy to determine. Fortunate, indeed, are they to whom it presents no difficulty, when the promptitude of decision arises from clearness of conviction and not from the absence of thought. But, on the other hand, it is not always just to attribute even a long fluctuation to levity or caprice."

His position at Trinity College, however, was not long retained. He complied, though under protest, with the requisition of the Master of the college to resign it, on the occasion of publishing a pamphlet in which he advocated the admission of Dissenters to the university, and incidentally reflected upon the then prevailing system of compulsory attendance at the chapel services. The present practice of the college, and the present state of public opinion on the subject, fully bear out the justice of the views then put forward by Thirlwall. The right of the Master to dismiss as well as appoint assistant-tutors was one by no means conceded by the Seniority; and, but for the magnanimity of Thirlwall, who personally exerted himself to prevent any proceeding detrimental to the interests of the college, there would perhaps have resulted a contest between the authorities as bitter as that which arose in the case of Bentley. As it was, when a very short time afterwards Thirlwall left college to take possession of the benefice of Kirby Underdale, to which he was presented by the Lord Chancellor, his departure was lamented by those who differed from him, as much as by those who concurred with him, on the main point of the controversy. His chief opponent, Whewell, who had vainly endeavoured to heal the breach before it was too late between the Master and his assistant, did not fail to express his "strong admiration and esteem for Thirlwall's great endowments and elevated character;" and the other speaks of Whewell's part in the matter as "having rather heightened than diminished the regard which he had long entertained for him." Their friendship continued through life.

During his residence at Cambridge he had, in conjunction with his friend Julius Hare, set on foot the *Philological Museum*, and translated two volumes of Niebuhr's *History of Rome*, which was almost a new revelation to English scholars. While studying law in London he had translated Schleiermacher's *Essay on Luke* and written the elaborate Preface

to it—a work which an able scholar and prelate pronounced to be of higher value than that to which it formed an introduction. He had also during the same period translated two of Tieck's *Novellen*. These performances, and the non-legal studies of which they were the outcome, he regarded merely as relaxation from the professional work in which he was engaged. But, in the seclusion of his country parish, which contained a population of only 300, he was enabled to devote his time to the production of his historical work. To leave the

"history of Greece in some respects in better condition than I found it is, I think, a sufficiently rational object of ambition to justify me in dedicating to it every moment I can spare from the duties of my parish, which, though in point of obligation they will always take the precedence, from the portion of time which they occupy may be considered as the chief occupation of my leisure. With respect to every other kind of recreation I am obliged to observe a strict economy."

In the fifth year of his parochial seclusion he was appointed by Lord Melbourne to the bishopric of St. Davids; and at once entered heart and soul upon the duties involved in that high office. The first thing that he did was to master the Welsh language, and this with such effect that within six months he

"read the Morning Service, including the Thanksgiving for the Queen, in Welsh, and administered the Sacrament in the same tongue to above a hundred communicants."

The London Cymrygddion Society, hearing of his progress in Welsh, elected him one of their honorary members. On the following Christmas Day he preached to a crowded choir. The Sunday after, one of the Welsh prebendaries being absent, he undertook the Welsh service in the nave, and was told the next day that the people insisted that he must be a Welshman by birth, "for he read better than the clergy." "I believe it possible," he says, "that my pronunciation may be more correct than that of many who officiate here."

We shall not attempt to trace the history of the Bishop through the thirty-four years of his episcopal life. The real record of that life consists in his charges, which, for the lucidity and completeness with which they handle every question that has come to the surface in the Church of England during the period over which they extend, and for the vast store of learning compressed into the positions which they establish, defy all comparison with anything which has been produced by any prelate of the present century. No monument which the admiration of his contemporaries has raised to the Bishop's memory is other than superfluous for the possessor of these, which have been reprinted in the three volumes of his *Remains* edited by the Dean of Peterborough. In Convocation, too, the Bishop was never wanting to maintain the principles of the Reformed Church of England against the Romanising tendencies which during the present generation have so widely infected all ranks of the clergy. On one occasion, indeed, he has been thought by some to have failed in vindicating the freedom of critical enquiry as unreservedly as might have

been expected of him. But it must be confessed that *Essays and Reviews*, the book which called forth the "Encyclical Letter" of 1861, was almost perversely contrived to cause irritation and evoke hostility on the part of the prevailing school of orthodoxy, and that some notice or other of it on the part of the bench of bishops was very generally expected by the clergy. The vague censure which was at last embodied in the "Encyclical" seems to have been the result of much private discussion among the episcopal signatories. Nine years afterwards the Bishop says:

"I cannot help lamenting that the secret history of the Episcopal Letter will never be known beyond a very small circle of persons, among whom I know only of one who would wish it to have been divulged."

There can be little doubt that its phrases were very variously interpreted at the time, according to the feeling which actuated its readers. The mature opinion of the Bishop on all the points which had given offence in the volume against which it was directed is formally expounded in his charge delivered in the year 1863, on which it is certain he bestowed much time and thought, and which leaves little more to be said.

But on another occasion, certainly of no less importance, his courage and energy exhibited themselves in a remarkable manner, and bore down all opposition before them. This was in the February session of Convocation in the year 1871. Among the fundamental rules laid down for the guidance of the company of scholars who were just then beginning the revision of the English Version of the Bible, one (the fifth) directed them to call in the aid of anyone whose reputation for learning warranted it, irrespectively of his nation or religious profession. Under this resolution a Unitarian gentleman was requested to join the Company of the Revisers of the New Testament. Before their first meeting, it occurred to one member, no less respected for his personal piety than his learning, that it would be generally gratifying if the whole Company of Revisers were to meet at the Holy Communion in Westminster Abbey before beginning their labours. The idea once broached found very general, although not universal, favour; and the late Dean of Westminster, always anxious to further any step which promised the promotion of mutual good-will, sent notice, without exception, to every member that the Holy Communion would be administered as suggested. When the day came, the Unitarian gentleman presented himself among the rest, and communicated. Instantly an outburst of fanaticism took place among the clergy. The proceeding was represented, not as an evidence of Christian charity, but as a profane insult to our blessed Lord requiring to be openly resented; and actually the Upper House of Convocation, who had framed the rule under which the gentleman in question had been invited to lend his services to the work of revision, had the rashness, under the leading of Bishop Wilberforce, to pass the following resolution:—

"That it is the judgment of this House that it is not expedient that any person who denies the Godhead of our Lord Jesus Christ should be in-

vited to join either company to which is committed the revision of the Authorized Version of Holy Scripture; and that it is further the judgment of this House that any such person now in either company shall cease to act therewith."

Bishop Thirlwall, immediately on learning this step, determined to quit his position as one of the Revisers, and his example would undoubtedly have been at once followed by the most distinguished scholars of both companies, but for the marvellous *volte-face* which out of mere shame the Upper House executed two days afterwards. Thirlwall gave notice at once that he would move a resolution which, in the speech by which he supported it, he informed his hearers was intended by him directly to contradict the one they had adopted. It was—

"That, notwithstanding the restriction introduced into the fifth resolution [the one guiding the procedure of the Revising Companies], this House does not intend to give the slightest sanction or countenance to the opinion that the members of the Revision Companies ought to be guided by any other principle than the desire to bring the translation as near as they can to the sense of the original texts; but, on the contrary, regards it as their duty to keep themselves as much as possible on their guard against any bias of preconceived opinions or theological tenets in the work of revision."

No more painful display has ever been made of feeble bigotry ashamed of its own act, and convulsively striving by any means to escape exposure, than is furnished by some of the speeches which followed this bold challenge. The Upper House *acceded unanimously* to the proposal of their intrepid censor, and sent it down to the Lower House, who in their turn made a proposal the effect of which was virtually and practically to rescind and annul the obnoxious resolution of two days before. Bishop Thirlwall thereupon, at the earnest request of the vanquished, resumed his place as a Reviser. To have stood out after such a victory would, as he says,

"have been mere obstinacy and peevishness, for which I had no motive, but, on the contrary, every reason to rejoice in a success which I should have previously thought impossible. . . . The only unfortunate part of the result is that the Upper House has certainly lowered itself in public estimation. All that can be said—and I really think that so much can be truly said—in its favour is that, having been betrayed by a mistaken zeal and confusion of ideas into an unwise step, they nevertheless had sufficient candour and honesty to accept truth and common-sense when it was presented to them, even at a great sacrifice of consistency" (*Letters to a Friend*, p. 242).

The limits of this article will not allow us to enter upon another topic—the opinions expressed by the Bishop to his correspondents upon the public men and the political events of the last ten years of his life which are scattered through the two volumes, and which the reader will find most interesting. The infirmities of age came thick upon him at last, partial blindness among the rest, not long after the resignation of his bishopric, which took place in May 1874, when he left Abergwili never to return to it, and settled in Bath. His love of reading remained as

strong as ever. In November 1874 he writes:—

"My only very serious concern is the steadily progressing failure of my eyesight. Already the dreadfully short mornings, which seem to pass like flashes of lightning, have become practically my whole day; for in the evening I can only read not the book I want, but one in large print. . . . I learn to appreciate the good-will of St. Paul's Galatians, though suspecting that they were not sorry to be unable to make the sacrifice."

In April 1875 he became almost totally blind, and also lost the use of his right hand. The mental powers, however, continued undiminished, and to the very last he was kept acquainted by his nephew and the family of the latter with everything that happened, and showed his interest in all religious and political matters by the letters he dictated. His death, which was sudden and peaceful, took place on July 27, in the seventy-ninth year of his age. The question whether his body should repose in Westminster Abbey or in his own cathedral was, we think, undoubtedly decided rightly in favour of the former; although, when it is remembered that the principal part in the restoration of the latter was owing to his efforts, and that in the course of his episcopate he had contributed between twenty and thirty thousand pounds to the Incumbents' Sustentation Fund, the anxiety of Welshmen to be the guardians of their benefactor's remains is not to be wondered at. In the Abbey he shares the grave of his illustrious school-fellow, friend, and brother-historian, George Grote.

J. W. BLAKESLEY.

*The Works of John Day.* Now first Collected, with an Introduction and Notes, by A. H. Bullen. (Privately Printed at the Chiswick Press.)

MR. BULLEN'S edition of the *Works* of John Day is in many respects a model of what the reprint of a minor English classic should be. It is absolutely complete, as far as can be discovered; it reproduces in facsimile the peculiarities of each first edition; and it is illustrated by learned notes, which are not too copious, and by a pleasant Introduction, which is not too enthusiastic. Not a few able editors in the present day exhaust the capabilities of the language in eulogistic adjectives before they allow us to be presented to the subject of their praise, and then are surprised at our bewildered look while we seek in vain to find the exquisite loveliness they spoke of on a set of very homely features. Mr. Bullen commits no such error. He admits with extreme frankness that Day attempted every species of dramatic writing, but failed in almost all; that his tragedy is not tragic, and his broad comedy broad without being comic; and that if we want fire and spirit we must go elsewhere. It is refreshing to meet with a pioneer who perceives that his whole run is not auriferous; he can detect the pyrites in his mass of quartz, and this gives us confidence that he knows gold when he sees it. The genuine metal of genius in the plays of Day consists of a certain

gracious and witty vein of rhymed pastoral poetry, in which he is almost unique among the Jacobean playwrights. Lyly, in the preceding generation, had enjoyed something like it; the Euphuist romancers, particularly Greene and Lodge, had led the way for it in prose; and Nabbes imitated it with some success a few years later. But Day remains the type and expositor of this playful and delicate side of Elizabethan drama, of the school of floral conceit and affected pastoral wit, Arcadian and, at the same time, mundane. We have lost most of his plays, and we might be content to lose more, so that the fates left us his three best and, indeed, inimitable pieces, "The Parliament of Bees," "Humour out of Breath," and the "Isle of Gulls."

Scarcely anything is known of Day's life, but Mr. Bullen's investigations show that as early as 1599 he was a professional playwright in full practice. Hitherto, we have not known him until 1606, and this relegates him to a time more strictly Shaksperian than had previously been supposed. Marlowe had been dead six years in 1599, and the circle of his immediate friends was broken up. Shakspeare was copiously at work; and Day seems to have made his *début* with Ben Jonson, Dekker, Chapman, and others belonging to the second wave of dramatic production. Day was, therefore, probably born about the same time as Jonson—not earlier, certainly, one is inclined to consider, than 1570. The sole fact known about his youth is that he was a student of Gonville and Caius College, Cambridge. In January 1599 he was accepting the paltry sum of five shillings from Henslowe, and was certainly hard at work play-writing. According to the *Diary*, he wrote, or was engaged in, no less than seven plays during that one year, being associated in most of these with William Haughton, a comic writer whose pieces have all disappeared with the exception of his "Englishman for my Money." Day's seven plays have had the same fate. Two of them were domestic tragedies of the newspaper style then so very much in vogue—vulgar plays of which "Faure Em" is not a bad example. The rest were tragedies; and Chettle, who was a very poor hand at tragedy, assisted Day and Haughton in their composition. "Cupid and Psyche" however, a play produced by Dekker, Day, and Chettle in 1600, promises more, and may have resembled Heywood's later efforts in classical pastoral. The same year saw the production of the earliest play of Day's which we possess, "The Blind Beggar of Bednal Green," a very unpleasant comedy, in which he was assisted by Chettle. It would seem that this play attracted the groundlings, for its authors were encouraged to put forth a second and even a third part, of which we need not lament the disappearance. It is needless to go through the lost plays whose names alone have been preserved. Of Day's first twenty-one dramas, "The Blind Beggar" seems to be the only one which saw its way into print, and that, when the author must have been long dead, in 1659. Some of these titles suggest the genius of Dekker rather than of Day; from the former dramatist, with his realistic touch and his sympathy for the poor and outcast, we might expect some stirring scenes in "The

Boast of Billingsgate" and "The Black Dog of Newgate," but these themes do not suggest themselves as giving any scope for Day's vein of courtly poetry. "Merry as May Be," a play in which he was assisted by Hathway and Wentworth Smith in 1602, may have been a poem more characteristic of its main author.

Mr. Bullen has discovered mention made of no less than thirty plays in which John Day was concerned, and he believes that this represents only a small fraction of his labours. He was, therefore, a professional poet in the most exact sense of the word. Besides the comedy mentioned above, five of his dramas have been preserved, and of these the earliest is the "Isle of Gulls," printed 1606. In 1607 were published "The Travels of the Three English Brethren" and "The Parliament of Bees," although the original edition of this latter seems to have disappeared. "Humour out of Breath" and "Law Tricks" were printed in 1608, and close the list of Day's existing works. In 1619, however, he was still alive, for Ben Jonson talked about him to Drummond of Hawthornden, and said that he was "a rogue" and "a base fellow." Tatham, a poetaster who lived on into the Restoration, wrote a punning epitaph on Day, which was printed in 1640. It is probable that his death occurred not long before this date; and we are left to speculate in vain about the incidents of a life of perhaps seventy years, with its one decade of feverish professional activity. Unlike most of his more distinguished contemporaries, Day seems to have printed no pamphlets, or romances, or miscellaneous poems, and to have been content to be known by a few dramatic waifs and strays from his enormous theatrical repertory.

Of entirely new matter, Mr. Bullen is able to supply us something. He has found among the Lansdowne MSS. "an olde Manuscript conteynynge the Parliament of Bees, found In a Hollow Tree In a garden at Hibla, in a strandge Languadge, and now faithfully Translated into Easie English Verse by John Daye, Cantabrig." This is a very valuable addition to our knowledge of the text of Day's most famous poem, which has been reprinted, in the unavoidable absence of the edition of 1607, from the quarto of 1641. The MS. seems to be an early and uncorrected draft of "The Parliament of Bees." In many respects it throws light on the development of that play, although we agree with Mr. Bullen that, in the main, the later version is the best. The same gentleman gives good reasons for believing that the credit of certain passages in this play belongs to Dekker, but we are happy to add that among these is not found any one of those exquisite rhapsodies in octosyllabic rhymed verse which have charmed every critic from Charles Lamb to our own day. Another very important discovery is the existence of a prose tract in MS. in the British Museum, a small quarto of thirty-two leaves, entitled "Peregrinatio Scholastica." This Mr. Bullen has printed for the first time. He has hazarded no conjecture regarding the date of this production; but, from the style and the peculiar choice of epithets and illustrations, I should be inclined to consider it the

earliest of Day's existing works, and not later in date of composition than 1595. In this richly coloured and picturesque piece of writing he shows himself one of the latest of the Euphuists and a very careful imitator of Lodge. The style suffers from the confusion and tedious complexity characteristic of the school, but it has occasionally eminent graces and rich turns of expression. The description of Dipsa, dressed as Diana in a loose robe of green velvet, with the story of Actaeon embroidered round the hem, and with a garland of red carnations in her curly golden hair, is as exquisite as an Italian painting of a century earlier; while the elaborate imagery under which the virtues and the emotions are depicted reminds us not a little of De Quincey's manner of presentment.

It is gratifying to me to observe that Mr. Bullen is inclined to subscribe to a suggestion which I advanced about three years ago—namely, that "The Maid's Metamorphosis," an anonymous play attributed without a shadow of evidence to Lyly, was probably written by Day. He promises to examine this beautiful and little-known drama more narrowly. When he does so, I feel certain that he will find himself struck by the analogy its versification bears to that of the "Isle of Gulls."

EDMUND W. GOSSE.

*Stories from the State Papers.* By Alexander Charles Ewald. In 2 vols. (Chatto & Windus.)

WE have been in some degree misled by the title of this book. It conveyed to us the idea that we were about to have presented to us a series of new facts from the stores of unprinted documents in the Record Office. In this we have been mistaken. Almost all that we have here was to be found before either in the popular Histories of England or in the Calendars published by her Majesty's Government. Mr. Ewald's book has little claim to be a vehicle of new knowledge, but it is amusing reading nevertheless, as it furnishes, in a popular form, details which the class of readers for which it seems to be intended would never dream of looking up in what they would consider the dry pages of a Calendar.

By far the best paper in the collection is the third, entitled "The Captive of Castile." Whatever may have been the exact truth about Juana, her life is one of the saddest things in history—

"a queen who had never known sovereignty, a daughter who had never known a father's care or a mother's love, a wife who had never known domestic happiness, a mother who had found in her first-born her bitterest foe."

All this and much more is true. Her sad life is not painted in too dark colours by Mr. Ewald, who has the deepest sympathy with her. We cannot, however, help believing that from the first she was suffering from disease of the brain. It is admitted on all hands that in her latter years she was without doubt mad. It may be—and for the credit of human nature we trust that it was so—that those who knew her best were really certain of this from the first. Her strange hatred of the worship of the Catholic Church really seems to go some

length towards proving this, for there is, we apprehend, no ground for supposing that she was intellectually at war with the theology of her time and country. For the horrible treatment the unhappy captive received no excuse whatever can be made, except the very poor one that it is a fact that until recently, in those countries where insanity has not been regarded as a mark of divine favour, it has commonly been treated with revolting severity. Of this we have, unfortunately, instances in every class of life from an early period down almost to our own days.

"The Gathering of the Storm," which treats of the disturbed relations between Charles I. and his people before the war broke out, contains many facts worth remembering. Mr. Ewald does not, however, show much power for appreciating the strong and many-sided character of Strafford. We wish also that he had spoken more kindly of Laud. The Archbishop was narrow-minded and absolutely unfit for the heavy burden laid upon him. It may have been morally right in a time of revolution to sweep away a person so highly dangerous. We will not now call in question the "justice" of his death; but it is not just to refrain from presenting the view of the situation which was in all good conscience held by himself, as it has been by many like-minded persons in days more recent. Whatever else the Archbishop was, he endeavoured with all his might to be a social reformer; and we have the most positive evidence that he did his best to induce his clergy to attend to their duties, and that he rightly enforced the laws against those of them who openly led ungodly lives. No one, we suppose, will censure him for being severe upon parsons who built themselves houses within the precincts of graveyards, or who turned the churches into cock-pits, and were accustomed to fight mains of cocks in front of the altar "before an admiring audience of villagers."

The story of the Lancashire witches has been told many times before; but it is one of those horrible tales that require to be repeated from time to time lest men should forget how terrible the delusion once was, and how frightful it might again become if circumstances were to change but a very little. Though the witchcraft laws have long been blotted from the statute-book, the belief remains in full force among a large proportion of our labouring poor.

We have detected very few errors, and those of a trivial nature. Among them is the mistake of speaking of Hull as a city; in official language it is always the town and county of Kingston-upon-Hull.

EDWARD PEACOCK.

*Life of Garibaldi.* By J. Theodore Bent. (Longmans.)

MR. BENT is a good chronicler of the small details which vitalise a memoir; but to write the history of a nation's idol in the lifetime of that idol, and to keep within the bounds of good taste, is a harder task than he has been able to accomplish.

He boldly commences his work by saying that nothing ever annoyed Garibaldi more than the fact that Alexandre Dumas wrote a

memoir of him when he was in the prime of life; and it is hard to believe that a memoir in which the characters and actions of Garibaldi's nearest relations are freely canvassed and animadverted upon could be more pleasing to him now. But, even if this were not the case, such a memoir must necessarily be a failure. It is impossible to grasp as a whole events which are in a sequence not yet complete; and the patronising way in which Mr. Bent recognises the past work of Garibaldi, and consigns him to inaction, does not lessen the difficulty.

To tell the story of such a life at all adequately, a man must be something of a poet and an artist; none other could show to the world the great results which have arisen from the conduct of a character swayed by one or two uncomplicated qualities. The simplicity of Garibaldi, and his freedom from counter-attractions in pursuing the objects he set before him, have concentrated in him powers of bravery, endurance, and patriotism in themselves remarkable, and have lifted him as on a resistless wave of success. Definiteness and hope have been two of the main sources of that success. Garibaldi has known from the first in a general way what he wanted to do, and he has done it. Cavour saw, too, what he wanted to do, but when he could not do that he did something else. Mazzini saw what needed doing with larger eyes than either of them, and is still, and will for long be, doing it.

Mr. Bent in his sprightly way has told the story of Garibaldi's early life clearly enough: the dreamy youth of the fisher-boy at Nice, the adventures with pirates at sea when he reached early manhood, the first acquaintance with Mazzini in 1834 and the exile involved by it, the privateering in Brazil, the practice in guerilla warfare (turned to such good account afterwards), the cattle-driving between Rio and Montevideo, the friendship with Anzani and marriage with Anita, are written about more pleasantly than subsequent events. The siege of Rome, the Sicilian campaign, the stories of Aspromonte, of the English visit, of Mentana, and of the Vosges are better known, and have been handled by more sympathetic writers than Mr. Bent. He maintains that "Garibaldi, from first to last, has been influenced by those around him;" but then he does not show how Garibaldi has chosen his surroundings and, consequently, his influences. He acknowledges that he is a masterful man in fighting and a hero of self-denial and purity; and, "when influenced for good, no character," he says, "was more glorious than Garibaldi's." But then people may differ as to the influence for good. Mr. Bent places it in Cavour and the Constitution; others might believe it to be in "the Mazzinian idea" which Cavour was combating, although to it the success in Sicily was due. But Mr. Bent is mistaken if he thinks that to depreciate Mazzini exalts Garibaldi. It is uncalled for, as well as absurd, to say that Mazzini was "too pusillanimous for a *coup de main* in Sicily." Garibaldi would be the first to justify the originator of the Sicilian project from such a charge, and to acknowledge the courage of the man who urged the scheme upon him, asking for none of the glory. F. M. OWEN.

## NEW NOVELS.

*The Lieutenant: a Story of the Tower.* By the Author of "Estelle." (George Bell & Sons.)

*Aurelia; or, the Close at Mixeter.* By Greville J. Chester. (Marcus Ward.)

*Married and Single.* By Emily C. Orr. (Walter Smith.)

*Dr. Breen's Practice.* By William D. Howells. (Triibner.)

*A Gentleman of Leisure.* By Edgar Fawcett. (Sampson Low.)

*If Either, Which?* By T. P. W. In 2 vols. (Satchell.)

*Strange Chapman: a North of England Story.* By W. Marshall. In 3 vols. (Hurst & Blackett.)

MISS HARRIS seems to promise by her title an historical novel; but, save for a reference or two in the body of her story to our Indian wars, there is nothing of the kind in the book, which is devoted to the history of the friendship between a young lieutenant-colonel in command at the Tower and a quaint little girl, one of a neighbouring household, whom he meets as she wanders about the old fortress in charge of her nurse. There is much delicacy and skill in all the earlier part of the story, where the characters of the two children, Monica and Louisa Carr, reared in a frugal, old-world, and somewhat Spartan family, are sketched and unfolded; but the interest flags in the later portion, save that there is some beauty in the description of the manner in which Louisa Carr's ascetic and self-denying temper, noticeable even in childhood, develops itself in adult life. The chronology of the narrative is rather mixed, for we have constantly pressed on us the fact that the time written of lies so far back as to belong to quite another era of social habits and training; but we get one date as that when *Bleak House* was publishing (1852-53—surely not very distant), while two or three years later on we find the Sikh War of 1846-49 raging; and some years later again the Laureate's "Lady Clara Vere de Vere," published in 1830, is but just out and fire-new. There are defects in construction, chiefly in that, whereas we are introduced to four sisters in the Carr family, two are merely named once or twice, play no part whatever in the story, and do not even serve to provide materials for bringing out traits in the other two. And yet in real life the sisters of two such originals could not have been mere dummies. Nor is it made clear how a very poor family, after the death of the principal bread-winner, can afford to move as sole tenants into a house lying in a more expensive quarter of London, where rents, even now, past though its day be, are very high.

Mr. Chester gives "Sketches in a Cathedral City" as a secondary title to his novelette, and thereby at once forces on the reader's notice his boldness in entering a field where one champion remains invincible, and in seeming to challenge comparison with *Barchester Towers*. A brief examination, however, shows that it is not Mr. Anthony Trollope with whom he enters into competition, but

the more ecclesiastical authors of a past variety of Anglican tales, in which all the good people are High Church, and all the bad or stupid ones either Low Church or Dissenters. The model on which Mr. Chester has endeavoured to form himself is Mr. F. E. Paget; but he has not the same lightness of touch and sense of the humorous, so that his polemic fails a little in good-natured railery, and is somewhat of an anachronism besides.

*Married and Single* is a very slight story, but not without merit and promise. It is quietly told in language which exhibits culture; and, though there is little plot and no special effort at character-drawing, there is enough in the book to give temperate pleasure to readers whose palate has not been spoiled by coarsely over-flavoured novels.

Mr. Howells divides with Mr. Henry James the suffrages of the American public as their representative novelist, and in his newest book he treats a question which has become very prominent of late. For his Dr. Breen is a young lady physician, and her practice consists of one troublesome and capricious school-friend. The chief interest of the story for English readers is that it shows that the debate on lady doctors is scarcely nearer to a close in the United States than even among ourselves. So far from its being an accepted fact there that the sexes are on an equality in the practice of medicine, we are given to understand not only that the male practitioners look on their lady rivals with good-humoured, yet quite unconcealed, contempt, but that the chief difficulty in the way of these latter is the conservative instinct of their own sex, which objects to the social eccentricity of the movement, and obstinately prefers male advice for its own benefit. And Mr. Howells, by drawing his heroine as a victim to febrile excitability and indecision—perhaps the worst of all constitutional defects in a physician—clearly throws his vote into the adverse scale.

As we reviewed *A Gentleman of Leisure*, a sketch of the Anglicised section of New York society, on its original issue by an American publishing firm (ACADEMY, September 17, 1881), we need here merely record its appearance in an English edition.

*If Either, Which?* appears to be a first attempt. It is crude, and very imperfect in literary style, showing much need of careful study and revision. But there is some capacity for better things exhibited in it. The story takes the somewhat unusual form of the original hero and heroine, after falling in love, falling out again under stress of adverse circumstances, and each taking up with a fresh attachment, which ends in matrimony, and with a strong friendship between the two brides, one of whom has supplanted the other. The chief pains have been spent on a very familiar type indeed—that of the evil-tongued and domineering gossip of the pariah, in this case the wife of the meek curate. But, trite as the subject is, it has been treated with some ability; and the letters the lady writes to persons whom she wishes to annoy have a fine spiteful flavour about them, which makes

them read as if they had been studied from originals.

*Strange Chapman* does not mean an eccentric peddler, as might be hastily supposed, but is the name of the hero of the story, one in which the well-worn properties of a fraudulent trustee, kidnapped children, secreted deeds, and final poetical justice are all employed. The book is a very readable one; and, if the author, by making Sheffield the principal scene, and working in a good deal about rattening and the bursting of the Bradfield reservoir, has matched himself against Mr. Charles Reade in *Put Yourself in his Place*, and is not of the same literary size and weight, he has come out of the contest with credit, though not with victory. One very curious error occurs for one who writes himself as a graduate, and gives a good deal of the story to narrating clerical humours and intrigues, in that he makes his hero, L'Estrange Chapman, who is a curate in Whittlemore or Sheffield, ignorant of his own parentage, and knowing nothing whatever of the record of his baptism till it turns up in the middle of the third volume, whereas he could not possibly have been ordained without previously sending in to the Bishop a certified copy of his baptismal register as one of the papers required by law. The book, however, has a certain swing, which makes it readable, and induces pardon of this and other defects. And there is a particularly good touch in the vengeance which is made to fall on the trustee who has plundered the orphans of his old school-friend, in that, although very rich, even independently of his unrighteous spoils, he suffers from partial mania, believing himself a totally ruined man, kept from starvation only by outdoor parochial relief, so that his wealth is mere Dead Sea fruit in his mouth.

RICHARD F. LITTLEDALE.

#### CURRENT LITERATURE.

*Extracts from the Writings of W. M. Thackeray.* Chiefly Philosophical and Reflective. (Smith, Elder and Co.) To the professional man of letters no name has a more welcome sound than that of Thackeray. He was alike novelist, essay writer, pressman, editor, draughtsman, poet, and even historian, combining in his single person the pursuits of all his fellows. Before his death he had attained the position of a classic, and the social enjoyments which he relished as keenly as he depicted. To enter Parliament was the one thing forbidden to his ambition. He did not live to read *Endymion*. How his reputation stands now it is difficult to decide. Never so widely popular as his great compeer Dickens, he has probably enshrined himself deeper in a more select circle of admirers. He is emphatically the author for the educated world, as Addison and Johnson each were before him. For such this volume of "Extracts" is hardly intended. Men who read much and read quickly will ever feel a distaste for disconnected passages and half-thoughts. It is as if they were set back again at their Delectus. But to a larger class, and to a younger generation, for whom literature must be made easy by being administered in measured doses, this book has a distinct value. It may lead them on to the *opera omnia*. Macaulay, we hope, is still read; nor have we yet heard of Selections from his Essays. Sidney Smith, we are sure, survives only in

his "Wit and Wisdom." No writer can be at the same time a classic and the subject of *Elegant Extracts*. If this book is to be a schoolmaster, to draw readers to Thackeray, we hail it with cordiality; if otherwise, it had better never have been compiled, well as the compiler has performed his (or her) duty.

*Free Trade and Protection.* By the Right Hon. Henry Fawcett, M.P. Fourth Edition. (Macmillan.) Mr. Fawcett has done well in issuing a new edition of this solid and useful work. It is the best manual of the best arguments in support of the policy of free trade. In this edition there is no chapter into which Mr. Fawcett has not introduced some new matter. In regard to the "fair trade" cry, Mr. Fawcett shows how indefinitely more serious would have been the depression which has affected English industry if the difficulties which had to be encountered had tempted us to make the smallest departure from the principles of free trade. This depression has been felt with greater severity in many protectionist countries. And, although it is due to many causes, some of which free trade is powerless to counteract, yet Mr. Fawcett establishes that, when a period of industrial depression occurs, its most serious consequences are not more surely mitigated by free trade than they are aggravated by protection. The chapter on Commercial Treaties probably contains the largest amount of new matter. With regard to any scheme of retaliation, Mr. Fawcett argues that, if the principle is once sanctioned of giving one special industry protection against foreign competition, it would be impossible to withstand the claim which would be urged by other industries to similar protection whenever they also suffered from foreign competition. Although we should certainly derive great advantage if the American, the French, and other markets were freely open to us, yet it cannot be doubted that, if these countries released their trade from its present protective fetters, they would become much more formidable competitors in those neutral markets—such as the markets of India and China—which are now so largely, almost exclusively, supplied with English goods. Most of the statistics in this valuable work are taken from the *Statesman's Year Book* and from the *Statistical Abstracts* of the Board of Trade. We are disposed to regret that in publishing a new edition Mr. Fawcett has not changed the figures, which are generally those of 1877, into those of the last recorded year.

*The Level of Hatfield Chase, and Parts Adjacent.* By John Tomlinson. (Doncaster: John Tomlinson.) The conditions under which this elegant volume has been issued are curious and remarkable. The author, who is also the publisher, has printed only 200 copies in royal quarto, and fifty in crown folio, and does not seek remuneration either for his personal labour or the expense of publication, but proclaims his intention to "give, not the profits, but the entire proceeds of sale, to the Doncaster Infirmary," provided only that the entire edition is disposed of before January 1, 1883. Allowing for the copies reserved for presentation to public libraries, the press, &c., and assuming that all the others are sold, of which there can be little doubt, the charitable institution above named will find itself in the receipt of upwards of £400, the clear produce of this literary venture. It is to be feared that few authors could afford, and fewer publishers would be disposed, to be so generous; and the very novelty of the proposition, if there were no more substantial reason, ought to ensure the immediate sale of every copy in the market. But the volume itself is intrinsically valuable, and its production reflects great credit upon the enthusiastic author-publisher. This is the

first complete history of the Manor and Chase of Hatfield that has been printed, though the unfinished account by Abraham de la Pryme (Lansdowne MS. 897) has long been familiar to students. Of this MS. Mr. Tomlinson has made ample use, as also of the subsequent labours of Stovin, Peck, Wainwright, Stonehouse, Hunter, and others; but he has reduced the details furnished by his predecessors to a system, and supplemented them by others involving a vast amount of original research. The result of his labours is a full, clear, and connected history of the drainage of the great level of Hatfield Chase, of the Manor of Hatfield, and of other parishes in the immediate neighbourhood. Incidentally, many interesting personal particulars are given relating to the chief persons engaged in the drainage, notably Sir Cornelius Vermuyden, the Van Valkenburghs, Vernattis, and others. The illustrations, twelve in number, include exterior and interior views of the churches of Hatfield, Thorne, Fishlake, and Barnby Dun, Hatfield Manor House, Thorne Old Hall, &c.; and two most interesting and important old maps of the district have been carefully reproduced. Add to all this the fact that the monumental inscriptions in the various churches, lists of incumbents, &c., are given, and it will be seen that Mr. Tomlinson has produced a volume which appeals to almost every class of antiquarian students, and possesses a value which cannot fail to be permanent.

*Orations and Essays; with Selected Parish Sermons.* By Rev. J. Lewis Diman, D.D., late Professor of History and Political Economy in Brown University. (Trübner.) This is a volume designed to perpetuate the memory of one who appears to have been dearly loved by his immediate friends, and who gave abundant promise of attaining eminence in the particular career to which he devoted himself, but who was unhappily cut off in the very prime of his life, leaving no great work behind him by which his abilities could be tested. To the English public the name of Prof. Diman will be comparatively unknown; while in his own circle, and among cultivated Americans generally, he was regarded as one of the foremost men of his generation. The contents of this memorial volume are necessarily of a varied character, and of no great permanent interest beyond the American horizon. The article which will be most likely to engage the attention of English readers is the well-conceived and admirably written address on the life and character of the ill-fated Sir Henry Vane, which may well take the highest rank among monographs of this sort. A commemorative discourse by the Rev. Dr. Murray affords interesting details of the personal history of the author; while a charmingly etched and evidently characteristic portrait presents the man as he must have appeared to those who knew him, and confirms physiognomically the popular estimate of his character.

*Tracts Relating to Northamptonshire.* Second Series. (Elliot Stock.) Mr. John Taylor's enthusiasm in regard to everything relating to the county of Northampton is well known, and he has done much admirable work in bringing to light and placing upon permanent record rare, and sometimes unique, documents and ephemeral tracts. We cannot feel, however, that his second series is equal to his first. It contains several valuable reprints which will be cordially welcomed; but surely it was unnecessary to reproduce an ordinary reporter's account of a recent Northamptonshire meeting of the Royal Archaeological Institute, or papers read at the same meeting which are abundantly accessible in the printed *Transactions* of that society, or a newspaper account of a visit to Lord Spencer's library at Althorp. Between

these and the really valuable sixteenth- and seventeenth-century tracts reprinted in this volume there is a wide gulf—so wide, indeed, that we are surprised that Mr. Taylor should have seen fit to make his way over it. We may also add that in an advertisement sheet at the end we see several tracts mentioned as belonging to this series which do not appear in the volume at all.

*Ludgate Hill, Past and Present.* (Griffith and Farran.) Mr. Treloar's modesty is touching. He shrinks back from the full blaze of the title-page, but blushing reveals himself in the Preface. Even there he does not proclaim himself an author in so many words. Yet we think that we may take it for granted that he has at least been concerned in the composition of this book, which may be described in his own language as a "brief, but inclusive retrospect of the history of one street or neighbourhood." It is "inclusive" we suppose because it includes some famous buildings like Baynard's Castle, which were not upon the Hill; but, however that may be, it is a pleasant, gossip book, somewhat in the manner of the late Mr. Timbs, about one of the most interesting localities in the City of London. As a guide-book, it is scarcely full or learned enough for the serious student; but for the country visitor it will serve as a very amusing companion, giving him an intelligent interest in all he sees, and enabling him to form many agreeable pictures of bygone times.

*Rambles and Studies in Old South Wales.* By Wirt Sikes. With numerous illustrations. (Jampson Low.) Mr. Sikes is consul for the United States at Cardiff, and these chatty pages were originally intended to introduce the Southern corner of Wales to his fellow-citizens. We beg leave to think that this region is not so entirely unknown to Englishmen as he seems to imagine; and it would be flattery to compare Mr. Sikes to either of his illustrious predecessors, Washington Irving or Nathaniel Hawthorne. Yet he has put together a volume of slight sketches which is eminently readable, and excellently got up by the publishers. His eyes were open to see what English travellers might not notice; and, though his historical comments are not always either new or true, the tone of his criticism upon persons is ever genial. The present book is not so valuable as the previous work by the same author upon Welsh folklore, but it gives us a very agreeable picture of Mr. Sikes himself as a man and a tourist.

*A Christian Woman.* By M<sup>me</sup>. de Witt. With Preface by the Author of "John Halifax." (Hurst and Blackett.) The story of M<sup>me</sup>. Jules Mallet (*née* Oberkamp), with the title "Une Belle Vie," has been written by M<sup>me</sup>. de Witt, and now appears in English as *A Christian Woman*. Both names apply equally well to the story of this life, and the words "Be such that you can do whatever ought to be done" might have been its motto. In thoughtful care for the working-classes, following the example of her father (who was a calico-printer and employer of labour on a large scale), M<sup>me</sup>. Mallet early began to plan and organise on their behalf. The elaborate scheme for infant schools in France was arranged and carried out by her; and to the end of her life this system was her supreme interest. But she had one of the most valuable qualities of a good organiser, that of being able to set others to work. She knew how to start a scheme better than any of her friends; she knew how far it needed her support; and she knew when to leave it to be carried on by others while she gave herself to that which needed her more. Born in 1794, and dying in 1856, her lifetime comprised some of the most eventful years in the history of France. In 1832 she devoted herself to nursing cholera cases, and

undertook the organisation and personal superintendence of a cholera hospital, in which 235 patients succeeded each other and received her most unwearied attention. When this work was ended, she found fresh occupation from an outbreak of cholera in her native place, where the village was left to the stricken ones and their two nurses (young soldiers in uniform). M<sup>me</sup>. Mallet went about from house to house tending the sick and dying, and then broke down from the strain, and was ill for many months. When Mrs. Fry visited France, M<sup>me</sup>. Mallet threw herself with enthusiasm into her schemes for the relief of female prisoners, and was one of the founders of a society for giving refuge to them when discharged. We find her next engaged in charity organisation and the distribution of relief in the great distress of 1848; and again, in 1849, nursing cholera patients, and especially the children of the schools which were her constant charge, and with reference to the formation of which the French Government endowed her with ample powers. Bright and energetic, with a self-reliance and intense fervour that carried her over all obstacles, she lived a life of usefulness which many might have envied; and her personal charm increased instead of diminishing with her varied interests. M<sup>me</sup>. de Staël wrote of her a few days after her death:—

"She took life easily. Strong natures move softly, because they are not obliged to exert themselves in order to remove heavy obstacles. She did everything readily and well. She took all in good part, and knew how to spare time even to the little joys of childhood in which she had so large a share. She breathed upon the dark clouds—which I too often have allowed to envelop my life—and they disappeared. She lived wholly in the presence of God. This accounts for all."

*Count Campello: An Autobiography.* With Introduction by Rev. William Arthur. (Hodder and Stoughton.) Mr. Arthur would have done better to leave this book in its original form. It must have lost greatly in translation, and the change from autobiography has made it stilted and confused. The most interesting feature in the life is that Count Campello can resign his canonry and leave the Papal Church without apparently exciting resentment or intolerance. He appears, from his own account, to have been made an ecclesiastic against his will, and never to have been satisfied with his clerical profession. His fervour found vent in schools for the artisans, which were summarily put an end to by the authorities. He afterwards tried to incite rebellion in a class of priests (whom he designates "the Hermits," but who were apparently malcontents), and failed to do so; and he then publicly gave up the Church of Rome. The book is disappointing. Count Campello seems to have changed one set of dogmas for another; but we miss entirely the spirit which makes such a change an advance, as in the case of Lammenais.

*Dogs of Other Days.* By Eve Blantyre Simpson. (Blackwood.) The young lady (for she lets us know that she was born after 1855, and we are not sure that her exact age might not be proved by a careful collation of different passages in the book) is evidently such a sincere lover of dogs, is so ready to make allowances for their little failings, such as cat-hunting and heel-nipping, so fertile in imaginative suggestion as to their motives and feelings, that we doubt whether any of the dogs about which she has written this affectionate and charitable account was ever quite worthy of their mistress. Ned was evidently a worthy old fellow, and Puck was no doubt a dog of character and sentiment, who sighed like a human being, and had many delightful traits, but he must have been a nuisance when he grew old, even according to this loving account of him. Though he had many adventures and narrow escapes, was once inoculated with the scarlet fever in the cause of science, and

was "the best dog we ever had," his biography fails to establish his claim to immortality. It is of a living dog, Betty by name, who has passed a volatile and selfish youth, but has now become a "wiser and a sadder" pug, that the only story is told which may be an important contribution to canine psychology. This dog was young when Puck was old, and, taking advantage of Puck's good nature and feebleness, stole his food and turned him out of his favourite beds. When Puck died, something like remorse appears to have seized Betty. She would not curl herself in the old cosy corners, though they were empty; but we will tell the rest of the story in the authoress's own words:

"After his [Puck's] decease she used to rise slowly, with a horrified expression on her blunt face, from the chair which had been his death-bed. It seemed as if the wrath of her pinched-featured friend suddenly inserted itself, as she had had a habit of doing, between her weighty body and the chair-back. As time went on, her old confidence reasserted itself, but she began to do a penance instead. There is a paper-knife, the handle of which is Puck's veritable old fore-paw and clean grizzled leg. Betty knows it. After she has stuffed down her share of sugar and toast, she goes, with a gentle light in her brown eyes, her face even more wrinkled than ordinarily, and her tail out of curl, to lick the reverend paw. If anyone touches the knife, she uncoils her corpulent, comfortable self, and arises from snug chairs to 'do penance.' . . . Whenever her attention is directed to it, she must get up and pay homage. As a rule, she is a dog utterly devoid of veneration—a mass of impetuous, insolent self-assertion; but her conscience somehow reproaches her for the rough usage she gave to the decrepit Puck, and she hopes, before she joins him in the happy hunting-grounds, to have wiped out that heavy score against her by constant, humbling 'penance.'"

This last imaginative touch is one of many which, if they destroy Miss Simpson's claim to be regarded as a scientific observer of dog-nature, greatly enhance the charm of her book.

*Mammy Tittleback and her Family: a True Story of Seventeen Cats.* By the Author of "Letters from a Cat." (David Bogue.) Though this "gift-book" has been late in reaching us, we cannot forbear to give it the welcome it deserves. The subject is attractive, for there is nothing children take a more real interest in than cats; and the writer has had the good sense to write neither above nor below his subject. The type is large, so that those for whom the book is intended may read it themselves. It may be as well to say that "Mammy Tittleback" is a tortoiseshell who is blessed with a progeny of twelve in various ages and generations, while the odd four cats are only "supers." For details we must refer all interested to the story itself, which seems to us written with admirable verisimilitude.

#### NOTES AND NEWS.

THE Rev. Dr. Moore, Principal of St. Edmund Hall, Oxford, has in preparation a work on Dante, which will shortly be published by the syndics of the University Press at Cambridge. It will consist of (1) a complete collation of the "Inferno" in all the MSS. preserved at the two universities, and also in a MS. (date about 1400) in the possession of Dr. Moore himself, all the variants being registered from Dr. Witte's Berlin text taken as a standard; and (2) a Dissertation on the condition of the text, with a collection of from 100 to 150 passages taken from the "Commedia" generally, selected mostly as supplying examples of readings primary and secondary in character, and so affording tests of the comparative purity of the text of MSS. generally. The collation of these passages will extend over a much larger range of MSS. and will be as far as possible complete for all the MSS. known to exist in England, and will also include some

of the best-known MSS. in foreign libraries. Dr. Moore has received advice and help from time to time from Dr. Witte, to whom the work will be by permission dedicated.

THE movement which was begun in Edinburgh last summer for the formation of a Scottish Text Society has been well supported, over a third of the requisite number of members having already put down their names. The promoters of the society are about to issue their prospectus and to complete the list of membership.

AMONG the books sold at the dispersion of the first part of the Sunderland Library was a MS. described as "Le Roman du Roi Arthus . . . bound in 2 vols. . . . circa cent. XIV." It was bought by Mr. Quaritch at a high price, but not so high as to compensate for such a loss to a noble English family. There are few books which deserve more to be prized among the treasures of a house like Blenheim than a MS. of Lancelot du Lac, containing a thirteenth-century text of that famous work, the first and finest flower of the literature of romances of chivalry. Transcribed probably about the year 1300, but representing, both in text and miniatures, a valuable codex of some fifty years earlier, the Sunderland MS. carries us back to a period of only fifty years after Walter Map's death, and is thus much earlier than the *ri facimenti* from which the English work of Sir Thomas Mallory was derived. It is imperfect, and was bound in the early part of the last century, without any order whatever, so that Mr. Quaritch has found it necessary to undo the binder's work, in order to put the sheets in proper sequence. But, such as it is, the work is one of singular interest and value; and we should be glad to learn that the Marquis of Blandford, whose appreciation of such fine old volumes is very different from that of many other bearers of noble titles, had exerted himself to restore this noble MS. to its fitting place on the shelves of the Blenheim Library.

THE Browning Society is making arrangements, through its member Mr. J. Dykes Campbell, now in Florence, to get photographs of the Pitti picture of Andrea del Sarto and his wife which suggested Mr. Browning's poem of "The Faultless Painter;" and of the picture by Fra Lippo Lippi in the *Belle Arti*, to which Mr. Browning alludes in his humorous and pathetic poem of "Fra Lippo":—

"God in the midst, Madonna and her babe,  
Ring'd by a bowery, flowery angel-brood,  
Lilies and vestments and white faces, sweet  
As puff on puff of grated orris-root  
When ladies crowd to church at midsummer;"

and in which, poor flesh-loving Fra Lippo shrinking back from

"this pure company,  
Then steps a sweet angelic slip of a thing  
Forward, puts out a soft palm,"

and draws the old sinner shuffling into heaven. The society also hopes to send a photographer or artist to out-of-the-way Fano, and secure a good copy of Guercino's

"Dear and great Angel . . .  
With those wings, white above the child who prays  
Now on that tomb,"

which the poet saw—his angel with him too—and "drank its beauty to his soul's content," and enshrined in his poem "The Guardian Angel"—a poem that his Italian reviewer in the *Nuova Antologia* picked out as the choicest of all Mr. Browning's Art-descriptions:

"Guercino drew I saw teach  
 . . . that little child to pray,  
Holding the little hands up, each to each  
Pressed gently,—with his own head turned away  
Over the earth where so much lay before him  
Of work to do, tho' Heaven was opening o'er him,  
And he was left at Fano by the beach."

MR. LANSDELL'S *Through Siberia*, just published by Messrs. Sampson Low, promises to be a success. Nearly three-fourths of the edition were disposed of before the book was ready for delivery, 500 copies being ordered by three firms.

MESSRS. CASSELL, PETTER, GALPIN AND CO. will shortly publish for the Cobden Club a new volume on "Local Government and Taxation in the United Kingdom," edited by Mr. J. W. Probyn. The contributors to the volume will include the Hon. G. C. Brodrick, Mr. C. T. D. Acland, Lord Edmond Fitzmaurice, Messrs. J. F. B. Firth, M.P., R. O'Shaughnessy, M.P., J. Thackray Bunce, W. Macdonald, and J. Roland Phillips.

MESSRS. W. AND R. CHAMBERS, of Edinburgh, will shortly issue a small work on the Canadian North-west, entitled *A Year in Manitoba: being the Experiences of a Retired Officer in settling his Sons*. A section at the end of the book will be devoted to hints to the intending emigrant.

MESSRS. HURST AND BLACKETT will publish during the present month a new novel, in three volumes, by Mr. M. A. Paull, entitled *Thistledown Lodge*; and, during February, *Gehenna*, by the Hon. Lewis Wingfield, and *It is no Wonder: a Story of Bohemian Life*, by Mr. J. Fitzgerald Molloy.

MESSRS. KERBY AND ENDEAN have in the press a novel entitled *Annunziata Grimani*, which is founded mainly on Milkowski's historical romance, *Les Uscoques*. The events described occurred during the reigns of Pope Clement VIII., the Emperor Rudolph II., and in the Republic of Venice during the middle and end of the sixteenth century, when the struggle for Bosnian independence was at its crisis.

MR. T. H. FARRER, Permanent Secretary of the Board of Trade, has written a work to illustrate established truths and to expose exploded, though not obsolete, fallacies, which will be shortly published for the Cobden Club by Messrs. Cassell, Petter, Galpin and Co., under the title of *Free Trade versus Fair Trade*.

WE learn from the *Manchester Guardian* that Mr. Charles Hardwick has in preparation a work entitled *Ancient Battlefields of Lancashire: their Historical and Legendary Associations*, upon which subject he has already contributed several papers to the local learned societies.

ON February 4, *Chambers's Journal* will have completed its fiftieth year; and, in commemoration of this, Dr. William Chambers, the senior conductor, will offer to his readers a *résumé* entitled "Reminiscences of a Long and Busy Life," which will appear in the part of the *Journal* to be issued at the end of January.

THE "Lancashire Operative" will be described and his good qualities shown in a paper by "A North Countryman" which, we hear, is to appear in the February number of *Cassell's Magazine*. This is to be followed by other sketches of North-country character from the pen of Mr. Burt, M.P., and other writers.

MISS ALEXES LEIGHTON, who has recently made a most successful *début* at the Alexandra Theatre, Liverpool, is a daughter of the late Mr. Robert Leighton, whose two volumes of verse, particularly the earlier and weightier one, will be remembered by many of our readers. Miss Leighton's first appearance was not merely a promise, but a performance. She has both power and grace, and an amount of easy naturalness hardly to be expected from a *débutante*.

MR. C. H. COOTE, of the British Museum, has been elected a corresponding member of the New England Historic Genealogical Society.

It is feared that the Rev. Charles Stanford, the author of *Power in Weakness* and other works, and a divine highly esteemed in the Baptist denomination, will lose his eyesight.

THE centenary of the *Glasgow Herald* newspaper is to be celebrated by a public banquet on January 27.

DR. J. G. MCKENDRICK, the new Fullerian Professor of Physiology at the Royal Institution, will give the first of a course of lectures on "The Mechanism of the Senses" on Tuesday next, January 17; Prof. H. N. Moseley will begin his lectures on "Corals" on Thursday, January 19; and Prof. E. Fauer his lectures on "Beethoven" (with musical illustrations) on Saturday, January 21. The first Friday evening discourse will be delivered by Dr. Huggins, on "Comets," on January 20.

MR. FRANCIS KILDALDIE ROBINSON died at Whitby on the 7th inst. A long-continued residence at Whitby—where he carried on a considerable business for some years—gave him an interest in the town and its neighbourhood. One of his works was a History of Whitby and its castle. In 1855, many years before local expressions had become a popular subject of enquiry, he published an excellent glossary of Yorkshire words and phrases. Latterly Mr. Robinson had lived in complete seclusion from the world.

THE Juridical Society of Palermo have elected Mr. Henry Dunning Macleod an honorary member.

AN American publication estimates the total number of newspapers and periodicals published throughout the world at 37,274, with an aggregate circulation of 116,000,000 copies. Of these, Europe leads with 19,557, and North America follows with 12,400. Nearly half (16,500) are printed in English, 7,800 in German, 3,850 in French, and 1,600 in Spanish.

ON the first day of the present month our contemporary *Das Magazin für die Literatur des In- und Auslandes* entered the fiftieth year of its existence. This journal, which is edited by Herr Eduard Engel, besides devoting exhaustive reviews to the best books produced in all parts of the world, publishes articles from able pens embracing every kind of subject, with the exception of politics, which is capable of interesting cultivated readers. In accordance with Continental literary usage, nearly every article bears the signature of the writer; and among the regular contributors we may mention the names of Georg Ebers, Robert Byr, Ludwig Freytag, Eugen Oswald, Friedrich Bodenstedt, Hieronymus Lorm, Max Nordau, Alexander Büchner, and Karl Bleibtreu. The *Magazin* is also the recognised organ of the Associated Union of German Authors.

THE *Revue de Droit international* announces that a committee has been formed to honour the memory of the late Prof. Bluntschli by founding prizes for papers on questions of international law, to be written in any European language.

THE *Revue critique* announces that it will publish an analysis of the theses read at the Sorbonne for the degree of Docteur ès-Lettres, together with the public comments of the examiners thereon.

M. JEAN ATOARD, having waited in vain during five years for the Théâtre français to put upon the stage his translation of "Othello," has decided to publish it through M. Charpentier.

HEER WILHELM JORDAN, the author of an epic entitled "Die Nibelungen" and of a translation of the "Odyssey," has just published a translation of the "Iliad" in hexameter verse, which has been very favourably received by the German press.

A NEW part has appeared of the great *Deutsches Wörterbuch*, commenced by the brothers Grimm in 1854. It is the eighth part of vol. vi., from "Lustigen" to "Mandelkose;" and it has been compiled by Dr. Moritz Heyne.

WE hear from Rome that Signor Baccelli, Minister of Public Instruction, has recently sent round a notice to the Italian universities, reminding them that they have the right to receive a copy, not only of every book and pamphlet published, but also of all newspapers.

THE *Riforma*—the well-known Roman journal—will shortly commence the publication of a translation of "Daniel Deronda."

THE list of new books which have been published during the recent Christmas season in Finland includes a fourth and considerably enlarged edition of lyrical poems in the Finnish language entitled *Sakeniä* ("Sparks"). The author, who writes under the pseudonym of A. Oksanen, is Prof. Ahlquist, well known for his philological researches into the Finnish dialects. He enjoys the reputation of being, at the same time, the foremost lyrical poet of Finland.

PROF. HARNACK has just completed a work on the Greek apologists of the second century, according to the Church tradition, which will, no doubt, throw much light on this important subject.

THE subject in English philology chosen for competition in the University of Copenhagen for the coming year is "The language of Wycliffe and of his predecessors in the translation of the Bible."

A CORRESPONDENT at Melbourne writes to us:—

"Mr. Ormond, the founder of the handsome college affiliated to the Melbourne University which bears his name, has undertaken to complete the structure. The total amount of his donation will have amounted to not less than £55,000. The building is of Geelong freestone, with a handsome tower. The number of students that will be accommodated in the building when completed will be between 100 and 150. Mr. William Russell, of Barunah, gave £1,000 to found one scholarship, which bears his name, and Mr. William Cumming gave another scholarship of the same value, open to all native-born Australians. A system of inter-collegiate lectures has been established between Trinity and Ormond Colleges; and it is expected that much trouble and expense will be saved in this way, the Master of Ormond being a high Cambridge wrangler and the Warden of Trinity being an Oxonian of high classical honours. Much of the success of Ormond is due to Dr. Morrison, of the Scotch College."

#### AMERICAN JOTTINGS.

THE application made by Mr. Samuel L. Clemens (Mark Twain) for a Canadian copyright in his new book [*The Prince and the Pauper*, we suppose] has been refused. The authorities have decided that his visit to Montreal for two weeks with this express object does not constitute the legal domicile required.

WE understand that the February number of *Harper's* will contain a poem in memory of the late President Garfield, expressing the English feeling aroused by his death.

WE learn from the Boston *Literary World* that a recent meeting of the Washington Literary Society was devoted to the commemoration of President Garfield, who had been one of its members. The principal paper was by Mr. Spofford, the librarian of Congress, on "Garfield's Literary Habits." Col. Mallery, of the bureau of ethnology, gave an account of Garfield's activity in promoting the scientific undertakings of the Government; and a short original poem was read from Mrs. Frances

Hodgson Burnett, who has only recently made herself known as a poetess. The proceedings are to be published in a memorial volume.

MR. E. A. FREEMAN's lecturing tour in the United States promises to leave some results of permanent value. At many of the towns the librarians of the public libraries have issued what may be called "bibliographical helps," indicating the books that illustrate the subject of Mr. Freeman's lectures. At the suggestion also of Mr. Freeman and Mr. Bryce, the Historical Society of Maryland has petitioned the Legislature for an annual grant towards the publication of the State Records. A second volume has just appeared of the "Calendar of Virginia State Papers," covering the period from April 1 to December 31, 1781, edited by Dr. William P. Palmer and Mr. Sherwin McKee, the State librarian.

It may interest the authors to know that Messrs. Harper and Bros., of New York, are publishing the following works for twenty cents, or say tenpence, each:—Miss Phillimore's *Sir Christopher Wren*; Mr. Hardy's *Laodicean*; Mr. Blackmore's *Christowell*; Mr. McCarthy's *The Comet of a Season*; Mr. Payn's *A Grape from a Thorn*; Mr. Murray's *A Life's Atonement*; *The Private Secretary*; &c., &c.

MRS. BAYARD TAYLOR, who is engaged upon arranging the materials for a biography of her late husband, requests that such letters, &c., as may throw light upon his public and literary career may be sent to her at 142 East Eighteenth Street, New York, to be copied and returned. It is probable that Mrs. Taylor will not be able to commence the work of writing for some time.

WE learn from the *Critic* that, ever since the death of William Cullen Bryant, his son-in-law, Mr. Parke Godwin, has been preparing an edition of his complete works. The two first volumes, containing his poems (with several pieces hitherto unpublished) will probably be issued by Messrs. Appleton this spring. The next two volumes will be devoted to essays and addresses, and the last two to the biography, which will include a large number of Bryant's letters.

THE next volume in the "American Men of Letters" series published by Messrs. Houghton, Mifflin and Co., of Boston, will be a Life of the painter Copley, by Mrs. Charles Amory, with an engraving of his portrait by himself.

MESSRS. J. P. LIPPINCOTT AND CO., of Philadelphia, have in the press a work by Charles J. Stille, late Provost of the University of Pennsylvania, to be entitled *Studies in Mediaeval History*.

MR. WILLIAM L. STONE proposes to publish, by subscription, *The Orderly Book of Sir John Johnson during his Campaign against Fort Stanwix in 1777*. It will be annotated by Mr. Stone from MS. letters in his own possession; and the volume will contain an engraved portrait of Sir John Johnson, and an Introduction by his grand-nephew, Gen. De Peyster.

THE Wisconsin Academy of Sciences, Arts, and Letters has published what the *Nation* terms a valuable paper by Prof. W. F. Allen on "The English Cottagers of the Middle Ages," showing that this class in the thirteenth century was made up of various groups, some of free and some of servile status. It is in the latter—the villeins—that Prof. Allen finds the representatives of the primitive village community.

WE quote from the New York *Publishers' Weekly* two regulations of the Post Office department of the United States affecting post-cards:—

"There is nothing in the postal law prohibiting

a 'dun,' or a threat of prosecution, being sent in the mail by a postal card.

"It is the duty of a postmaster to examine postal cards, and to see that they contain no improper matters; but they [sic] must not disclose the contents."

#### MAGAZINES AND REVIEWS.

THE articles which open the second number of the *Bibliographer* confirm the favourable impression produced by the first, being contributed by specialists who are specialists and something more, and who understand the art of making themselves intelligible and instructive to the outside world. Mr. Pocock, in his first article on the Bishop's Bible, shows how bibliography may throw light on theology, or, rather, on the history of religious opinion. Prof. Hales suggests that Dante may have been known to Chaucer before the visit of the latter to Italy in 1372; and Mr. W. M. Conway contributes a first paper on the wood-cutters of the Netherlands during the neglected last quarter of the fifteenth century. Mr. Kershaw has an interesting article on some of the early topographical works in the great library under his charge. We cannot but express a doubt whether a monthly magazine is the best place for detailed records of book sales. A magazine devoted to bibliography should deal with its subject in a scientific, rather than a commercial, spirit; and the interest of the sale of the Sunderland Library was scarcely in the main a literary one.

OUR chief objection to the first number of the *Antiquarian Magazine and Bibliographer* is that it consists too largely of reviews and second-hand matter. We want less criticism and more original work; and we have little doubt that Mr. Walford and his staff will give us something worth having in the future. What we have here is certainly interesting and valuable in its way.

THE *Altpreussische Monatsschrift* (published at Königsberg, by F. Beyer, under the editorial care of R. Reicke and E. Wichert) continues, as the literary organ of the old province of Prussia, to maintain the high position it has held for so many years. In the first two instalments for 1881 (Heft 1 and 2: January to March; Heft 3 and 4: April to June) there is, as usual, a good deal bearing directly or indirectly on Kant. Dr. Gottlieb Krause contributes an article extending through both parts on the life of C. J. Krauss, perhaps best known outside Königsberg as the intimate friend of Kant's declining years. Herr Rogge gives in Heft 1 and 2 some interesting details of the early labours of Lysius, a Church reformer in the beginning of last century; while in Heft 3 and 4 Johannes Reicke, the son of the senior editor of the journal, communicates a hitherto unpublished address of Kant's *De medicina corporis quae philosophorum est*, apparently composed on the occasion of laying down his rectorship in 1786 or 1788. This address, which has been carefully edited, affords matter for comparison with his well-known views on diet and regimen. Philologists will find valuable material in an article in Heft 1 and 2 on Prussian local names derived from the language of the old heathens whom the Teutonic order annihilated, as well as in a paper in Heft 3 and 4 on names of places and persons in the province, by F. Hoppe; and in an extract from a *Trau und Tauf-büchlein* of 1561. The Regesta of the town of Königsberg between 1256 and 1524, by M. Perlach, in the first number, and some Prussian documents from Polish and English archives (the latter being communications between Edward I. and the Grand Master of the Teutonic Order, à propos of Prussian merchants in London), by the same compiler, in the second part, deal with mediaeval history,

The archaeologist will turn to two articles in Heft 3 and 4—one on the bridges of Königsberg, and the other on the altar-screen (dated 1518) of a tiny wooden church at Reichenau. We can only notice in addition the full reports of the historical and antiquarian societies of Prussia, and the extensive enumeration of articles of scientific and historical importance in the various provincial newspapers. The Englishman can only marvel at such products of what, though "no mean city," is far from being as large as Liverpool or Birmingham.

THE *Revista Contemporanea* of December 30 has a further instalment of Becerro de Bengoa's essay on Modern Electricity, dealing with the various systems of lamps, giving illustrations of each, and an indication of the locality where it is in use. Dionisio Chauli, in his interesting "Recuerdos de un Contemporáneo," draws a lively picture of the rapid changes in social, political, and artistic life of Madrid from 1833-38, after the jealous tyranny of Ferdinand VII. had disappeared. Gen. Cordova narrates the circumstances which led to his appointment of General-in-Chief of the Neapolitan as well as of the Spanish forces in Italy in 1849. As a pendant to the recent calamity in Vienna, P. de Gongora exhumes an account of the still more terrible burning of the Coliseum of Zaragoza in 1778, when the house was crowded with more illustrious victims.

#### SIR ROBERT PEEL—AN UNPUBLISHED LETTER.

THROUGH the courtesy of Mr. Mercer Davies, of Chiswick—who has written to me in consequence of having seen my monograph on "Sir Robert Peel"—I am able to send you a letter, hitherto unpublished, written by the distinguished statesman's father. This letter is of very considerable interest, as it refers to the first speech made in the House of Commons by the future repealer of the Corn Laws. It was written to Mr. Davies's father, and is as follows:—

"Knowing the interest you always take in the welfare of my family, you will be pleased to hear that my son's first speech in Parliament was judged to be, by men the best qualified to form a correct opinion of public speaking, the best first speech since that of Mr. Pitt's. The Speaker and the leading members on both sides of the House concurred in this opinion. You would have been pleased with his address and language, and he was about forty minutes on his legs without being in the least embarrassed. I have been congratulated alike by members entertaining different political opinions, as he said nothing which could give offence. He has already raised himself a character, which in future may be highly useful to him, if his health is preserved, and he should feel attached to the study of politics.

"I am, dear Sir, yours truly,  
"ROBERT PEEL.

"Stoney Stratford, 26th Jan., 1810."

This maiden speech of young Peel was delivered at the opening of the session of 1810, when he was chosen to second the Address. His brilliant career at Oxford is well known; referring to this in a letter dated December 17, 1808, and also addressed to Mr. Davies, the first baronet wrote: "My son Robert is returned from Oxford, after having taken a better degree than ever has been taken. I know you will rejoice with me."

G. BARNETT SMITH.

#### CORRESPONDENCE.

THE MANUMISSIONS IN THE LEOFRIC MISSAL.  
Sheffield: Jan. 10, 1882.

In Mr. Warren's letter in the *ACADEMY* of December 17, 1881, relating to the specimen pages which he has photographed from the Leofric Missal, it is stated that the page of Anglo-Saxon manumissions contains "an allusion to the occupation of women" in the title *hlaf-bryttan*. This seems to be a misunderstanding. It is not *Ælfgyth*, but her father, *Æthelst*, who is said to have been "*hlaf-brytta* [bread-distributor] at Borslea." I have not met with this compound elsewhere, but should suppose it equivalent to the Latin *dispensator*.

With regard to the identification of the place-names mentioned in the document, Oomund tun is Oakhampton (Domesday *Ochmentone*); Brada stan is Bradstone; Liw tun is Lifton; Swuran tun is Sourton; Curri tun is Coryton; Tref meu tun seems to be Trematon; and Clymes tun was probably near Stoke *Climsland*. Bócland is most likely Buckland Monachorum, near Tavistock. All these places lie near to one another; and Borslea, Lamburnan, and Cyric ford, which I have not been able to identify, were probably in the same neighbourhood. Some of them may perhaps be found on the Ordnance map. Tiwarhel seems to be the Tiwarthel of Domesday. There was formerly a barony of Alwerton and Tywarnale (or Tiwarnel) in Cornwall, but I do not know whether this is the same place. Bræg may possibly be Breage, near Helston, though that place seems too distant from the other localities mentioned, and, from the signification of the word, it is likely to have been common as a local name.

HENRY BRADLEY.

##### CHINESE COINS.

Newton Abbot: Jan. 9, 1882.

As the number of persons engaged in collecting Chinese coins is increasing, we may well be thankful to M. T. de La Couperie for calling attention to the subject in the *ACADEMY* of December 24. To persons in China and the colonies who understand Chinese it may not be necessary to point out the European sources from whence information may be derived; but others will be glad to know that, besides the works referred to in M. La Couperie's review, part ii. of the *Transactions* of the China branch of the Royal Asiatic Society for 1848-50 is entirely taken up with a work on numismatics. During the purchase and arrangement of my

own collection, which includes, besides some 1,500 coins, a large number of curious charms and amulets, I found the above-mentioned work most useful. From the Prefatory Note we learn that the paper contains "A Brief Notice of a New Arrangement of the Chronicles of Tsien, and a Key to its 329 Wood-cuts of the Coins of China and Neighbouring Nations, by C. B. Hillier, Chief Magistrate of Hong Kong, a work in great repute among the Chinese, and which must prove interesting to antiquaries and numismatists of other countries." The "brief notice" occupies but four pages—the rest of the work being devoted to excellent wood-cut facsimiles of the various coins—yet those pages contain some very interesting remarks; while historical and other notes are added to many of the coins themselves. I never had the least difficulty in identifying coins by means of this work; although, on account of the limited number represented, I often found it necessary to go to purely native works for additional help. The statement that there are 329 wood-cuts is misleading; the fact being that there are very many more than that number. In some cases, for example, one Emperor may have issued a dozen or twenty different styles and sizes, yet they only reckon as one in this book, even if all are given. Thus under Hsi-Ning (A.D. 1068) eleven styles are represented. Another work of a similar kind was published in Shanghai some time since, the title of which I do not now recollect—nor have I a copy at hand to which to refer. In the *China Review* there have appeared from time to time some valuable notes on Chinese coinage. The whole subject and study has great fascination for one who can go in and out among the people and buy his own specimens.

HILDERIC FRIEND.

##### "DIMETIAN."

The College, B. Cole, Liverpool: Jan. 9, 1882.

Permit me to offer a word of explanation in reference to the use of the above term in my paper read before the Philological Society on December 16 last (*ACADEMY*, December 24, 1881, p. 479).

As my words have been understood to imply a desire to restrict the term "*Dimetian*" to the forms of speech prevailing in West Breconshire and East Cardiganshire (not vice versa, as stated in *ACADEMY*, l.c.), I can only suppose that I must have expressed myself very imperfectly, for I had no intention whatever of advocating such a restriction. At present there are three well-marked varieties of Welsh spoken in South Wales—the Gwentian in Monmouth and Glamorgan; the Pembroke dialect; and a third, which, with local variations, is spread over Breconshire, Caermarthenshire, and the greater part of Cardiganshire. It is to this last that I (in accordance, I believe, with precedent) intended to apply the term "*Dimetian*." To this dialect my paper principally referred, and particularly to those forms of it which prevail in West Brecon and East Cardigan. I referred specially to these districts because I have heard every form adduced in my short sketch used by natives of one or the other. Substantially, the treatment of English words is much the same all over Wales. But there are certain peculiarities characterising certain districts; and, as my paper did not pretend to be exhaustive, I thought it right to state exactly to what districts it did specially apply.

THOMAS POWELL.

##### APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Jan. 16, 5 p.m. London Institution: "Scorpions, Terrestrial and Marine," by Prof. E. Ray Lankester.  
8 p.m. Royal Academy: "Artists of the Eighteenth Century," by Mr. E. Armitage.  
8 p.m. Victoria Institute: "Biblical Proper Names, Personal and Local, illustrated from Sources External to Holy Scripture," by the Rev. H. G. Tomkins.

8.30 p.m. Geographical: "A Recent Journey through the Rovuma Country," by Mr. Joseph Thomson; "Makua Land, between the Rivers Rovuma and Luli," by the Rev. Chauncy Maples.

TUESDAY, Jan. 17, 3 p.m. Royal Institution: "The Mechanism of the Sense," I., by Prof. J. G. McKendrick.

7.45 p.m. Statistical.

8 p.m. Institution of Civil Engineers: "The Conservancy of Rivers." Discussion.

8.30 p.m. Zoological: "The Structure and Development of the Skull in the Crocodilia," by Mr. W. K. Parker; "A Collection of Rodents from North Peru," by Mr. Oldfield Thomas; "The Variability of Plumage exhibited by the Red Grouse," by Mr. T. E. Buckley.

WEDNESDAY, Jan. 18, 8 p.m. Society of Arts: "The Relation of Botanical Science to Ornamental Art," by Mr. F. E. Hume.

8 p.m. British Archaeological: "St. Agnes' Eve," by Mr. H. Syer Cuming; "Romano-British Mosaic Pavements," by Mr. T. Morgan.

THURSDAY, Jan. 19, 3 p.m. Royal Institution: "Corals," I., by Prof. H. N. Moseley.

7 p.m. London Institution: "Singing, Speaking, and Stammering," by Dr. W. H. Stone.

8 p.m. Royal Academy: "The French School of David, and its Influence on Contemporary Art," by Mr. K. Armitage.

8 p.m. Linnean: "Life History of a Orocus, and Life History and Classification of the Genus," by Mr. G. Maw; "Asteroides of the Challenger Expedition," by Mr. W. Percy Sladen; "Stamiferous Corolla in *Digitalis* and *Solanum*," by the Rev. G. Henslow.

8 p.m. Historical.

8 p.m. Telegraph Engineers: Inaugural Address, by Col. C. K. Webber.

8.30 p.m. Antiquaries.

FRIDAY, Jan. 20, 8 p.m. Philological: A Dictionary Evening—Dr. J. A. H. Murray.

9 p.m. Royal Institution: "Comets," by Dr. W. Huggins.

SATURDAY, Jan. 21, 3 p.m. Royal Institution: "Ludwig van Beethoven," I., by Prof. Faurer.

## SCIENCE.

*Philosophy and Religion.* Selections from the Manuscripts of the late James Hinton. Edited by Caroline Haddon. (Kegan Paul, Trench, & Co.)

THIS is a valuable book; philosophically speaking, perhaps the most valuable book written in England since Coleridge. First, for the deep insight of the thoughts which compose its philosophy of "Actualism;" and, secondly, on account of the particular philosophical ground which it occupies, and from which it speaks. We must remember that there are two very different sorts of philosophy in England. One of them embraces all those ideas which are discussed in sermons, and traces its history from the Bible downwards through the works of theologians; the other aims at giving the ultimate analysis and laws of things, and traces its history from Greek sources through Plato, Aristotle, Descartes, Locke, Hume, Kant. Two distinct philosophical traditions; two distinct philosophical businesses. Nine-tenths of the philosophy of England are, and always have been, philosophy of the first sort, partly from our natural bent, and partly from the determination of the two elder universities to make religious orthodoxy a *sine qua non* of all university teaching, philosophical or other.

Hinton's philosophy is of the first sort, and hence (being profound in itself) its extreme importance. For it is philosophy in *usum serenissimi angli*—serenely indifferent, that is, to any other than a theological philosophy. What on this ground it effects is this. Just as Luther's doctrine of justification by faith reformulated Gospel truth for the Reformation era, so Hinton's doctrine of Actualism reformulates it again for ours. The Sermon on the Mount is here contained, in nineteenth-century phrases. Take, for instance, the following:—

"Is not all included in that doctrine of love, of creation as God's self-sacrifice; that is, that the creature is one with the Creator? Only so

do we know God, because we are God. When God would show us Himself, He shows us—what but *ourselves*, man? We recognise God in Christ, because we recognise humanity. God does in Christ what we would do, what alone would constitute us men. He cannot be God if He be not man; nor the Creator if He be not one with the creature" (p. 238).

"Give up and you shall have; cast out self and all is yours, even God; we are heirs of God. The universe is the very best for you; give up that self-will and you will find it so. It is as good to you as to God; because the world is redeemed. So all men's good is in the destruction of the evil. The casting out of self—not God—from us is our life" (p. 240).

"Spiritual self-sacrifice is not (like the phenomenal) a ceasing to be, a less; it is the very being; it is the act that constitutes the being and the life" (p. 241).

"Men believe that all they bear is God's will, is necessary for His work to be accomplished. But that is not Christianity; philosophy gets so far; but it is not enough. It does not *save* to know only so vaguely; does not content or make happy; we do not know that that will is anything we should be glad at, or could be; feeling the phenomenon as fact, and feeling it evil. Christ shows what it is. This is the very point of Christianity; revealing what God is and His work. That makes us truly willing to bear annoyances—*saves* us—makes us happy and truly content in knowing God. There is a radical defect in every religion that will not do this" (p. 267).

It is the central doctrine of Actualism that self-sacrifice for others is the law of life and conduct, and that this law is the *phenomenon* of a real and "actual" existence, which is love, and love is God. Self-sacrifice is the divine love *as it appears in a phenomenal world*. The effectual conviction of this truth, so as to feel it and act upon it, is what I have called Luther's "justification by faith" (pp. 15–17).

Now here is the value of this philosophy, standing frankly as it does on theological ground. It vindicates religion from Scholasticism, from that mediaeval doctrine of Substances and Substantial Causes, which is the parent of atheism; it meets that hampering doctrine on its own ground, and combats it with its own weapons. It is the Protestantism of theological philosophy. This on the one side. On the other, it combats atheism, too, on its own ground; for atheism is often no more than a revolt against scholasticism; both are theology; the atheist is a theologian, not a philosopher; he is *serenissimus* so far as philosophical conceptions are concerned. Atheism of this kind is really faith in disguise, because springing from moral needs which scholasticism does not satisfy; it is faith in an *unknown* God, which unknown God Hinton again declares:

"I say we can know God, but not intellectually, and that this personal God, who acts in time, of which theologians tell us, is not possibly the true God, but is phenomenal merely; that it will not do. I do not deny it is the right phenomenon, but I say we not only can, we *must*, know the fact which is not this" (p. 180).

This is the central doctrine of the present volume, the central doctrine of Actualism—that God is knowable by faith, when that faith works by self-sacrifice, and that God so known is the *truth* of the world, the real Being behind phenomena, *all* of which are

His manifestation. Of the present volume I say, because we are told by the editor that this volume is excerpted from the earlier series only of Hinton's MSS., representing the growth of his thought from 1856 to about 1861. And the author's Preface also warns us that his thoughts outgrow their expression even as he writes them down, and particularly that the term "Actualism" is one by which he would have us set no special store. Making, however, every allowance for future changes of expression, and even of opinion, the central doctrine can hardly be affected, harmonising completely as it does with what we know of Hinton's later views from his already published writings. The charm of the present volume is that it gives us his mind at work, and shows how the theory presented itself gradually to his perception. The central idea was first grasped, and afterwards applied; that is, all other ideas were moulded by being brought into harmony with it. The arrangement of the excerpts under the eight headings, "Metaphysics," "Nature known by the Moral Emotions," "Mental Physiology," "The Art of Thinking," "The Self and Consciousness," "The Bible," "Holiness," "Ethics"—this is the work of the editor, and well exhibits the application of the central idea to different subjects.

Now, when we speak of the formation of a central idea and its application to mould all other ideas—that is, of systematising a philosophy—the chief question is, Of what ideas does the *nisus formativus* itself consist; what is the form of the *method*; what the lines upon which the mind itself works? Ideas themselves are formed in certain ways, and these ways, when named, are nameable only as ideas. What, then, are Hinton's *formative* ideas; what is his *apparatus logicus*? Of these, two seem to be ultimate. The first is drawn from physiology, and consists in the distinction of *nutrition* and *function* (pp. 5, 6). The second is logical, and consists in a negation similar to Hegel's, or, as Hinton calls it, the "not" (p. 19). Under these two forms of thought everything is subsumed; for instance, the formation of a theory is a case of *nutrition*, a storing up of knowledge. When we can see all round our theory, and perceive not only the hypothetical fact upon which it was built, but also something of the real fact to which it points—that is the *interpretation* of the theory, the conversion of the nutrition into *function*. Interpretation is a case of function, as theory of nutrition. The belief in "matter" is a theory; the world *appears* to us material, because we cannot see it thoroughly; it is not transparent to us, because our powers are defective, because we have a "not" or defect in us, because we are "not" God. The seeing that this is so is the interpretation of that theory. *Spirit* is the name Hinton gives to the real Being of which matter is the phenomenon. And so Actualism is a case of both laws of the *apparatus logicus* united (pp. 38, 39).

Thus Hinton, standing on theological ground, worked out his own theological philosophy. What relation does it bear to philosophies which belong to the other, the non-theological, tradition? A theological philosophy founded on faith to philosophies

founded simply on analysis of fact? Are the two things, after all, but one thing? And, if so, which of the two forms will be the form of the final philosophy? Or will it be a third form different from either? These are questions too large to be discussed here. One thing only we may say, that, whatever that form may be, it must be such as to account for, include, and take up into itself those facts of moral life and religious experience which have found an expression at once so full and so accurate as in the present volume. It is greatly to be wished that the editor may complete her task with excerpts from the remaining portion of James Hinton's MSS.

SHADWORTH H. HODGSON.

#### NOTES OF TRAVEL.

DURING the coming summer Prof. Nordenskiöld contemplates undertaking another Arctic expedition; and, although its main object will be to prove the possibility of regular communication for commercial purposes with the coast of Siberia, it will, no doubt, result in great gains to geography and science generally.

JUST when the news arrived of the safety of the two boats of the *Jeannette*, a scientific expedition was on the point of starting from St. Petersburg to explore the mouths of the Lena. M. Nicholas Jurgens, an officer in the corps of pilots, is in command of the party, with special assistants to make observations in meteorology and natural history. They proceed by way of Moscow and Nijni Novgorod, thence by Ekaterinburg and Tomsk to Irkutsk. They will not reach the mouths of the Lena until August of the present year; and they propose to stay there for twelve months. All their wood for building and firing will require to be brought from Irkutsk.

AT a recent meeting of the French Geographical Society it was suggested that the Government should be asked to institute enquiries whether the library at Kairwan, the sacred city of Tunis, contained any important documents relating to ancient geography, maps, narratives of travel in the interior, &c. As a result presumably of this suggestion, MM. Houdas and Basset, professors at the Ecole des Lettres at Algiers, have been directed to proceed on a scientific mission to Kairwan.

THE Church Missionary Society have just received letters from the Rev. P. O'Flaherty and Mr. Mackay dated from Rubaga, the capital of Uganda, on August 1, bringing much more favourable news than has been received from the Victoria Nyanza for a long time. Mr. O'Flaherty was in high favour with King Mtesa, and, what is, perhaps, quite as important, had succeeded in establishing a *modus vivendi* with the Algerian missionaries.

THE agents of the Masi station of the Universities Mission to Central Africa have lately made several journeys in the country between Lake Nyassa and the coast. The Rev. Chauncy Maples' account of his travels in Makua Land—between the Rovuma and Luli Rivers—will be one of the papers read at the next meeting of the Royal Geographical Society. The Rev. W. P. Johnson, one of his colleagues, who about a year ago penetrated from Mataka's town to Livingstonia, has also lately followed the Lujenda tributary of the Rovuma from its source in a lake among the mountains, which he reached through native information. He followed the shore of the lake for some distance, and he supposes that he has lighted upon the unexplored northern portion of Lake Shirwa.

ON January 4 Dr. Bayol and M. Noiret (the latter a photographer) landed at Bordeaux

on their return from an expedition into the little-known region, called Futa Djalo, which lies at the back of Senegambia. They started from Belair, on the River Nunez, last May; and they arrived at Medine, on the Upper Senegal, in November. In the meantime, they had traversed a large extent of country of which Timbo is the capital. They describe the climate as salubrious, and the soil as fruitful. Gold and iron are worked, and copper abounds. They bring back with them not only a treaty signed by the chief, the Almamy Sory, but also his First Minister and several other natives; and they report that "the influence of France is definitively established over more than 400 leagues of territory."

THE party sent out to make a scientific investigation of Señor Paiva de Andrada's vast concession in the Zambeze basin is experiencing the fate which has befallen so many expeditions both in the East and in the West of Africa. We learn that they have not been able to advance beyond Makonga and Machinja owing to the desertion of the soldiers and carriers who were obtained at Tete.

M. F. BERNARD has lately forwarded to Paris some information regarding the *sebkha*, or salt marsh, of Amadghor, to the south of which Col. Flatters' expedition was massacred. M. Bernard says that it really lies somewhat to the east of the position previously assigned to it, and that its extent is not so great as was believed. The salt deposit is in a large depression near the Jebel Abaggar, the slopes of which come to an abrupt termination a short distance from the *sebkha*, which on its other sides is surrounded by a vast waterless plain, where scarcely any vegetation is to be seen.

AN interesting collection of relics from British Columbia has been added to the Geographical Museum at Ottawa. It consists of 400 objects, illustrating the history of the Red Indian.

SOME officers of the Geographical Section of the Japanese Ministry of the Interior are about to visit the Bonin Islands for the purpose of making a topographical survey and preparing a map of the group.

THE Rev. W. D. Cowan, of Madagascar, has just published at Antananarivo a brochure entitled *The Bara Land: a Description of the Country and People*. The region in question is an extensive district to the south and west of Southern Betaïlo, and up to the present time its chiefs have maintained a virtual independence. Mr. Cowan has rendered his little work additionally interesting by furnishing from his own surveys a sketch-map of this part of South Central Madagascar, together with a list of birds seen during his journey and a short comparative vocabulary of the Ibara and Hova languages.

#### SCIENCE NOTES.

*Impressions of Plants in the Older Rocks.*—The excessive caution needed by palaeobotanists in seeking to interpret the obscure markings which are often found upon the older rocks, and are generally regarded as impressions of fossil plants, is strikingly exemplified by the recent studies of Mr. A. G. Nathorst in Sweden, an account of which has been contributed by Mr. Carruthers to the current number of the *Geological Magazine*. Mr. Nathorst has carefully observed the nature of the trails made by crustaceans, annelides, and other animals when caused to move over the moist surface of plaster of Paris or of fine mud. The markings thus obtained were singularly like many of those which, occurring on the Palaeozoic schistose rocks, are regarded as representing fossil algae. It is probable, too, that the so-

called *Eophyton*, from the Cambrian rocks of Sweden, which has been taken as the earliest form of phanerogamous plant, will turn out to be nothing more than the markings formed by medusae. Indeed, Mr. Nathorst believes that he has obtained other evidence of the existence of fossil jelly-fishes in these archaic rocks. Medusae were previously known from the lithographic stone of Solenhofen, but they are now, it seems, to be carried back from the Jurassic to the Cambrian period. Mr. Carruthers has satisfied himself that the impressions on the Lower Silurian slates of Angers, described by Saporta as the earliest known fern, have no claim to an organic origin.

THE last work of the late Mr. H. C. Watson on the distribution of British plants was his *Topographical Botany*, published in 1873-74, in which he traced the dispersion of each species through the 112 vice-counties into which he divided the country. Of this book only 100 copies were printed for private circulation, and these were all given away by the author immediately. Since its issue, a large amount of new material has been accumulated, principally through the exertions of the members of the Botanical Record Club; and at the time of his death last autumn Mr. Watson was engaged in the preparation of a new edition. This he did not live to complete as regards its prefatory and explanatory portions; but he had kept an interleaved copy in which he regularly entered up every record of any plant in a new district that was brought to his notice. At his own special request, this was deposited with his herbarium at Kew; and from this it is now proposed to prepare a second edition of the book, which Mr. Quaritch has undertaken to publish, and Mr. J. G. Baker and the Rev. W. W. Newbould to make ready for the press.

A NEW edition will shortly be commenced of that indispensable work of reference to the systematic botanist, Steudel's *Nomenclator Botanicus*, an alphabetical list, arranged under genera, of names of plants, giving their native countries, and the authors who published their descriptions. The last edition of the work appeared in 1841, since which it is estimated that the number of described species has been doubled. The new edition will be prepared from an interleaved copy with MS. additions which has always been kept posted up at the Kew herbarium, and will be edited by Mr. B. D. Jackson, secretary to the Linnean Society. The funds are provided through the munificence of Mr. Charles Darwin.

THE treatise on the Theory of Determinants, for use in colleges and schools, announced some time ago by Messrs. Macmillan and Co. as in preparation by the mathematical master of the High School of Glasgow, is almost ready to leave the printer's hands. There has recently been published by the same author in the *Quarterly Journal of Mathematics* a chronologically arranged List of Writings on Determinants (1693-1880). The list extends to forty pages.

SPECIMEN pages have been issued of Mr. Henry Seebohm's *History of British Birds*, with Coloured Illustrations of their Eggs. The work will consist of three volumes, of about 600 pages each, and there will be from sixty to seventy plates. In his description of the life-history of birds, Mr. Seebohm will be assisted by Mr. Charles Dixon, author of *Rural Bird Life*.

THE Royal College of Physicians has decided to recognise the courses of instruction at the Mason Science College, Birmingham, in chemistry, physiology, and biology—including botany and zoology—as qualifying for its examinations. The Royal College of Surgeons has also granted the same recognition.

THE enterprise of boring artesian wells in Tulare County, California, is reported to have proved successful. A well commenced on October 10 struck water twenty-seven days afterwards at a depth of 330 feet, and has since been yielding at the rate of more than 30,000 gallons per hour.

#### PHILOLOGY NOTES.

NOT a few of our readers will be glad to hear that a Professorship of Celtic has been founded in the Collège de France for M. H. d'Arbois de Jubainville. His latest work—*Études grammaticales sur les Langues celtiques*—containing an exhaustive phonology of the Breton language from the earliest times to the present day, is reviewed in the last number of the *Revue critique*.

ON December 30, Prof. Boehtlingk, of St. Petersburg, and Prof. Bugge, of Christiania, were elected foreign corresponding members of the Académie des Inscriptions et Belles-Lettres.

THE late Prof. J. J. Hoffmann, of Amsterdam, whose Japanese Grammar is highly valued, left at his death the complete MS. of a Japanese dictionary, which is now being published in parts by the firm of Brill, at Leyden, under the title of *Japanisch-Nederlandsch Woordenboek*. The editor is M. Serurier, Keeper of the Ethnographical Museum at Leyden.

THE pupils of the late Prof. Th. Müller, of Göttingen, propose to commemorate their master by founding a bursary or exhibition for the study of modern languages in that university.

A MOST useful edition of Tischendorf's last text of the Greek Testament has been published by Tauchnitz, which, though less elegant in form than the familiar Oxford edition of the *Textus Receptus*, well deserves to displace it in the lecture-room and the study. Its special merit consists in the foot-notes which contain the various readings of the texts of Tregelles and of Westcott and Hort. The comparative precision with which the rather complicated notation of the Cambridge editors is reproduced deserves recognition. A condensed conspectus of the critical authority for the text is appended to the volume. The editor is Dr. Oscar von Gebhart, than whom no more competent scholar could be found.

DR. FERDINAND HEERDEGEN'S *Untersuchungen zur lateinischen Semasiologie* (Erlangen: Deichert) consists of three parts: (1) a systematic introduction to the subject of Latin semasiology; (2) an attempt to define and exhibit a logical division of its principles; (3) an example of the historical development of the meaning of Latin words as exhibited in the fortunes of the word *orare*. The two first parts, though carefully reasoned out, are, to our thinking, less valuable than the third. In the present circumstances of philological science the most important thing is to register facts; and the book would, in our opinion, have been more useful had the author illustrated the development of meaning from several groups of words, not from one word only, the history of which, though carefully worked out, is not sufficient to guide us very far.

DR. BERNHARD DOMBART has brought out a second edition (Erlangen: Deichert) of his careful translation of Minucius Felix's *Octavius*, with an excellent Preface on the work and its author.

BY far the most important paper in the last number of the *Hermes* (vol. xvii., part 3) is Mommsen's "Schweizer Nachstudien," a series of discussions, based mainly upon the evidence of inscriptions, on the legal relations

of the conquered Helvetii to the Romans, and the limits of their province. K. Albrecht contributes a careful essay on the repetitions of verses or parts of verses in Vergil. Van Heerwerden's "Homerica" contains a number of emendations in the text of the *Iliad* and *Odyssey*. W. Dittenberger ("Sprachliche Kriterien für die Chronologie der platonischen Dialoge") dwells upon the differences in the use of certain particles as tests of the period to which various Platonic dialogues are to be assigned. P. Stengel traces the custom of offering sacrifices to the winds among the ancient Hellenes to Phoenician influence. Wissowa discusses the sources of the second book and part of the third book of Macrobius, and E. Maass the Catalogue of Sibyls, and that of the Commentators on Aratus.

IN the *Zeitschrift für die österreichischen Gymnasien* (November 19) the speech of Oedipus in the *Oedipus Tyrannus* (216-75) is discussed by W. Fox, and etymological notes are contributed by Bösch on *cerussa*, *scriblita*, *monobelis*. The October number contains essays by Benicker on the sixth and seventh books of the *Iliad*, and on passages of Vergil by Klouček.

#### MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, Jan. 10.)

DR. SAMUEL BIRCH, President, in the Chair.—This being the anniversary meeting, the secretary's report for the year 1881 was read, and the officers and council were elected for the coming year. Dr. Birch continues president, and Mr. W. Harry Ryland secretary. The total number of members of the society is now 559—a net increase of seventeen for the twelve months. The balance-sheet for the year shows an income of £789, against an expenditure of £629.—A communication was read from Prof. W. Wright, of Cambridge, upon three ancient Hebrew seals recently acquired by the British Museum. No. 1, a crystal signet, which Prof. Wright believes to date probably from before the Exile, bears the inscription, "to Nehemiah, the son of Micaiah;" No. 2, a chalcedony cone, bears the inscription, "to Sheharhor, the son of Zephaniah," *Sheharhor* being the masculine form of the word translated "black" in the *Song of Songs*, i. 6; No. 3, an agate scaraboid, with winged figures, bears the inscription, "to Ellam."

#### FINE ART.

*The Tyne and its Tributaries*. Described and Illustrated by W. J. Palmer. (G. Bell & Sons.)

THOSE who are acquainted with our old favourite, *The Book of the Axe*, know how pleasantly a river can be made to tell its story when the interpreter possesses the necessary qualifications of knowledge, taste, and enthusiasm. What Mr. Pulman did with singular success for the picturesque Devonshire stream, Mr. Palmer has now done, ably and honestly, for the more important river of the North. It is true that the view of "coaly Tyne" which the railway passenger catches from the High Level bridge at Newcastle is not encouraging to one in search of the picturesque. The pitchy stream, crowded with steam-tugs, barges, and keels, appears to flow between banks made hideous everywhere with coal-staiths, blast-furnaces, and malodorous chemical works. Instead of sloping lawns, one sees desolate ballast heaps; and tall chimneys, belching forth fire and smoke and vapour, take the place of frowning cliffs and over-arching woods. But follow the river up to its source, or, rather, to its several

sources, in the fells of Cumberland and in the Border hills, and you will see how varied are its characteristics, how rich it is in historic associations as well as in scenes of grandeur and beauty.

One could scarcely wish for a better companion than Mr. Palmer. He knows every inch of the ground, and seems to be as much at home in the moorland of Garragill as among the industries of the lower Tyne. He delights in tales of the country-side and traditions of the English border. He has an eye for every ruined peel and weather-worn scar, and an ear for every scrap of talk which reveals Northumbrian character or preserves some local form of speech. In a word, he has something to tell us at every turn, and tells that something fairly well. The River Tyne divides itself naturally into three sections. From Hexham eastwards to the sea it flows in one broad stream; but at Warden, a few miles above the abbey town, it bifurcates, and that so widely that the source of the South Tyne is something like forty miles distant from North Tyne head. North and South Tyne are, in fact, two distinct rivers. The former, rising at the foot of Peel Fell, the most westerly spur of the Cheviot range, flows sluggishly at first across a dreary table-land, and not until it has been augmented by half-a-dozen mountain burns does it acquire the dignity of a river. Passing more than one ruined peel, the square-towered churches of Falstone and Greystead, and Helyside (the ancient seat of the Charltons), it reaches Bellingham, and, just below that old-world village, receives its most considerable affluent, the Reed, or, more correctly, Reeds-water. On the left bank is quickly seen Chipchase Castle, in which are happily blended by a Jacobean architect the castellated and domestic styles of architecture; and, lower still, upon the right bank, rise the massive ivy-mantled towers of Haughton Castle. Chollerford, rich in Roman remains, soon follows, and "the meeting of the waters" takes place in a rocky basin below Warden Hill. The course of the South Tyne, which issues from the side of Cross Fell, is marred at some points by the lead mines; but, on the whole, is singularly beautiful. The castles of Featherstone, Bellister, Blenkinsop, and Thirlwall adorn its banks; and there can be few more beautiful spots than Willimonts-wyke and Unthank, which contend for the honour of having given birth to the martyr Ridley.

We would willingly linger over many a scene which Mr. Palmer has admirably delineated with pen and pencil, but are compelled to dismiss his volume with this brief acknowledgment of the pleasure it has afforded us. CHARLES J. ROBINSON.

#### THE GROSVENOR GALLERY EXHIBITION OF THE WORK OF MR. WATTS.

THE happy idea of assembling each year as much as possible of the life-work of some contemporary artist of high distinction or widespread popularity affords the Grosvenor Gallery sufficient motive for opening its doors in winter; and, whatever be our individual estimate of Mr. Watts's work, none of us will deny that among contemporary painters he has early

claim to full illustration. Among English artists few have essayed so much as Mr. Watts; few have courted success and failure over so wide a field. For something like forty years he has been unremittingly faithful to a high ideal in art. He has altered only in obedience to the suggestions of his own mind; never out of deference to the fashions of the day. But if the range of his efforts has been wide, that of his complete success has been more limited. He has dealt with ancient fable, with allegory sometimes of his own invention, with portraiture, with landscape, here and there with tragic or pathetic incidents of the life of modern London. Nothing in the study of contemporary art—generally but too barren of real intellectual interest—can be more interesting than the attempt, which each visitor to the Grosvenor must make for himself, to understand the curious inequalities of work executed at least with no inequality of care.

In the ideal and imaginative labour upon which possibly Mr. Watts sets most store, the inequality of success is marked—more marked perhaps than in the department of portraiture when once the matter of superficial likeness has been placed beyond pale of discussion, but less marked again than in the department of landscape and in that which concerns itself with the illustration of common life. Or, to be more accurate, while Mr. Watts succeeds well-nigh always in portraiture, seen from the purely artistic side, he succeeds less often in ideal invention and in parable, and succeeds only to the most limited extent in landscape, and does not succeed at all in the illustration of common life. It is by his failure with the incidents of common life that there is made most evident the limitation of his artistic sympathies—the absence of just that universality of range which has been unduly claimed for him. Of course, practically speaking, he has avoided common life; even his efforts—not to speak of his successes—in this direction are comprised within some half-dozen canvases; while in the course of a career still, as we may hope, far from exhausted, no less than two or three hundred canvases have been finished by his hand. But it is not only the scarcity of his modern-life pictures that is noticeable: it is also the limitation of their themes to much such scenes of penury and of pathetic loneliness as commend themselves particularly to Mr. Legros. But Mr. Legros deals with such scenes in a quite final way, as far as their dramatic expression is concerned. A colourist sometimes as ungainly as Mr. Watts at his worst, Mr. Legros is a dramatist of power; and the drama that he feels the most vividly, and plays out for us with rugged perfection, is the drama of the poor, the squalid, the beaten-down, the people who have dealt hardly with themselves among the vices of cities, and with whom life and circumstance have dealt hardly too. Now, Mr. Watts, in his "Sempstress" and "Under an Arch," has engaged himself in just this drama; and I am far from saying that he has not succeeded in playing in it an emotional part. Still, it is little by the side of what Mr. Legros can do. And, moreover, it is monotonous; more monotonous than Mr. Legros, and, just because more monotonous, less veracious. Mr. Legros looks at the matter more broadly: sees the comedy of make-shifts as well as the pathos that goes with them—as in "Le Repas des Pauvres"—and in this way treats the squalid modern life, even in its saddest scenes, as a *genre* painter who knows the ups and downs, and is interested in the vicissitudes. He gives us a drama, and not only an elegy. With modern life, Mr. Watts is elegiac.

Of course, we may be reminded of the great picture at the end of the West Gallery—that of the horses and the drayman. But no one will pretend that that was painted for the sake of

the drayman; it was done for the sake of the horses, and very noble they are. The work is without atmosphere—an indication, which landscape painters will readily seize, of Mr. Watts's comparatively superficial and perfunctory fashion of treating landscape. But it is highly acceptable for that which it does contain—not landscape, not any really interested portraiture of a man of a class that would have interested Rembrandt, but the very powerful presentation of animals that would have interested Cuyp. So far it is good—fine, no doubt, in drawing; fine even in colour. But one must be suffered to instance it, by reason of the insignificance of the drayman, as one more proof—proofs to the contrary being wholly absent—of the painter's incomplete sympathy with modern life and character, or, I should rather say, with humanity as humanity, with the human nature of every-day. His extensive dealing with portrait has been taken as evidence of his interest in this common human nature. But the portraiture deals, to a degree which no living painter can equal, with selected types, with men of political action or literary attainment, with women of society, *dilettanti*, graceful girls who were born ladies, well-groomed children. And, in so dealing, it displays at once the painter's good fortune and the refinement of his taste. But it does not display—it cannot possibly display—any care or understanding for the rougher or simpler, or wilder and more various, herd, altogether beyond and apart from this carefully watched fold. And when, by the bold plunge into the common life of London or of some distant country-side, the occasion does present itself for displaying this understanding, this capacity for entering into the lives of every-day, and of seeing in them—as the most potent imaginations have always seen in them—abounding material for art, is the occasion taken advantage of? There is no sign of it whatever. Nor is there, in our day, any likelihood that the painter of allegory and ideal composition will be the painter whom we can accept as an interpreter of that contemporary life which will some day be understood as social history, and will be held to be dignified then.

Passing to what should be the more agreeable business of indicating what are really the fields of Mr. Watts's high success, it is difficult to feel that there can be anything left to say, a whole volume of appreciative comment on Mr. Watts's portraiture and Mr. Watts's allegorical design having been issued to the world during the last fortnight all over the London press. In presence of an assemblage of painting that had occupied about forty years of refined and conscientious labour, it was seemly that the expression of praise should run high. Moreover, seen in mass, the deficiencies which strike in detail are a good deal forgotten. That Mr. Watts is hardly a colourist is overlooked. The strange excesses of hue visible in "Mrs. Nassau Senior," the less harsh discords of his "Lady Margaret Beaumont" of twenty years ago, reconcile us to his more habitual adoption of schemes of colour in which he has found harmony, if hardly positive beauty. In a word, the works look well together—stand the test of juxtaposition, the test of being seen *en masse*. And as we look over the range of Mr. Watts's production, we recognise that it has scarcely ever been his aim to present colour as in itself sufficient. Colour with him must be expressive; it must accord with the theme—be rather the accompaniment of the song than the song itself. For he is designer more than colourist, and, in intention, if not always in power, poet even more than designer. Whether Mr. Watts is right or wrong in subordinating, as we seem to see that he does, colour to thought—and that thought poetical fancy rather than pictorial thought—is

not now the question. The upholders of beautiful patterning, who find in an appeal to the highly trained senses the legitimate province of painting, and say that exquisite painting is the first and last business of a painter, have their side of the matter, and much to be said for it. They are in accord with those who give to style the first place in literature. But Mr. Watts belongs to the perhaps larger party who allow a more important place to the matter conveyed; and his colour, in its more than occasional unpleasantness, is perhaps only to be understood and allowed for if this is recognised. Of beautiful colour he is at times quite capable. "Life's Illusions" shows beautiful colour. The portraits of his freshest young women show beautiful colour. In dealing with children, the tints become actually joyous. Nothing is fuller of gladness than his hues in such a picture as "Dorothy."

Unequal as he is in design and grouping, the draughtsmanship of Mr. Watts has long been rightly allowed its meed of praise. Nowhere, perhaps, is there finer display of all these qualities possessed in high degree than in that beautiful group of "The Three Goddesses," who are linked indeed by more than touch of arm and hand—by the touch of perfect composition. This is one of the few designs of Mr. Watts which have been reproduced in other methods of work than the painter's own. There exists of "The Three Goddesses" an etching by Mr. Benwell Clark which gives, as I remember, with great intelligence in interpretation, no small share of the beauty of the original picture.

Inequality—a characteristic of all artists who are above mediocrity and whose work has nothing of the mechanical—characterises Mr. Watts, we know, somewhat too notably; but in its presence there is at least an evidence of life. We find it in some measure in his portraits—as to which there can here, and at this time, be no necessity of speaking, so well and fully have they been praised; but it is more pronounced in his allegory. Now and again not only is the execution incomplete and undecided, but the inspiration itself would seem to have been halting. The effort towards poetry has been made, and only too visibly; but is poetry the result? Poetry ought not to require a page of printed explanation. At other times, and very specially in the invention known as "Love and Death," it is clearly a poem that has been produced. The lines have in them an eloquence and rhetoric of painting which affect and excite the beholder. He becomes an interested witness of the struggle the painter has imaged. But an occasional triumph in this kind would, in many cases, be insufficient to justify a most prolonged devotion to the art of the symbol and the allegory. The justification is found less in the success than in the fact of the individuality of the painter. Not perhaps quite so much by reason of the themes to which he has been devoted, as because of the unvarying refinement and dignity with which he has treated them, is Mr. Watts to be held up as an example to the generation that succeeds him.

FREDERICK WEDMORE.

#### NOTES ON ART AND ARCHAEOLOGY.

PROF. LEGROS has just given another proof of the activity of his artistic intelligence and the variety of his skill. But yesterday we had to draw attention to his success as a sculptor of the round; to-day we must record his mastery as a medallist. Adopting the style of the Italians of the Renaissance, he has executed five medals which are not more remarkable for their life-like vigour than their technical skill. Two of them—heads of Mr. Charles Darwin and Mr. Alfred Tennyson—have more than an artistic interest. He has seized with great

force the noble lines of their faces, and the grand structure of their skulls. They show somewhat more than the profile; and, with an artistic perception which is wonderful when we consider how little the art has been practised for the last 300 years, the contours have been modelled with exact feeling for the emphasis of expression to be gained by the incidence of light. Not less observable is the management of the hair, broadly massed, and yet preserving both quality and quantity. Though not so valuable historically, these grand and true presentments of two of our greatest men do not give more pleasure of a specially medallist kind than two others moulded from two models, whose names, Orlando Martorelli and Maria Valvona, inscribed on the margins of the medals, are likely to live longer than those of their brothers and sisters of the studio. These might be taken for true antiques if it were not for the newness of the metal, the method of casting, and the dates on the margin. A portrait of Mr. Ionides and the face of a child complete a little group which has already made a sensation in Paris resulting in the formation of a society of medallists. We understand that M. Legros' method is peculiar, and consists of making first only a rough model in wax, and then finishing the plaster cast in the hollow.

It is, we hear, the intention of the Messrs. Dowdeswell to commission a successful etcher to execute for them a plate from one of the most attractive and remarkable of the water-colour drawings of George Manson now exhibiting at their gallery in New Bond Street.

We hear that the Fine Art Society is preparing for publication a volume of which a chief attraction is likely to be some reproductions of the works of Samuel Palmer.

THE February number of the *Magazine of Art* will contain an article on Alnwick Castle, by the Rev. M. Creighton, and a "Byway of Book Illustration," by Mr. R. L. Stevenson.

We are requested to announce that Monday, February 6, is the day fixed for sending in water-colour drawings for the approaching exhibition at the Dudley Gallery. This announcement may be accepted as a contradiction of the rumour, to which we among others gave currency, that the Dudley Gallery under its present management had come to an end.

THE date fixed for the forthcoming exhibition of the Society of Painter-Etchers has been altered; and we are therefore requested to announce that works intended for exhibition must be sent to Messrs. Hogarth and Sons, Mount Street, by the last day of February, instead of March 6. The duration of the exhibition will be from March 6 to April 11.

FEBRUARY 27 and 28 are the two days fixed for receiving pictures intended for the spring exhibition of the Society of British Artists in Suffolk Street.

AT the meeting of the Society of Antiquaries of Scotland on January 9, Mr. J. B. Findlay was elected secretary in the place of Dr. Arthur Mitchell, who is compelled by ill-health to retire from the office which he has filled so efficiently for so many years.

THE January number of the *Great Historic Galleries* (Sampson Low) worthily commences a new volume of this excellent serial. One of the photographs (permanent) is from the celebrated picture of three royal children at Hampton Court, which still retains the name of Holbein on the frame, and was formerly supposed to represent the children of Henry VIII. It is now known to be by Mabuse, and the children are identified with those of Christian II. of Denmark. Another is Sir Thomas Lawrence's of "Countess Gower, Wife of the Second Duke of Sutherland, and his Daughter, Lady Eliza-

beth." The third reproduces miniatures of five of the fifteen children of George III., from those by Cosway and Humphrey at Windsor Castle. Not only are the photographs excellent, but the letterpress is written with great care. The account of the Mabuse is a very neat and accurate summary of its history.

AN interesting paper from Mr. Clarke, head of the Assos expedition of the Archaeological Institute of America, is printed in the *American Architect and Building News* for December 10, together with plans and drawings of sculpture. The whole site has been cleared of the temple which crowns the acropolis of Assos; and its plan and general principles of construction have been laid bare. By a curious coincidence, its dimensions are found to be almost precisely identical with those of the Theseum at Athens; though from the archaic principles of its architecture—e.g., the absence of division in the inner naos—it is evident that the temple at Assos is far the older of the two. Of the reliefs which ornamented the epistyle and formed the metopes, seventeen fragments were carried off by the French in 1838, and are now in the Louvre. Their archaic character, as illustrating the gradual Hellenisation of Oriental types and methods, is well known. Seven more fragments have now been found, of which five are of considerable size, including a complete metope. The Assyrian origin of some of these is very manifest from the drawings.

THE members of the commission for organising the last Salon have terminated the dispute as to the employment of the proceeds by a vote declaring that they shall be kept in deposit and handed over unconditionally and entirely to the new Society of French Artists after it has been definitely constituted. The formation of this society is not to be determined hastily. M. Tony Robert-Fleury, who was appointed to report upon all the societies of artists that have at any time existed, or still exist, in Europe, has finished his task, and read the first part of his Report to the sub-commission of the Salon of 1882 charged with the duty of studying the question. It was mainly occupied with a statement of the respective advantages and defects of the Free Society of Artists of Vienna and the Royal Academy of London.

M. TAINE has commenced a course of lectures at the Ecole des Beaux-Arts on the aesthetics and history of painting.

A LITTLE while ago M. Michel Ivanoff wrote a letter to the *Novoje Vremya* of St. Petersburg about a picture to be seen in the villa of the Baron de Benneval at Sorrento, which he maintained to be nothing less than an original Greek painting of Cleopatra. A lively discussion on the subject appears to have arisen at Naples; and the Commendatore J. P. Giustini sends us a letter that he has addressed to *La Stafetta* of that city, affirming the authenticity of the picture. It is said to have come from Hadrian's Villa at Tivoli, and its history can be satisfactorily traced from 1818. Into the various arguments urged on one side and the other we cannot enter.

THE section of fine arts of the Académie royale de Belgique has elected M. Emile Wauters in the room of the late Verboekhoven, and M. Pierre Benoît in the room of Vieuxtemps. At the same time Dr. Schliemann, Herr Hans Makart (of Vienna), and Herr von Raschdorf (the Berlin architect) were elected foreign members.

THE etchings in the two last numbers of *L'Art* are particularly good. One is a portrait of M. de Segur, after Gaillard, by M. E. Burney; the other, by M. Gustave Creux, after Delacroix' grand picture of "Jacob and the Angel." The latter number also contains a fine wood-cut after M. Léon Lhermitte's beautiful charcoal

drawing of the printer Liénard and his son, which was exhibited at the Black and White Exhibition last year.

M. CHEVET, the great scene-painter and theatrical decorator of Paris, died on January 7, after a long and painful illness. Most of the finest spectacular effects of the French stage in recent years were due to M. Chevet's genius; and he had also introduced an artistic style of mural decoration. Some of his works were thought worthy of being exhibited at the Exposition of 1878.

AN exhibition confined to the works of female artists will be opened in the rooms of the Cercle des Arts libéraux at Paris in February, and the first exhibition of the Society of Animal Painters will be held in the Rue St-Honoré in April.

THE Palazzo Bianchi, formerly known as the Palazzo Androsilla, is now being levelled in order to complete the isolation of the Pantheon. Many more fragments of masonry, which apparently formed part of the hall situated behind the great rotunda, have been found beneath the Via Palombella.

A CORRESPONDENT in Paris writes:—

"The battle of the Beaux-Arts waxes strong: on one side the officials, on the other the *Figaro*. In reply to a modest letter from the students of the Villa Medici, *Figaro* replies, under the signature of A. Wolff: 'If I did not understand these things better than all the students at Rome put together, I should not meddle with their pretentious letter. They are mistaken. Let them return to their studies, and leave me to my affairs. The matter is finished. I sometimes argue with the masters; but with students, never.' M. Gounod takes up arms for the schools, pointing out in a manly letter the culture to be acquired in Rome, which is of as much value to an artist as mere technical education.

"Michael Pascal, who has just passed away at the age of sixty-eight, was employed in the restorations at Vézelay, Sens, Bordeaux, and upon the Sainte Chapelle and Notre Dame de Paris. The work at Vézelay in the Morvan, one of Viollet-le-Duc's finest restorations, was in full swing when we passed through last September.

"The 'decoration' of M. Manet is held in Paris as the crowning of the 'ugly school' in the person of its high-priest. The artist is a personal friend of M. Proust, Minister of Fine Arts."

THE practice of embroidery as a household art is said to be making its way from Vienna and Munich into North Germany. A valuable work, comprised in three albums, has been published at Berlin (Lippeheide), entitled *Musterbücher für weiblicher Handarbeit*, which contains no less than 617 patterns of German embroidery from the fifteenth century downwards. The editor is Prof. Julius Lessing, Director of the Museum of Industrial Art at Berlin, who proposes to undertake a similar collection of ancient Italian embroidery.

THE explorations undertaken by the municipality of Corneto in the ancient cemetery of Tarquinia have resulted in some important discoveries. A number of tombs of high antiquity have been excavated in the district known as "Le Arcatelle," which is believed to have been traversed by one of the chief roads leading into the city of Tarquinia. In these tombs were found urns similar to the vases of the archaic sepulchres of Chiusi, which are known as pit-tombs, and bearing a close resemblance to those dug up at Villanova and in the more ancient portion of the Bologna necropolis. The tombs of Corneto also consist of pits, and have yielded some personal ornaments worked in bronze of a distinctly archaic type. Many years ago some tombs very similar to these were discovered near the site of the present excavations; but in those days archaeologists

did not exist, and no attention was paid to the discovery. To-day scholars eagerly study every scrap of evidence likely to illustrate the history of the peoples who lived beyond the limits of Etruria proper. One of the most interesting relics just brought to light is an urn shaped after the pattern of a hut, having a close resemblance to the urns dug out in the Latin cemeteries of Mount Albano. This most important discovery will very possibly throw light on a find of a similar character that took place in the Tolfa Mountains, near Allumiere, where Baron A. Klitsche de la Grange dug out an ancient tomb on the Poggiombricolo Hill, containing vases resembling those of Corneto, as well as fragments of a hut-shaped urn, bearing a close affinity to those of Mount Albano, which excited a warm controversy among archaeologists.

THE period of French history from 1559 to 1570, which terminates with the massacre on St. Bartholomew's Day, has been commemorated by two contemporary artists, otherwise unknown, Tortorel and Perissin, who executed elaborated engravings of various scenes of which they were eye-witnesses—battles, massacres, murders, executions. The originals have now become extremely rare, though imitations at the time and copies made subsequently are not uncommon. Fischbacher, of Paris, now proposes to issue a reproduction by héliogravure of the entire series of forty-three plates, under the title of *Les grandes Scènes historiques du XVI<sup>e</sup> Siècle*. The work is to be edited by M. Alfred Franklin, of the Bibliothèque Mazarine, and will be illustrated with historical notes by the first authorities. It will be published in parts, each containing one plate, at the price to subscribers of 3 frs. a part.

WE have received from Messrs. Colnaghi a proof, with remarks, on India paper, of an etching by Mr. W. B. Scott from Thomas Phillips' portrait of *William Blake*. The etching has been made from the sketch in oils exhibited at the Blake exhibition at the Burlington Fine Arts Club in 1876, which is practically the same composition as the finished picture in the National Portrait Gallery. This sketch is now in the possession of Mr. H. Buxton Forman. Mr. Scott has done his work in a very solid manner. This is the second occasion in the present year on which admirers of Blake have had to thank Messrs. Colnaghi. We have not yet forgotten their engraving of Blake's *Canterbury Pilgrimage* from the original plate.

THE late M. Dubois de l'Estang had intended to bequeath to the State his fine collection of military costumes of various ages and various peoples. This intention was never carried into execution; but his children have determined to respect it. The larger portion will probably find a home at the Ministry of War, but the original designs of Raffet and others are to be placed in the Louvre.

DR. CHARLES C. ABBOTT has ready for publication an elaborate work on American prehistoric times, which will be issued by Mr. S. B. Cassino, of Boston, U.S.A., and by Messrs. Trübner and Co. in this country. It is the result of many years spent in collecting and studying the various forms of stone and bone implements made by the Indians who formerly occupied the Atlantic coast from Maine to Maryland. The shell-heaps, the pottery, and all other traces of these tribes are fully treated of. There is also a discussion of the geological age of the implement-yielding gravels of the Delaware River, with reference to the question of the antiquity of man in North America. The volume will contain more than four hundred illustrations.

*A Correction.*—Mr. J. Henry Middleton wishes to make the following correction in his article

on "The Medals in the British Museum" which appeared in the last number of the ACADEMY:—

"I spoke of the electrotype copies exhibited in the King's Library. This is a mistake. The medals themselves are shown."

### THE STAGE.

SOME better fairy—some fairy more potent in charm—than Mr. Gilbert's in his latest piece at the Criterion was wanted to protect the fortunes of that theatre. But perhaps Mr. Charles Wyndham has found his *Mascotte* by the mere act of revival of "The Great Divorce Case," which was assuredly one of the Criterion successes of old time, and which bids fair now again to amuse for a sufficient number of nights. A literal translation of "Le Procès voracieux" would always have been impossible; and, without it, the main drift of the play has been found enough to entertain an English audience. The revival is successful. Mr. Wyndham appears in it as the more restless and energetic of the two friends whose indiscretions are severely brought home to them. With him is contrasted the milder or more philosophic character; but it is Mr. Wyndham who obtains the most applause, for his eagerness is exhilarating, his ready resource refreshing, and on the stage he is known to be happiest when he is most thoroughly put about. The cast generally is strong, though Mrs. John Wood—clever enough, at all events acceptable enough and cheerful enough in her own way—finds herself unable to exercise her art so completely as to pass for the character she now represents. Mr. Maltby is as well fitted for the quiet part he assumes as is Mr. Wyndham for his more bustling one. Mr. Standing and Miss Saker contribute to the general amusement; and both Miss Mary Rorke and Miss K. Rorke figure in the cast with good effect.

WE are only able, at least for the present, to chronicle briefly the success of Mr. Pinero's play, "The Squire," at the St. James's Theatre. So rapidly is literary discussion conducted nowadays, that the dispute respecting the origin of the play is already almost matter of history. It is, we may fairly assume, the general opinion that Mr. Pinero was more influenced than he imagined by that perusal of Mr. Hardy's *Far from the Madding Crowd* which he allows to have been one of the necessary steps in a liberal literary education. This is a point, however, which for the present may be left, though we must say that it will be regrettable if the presentation of "The Squire" prevents the representation at another house of a play in which the most original of living novelists has had a principal hand. Of Mr. Pinero's play, considered without reference to the literary dealings which preceded it, good account must be given. The situation it presents, and the dialogue in which these are developed, afford to Mrs. Kendal some of the best opportunities ever enjoyed or taken advantage of by an artist continually on the watch to excel her own efforts. The impression created by Mrs. Kendal in "The Squire" is profound; it is such as could be made by no other living actress now on the English stage. Mr. Kendal as a lover, Mr. Hare as a clergyman of eccentric temperament, and Mr. Wenman, Mr. Mackintosh, and Miss Brereton as rustic characters—whom Mr. Pinero must have been most exceptionally fortunate to meet and understand during a townsman's brief country holiday—give singular completeness to the cast; but it is probably by Mrs. Kendal's grasp of the fortunes of the heroine that the present drama will live.

### MUSIC.

THE opening Monday Popular Concert of the new year (January 2) was inaugurated by a very good performance of Beethoven's quartett in A major (op. 18, No. 5), with M. Hollander as leader. Mdlle. Marie Krebs was the pianist; she took part in Goetz' interesting quintett for piano and strings, and played as solo Beethoven's sonata in E flat (op. 31). It is unnecessary to speak of this pianist's intelligent style of playing and excellent mechanism, but on Monday she was not at her best, and in her rendering of the sonata not always faithful to the composer's intentions. At the concert on the following Monday (January 9) Mdlle. Krebs was again the pianist, and played three pieces of Scarlatti.

MR. CARL ROSA announces a season of opera to commence to-day (Saturday) at Her Majesty's Theatre. The list of principal artists is excellent, including many well-known and some new names. Mr. Barton McGuckin will make his first appearance in this company, and special engagements have been made with Mdlle. Alwina Valleria and Herr Anton Schott. Four operas by Wagner are announced—"Rienzi," "Flying Dutchman," "Tannhäuser," and "Lohengrin." Balfe's opera "The Painter of Antwerp" is to be given for the first time in England; and last, but not least, Hector Berlioz' semi-seria opera "Benvenuto Cellini." Times have changed since this work was so unfavourably received at Paris in 1838 and at Covent Garden in 1853. Whatever may be thought of the opera now, it is certain at least to be respectfully listened to, and we hope impartially criticised. The composer himself reviewed his work fourteen years after its first production, and his words are sufficiently interesting to quote:

"Je viens de relire avec soin et la plus froide impartialité ma pauvre partition, et je ne puis m'empêcher d'y rencontrer une variété d'idées, une verve impétueuse et un éclat de couleurs musical que je ne retrouverai peut-être jamais, et qui méritaient un meilleur sort."

WE are informed by Herr Schulz-Curtius that the subscription for the "Nibelungen" performances at Her Majesty's Theatre in May is proceeding wonderfully well, amounting already to over £3,500. The subscription for the Symphony Concerts under the direction of Mr. C. Hallé is also progressing favourably. Herr Wilhelmj has promised to play at these concerts, and probably M. Strauss will be the *chef-d'attaque*. Herr Schulz-Curtius further informs us that arrangements are already well advanced for a series of symphony concerts during the winter 1882-83 at popular prices.

A GRAND choral and orchestral concert was given last Saturday afternoon at the Albert Hall in aid of the funds for the relief of the sufferers by the burning of the Vienna Ring Theatre. Herr Hans Richter came over to England specially to conduct the concert. The chorus composed of members of the principal London choirs, the orchestra, and all the artistes—Mdlles. Marie Roze, Valleria, Rose Hersee, and many others—gave their services gratuitously. It is not necessary to criticise the performance. The programme included the Austrian and English National Hymns; Beethoven's Funeral March from the "Eroica," and his symphony in C minor; and selections from "Tannhäuser" and "Lohengrin." The order of pieces was not, as is often the case on such occasions, in any way disturbed. One of the most curious features of a naturally mixed scheme was the juxtaposition of Elisabeth's Prayer from "Tannhäuser" and Wallace's "Sweet spirit, hear my prayer." The concert, at which the Prince of Wales was present, was very well attended, so that the profit for the benefit of the sufferers will be a large one.

SATURDAY, JANUARY 21, 1882.

No. 507, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Fall of the Monarchy of Charles I. 1637-49.* By Samuel Rawson Gardiner, LL.D. Vols. I. and II. (Longmans.)

MR. GARDINER may be said to have invented the serial history. His practice is to bring out two volumes at a time, each pair constituting a complete work so far as this, that it has a separate descriptive title, but at the same time forming but a chapter in a continuous History of England under the Stuarts. This time he rather puzzles us by adopting, without notice, a somewhat different system. He entitles his new brace of volumes *The Fall of the Monarchy of Charles I.*, and yet they only carry the narrative to the commencement of the Civil War. The reader is at a loss to understand how the monarchy of Charles I. can be said to have fallen in the year 1642 until he perceives that the title is not intended to describe merely the volumes now published, but a larger work which is to cover the whole period from 1637 to 1649, and of which these volumes form the first instalment.

They are the most important volumes which Mr. Gardiner has yet given us. To him history is not so much a story to be told as a problem to be solved; and, as he lets us know himself, his former volumes have contained only the working of his problem, whereas these contain part at least of the results. All serious students must applaud the perseverance and constancy with which Mr. Gardiner has pursued the scientific and disdained the popular method in history. Deliberately, he says, he began with the unattractive subject of the reign of James I., because

"it seemed to him then, as it seems now, that it was the duty of a serious enquirer to search into the original causes of great events rather than, for the sake of catching at an audience, to rush unprepared upon the great events themselves."

Contrast this proceeding with that of Lord Macaulay, who, having undertaken to describe the Revolution of 1688, begins only three years short of the event itself, and does not even fully narrate, much less thoroughly investigate, the rejection of the Exclusion Bill, the Popish Plot, and the policy of the Treaty of Dover, although most obviously the causes of the Revolution lie hidden there.

He who looks for problems in history will not only advance in this deliberate manner towards great events, but will also have his own opinion of what constitutes a great event. Mr. Gardiner says, "If I have judged rightly the first fourteen months of the Long Parlia-

ment, I am likely to judge rightly the future course of the parties which then came into collision." These fourteen months fix his attention more, and seem to him more critical, than the noisy events which followed them, the Civil War and the Military Revolution. And justly, for when the civil struggle had once begun its course was even painfully normal. Its incidents, therefore, may have often a strong biographical, but not so strong an historical, interest. But the years 1640-41 are, from the historical point of view, quite among the most important in English history, and therefore Mr. Gardiner may well give us to understand that he attaches more importance to these volumes than to any that he has published before.

And, after having raised such high expectations, he does not disappoint them. He satisfies most successfully the kind of curiosity he awakens. I think these volumes more excellent in arrangement, in clearness of view, distinctness of statement, and decision of judgment than any of those which preceded them. I cannot, indeed, say that they "read quite like a romance." It is not Strafford's Trial and the Arrest of the Five Members put on the stage with new costumes and scenery. There is no word-painting here, and, what is more, the story is not told in such a way as to leave us glowing with admiration of great deeds or with ardour in some great cause. Mr. Gardiner himself, no doubt, would admit this; but he would allege in excuse that he did not *make* the characters and deeds that he describes (though, indeed, why did not he?—many other historians do), and that if they turn out disappointing it is their fault, not his. Indeed, I fear that the great revolutions of history, when recorded by a conscientious historian, seldom produce the effect of a play by Schiller. But some readers who were alive to this as a general principle may find Mr. Gardiner's picture saddening because they may have been accustomed to think that our Great Rebellion formed an exception in history, and did really abound with personages and achievements fit for poetry. Such readers will not read these volumes without disappointment. Not but what the period always remains morally most respectable. For a period of disturbance it is remarkably free from great crime, and Mr. Gardiner's investigations have rather extenuated than deepened what moral stains it has. He is, indeed, eminently a merciful judge. We scarcely ever find him severe except when he speaks of England's treatment of Ireland. According to him, we shall find, if we look closely, that Strafford was not an apostate, Laud was not a contemptible bigot, Montrose, too, was no mere renegade; and as to Charles himself—but it is in this character that Mr. Gardiner's penetrating sympathy and charity shine most, and he shows us, by a series of delicate touches, how Charles was, indeed, perfectly untrustworthy, but not, properly speaking, unconscientious, and that he ought to be described rather as entirely without mental grasp, and incurably addicted to mistaking words for things. Nevertheless this remarkably charitable historian has deprived the period he describes of some of its splendour. He does so by somewhat lowering the intellectual rank of the leaders and the total value of their achievements. We have

been in the habit of speaking of Pym and Hampden and their compeers as men of profound insight and sagacity, as rising far above the level of English party-leaders. If they failed, we think it was certainly not from want of ability, but perhaps from aiming too high or forerunning their age too far. Now Mr. Gardiner, though assuredly not wanting in sympathy for the Parliamentary cause—he announces himself in the Preface as a descendant of Cromwell and Ireton—arrives at a different conclusion. He repeats frequently that the men were not equal to the crisis—that they did not rise, as the occasion demanded, above the ordinary notions of their age. Descending into details, he shows us Pym (Hampden he seems somewhat to overlook) as a cool and able party-leader, whose actions, too, even when they might appear extreme, he is often prepared to justify, but at the same time as prejudiced, of rooted Conservatism, unable not only to find out for himself the right course in unprecedented circumstances, but even to recognise it when it is pointed out by others. When he claims in the Preface to have realised and measured in these volumes the greatness of Pym as he formerly did that of Strafford, I am somewhat surprised at his language. The greatness of Strafford he has exhibited more strikingly than any other writer; but he has reduced the dimensions of Pym so much that the epithet "great" seems no longer to suit him.

In like manner Mr. Gardiner may disappoint the reader by the tone in which he speaks of the Civil War, of which he has here recorded the commencement. He does not describe it in the manner, for example, of Mr. Forster, as a glorious struggle in which the liberties of England were established. On the contrary, he writes: "Failure, and it must be confessed deserved failure, was the result of Pym's leadership." Again, he remarks that in October 1641 the Long Parliament had already "said its last word in politics," pointing out that the work of its first months was solid and still makes part of the English Constitution, but that all which it did after it took the path of civil war was undone again and perished. He even expressly attributes to the Civil War the demoralisation that followed the Restoration, and thus teaches us that the struggle which Pym began not only failed politically, but had a bad moral result. Shall we welcome a book which makes such depressing statements? Well, if the statements are true, and if we are wise, we shall pronounce that history is most instructive precisely when it teaches what we should never have guessed, and are least willing to believe—viz., that the best and most religious part of the nation may unite in a movement, and that the movement may end in utter failure and general demoralisation.

But it is time to examine more closely what Mr. Gardiner has accomplished. In doing so I shall resist the temptation of indulging in criticism on minor points, because, where the work reviewed is of great importance and of essential soundness, such criticisms cannot, in a review of this length, be stated at all without being made unfairly prominent.

A main part of Mr. Gardiner's work has, of course, consisted in a complete review of what has been done of late years by other

students of this period. He pays a tribute to the accuracy of Mr. Sanford and Prof. Masson, and expresses "extreme admiration" for Mr. Lecky's investigations of the Irish Rebellion. On the other hand, he thinks it "necessary in the interests of truth to speak clearly on the extreme carelessness of some of Mr. Forster's work." This announcement, made in the Preface, is followed up by a series of criticisms in the work itself, which, unless they can be met, will destroy the authority of that writer's books on the Grand Remonstrance and the Arrest of the Five Members.

But Mr. Gardiner is here, as in former works, no mere reviewer of other men's labours; he is also an explorer and discoverer. He produces new information, partly drawn from the correspondence of Rossetti, Papal agent at the Court of Henrietta Maria, with Card. Barberini, partly from transcripts made by Mr. Rawdon Brown of the Venetian despatches of Guessturan, and partly from the Verney MSS. preserved at Claydon. It is to be remarked that the great crisis in the English Rebellion, as in the French Revolution, was brought on by suspicion. The Parliament attacked the King, first in the Grand Remonstrance and afterwards in the Militia Bill, because they were mortally afraid that the King was about to attack them. The air was full of sinister rumours, which seemed to find an appalling confirmation in the Irish Rebellion. Now, was all this suspicion reasonable? Was the King really conspiring with the Pope and with the Catholic lords in Ireland? Mr. Gardiner has penetrated some way into the mystery; he has partially lifted the veil that covered the privacy of Charles. We do find, not, indeed, the King, but the Queen intriguing with the Pope, offering toleration for the Catholics, and even a prospect, though a very vague prospect, of the conversion of Charles, in exchange for money. We also find some evidence of the suspected Irish intrigue.

But Mr. Gardiner's principal achievement, I take it, is the luminous explanation he has given of the rise of the Cavalier party and of that division which, growing up in the heart of Parliament during the autumn of 1641, led to the disastrous Civil War. It is surprising how confused and unintelligible is the account with which we have always contented ourselves of these events. Many Englishmen, I fancy, suppose that the Cavaliers were simply the party of Laud and Strafford, or else that they were mere loyalists, the sort of party which in every country is always ready, when appealed to, to support the existing state of things. But in the first place it appears that Laud and Strafford left behind them *no* party; scarcely any great man seems ever to have lived in such solitude as Strafford. In the second place, the men who made the Cavalier party, so far from being Conservatives provoked by the innovations of the Parliamentary party, were leading members of that very party. In the attack on Strafford, Falkland and Hyde showed as much zeal as Pym and Hampden; they even showed as much animosity against the Bishops.

Closely connected with this is another great difficulty. It is at first sight incomprehen-

sible how the Parliament can have bungled what seems a very simple task so much as to inflict upon England a long civil war and a military imperialism; for at the meeting of the Long Parliament Charles seems to have had scarcely any supporters, and we know that he had no standing army. He afterwards appeared to be so helpless that he could not prevent the fall of Strafford. How can it have been necessary to wage formal war against a tyrant so utterly without resources? and how did it happen that, though he did not at all mend his ways, though he tried to arrest the Five Members, and though he was believed to have caused the Irish Rebellion, yet the same Charles, who a few months before seemed steering straight for a second Runnymede, was joined in the hour of need by a party so respectable and strong that for a moment he seemed likely to come out of the war victorious?

These difficulties have hitherto been dealt with, when they have been faced at all, in that spirit of over-eager praise and blame, and in that method of random hypothesis, which are the bane of history. Mr. Gardiner has for the first time faced them fully, and handled them in a truly historical manner. He is not content either to lament over the weak sentimentalism of Falkland, which caused him to quail before the dire extremity of civil war, or, contrariwise, to applaud the genuine moderation which restrained him from following Pym in his desperate course. He is not satisfied to guess how the division *may* have happened, but searches the documents to ascertain how it *did*. And he arrives at the conclusion that it arose, not upon the political, but upon the ecclesiastical question. The Cavaliers were first an Episcopalian, and afterwards grew, by slow degrees, into a Royalist party. But how could an Episcopalian party spring up in the bosom of that fierce opposition to the system of Laud? According to Mr. Gardiner, we must realise fully the necessity the Parliament lay under of constructing a positive obligatory ecclesiastical system in place of the reigning episcopacy if they destroyed it. Had any scheme of partial relaxation or toleration been admissible the division might have been avoided. But public opinion did not admit of this. It was a question of choosing between one iron system and another; and Falkland's following, though they disliked the existing system, felt instinctively, when the alternative Presbyterian system was put before them, that they disliked it far more. The very feeling which led Milton through Presbyterianism to Independency, the feeling that "new presbyter would be but old priest writ large," led them to stand by "old priest." And by slow degrees the affinity between episcopacy and royalism became manifest. The bishops were the King's standing army in the House of Lords, and it was the royal appointment of bishops which determined the character of the episcopal order. And in this way gradually the King gained a new party of supporters, as different as possible from Strafford and Laud—a party founded, we may say, upon the principle that Puritanism, though it may be useful at times as a weapon of offence, is not a good thing to live with.

Such, as I apprehend it, is Mr. Gardiner's

theory, concerning which I am not prepared to say that it is true, but I am sure that it is excellently developed and supported.

For the rest, the peculiar merits which have characterised Mr. Gardiner's historical work from the beginning are as conspicuous as ever in these volumes. He has introduced two grand improvements into the treatment of the Stuart period. In the first place, he attends carefully to the relations between England and the Continent, which the old school of historians always neglected too much, and in periods when there was no war were apt to overlook altogether. It may be laid down that no one can know the great Rebellion who does not also know the Thirty Years' War and the policy of Richelieu, Ranke taught us this lesson; and of our native historians Mr. Gardiner is, perhaps, the first who has thoroughly profited by it. In the second place, he knows that history is an empty name if the historian does not raise himself high above the commonplaces of party politics. He is able to do this without being a political indifferentist, because he sees that the parties of the seventeenth century were much more different from those of the nineteenth than is commonly supposed. Thus he admires Pym, and, on the whole, sides with him; yet he does not for a moment dream that Pym was a Liberal. He writes of Pym—

"his position was purely conservative, and he brought with him the strength and the weakness which conservatism always brings. To him *Parliament* was the most conservative force in existence. It was the guardian of the old religion and of the old law against the new-fangled nostrums of Strafford and Laud."

Mr. Gardiner can say this calmly and yet approve Pym, and yet be, to all appearance, a Liberal himself.

A writer like this really *sees* the past, and may hope to make discoveries in it. He has made, I take it, a real discovery in his analysis of the political views of Strafford, and he has made it, not by adducing new facts, but simply by using his trained historical sense. It will scarcely be possible after these volumes to revive the tragic style of denunciation which Hallam and Macaulay used to employ in speaking of Strafford—"Satan, so call him now, his former name is heard no more in heaven." For Mr. Gardiner has read the enigma of his character and explained the strange fascination which it has had for historians of every school.

"Alone among his generation, his voice was always raised for practical reforms. Pym and Hampden looked upon existing society as something admirable in itself, though needing to be quickened by a higher moral spirit, and to be relieved from the hindrances thrown in its way by a defective organisation. Strafford regarded that society as full of abuses, and sought in the organisation which was ready to his hand the lever by which those abuses might be removed."

What does this mean? Anyone who has traced the history of the rise of Liberalism in the eighteenth century, who has studied Frederick the Great and, still more, Joseph II., recognises at once the type of statesmanship. It means that Strafford (as Bacon before him) was a *Liberal* in an age when Liberalism to the world at large was an unintelligible creed. That impatient zeal, that

intolerance, and especially that aversion to Assemblies as strongholds of Conservative prejudice characterised almost all the great reformers of the last century. They were indeed the marks of Liberalism until a way of reconciliation was found between two things which for a long time were sharply opposed—Liberalism and Liberty.

J. R. SEELEY.

*The Mendelssohn Family (1729–1827) from Letters and Journals.* By Sebastian Hensel. Translated by Carl Klingemann and an American Collaborator. In 2 vols. (Sampson Low.)

A FAMILY history is not always a record of kindness, truth, purity, mutual help; not always a record of aspiring youth and reverent age; of beneficent lives and tranquil deaths. Goodness in a group of persons, and in an eminent degree, is rare; goodness with genius, one and indivisible, is still rarer. Light and love together in a company of kinsfolk make a beautiful illumination, which is a blessing to eyes that rest upon it; make a music which reveals ideal possibilities in the clash and clatter of our every-day lives. This music it is, more than any rendered by instrument or orchestra, which is the attraction of the Mendelssohn family. And if we cannot trace it to its original, we can find where it first gathers power—in the person of a little humpbacked, stammering Jew, a silk-merchant's book-keeper, anathematised in the synagogue, jeered at in the Christian streets, but winning upon the world by the charm of thought and love, and leaving to his children and his children's children a growing heritage of moral and intellectual beauty.

Lessing's friend, the model for Nathan the Wise, the author of the German *Phædo*, Moses Mendelssohn starved in a garret in his early years that he might force a way to learning; "on the loaf that he bought every week as his only food he marked his daily allowances with lines, knowing that if he had eaten more he would have had nothing left at the end of the week." A kind of Hebrew pigeon-German was spoken by the Jews; the written tongue was Hebrew; to read a German book was heresy. In spite of obstacles on the right hand and the left, Moses Mendelssohn became the typical cultured German Jew of his time, so securing for his people an emancipation of which no brute-passion of New Germany will rob them. In spite of his physical deformity, or perhaps with its aid, for there is a charming story about his wooing which ought to be true since woman's love can at times be generous, he won Fromet Gugenheim to wife. But even in the days of fame and honour it was necessary to secure a retreat for himself and his children from the persecution of the Berlin school-boys (serious Jew-hunting school-boys surely, for a German *gamin* is inconceivable); and with this in view Mendelssohn hired a garden where he could forget the unworthy passions of the earth, and the petty annoyances to which his descent exposed him. He lived for long in daily peril of being ordered out of the city by the police, and was at last induced to draw up a petition begging for permission to exist, on a duplicate copy of which his adviser, the Marquis

d'Argens, wrote: "Un philosophe mauvais catholique supplie un philosophe mauvais protestant de donner le privilège à un philosophe mauvais juif." Mendelssohn received the privilege of residing in Berlin unprotected by a naturalised citizen in 1763; an extension of the same to his posterity, refused by Frederic the Great, was bestowed by Frederic William II. in 1787 upon his widow and children.

"Formerly I was the son of my father, and now I am the father of my son," was the description of himself modestly given by Abraham Mendelssohn after Felix had become illustrious. Our acquaintance with Abraham, the second son of Moses Mendelssohn, is almost wholly derived from these volumes of Hensel, and an admirable figure he is. A noble moral severity ruled his house. "Faithful and obedient till death" was the admonition he gave his daughter Fanny on the day of her confirmation." The art which bore flowers and fruit in the lives of his children had its roots in Hebrew strenuousness of moral purpose. Abraham Mendelssohn's love for Fanny and Felix and his other children was no lax, self-indulgent regard, but a strong desire to train up each to his or her proper perfection; they were to arrive at love through obedience, and at freedom and happiness through order and discipline. Before them he kept the high example of their mother, whose rectitude and large simplicity of character were united with a varied and complex culture of intellect and imagination. "She played and sang with expression and grace; she drew exquisitely; she spoke and read French, English, Italian, and, secretly, Homer in the original language." Abraham Mendelssohn, himself convinced that "there are in all religions only one God, one virtue, one truth, one happiness," desired that his children should accept that form of faith which would least isolate them in proud antagonism from their fellows. So Felix and Fanny and the rest grew up Christians. The following remarkable passages from a letter written by her father to Fanny on the occasion of her confirmation show his manner of dealing with his children—his seriousness, his sincerity, his strong enthusiasm of the conscience:—

"My dear Daughter,—You have taken an important step, and, in sending you my best wishes for the day and for your future happiness, I have it at heart to speak seriously to you on subjects hitherto not touched upon.

"Does God exist? What is God? Is He a part of ourselves, and does He continue to live after the other part has ceased to be? And where? And how? All this I do not know, and, therefore, I have never taught you anything about it. But I know that there exists in me and in you and in all human beings an everlasting inclination towards what is good, true, and right, and a conscience which warns and guides us when we go astray. I know it, I believe it, I live in this faith, and this is my religion. This I could not teach you, and nobody can learn it; but everybody has it who does not intentionally and knowingly cast it away. The example of your mother, the best and noblest of mothers, whose whole life is devotion, love, and charity, is like a bond to me that you will not cast it away. . . . Your mother has been, and is, and I trust

will long remain to you, to your sister and brothers, and to all of us, a providential leading star on our path of life. When you look at her and turn over in your thoughts all the immeasurable good she has lavished upon you by her constant self-sacrificing devotion as long as you live, and when that reflection makes your heart and eyes overflow with gratitude, love, and veneration, then you feel God and are godly.

"This is all I can tell you about religion, all I know about it; but this will remain true as long as one man will exist in the creation, as it has been true since the first man was created.

"The outward form of religion your teacher has given you is historical and changeable, like all human ordinances. Some thousands of years ago the Jewish form was the reigning one, then the heathen form, and now it is the Christian. . . . We have educated you and your brothers and sister in the Christian faith, because it is the creed of most civilised people, and contains nothing that can lead you away from what is good, and much that guides you to love, obedience, tolerance, and resignation, even if it offered nothing but the example of its Founder, understood by so few, and followed by still fewer."

An exquisitely beautiful relation, says Hensel, subsisted between Abraham and his son Felix; and it is not too much to say that without this father Felix Mendelssohn would never have become what he was. He constantly drew his son's attention to the old masters, especially Bach, and it was he who urged Felix to the composition of "St. Paul." "I often cannot understand," Felix writes, "how it is possible for you to have so acute a judgment with regard to music without being technically musical." And elsewhere:

"Allow me to take this opportunity to say to you that the approbation and enjoyment of the public, of which I am certainly very sensible, only really pleases me when I can write to tell you of it, because I know it rejoices you, and one word of praise from you is more truly precious to me, and makes me happier, than all the public in the world applauding me in concert."

Abraham Mendelssohn died with the knowledge that the oratorio, which so much interested him, was worthy of his son; and this was enough, without witnessing its public triumph. Like almost every member of the family, his death was a peaceful falling asleep. "So beautiful, unchanged, and calm was his face," wrote Fanny Hensel,

"that we could remain near our loved one not only without a sensation of fear, but felt truly elevated in looking at him. The whole expression was so calm, the forehead so pure and beautiful, the position of the hands so mild."

It is surprising that no book-maker has compiled a volume with the title "Sisters of Great Men." There is an interesting passage in one of Sainte-Beuve's lectures on Chateaubriand with reference to Chateaubriand's sister Lucile, which maintains the superiority of these women of genius to their more illustrious brothers. The man, some day, sooner or later, gets to the business of a man; he flies from the nest, and takes to the bushes of the wayside; the dust of the world settles on him;

"S'il ne se perfectionne beaucoup en avançant, il se gâte. Les femmes, si elles restent ce qu'elles doivent être, gardent le foyer, et aussi, dans toute sa délicatesse, elles y gardent le

culte de l'idée première, de l'idéal; elles sont comme les prêtresses domestiques de cette chose sacrée que nous allons dissipant, dépensant, exploitant au profit souvent ou de notre ambition ou de notre amour-propre, de ce qu'on appelle la gloire."

There is a certain truth in this, although it would be worse than a paradox in criticism to place Angélique above the great Arnauld, or Eugénie de Guérin's gift above that of her brother Maurice, or Dorothy Wordsworth's genius above that of William Wordsworth; and, indeed, no one would resent the inversion of the true order of precedence so much as these sister-moons of the strong day-stars. It is enough to say of Fanny Hensel and Rebecca Dirichlet that they were worthy children of Abraham and Leah Mendelssohn, and worthy sisters of Felix. These volumes tell very fully what they were, and how each in a different household became a centre of brightness and of love. Wherever one of them—sisters or brother—goes, things of the mind take the first place, with no strain or unhealthy self-consciousness, but naturally and spontaneously, while material interests fall into a second rank. Art with them is not a thing to fawn upon with foolish lips, but a large and substantial factor in life, entering into life simply and of course.

Some of the brightest letters in these interesting volumes are those written from England by Klingemann, the friend of the Mendelssohns. In the best of them there is a mingling of humour and irony and sentiment which reminds one of passages from the *Reisebilder* of a more famous contemporary. "Felix leaves behind him," writes Klingemann,

"in opposition to the evil one, the odour of his 'high talents' and of 'the perfect gentleman.' You can hardly realise abroad how much an English lady expresses by that; it contains volumes of acknowledgment. I assure you that, if the great Apollo came himself, playing irresistibly on his lyre, and yet, perhaps, as a free-thinking Greek, omitted to drink wine with the lady of the house, he would incur the greatest anathema of the civilised world—'He is no gentleman.'"

EDWARD DOWDEN.

#### JANSEN'S FOLK-LORE OF THE ESTHS.

*Märchen und Sagen des estnischen Volkes.*  
Gesammelt und übersetzt von Harry Jansen.  
(Dorpat.)

MÄRCHEN, Märchen, Märchen, everywhere Märchen! Hundreds of years passed away, and no one ever thought of Märchen. They were there all the time, like the little shells in the oolite (why not oolithe?), yet no one spoke of them, no one, at least, wrote of them, and the old nurses who told them, and the little children who listened to them, looked upon them as they did on their daily bread, and that was all. Luther expressed himself grateful for the strange and wondrous tales which he had carried along with him from his tenderest childhood or met with afterwards, and he declared that he would not part with them for any money! And Rollenhagen (sixteenth century), in his Preface to the *Froschmäusler*, speaks of them for the first time as deserving of serious attention, because, as he says, they teach homely lessons in a

homely way. "What the heathen doctrines of the ancient Germans may have been," he writes,

"we can gather best from the curious household tales of the despised good 'Aschenpössel' (Cinderella, here a boy) and his proud, scoffing brothers, of the silly and lazy 'Heinz,' of the 'Iron Heinrich,' the old 'Neidhartin,' and others. These stories, without being written down, were always inherited orally by successive generations; and they generally aim at teaching fear of God, industry, humility, and hope, for the most despised person generally turns out the very best."

The impulse that was given to the collection of these stories by the Brothers Grimm is well known; and it was their chief merit not only to have set an example of how these stories should be collected—namely, with scrupulous accuracy, and without any attempt at embellishment—but also to have pointed out their historical value for the study of ancient mythology. For the mere purpose of amusement, many of the stories which we find in Grimm's *Kinder und Hausmärchen* had been written down and published in Italian by Straparola (sixteenth century) and Basile (seventeenth century), in French by Perrault (seventeenth century) and the Countess Aulnoy (seventeenth century). What was peculiar to Grimm's collection was his mixing the *utile dulci* by drawing the attention of scholars to the relics of ancient thought that lie imbedded in these popular tales.

It is in this spirit, and on the lines laid down by Grimm, that a collection of *Märchen und Sagen des estnischen Volkes* has been made which has just reached us from Dorpat. They were collected and translated by Mr. Harry Jansen. They are pleasant to read in their German translation, and they contain here and there nuggets of mythology which the student of comparative mythology will not be slow to dig out in order to use them for his own purposes. The story of "How the Sea became Salt," of "Pikne's Pipe," of "Jutta," &c., are full of well-known mythological elements. The chief difficulty will be to distinguish in these Esthonian stories between the original Turanian elements and the frequent admixtures of Aryan thought, whether borrowed from Teutonic or Slavonic sources. There is one story of the man who poured hot tin into the Devil's eyes, and told him that his name was Self, which strongly reminds us of the story of Odysseus and Polyphemos, only that the Devil here rushes about crying that "Self has done it." The same difficulty exists with regard to the popular traditions of the Finns, as was pointed out many years ago by Jacob Grimm. We can only hope that Mr. Harry Jansen may be encouraged to continue his work, and that he will fulfil his promise of giving us, at the end of his collection, his mythological notes on the traditions of the Esths.

F. MAX MÜLLER.

*The True Tragedy of Rienzi, Tribune of Rome.* By John Todhunter. (Kegan Paul, Trench & Co.)

At a time when so much genuine interest is felt not merely in poetry of that rare order in which we detect the touch of creative genius,

but in that lower, though still delightful, work which testifies only to quick sensibility and trained craftsmanship, it is rather curious that Dr. Todhunter's verse should not have attracted wider attention and quicker recognition than have heretofore been accorded it. Comparisons are unedifying as well as odious; but few readers of *Laurella*, his first volume, will dissent from the verdict—which one feels impelled to bring in—that it contains poetry distinguished, among other fine qualities, by that independent vitality which is the one thing lacking in the volumes of several younger poets who have been much more talked about. *Alceste*, his second venture, was, as a whole—and only as a whole can it be judged—not on a higher plane than the best parts of its predecessor. It had tenderness, beauty, and here and there, in the strong emotional passages, gleams of memorable insight; but modern recastings of ancient myths are wont to be vaguely unsatisfying, and perhaps in this respect *Alceste* shared the fate of its fellows. In this *True Tragedy of Rienzi* there is, however, an unmistakeable advance. Nothing that Dr. Todhunter has so far produced has anything like the same indications of command over material, or sustained strength of dramatic realisation and expression; indeed, it may, without exaggeration, be said that no recent work of the kind is more truly instinct with the living spirit of the Elizabethan drama. In "composition," using the word in the pictorial sense, Dr. Todhunter had not been fairly tested, and it was impossible to guess how he would stand the test; but one can no longer doubt his power to achieve this most important essential of satisfactory dramatic work. The composition of *Rienzi* is very noteworthy, and is all the more admirable because, though the writer does not affect a mechanical literalism of treatment, he has in the main eschewed invention of incident and situation, and worked along the lines of actual history. Dr. Todhunter's arrangement is his own vision his recorded fact; but he frankly admits of indebtedness to Lord Lytton's novel

"for the dramatic manner in which Pandolfo di Guido, the influential citizen beheaded by Rienzi, and Cecco del Vecchio, his assassin, are made types of two different classes of the Roman people, at first favourable to him, but afterwards disaffected;"

and no true critic will regard this or similar indebtedness as any lapse from genuine originality.

*The True Tragedy of Rienzi* is not one of those hybrid works of art, half poem, half play, and wholly neither play nor poem, which are known as closet dramas; in its production the requirements of the stage have evidently never been lost sight of, and every scene is busy with the quick movement which the stage demands. The central character is a singularly powerful and interesting study; and there is both subtlety and strength in the fine differentiation of Rienzi the impassioned Tribune from Rienzi the disillusioned Senator. Stefano Colonna is also a very masterly creation; and the scenes in which Vittoria Colonna appears make one wish that this character had been a little more elaborated. The versification is strong, sinewy, and varied—full of fine Shaksperian sugges-

tions; and the imagery has a large imaginative quality which is very refreshing. It is unfair to conclude a notice of so fine a drama with a decided anti-climax; but it is only just to add that *The True Tragedy of Rienzi* provides a full allowance of the spectacular effects which are dear to the soul of the modern playgoer.

JAMES ASHCROFT NOBLE.

*Alps and Sanctuaries of Piedmont and the Canton Ticino.* By Samuel Butler. (Op. 6.) (David Bogue.)

To lovers of the Alps who do not care to be either always climbing among the snows or involved in the crowd which during August and September infests the lakes and valleys of Switzerland, the romantic hill-country of Venetia, Lombardy, and Piedmont offers a sure and delightful refuge. There are a few who delight to lose themselves in the maze of vale and alp which extends from Tarvis and the shrine of the Luschari-berg in the far east to where, at the meeting of Alps and Apennines, the Certosa di Pesio looks over its chestnut-groves and across the whole breadth of the Po valley to the snows of Monte Rosa. This enchanting region, hardly rivalled in natural beauty, has other and less generally known attractions. The wanderer among the hills must not, of course, expect to come upon artistic treasures equal to those of the plain. The cities naturally drew the best to themselves. But those who have a taste—and such a taste seems now only too common—for discovering Little Masters, and tracking up the backwaters of every stream of human effort, may find a great deal to interest them within the Alps. In the Trentino and Bergamasque country there are the old pilgrimage churches, the foundation of which a legend, supported by documents of some antiquity, attributes to Charles the Great. Every village boasts of pictures or frescoes by native or Brescian painters. Mediaeval castles, such as that of Bartolommeo Colleoni at Malpaga, are common. Round Varallo and the Lakes traces are found of local artists who lingered behind the advancing age. Biella boasts its three great sanctuaries; the valleys of Lanzo have their lesser shrines and ruins. San Michele, on its high rock, guards the entrance to the Vale of Susa, and at its head, under the strange pilgrimage chapel, over 11,000 feet above the sea, of the Roccia Melone, lies the site of the once lordly house of Novalesa. Beneath the shadow of Monte Viso, San Chiaffredo, a runaway apostle of the Theban legion, has usurped the worship paid in old time to the river-god Eridanus, and, surviving all the onslaughts of heretical Vaudois, scarcely yields to Varallo or Oropa in the number of his devotees. Here, and in other spots, the religious house has been secularised and turned into an inn; a resort in the summer months for citizens, who, if they do not care, like its former inmates, to spend their lives in selfish isolation, are glad enough of a few weeks' escape from the heat of the plain.

Members of the Italian Alpine Club have recently issued a series of handbooks, all of details of out-of-the-way antiquities

and strange popular customs, which no intelligent traveller can afford to dispense with. But the artistic interests of these Italian Alps have been hitherto but lightly touched on by English writers mainly in search of the picturesque. Mr. J. Gilbert has supplemented his "Dolomites" with a charming volume on "Titian's Country," but beyond his range a great field has been left open. This was Mr. Butler's opportunity; and he has allowed himself to throw it away. He has spoilt his book by thinking too little of his subject and too much of everything else. At least one-third of the pages which compose *Alps and Sanctuaries* are given over to desultory reflections unconnected with the matter in hand. If the book had been named "Alps, Sanctuaries, and Paradoxes," the title would have been a fairer index to the contents.

To lay down any fixed rule as to the digressions allowable to a writer of travels—other than the genius who is above rules—would be, perhaps, almost as difficult as to draw the legal line between quotation and piracy. But a similar principle underlies both cases; the imported matter, whether original or borrowed, should be serviceable for the illustration of the main subject. Mr. Butler's digressions do not fulfil this condition. The author of *Erewhon* has sojourned so long in a topsy-turvy world that even from the Italian Alps he cannot resist rushing back to it for what he calls "a spiritual outing." He is constantly striving to amuse or startle us. But the reader is only moderately interested or surprised to learn that, in Mr. Butler's opinion, St. Paul's is "ineffable," Ludgate Hill much improved by the railway viaduct, the Temple Bar griffin one of the handsomest things in London, and London itself the most beautiful and commodious of cities; or even that "Handel is as much above Shakespeare as Shakespeare above all others," or Dante and Raphael among—but my pen refuses to register any more of these impertinencies. It may be necessary to Mr. Butler to go through such intellectual gymnastics; and no one surely would grudge him the recreation if he took it in private, or only before willing spectators. But gymnastics, even the most ingenious, pall; and the author ought to have remembered that his readers have already five series to choose from, and that on the title-page to "Op. 6" he had promised them something quite different.

Mr. Butler is capable of better things than the commonplace tourist, or he would not be worth calling to order. His descriptions of scenery are clear, bright, and spontaneous; his sketches of his inn or wayside companions lively and amusing. But he is seldom at sufficient pains to help his readers to feel the peculiar character of the country, or to enter fully into the existence and traditions of its inhabitants. He does not make us realise, for instance, the strange structure of the gneiss mountains of Ticino, the ruined pedestals of mightier pyramids, or its effect on the life and industries of the people, who hold their drinking-bouts in the most romantic glens, conquer the precipices with staircases rivaling those of the Mountain of Purgatory, and scatter

over the upland lawns odd hamlets of stone-built huts, to which they return contentedly from the stirring life of the Antipodes. One finds oneself wishing—even at the risk of a little dullness—to transfer to the text some of the dry and minute accuracy which gives value to the numerous illustrations.

Yet, with all its faults, *Alps and Sanctuaries* contains much that is interesting, and a good deal that will be new to the world. It opens with an account of the villages about Faido, the part of Val Leventina where chestnuts and *campanili* and purple mountains first gladden the eyes of travellers fresh from the cold green North and the gray gorges of the St. Gothard. The churches are, many of them, of great age, and one, at Giornico, has a raised chancel and under-church like San Zenone at Verona. On the upper alps (Mr. Butler uses *alp* in the sense in which it is used from Carinthia to Dauphiné and among the hills of Tuscany, as equivalent to an upland pasturage) two resting-places are now waiting for the travellers by the new railway; one among the hay-meadows of Lago Ritom, the other across the hills at Fasio, on the head-waters of the Maggia. It is natural that Italians, to whom the reserve of Alpine scenery and the keenness of mountain air are novelties, should appreciate such scenes. But the British tourist has learnt to expect a brilliant array of snowy peaks as a background to an Alpine pastoral; and I am afraid that, when he sees Mr. Butler's ideal mountain-valley—Val di Sambucco—he will exclaim that it is only fit for those whose ideal, like a cow's, is limited to grass. On the other hand, few Northerners are likely to prove so insensible to the most romantic combinations of rock, wood, and water as to pass by, as Mr. Butler does, Bignasco and Val Lavizzara without a word of praise, to leave unvisited the Cappella di Monte and Val Bavona. The incredible blue of the streams, the lavish wealth of woodland scenery, and the extraordinary variety of their landscapes make the Ticinese valleys a revelation of new beauty even to the most seasoned Alpine wanderers. But they do not seem to touch Mr. Butler. It is true he has not seen Val Verzasca, Val Onsernone, or Val Centovalli with its pilgrimage shrine of Ré.

Pleasant accounts will be found, however, of the Valley of Mesocco and San Bernardino, of the Sacro Monte of Varese, of some of the Piedmontese resorts in the Valli di Lanzo. Two or three of the best chapters in the book, with some excellent illustrations, are devoted to the castle-convent of San Michele, familiar in the distance to every railroad traveller, but seldom visited. Then the newest ground is broken in the account of two of the three great sanctuaries which crown the lovely hills of Biella—Oropa, Graglia, and San Giovanni d'Andorno. These have all been secularised; but the old practice of gratuitous hospitality is kept up. Pilgrims, whether in quest of spiritual or bodily refection, have the right to receive lodging—but not board—free for nine days.

After mounting by a good carriage-road above the crowded villages and factories of the Biellese—one of the most prosperous districts of North Italy—and wending along spurs which command, through the breaks in

their chestnut-forests, a wide prospect towards Monte Viso and the Apennines, the visitor to Oropa sees before him, sheltered in a hollow of the hills, not the rustic shrine he might expect at this height (3,500 feet), but a stately pile led up to by long avenues and pillared gateways, a mountain palace built by a prince—Card. Maurice of Savoy—for the people, and capable of holding 2,000 (Mr. Butler says 5,000) guests at a time. Its Court of Honour opens hospitably wide, the centre upraised on open colonnades, and supported by massive wings. Beyond the colonnade extends a large quadrangle, including the church which enshrines one of the most popular of St. Luke's Black Virgins. A knoll in the park, which nature has laid out round the Sanctuary, is enlivened with a flight of chapels containing groups similar, but not equal, to those of Varallo. Over the hills go paved tracks to S. Giovanni d'Andorno and Val de Lys, the latter marked by crosses which tell a tale of snowstorms and death. Hither come from 70,000 to 80,000 pilgrims annually; and that many of them still come in faith is shown by the votive tablets with which every wall of the church is plastered. They range through several centuries to culminate in the modern photograph. It is amusing to note the tact and skill shown by the local artist in reconciling his new method with the conventional treatment. He has furnished his studio with a bed, into which he puts the convalescent, grouping his or her relatives round, and supplying the necessary apparition of the Virgin by a painted background!

The Hospice of Graglia has now become a "Pension" for middle-class Piedmontese society. Its patron saint is La Madonna della Neve; her festival, August 5. Is this the Madonna at whose shrine Lionardo da Vinci made the sketch dated "Di Santa Maria della Neve addi 5 Agosto 1473," which M. Ravaisson-Mollien oddly tries to attach to the Maria Zum Schnee of the Rigi? Unless, however, the pilgrimage is older than the date for the present chapel given by Mr. Butler, this conjecture cannot stand. Mr. Butler makes no reference to the Passion Play ("spettacolo eroi-comico," the local handbook curiously calls it) performed every five years in a meadow close to the neighbouring village of Sordevolo.

*Alps and Sanctuaries* is "copiously illustrated," principally from sketches by the author. Architectural subjects are preferred to landscape; near, to distant views. The drawings are minutely accurate, and, wherever the subject is interesting, which is generally the case, share its quality. They have been admirably reproduced. Among several facsimiles of local art is a fascinating representation of St. Loyola seated on an *aiguille* with the expression attributed by tradition to Jack Horner, but on his lap in place of the pie a ponderous volume, from which he has evidently just picked out a specious argumentative plum; while, on the plain below, a martyr of the Theban legion holds up his forefinger in reprobation of spiritual pride. Mr. Butler will, I hope, apply the moral of the fable he here offers us before he sends to press the second work on sub-alpine sanctuaries we are led to expect, and thus spare his

critics the unwelcome necessity of imitating the attitude of this Theban centurion.

DOUGLAS W. FRESHFIELD.

#### CURRENT THEOLOGY.

*Mercy and Judgment*: a few last words on Christian Eschatology with reference to Dr. Pusey's "What is of Faith?" By F. W. Farrar. (Macmillan.) Canon Farrar's "few words" extend to 485 pages crown octavo. They do not profess to be, and, indeed, in no possible sense can be regarded as, a reply to Dr. Pusey's singularly able little work; but they do serve the purpose of proclaiming to the world, "I am not as unorthodox as I might seem." Indeed, we have the distinct statement, "I find, with deep thankfulness, that between Dr. Pusey's views and my own there is not a single point of difference as regards any matter of faith." And again, "I find myself entirely in accordance with Dr. Pusey on every essential point." The volume shows extensive, but not always accurate, reading in the literature of the subject. What will be thought of Dr. Farrar's studies in ecclesiastical history when he states his belief (p. 217) that, in the days of St. Jerome, "those who in this respect [i.e., with regard to future punishment] embraced the milder views of Origen were, perhaps, a majority of then living Christians;" and all this based on St. Jerome's words, "nonnulli, immo quam plurimi." If the phrase may be used in connexion with such grave subjects, much entertaining reading—although ill-digested—will be found in Canon Farrar's volume on the history of opinion on many topics connected with his main theme—e.g., "On the doctrine of the mitigation of the pains of the damned," "The descent into hell," "The exultation of the blessed in the torments of the lost," &c. Canon Farrar discusses, at much length, the subject of the Jewish eschatology. We wish we could be assured that his footing in this difficult subject was secure.

*Unitarian Christianity*: Ten Lectures on the Positive Aspects of Unitarian Thought and Doctrine. Delivered by various Ministers under the auspices of the British and Foreign Unitarian Association, in St. George's Hall, London, in March and April 1881. With a Preface by the Rev. James Martineau. (Office of the Association.) In his Preface, Dr. Martineau remarks that

"the title of this volume would very imperfectly indicate the main design of the following Lectures, if taken to imply that they are put forth in the interest of a system or a sect, and constitute a mere rebutting argument against the imputation of purely negative teaching. If incidentally they correct the false impression implied in the charge, it is well. But they are presented in the service of positive religion, and not in any spirit of self-vindication."

The lecturers are Messrs. R. A. Armstrong, G. Vance Smith, Binns, Crosskey, Gordon, Beard, J. E. Carpenter, Freckleton, Jerson, and Wicksteed; and, though each writing independently, they unite to form what is, substantially, a harmonious presentation of the English Unitarianism of the present day. The volume is creditable to the thoughtfulness and culture of what is, numerically, one of the most insignificant of religious communities in England. We have noted, as a curious and amusing specimen of the literary gloss which dogmatic prepossessions can put upon a Biblical story, the following (p. 75):—

"Said Superstition, 'Thou shalt sacrifice thy son a burnt offering to me.' Answered Abraham, 'By the help of God, no; there is a higher law than yours; no voice shall silence that inner voice I hear; no power shall force me to extinguish fatherly love; no command shall abrogate the com-

mand within;' and he set his foot on human sacrifices, and became the Father of the Faithful of a new race of men, and this rise above superstition God counted to him for righteousness."

We are bound, however, to say that this is quite an exceptional instance of exegetical folly.

*The Apostolic Liturgy and the Epistle to the Hebrews*: being a Commentary on the Epistle in its Relation to the Holy Eucharist; with Appendices on the Liturgy of the Primitive Church. By J. E. Field. (Rivingtons.) It will probably be considered sufficient to state that the design of this book is "to trace throughout the argument of the Epistle to the Hebrews a continuous line of allusion to the Holy Eucharist," and to establish as a fact that certain important passages occurring both in the Liturgy of St. James and in the Epistles of St. Paul are taken by the Apostle from the Liturgy and not by the Liturgy from the Apostle. It will be remembered that this latter subject was discussed by the late Dr. J. M. Neale, and the same contention eagerly put forward. It need not be said that the presumptions against the supposition here maintained are of, apparently, overwhelming weight; but it must be acknowledged that the question is not absolutely closed, and really deserves a careful investigation, pursued in a purely historical spirit.

*Memorials of the Right Reverend Charles Pettit McIlvaine, D.D., D.C.L., late Bishop of Ohio*. Edited by the Rev. William Carus. (Elliot Stock.) The personal friends of Bishop McIlvaine (and he had many attached friends) may perhaps be pleased with the record of his life here given by Canon Carus; but the general reader, even of the religious public, will find little to interest him in this account of a not very remarkable specimen of the narrowest type of now extinct "Evangelicism." We select the following from the notice of the Bishop's first Sunday in Paris (in June 1830):—"There was the market as much studded with vegetables . . . as usual. . . . My spirit seemed loaded with the daring Atheism of this people. I never had such an impression of general rebellion against God." Still his charity extends even to "these poor benighted Pagan Romanists."

*Eighteen Centuries of the Church in England*. By the Rev. A. H. Hoare. (Oxford: Parker.) This is a continuous narrative of the history of the Church in England from the introduction of Christianity to the present time. Mr. Hoare's view-point is that of a moderate Anglican, and he is, throughout, fair-minded, and even sympathetic and appreciative, in his treatment of religious opponents. We have noted a few errors in matters of detail, but the work is one which deserves, and, we doubt not, will receive, a favourable recognition from English Churchmen.

*Temple Sermons*. By O. J. Vaughan. (Macmillan.) The characteristics of Dr. Vaughan's modes of thought and style as a preacher are too well known to need description or comment here. The present volume contains fifty sermons, "a few out of many" preached in the Temple Church during the last twelve years, and may be taken as a pleasing and not unworthy memorial of one who has so long and deservedly retained his popularity in the pulpit.

*The Great Dilemma*: Christ His own Witness or His own Accuser. Six Lectures. By H. B. Ottley. (Kegan Paul, Trench and Co.) Without laying claim to originality of treatment, Mr. Ottley exhibits in these lectures, in a manner suited to what he calls "non-theological laymen," the argument for the truth of the Christian creed, based on the character and claims of Jesus, as these may be gathered from

the gospels. The lectures are written in a candid spirit, and in effective style.

*Science and Religion.* By Alexander Winchell, LL.D. (Strahan.) If the reader can endure with patience Dr. Winchell's fine writing, and his large array of pretentious, quasi-scientific terms, he will find, in the present volume, some really interesting and valuable arguments on behalf of religion in its present conflict. But we confess to being largely antagonised by successional phychic cycles, even though they be instrumentalities by which Intelligence effectuates the objectisation of plans! Need we say the author hails from across the Atlantic?

*Christian Ethics.* Special Part. First Division: "Individual Ethics." By Dr. H. Martensen, Bishop of Seeland. Translated from the Author's German Edition by William Affleck, B.D. (Edinburgh: T. and T. Clark.) Martensen's work entitled *Christian Ethics*, which had been previously translated (from the Danish) and published in "Clark's Theological Library," dealt with the general aspects of the subject—as, for example, the fundamental conceptions of ethics and the ethical views of the world and life. The further and special treatment of the subject under the heads of Individual and Social Ethics was promised; and the first of these topics is here discussed. For the general reader this will be found more interesting, and more practicably serviceable, than the earlier volume, which attained so considerable a success. We notice, as of especial interest, the discussion of Schiller's doctrine of aesthetic education in its relation to morality. The province of casuistry is not entered upon, but the resolution of "cases" will, in scores of instances, follow readily from the principles laid down.

*A Plain View of the Claims of the Orthodox Catholic Church as Opposed to all other Christian Denominations.* By J. J. Overbeck. (Trübner.) The Eastern Church rarely appears in our day as actively controversial. In the work before us, however, Dr. Overbeck attains the full intensity of acrimonious zeal which is so common a feature in our Western religious disputations. The dignified attitude of Oriental self-content is abandoned, and a vigorous attack is carried well into the enemy's lines. How far the attack is effective is another matter; but, whatever may be thought as to this, Dr. Overbeck's exhibition of the claims of the Holy Orthodox Church will well repay study from all who are interested in understanding the mutual relations of the great Christian communities. Rome, of course, has to bear the brunt of the assault, but Anglicanism comes in for many hard knocks. "The Anglican Church, being a daughter of the Roman Church, has naturally participated in Rome's schism;" while, in respect to Anglican Orders, the uncertainty of their validity is such that the Holy Orthodox Church finds it necessary to ordain any of the English clergy who join her communion. "The Roman heresy [sic] of indulgences," "the cancer of faith and morals," is vigorously assailed; while the warmest indignation is excited by "the crowning of the schismatico-heretical edifice" in the promulgation of the dogma of Papal Infallibility.

*The Philosophy of the Dispensations*, by David Milne (David Bogue), is a well-intentioned and well-planned work, and might have been a real contribution to theology if the author had waited either till he had matured his views a little more, or till he had compared them with those held by other men upon his subject. His subject is, in the first instance, to ascertain the purpose of the law and the Gospel, and their relation to one another and to the state of man as created and as fallen. In his enquiry

on these points, he undertakes to give "a systematic exposition of the traditional theology of the first two centuries." Brought up (it is evident) as a Calvinist, he has revolted from Calvinism, but not from Christianity, nor even from Protestantism; and he has written this book to show that the theology of Barnabas, Irenaeus, and Clement of Alexandria agrees far better than Calvinism with Scripture and with common-sense—at least if their doctrine of Sacramental grace be minimised. Two of his suggestions seem to furnish matter for thought. The first is, that the second-century theologians anticipate recent criticism in contrasting the simple legislation of Sinai with the elaborate Levitical code, and in depreciating the latter as compared with the former. And the other is, that the orthodox theologians of the second century adopt the method of accepting the doctrines of Scripture as understood by common-sense; while Calvinists, like the Gnostics, overrule and explain away the *prima facie* teaching of Scripture when it comes in conflict with metaphysical deductions from the absolute nature of the Deity.

*The God Man.* (Elliot Stock.) This clever and pretentious little book is divided into two parts, the Apotheosis and the Theophany. The first treats how man in Christ Jesus is united to God; the second, how God in Christ Jesus is manifest to man. The author intends to speculate within the limits of the Athanasian Creed, but has so little knowledge of the history of theology and the doctrine of the Hypostatic Union that he actually asserts that the orthodox commonplace—that the Sacred Humanity is impersonal—is flat Nestorianism. He knows just enough of the Fathers and School-men to start difficulties, and not enough to respect their method. A jurist who should furbish up Cicero's jests against the civilian of his day to disparage Roman Law in general would not inspire confidence. The main thesis of the first part of this book is that the man Christ Jesus was God without at first knowing it, and that the temporary loss of this knowledge was the bitterest part of the Passion. If the writer had taken St. Thomas Aquinas seriously he might have set himself, not without profit, to illustrate the conception that the Lord was from the beginning to the end of His earthly life at once *viator* and *comprehensor*; or even to make some approach to realise the subtler distinctions between the knowledge His human soul possessed in virtue (a) of the hypostatic union, (b) of the beatific vision, (c) of its infused wisdom, (d) of its acquired wisdom. Perhaps he might have come to the conclusion that the acquired wisdom and virtue of the soul of Christ gradually became adequate to the complete manifestation of its original endowment. As it is, he reproduces, obviously without knowing it, in a concise and telling form, much of the substance of modern German theology which is meant to be orthodox. The standpoint of the doctors who think to avoid the Scylla of Ephesus and the Charybdis of Chalcedon by agreeing with Nestorius up to the Ascension and with Eutyches thenceforward, has never been better expressed than in these lines. "The Incarnation is not a single event, but a process, because human life is itself a process. Or, more precisely, God might become man at a particular point of time, but man must occupy a space of years to become capable of being God." The second part of the book has less of the parade, but not less of the substance, of originality. There are some very shrewd prolegomena on the Fourth Gospel in a vein of not unseemly irony, for the writer insists on the irony of Jesus as one of the things which were most unique in Him.

*The Hope of the World.* By Walter Loyd. (Kegan Paul, Trench and Co.) Mr. Loyd con-

tributes to the growing literature of universalism two suggestions—(1) that life is a struggle for freedom (whence it follows that we do not start with a freedom too Godlike for God to overrule even to our salvation); (2) that the worst sinners are quite sufficiently punished in this life, which, in nine cases out of ten, seems true. He altogether fails to grapple with the well-known texts in the Synoptic Gospels on which the traditional view really rests.

*The Enchiridion of Epictetus.* By T. W. H. Rolleston. (Kegan Paul, Trench and Co.) This version of the *Enchiridion* possesses a suggestive Preface, some venturesome renderings, and a charming and most appropriate format.

*Jewish Christians and Judaism*, the Hulsean Dissertation for 1880, by W. R. Sorley (Deighton, Bell and Co.), is simply a good prize-essay on a subject that needs special knowledge such as few prize-essayists have.

We have received *Links and Clues*, by Vita (Macmillan); *The Order of Complin, according to the Use of the Illustris Church of Sarum* (Pickering); *Small Sermons on Great Texts*, by John M. Clabon (Cassell and Co.); *The Redemption of the World*, by Henry Hughes (Kegan Paul, Trench and Co.); *The Sling and the Stone*, Vol. VIII., by the Rev. Charles Voysey (Williams and Norgate); *Critical and Exegetical Handbook to the Epistles of St. Paul to Timothy and Titus*, by Joh. Ed. Huther, Th.D., translated from the German (Edinburgh: T. and T. Clark); *Critical and Exegetical Commentary to the General Epistles of Peter and Jude*, by Joh. Ed. Huther, Th.D., translated from the German (Edinburgh: T. and T. Clark); *Our New New Testament*, by E. B. Nicholson (Rivingtons); &c.

#### NOTES AND NEWS.

We have again to thank Messrs. Longmans, in the name of that small class who buy books, for another novelty in publishing. They have just issued Mrs. Oliphant's new novel, *In Trust*, at twelve shillings. It appears in the usual form of three volumes, crown octavo; while, both in its binding and its print, it seems to us to run no risk in the inevitable comparison with many of its highly priced competitors.

It is not only old members of the school who will be glad to hear that the Rev. Charles J. Robinson, Rector of West Hackney, has undertaken to edit, with biographical notices, the lists of the scholars at Merchant Taylors' School from 1562 to 1874. The materials are chiefly derived from the Records of the Merchant Taylors' Company, the School Probation Books, and the Admission Registers of some of the head-masters. The total number of names gathered from these sources approaches 17,000. Specially full information is supplied by the Admission Register of Mr. Dugard, head-master from 1644 to 1661, which is now at Sion College; and, generally, the annotations for the early years of the school's history will be both copious and trustworthy. The work will consist of two volumes, which it is proposed to publish by subscription. The first volume, it is hoped, will be ready in July, and the second by the close of the present year.

MR. JOHN BATTY, author of the *History of Rothwell* and other antiquarian works, and contributor of papers "On the Charm and Scope of Antiquarian Study" to the new *Antiquarian Magazine*, has made a *trouvaille*. In the hands of a private person, instead of in the parish church where it ought to be, he has discovered the old Town's Book of the parish of East Ardsley from 1652 to 1696. The book is replete with items of antiquarian and historical interest, and early in March its discoverer intends reading an account of its contents before the Bradford Antiquarian Society.

MISS EDITH SIMCOX has in the press a new volume, to be called *Episodes*. It is not philosophical, nor does it relate to School Board education, but consists of a series of tales of varied interest, possessing much beauty of treatment. Messrs. Trübner and Co. are the publishers.

THE Hon. Roden Noel is about to publish, with Mr. W. Harrison, of Museum Street, a work in prose entitled *A Philosophy of Immortality*. It deals chiefly with the general philosophy of the question, but partly also with the phenomena called spiritualistic, in which the writer believes that he has been able to discover a considerable residuum of truth amid much imposture.

MESSRS. W. SWAN SONNENSCHNEIN AND CO. will shortly issue three new volumes of their "Illustrated Library of the Fairy Tales of All Nations":—*Hiawatha, and other Legends of the Wigwams of the Red American Indians*; *Old Norse Fairy Tales*, by Stephens and Cavallius; and a new edition of the late Mr. Crofton Croker's *Fairy Legends of Ireland*, which latter copyright these publishers have acquired for their series. A later volume, now at press, will be *Goblin Tales of Lancashire*, collected by Mr. James Bowker. Numerous other volumes are in preparation.

MR. MONGREDIEN, author of *Free Trade and English Commerce and History of the Free Trade Movement in England*, has in the press a new work, entitled *Pleas for Protection Examined*, which Messrs. Cassell, Petter, Galpin and Co. will publish for the Cobden Club.

MESSRS. BELL are about to publish a small philosophical work by the Rev. E. P. Scrymgeour, Lecturer on English Literature in King's College, London, entitled *The Doctrine of the Cross: a Contribution to the Theory of the Christian Life*. The author's object is to show that the modern scientific movement, with all that has been revealed by it, is simply a phase of the wider Illumination properly called Christian.

MESSRS. CLOWES will shortly publish a work by Mr. Serjeant Pulling, entitled *The Order of the Coif*, which will embrace the history of the old order of Judges and Serjeants-at-Law, and also a very wide range of cognate matter. The book will be illustrated with engravings and wood-cuts.

MESSRS. MARCUS WARD AND CO. will shortly publish a novel by Monica, entitled *Owlet Ash*. A mistaken marriage, a separation, and a new departure, with its results, form the leading motive of the story.

AMONG the contents of the February number of the *Century* will be an essay by Mr. Emerson on "The Superlative;" a long poem by Mr. Longfellow, entitled "Hermes Trismegistus;" and an estimate of Robertson, of Brighton, by the late Dean Stanley. Concerning this last paper, the story is told that it had to be sent back to England to be deciphered. It had been duly written out fair by the Dean's amanuensis; but the Dean afterwards made so many corrections and marginal additions in his own handwriting that no printer in America dared to attempt the "copy," which had to be referred again to the same amanuensis.

THE Browning Society will, we understand, as soon as funds permit, ask Mr. Browning to let it facsimile or print the "Book" of *The Ring and the Book*—that is, the small folio collection of pleadings and MS. reports of the trial of Guido Franceschini, which Mr. Browning bought for a "lira—just eightpence," and which first suggested his famous poem to him.

THE New Shakspeare Society has had a liberal offer made to it by one of its lady members. This is, that, as the society's Old-Spelling

edition of Shakspeare by Mr. Furnivall and Mr. Stone comes out (the comedies are to be issued next year), the lady will compile a fresh Concordance to Shakspeare's works in the old spelling of the society's edition; will give the numbers of the lines, as well as acts and scenes; will make the quotations one-third longer than Mrs. Cowden Clarke's; will separate the different words spelt alike, as *tears* from the eye, and *tears* a letter, and also the senses of each word as in Schmidt's Lexicon; will include, as that does, the poems as well as the plays; will distinguish the probably spurious words and passages; will add a few illustrative extracts, where needed, for every sense; and, lastly, will contribute £500 towards the printing of the work, the society finding the rest. A Concordance on these lines has always been part of the society's intended scheme of work, though it was not put forward in the first outline of the actual scheme. We can now only hope that nothing will befall to prevent the society's generous helper carrying her proposal into effect for the behoof of all Shakspeare students. Assuredly a new Shakspeare Concordance in the spelling of his day is now wanted.

WE understand that a second edition of Bishop Mollvaine's *Memorials*, by Canon Carus (noticed in another column of the ACADEMY), is in the press, and will be published shortly, with some additional matter of great interest incorporated in it.

A NEW work from the pen of Mr. William Andrews, of Hull, will appear at an early date, under the title of *Gleanings of Lancashire Lore*. In a few days Messrs. Simpkin, Marshall and Co. will issue *The Book of Oddities*, by the same author, which we have already announced.

A REAL novelty in magazine literature has this year been introduced in *Cassell's Magazine* under the title of "The Family Parliament." The discussions are exciting the liveliest interest; and a new debate, we see, is to be opened in the February number on the question, "Are Early Marriages Unthrifty?" The debates are open to all readers of the magazine.

ON February 4, the *Pictorial World* will be permanently enlarged to twenty-four pages of illustrations and letterpress, together with a coloured Supplement every week. At the same time the price will be raised to sixpence.

SOME of the alterations which have recently been effected in the Patent Library have stirred the indignation of its frequenters. The library commenced in a very small way; but it received a large accession of books from the liberality of the late Mr. Bennet Woodcroft. By that means, and by the assistance of Government grants, it had become an excellent reference library; and students of the history of scientific progress appreciated it at its full value. In periodical literature, as the hand-list of its collections showed, it was especially strong; and it was consequently with great regret that those who were most interested in its progress heard that several journals previously to be found there had been removed.

IN the prospectus of the Central Young Men's Christian Association, we notice not only a long list of evening educational classes, but also a series of lectures to be delivered at Exeter Hall in the three coming months by Prof. Jas. F. Hodgetts, the Rev. H. Sinclair Paterson, Dr. Andrew Clark, Prof. A. H. Sayce, and Mr. A. C. Ranyard.

THE publication of M. Zola's *Nana* in a Danish translation has been prohibited at Copenhagen, and criminal proceedings have been instituted against the translator.

A BILL has been introduced in the Hungarian Parliament by the Minister of Justice, fixing the term of copyright, both literary and

artistic, at thirty years. Translations of foreign works must be commenced within one year after their original publication, and must be finished within three years.

LOVERS of Italian literature will be glad to learn, on the authority of *La Cultura*, that an approximately complete edition of Manzoni's correspondence is now in the press. It will comprise two volumes of over five hundred pages each, and will contain, in addition to the letters already in print, all those hitherto unedited which Cav. Giovanni Sforza has been able to discover in the course of six years of patient research.

THE popular Italian writer, Signor E. de Amicis, who has for more than a year been a Commander of the Order of the Crown of Italy, has recently received the Legion of Honour on the nomination of M. Gambetta. This decoration is supposed to be due to the persistence with which Signor de Amicis has always advocated what is known as "the Latin alliance."

WE learn from the *Rassegna Settimanale* that M. Sansoni has in preparation a new volume of his "Collezione di Opere inedite o rare," which will contain short popular poems of the fifteenth century, edited, with notes, by Prof. D'Ancona.

JEAN CROUSOUTY, sub-librarian of the museum at Cracow, has discovered what is believed to be the earliest book printed in Hungarian. It is a Legend of St. Paul, dated 1512.

PROF. JANITSCHKE, of Prague, has ready for publication an elaborate work on L. B. Alberti (ob. 1472), whom he regards as the most varied genius of the early Renaissance and the true precursor of Lionardo da Vinci.

FEDOR BECH has published (Berlin: Weidmann) a Catalogue of the MSS. and old printed books in the library of the Protestant chapter of Zeitz, in Prussian Saxony. The MSS. number eighty-seven; but none is of older date than the latter part of the fourteenth century. Among them is a *Catilina* of Sallust, several of Cicero's dialogues, and a *De Consolatione* of Boethius with a Commentary. The books number 20,000; the oldest are dated 1472; and one of the chief rarities is a book printed by John of Cologne and Wendelin of Spire.

TURGENIEV'S *Memoirs of a Sportsman* has been translated into Finnish by K. S. Suomalainen, who is also the translator into the same language of Pushkin's *Captain's Daughter* and Gogol's *Taras Bulba*.

M. BEZOBRAZOV has published, under the title of *Gosudarstvo i Obshchestvo* ("The Empire and Society"), a series of articles on local self-government in Russia which he has contributed during the past twenty-two years to various journals and periodicals.

THE Russian papers state that Count P. A. Valuief is passing through the press a romance, written in 1876, the title of which is *Lorin*. It is understood that a German translation will be issued simultaneously with the Russian edition.

MR. PAUL O. D'ESTERHÁZY, of New York, has just published a new volume of metrical renderings from the Magyar, under the title of *Gems from Petöfi and other Hungarian Poets*, by W. N. Loew. The translations are prefaced by a short review of the poetical literature of Hungary.

HERR E. VON BAUERNFELD, the dramatist, of Vienna, has just celebrated his eightieth birthday, amid great popular rejoicing and congratulations from actors and men of letters.

## SCOTCH JOTTINGS.

DR. J. M. ROSS, English master at the Edinburgh High School and editor of the *Globe Encyclopaedia*, has for some time past been engaged upon a work of considerable importance for the early history of Scotland, which will probably be published in the spring by Messrs. Cassell, Petter, Galpin and Co. The author traces the growth of Scottish nationality out of Pictish, Cymric, Gaelic, Anglian, and Norse elements, and seeks to explain the political causes which evolved out of such ethnical confusion one of the most intense forms of patriotism known to history. A large portion of the book will be devoted to a critical examination of the native literature, and especially of the Wallace and Bruce legends. Sketches will also be given of the social and industrial life of Scotland at different periods.

INSPECTOR AITKEN, of St. Enoch Station, Glasgow, author of a volume of poetry, published some time ago, entitled *Rhymes and Readings*, will soon have ready for the press *Lays of the Line*. We have read several of the poems, and can say that they ought to be no less favourably received than the previous volume.

At the meeting of the Society of Antiquaries of Scotland on January 9, a paper was read from the Marquis of Bute on "the regnal years of David II." It has long been known to students of Scottish history that in the latter part of the reign of David II. his regnal years are dated incorrectly, being one year less than they ought to be. While compiling chronological notes upon the history of Scotland, the Marquis had been led to investigate this obscure subject. From a comparison of several chartularies, he concludes that the year omitted is the twenty-fourth of the King's reign—from June 1352 to June 1353; but no cause can be discovered for such an extraordinary omission.

SOME of the inhabitants of the little town of Auchtermuchty, in Fife, have set the excellent example of printing, in pamphlet form, a translation of the royal charter granted by James VI., with other historical documents. Their object is to show that the estate then belonging to the town has been wrongfully diminished by the encroachments of neighbouring landowners.

A GENTLEMAN, who for the present withholds his name, has given to the University of Edinburgh a sum of money sufficient to endow five fellowships, of £100 each for three years in science and philosophy. In the year that has just closed, the total number of students at Edinburgh was 3,237, there having been a large and steady increase during the last four years. They are thus classified according to faculties:—Medicine, 1,638; arts, 1,047; law, 458; divinity, 94. Of the total, 1,997 were of Scotch birth, 685 came from England, 202 from the colonies, 120 from India, 47 from Ireland, and 63 from foreign countries. Slightly more than one-half were above twenty-one years of age.

THE current number of *Polybiblion* has a note upon a Scotch colony at St. Martin d'Auxigny, in Berry, of which no mention seems to be made in Burton's *The Scot Abroad*. According to tradition, confirmed by charters, this colony is descended from the Scots who came over under John Stewart, Earl of Buchan, in 1424 to support the cause of Charles VII. against our own Henry V., others of whom founded the celebrated Scots Guard. They received from Charles VII. a portion of the forest of Haute-Brune, in Berry, and are still known as "Forêtins." They are said to have married only among themselves, and to preserve to this day certain national characteristics in their mode of life and transmission of property. Our French contemporary finds a Scottish origin in

the following names of some of their hamlets:—les Jovys, less Cocus, les Sagnats, les Clavier, &c. In confirmation of the tradition, several provincial Histories are quoted.

WE learn from the *Scotsman* that the old burial-ground at Ecclefechan, in which Carlyle was interred, has recently been put in order by persons having rights of sepulture there. The boundary wall has been repaired, and walks have been laid out. But Carlyle's grave is marked only by the remains of a few wreaths. Not even his initials are carved on the insignificant head-stone, though the stones on each side bear the initials of his mother and his brother.

ANOTHER correspondent of the *Scotsman* draws attention to the neglected state of the old graveyard at Glenbervie, in Kincairdineshire. Here are still to be seen, fallen down and half-embedded in the earth, the tombstones of several of the paternal ancestors of Burns. The great-grandfather of the poet, James Burness, died in 1745, at the age of eighty-seven; his great-grandmother lived to be ninety.

## FRENCH JOTTINGS.

It has long been known that M. Alexandre Dumas had in preparation a complete edition of his plays. M. Claretie has written a letter to the *Temps* saying that this edition will not only be printed in the highest art, but will also possess curious details and notes of importance. But M. Dumas has resolved that the public shall not be admitted behind the scenes at any price. The edition will be limited to exactly ninety-nine copies, for presentation only to personal friends and to the actors and actresses who created the parts.

M. WECKERLIN, librarian at the Conservatoire de Musique, has just made a notable acquisition. This is a copy of the first edition of Mozart's early sonatas, entitled "Sonates pour le clavecin, qui peuvent se jouer avec l'accompagnement, dédiée à Madame Victoire de France, par J.-G.-W. Mozart de Salzbourg, âgé de sept ans." In other words, this is the dedication copy to "Victoire de France," the daughter of Louis XV. It is superbly bound in red morocco.

THE firm of Vieweg, Paris, announce that they will shortly begin the publication of a "Bibliothèque française du Moyen Âge," edited by MM. Gaston Paris and Paul Meyer, the two well-known professors in the Collège de France. The collection will consist of texts, with introductions and glossaries, forming six volumes in all. The following are the texts chosen:—Vols. I. and II., *Recueil de Motets français des XII<sup>e</sup> et XIII<sup>e</sup> Siècles*, edited by M. H. Lavoix; Vols. III. and IV., *Alexandre le Grand*, by M. Meyer; Vols. V. and VI., *Le Psautier de Metz*, by M. Bonnardot.

THE forthcoming volume of M. Zola's "Les Rougon-Macquart" will appear at the end of March. It will be entitled *Pot-Bouille*.

THE Société polymathique of Morbihan has decided to place an inscription over the door of the house in Sarzeau where Le Sage, the author of *Gil Blas*, was born on May 8, 1668.

A PROPOSAL by the Municipality of Paris, that one of the streets of the city shall be called after Littré, has received the approval of the prefect.

AN interesting discovery has been made in connexion with Bouchard, the friend of Peiresc and of Holstein, all three men of letters in the early part of the seventeenth century, who have given occasion lately to much book-making in France. M. Eugène Müntz, librarian at the Ecole des Beaux-Arts, has found in his own library a MS. account by Bouchard himself of

his visit to Naples in 1632, giving a detailed account of the customs of the people, the language, the arts, the music, the antiquities, &c. It is described as one of the most interesting documents that exist relating to Italy in the seventeenth century.

THE Marquis de Turgot has presented to the Musée Carnavalet at Paris, which already possesses an interesting collection of relics of the Revolution, a number of curious historical documents of that period. These include a series of warrants signed by Santerre, placards announcing the execution of Louis XVI., Republican calendars, pamphlets, broadsheets, and street songs. It is stated that the Marquis has announced his intention of presenting to the city of Paris the whole of his well-known collection of curiosities. Among these is a chronological series of time-pieces, comprising several *montres décimales*, or watches giving the division of the day into ten hours of 100 minutes of 100 seconds, which was attempted to be established by a decree of the Convention for carrying out in its completeness the decimal system.

THE quarterly *Bulletin* of the "Société de Borda," Dax, contains an interesting note on the "sauvetats" of Guyenne, and more particularly on those of Mimizan, in the Landes. These "sauvetats" are stone pyramids from 4 to 5 mètres high on a base of 2 mètres square, and are surmounted by a cross. They are usually four in number, and are placed at from 750 to 850 mètres from the church or monastery, and at 400 to 500 mètres from each other. The site was determined by the distance to which a cross-bow or "balista" could shoot from the four angles of the church; where the bolt fell the "sauvetat" was erected. The space between the "sauvetats" and the church or monastery was a sanctuary for all fugitives, defended by the heaviest penalties of ecclesiastical censure. In the same journal (p. 283) is the "Procès-verbal" of admission of two Jewish deputies from the Portuguese colony of St-Espirit to the Assembly of the Tiers-état at Tartas, April 22, 1789. These Jews fled from Portugal in the early part of the sixteenth century, and established themselves first around St-Jean-de-Luz, and subsequently at Bayonne, where their descendants still remain. Prof. J. Vinson, following MM. Balasque and Du-laurens, has for some years been collecting notes on this interesting colony, and we hope he will soon give them to the world.

WE learn from *Le Livre* that a copy of the *Horae*, printed by Simon Vostre towards the close of the fifteenth century, has been placed in the hands of Ourmer, of Paris, for the purpose of a facsimile. This copy is one of the three printed on vellum that are known to be in existence; but its chief value lies in the fact that its wood-cuts have furnished designs for the decoration of art-books to the present day.

M. PAUL MEURICE has written, and M. Calmann Lévy publishes, a drama in twelve tableaux founded on M. Victor Hugo's *Quatrevingt-treize*.

## TRANSLATIONS FROM HEINE.

"AUF FLÜGELN DES GESANGES."

Away! To the shore of the Ganges!  
Come away! on the pinions of song,  
To a bower in green leafage entangled  
Deep hid from the throng.

There, love, is a garden with flowers  
That bloom in the pale moonshine;  
The lotus-flowers dream of their alister;  
Ah! let them not pine.

There violets are whispering softly,  
Their eyes to the pale stars climb;  
There roses are softly retelling  
Sweet tales of old time.

Darts by—and pauses—and listens—  
The wary, mild-eyed, gazelle;  
And the far-heard Ganges quiets  
The spirit as a spell.

Ah! there will we lie embowered  
Neath the tall palm's spreading crest;  
There, love, will be endless pleasure,  
And there will be rest.

"DIE BERGSTIMME."

All sadly thro' the wild ravine  
A warrior slowly drave:—  
"Ah! now am I nearer my darling's arms,  
Or nearer the silent grave?"  
The mountain answer gave:  
"The silent grave!"

And further the warrior rideth,  
And a sigh breaks from his breast:  
"And must I then enter the grave so soon?  
Ah well, in the grave there is rest!"  
And again—from the mountain's crest:  
"In the grave there is rest!"

The warrior's brow is troubled;  
A tear on the bronzed cheek fell:  
"Is there no rest then in the world for me?  
Then the rest of the grave will be well."  
The Voice from the mountain fell:  
"The grave will be well!"

"DU HAST DIAMANTEN UND PERLEN."

You've diamonds, and pearls, and all treasure  
Wherefor men will delve and sweat;  
And your eyes are the sweetest; and, darling,  
Is there anything yet?

On those sweet eyes unnumbered  
Are the deathless songs that I set  
To the tenderest music; and, darling,  
Is there anything yet?

And with those sweet eyes you bound me  
In the toils of a bitter regret:  
You blasted my life, my darling—  
Is there anything yet?

"DIE HOLDEN WÜNSCHE BLÜHEN."

Hopes blossom in the springtime,  
And wither in the fall;  
Blossom, and wither, and blossom,—  
And death withers all.

I know it, and love or laughter  
Yield naught but a vain unrest:  
My heart is shrewd and so witty—  
And it bleeds in my breast.

"HERZ, MEIN HERZ."

Heart, my Heart, yield not to sadness;  
Be submissive to thy fate;  
And Spring restoreth—only wait,  
All that Winter steals from gladness  
Think but how much there still is left thee;  
Think but how fair the world is still;  
Heart, my Heart, befall what will,  
Love can never be bereft thee.

"MIT SCHWARZEN SEGELN."

With brown sail spread my vessel flies  
Far over the troubled sea;  
Thou knowest I am sick at heart  
And still thou grievest me.

Thy heart is faithless as the wind  
That ever will be free:  
With brown sail spread my vessel flies  
Far over the troubled sea.

"ICH GROLLE NICHT."

I must endure—tho' my sad heart should break.  
Oh love for ever lost! I must endure.  
And thou may'st shine in diamonds bedight—  
They shed no lustre o'er thy bosom's night.  
I've known it long. In dreams that troubled rest  
I saw night chambered in thy loveless breast;  
Saw serpents feeding in its inmost part,  
And saw, lost Love, how thou wert sick at heart.

"WIE KANNST DU RUHIG SCHLAFEN."

And can you sleep so sweetly  
And know me living still;  
Nor dream that my pain may wake again  
And break my heart and will?

You know the ancient ballad—  
How once a dead man drave,  
At the darkest hour, to his lady's bower,  
And dragged her to the grave?  
Believe me, my child-angel,  
In slumber now afar,  
I'm living still, and am stronger yet,—  
Than any dead men are!

ERNEST RADFORD.

#### MAGAZINES AND REVIEWS.

PROF. GREEN leads off the present number of *Mind* with an elaborate discussion of the question: "Can there be a Natural Science of Man?" This appears to be denied on the idealistic ground that "the understanding makes nature," and that consequently man, including human intelligence, cannot be regarded as a product of nature. But the author hardly distinguishes sufficiently between the scientific and the philosophic aspect of the problem which the title of his essay embodies. An idealist may surely hold that the evolutionist's "science of man" *qua* science—that is to say, so far as it deals with human intelligence as a phenomenon which has a history in time—is perfectly legitimate. Curiously contrasting with this somewhat ponderous paper of the English Professor is a paper by an American Professor, Prof. Josiah Royce, on "Mind and Reality." The writer seeks, in a very ingenious and lively way, to substitute for the current idea of unconscious "mind-stuff" the hypothesis of a universal consciousness which embraces all existence lying outside our individual minds—that is to say, all external realities or "possibilities of experience." This hypothesis is modestly put forward as one possible expression, though not the only one, for our natural postulates about reality. The argument is ingenious; but it may be doubted whether the author has realised all the difficulties in the way of conceiving either the universal consciousness itself—which is obviously wanting in the first condition of a consciousness, "unity"—or its relation to individual consciousnesses which somehow or other tend to approximate to it. But Prof. Royce's essay seems to be a kind of *jeu d'esprit*, which he would not wish us to take too seriously, on the ground given by him: "Ontology is play; theory of knowledge alone is work." This essay is followed by a short and thoroughly readable paper on "The Localisation of Fallacy," by Mr. A. Sidgwick. The writer criticises very sensibly the usual way of dealing with fallacies in logical treatises, and offers some shrewd suggestions on an improved method of treating the subject. The number closes with a scholarly paper from the pen of Mr. N. W. Benn on "The Relation of Greek Philosophy to Modern Thought." The writer traces with considerable skill the influence of the Greek systems, more particularly those of Plato and Aristotle, on the forms which nascent modern philosophy assumed. He succeeds, we think, in making out a very close connexion between Bacon's speculation and the Aristotelian system, and in demonstrating the influence of the Atomists, of Plato, and of Aristotle in different parts of Descartes' philosophy. It may be added that the present number of *Mind* fully keeps up the reputation of the journal for the watchful noting of new researches and the competent criticism of new philosophic works.

THE *Deutsche Rundschau* for January continues the publication of Russian State Papers which have somehow found their way into the hands of a contributor to that journal. A "Memorandum relating to the trial of Wera Sassulitsch" by Gen. Trepow throws great light on the relation between the Administration and justice in Russia, and shows the grievances of the Nihilists which led them to their desperate

attempts against the late Czar. A story by Herr Wichert, "Der Schulmeister von Zabian" is a sketch of the Reformation period in East Prussia in the early days of the first Duke Albert. Prof. Reinke contributes a careful paper on "The Fundamental Problem of Physiology," in which he discusses the chemical evidence which tends to establish a fundamental difference between the lowest living organisms and inorganic matter. Sir Rowland Blennerhassett contributes a paper on "Ireland" which is admirably adapted to give to foreigners a lucid explanation of the existing crisis. A series of sketches "Aus dem esthnischen Volksleben" call attention to the peculiarities of the Esthonians, a people to whom little attention has been paid in late years.

THE *Theologisch Tijdschrift* for January is mainly devoted to subjects connected with the philosophy of religion. A lively discussion has been going on for many years among the Dutch Liberal divines; and Hugenholz and Bruining, Kuenen and de Bussy, still represent different shades of thinking among the "moderns," Dr. Kuenen representing an "intellectualistic" tendency repudiated by the "ethical" section. English readers will be more interested by Hoekstra's review of Hartmann the philosopher's latest work, full of novel and ingenious views, on *The Religious Consciousness of Humanity in its Progressive Development*.

#### A LETTER OF "GEORGE ELIOT."

[WE take from the New York *Critic* the following letter from "George Eliot," which seems to us in some respects the most characteristic that has yet been published:—]

"MY DEAR MISS W.—The signs of your sympathy sent to me across the wide water have touched me with the more effect because you imply that you are young. I care supremely that my writing should be some help and stimulus to those who have probably a long life before them.

"Mr. Lewes does not let me read criticisms on my writings. He always reads them himself, and gives me occasional quotations, when he thinks that they show a spirit and mode of appreciation which will win my gratitude. He has carefully read through the articles which were accompanied by your kind letter, and he has a high opinion of the feeling and discernment exhibited in them. Some concluding passages which he read aloud to me are such as I register among the grounds of any encouragement in looking backward on what I have written, if not in looking forward to my future writing.

"Thank you, dear young friend, whom I shall probably never know otherwise than in this spiritual way. And certainly, apart from those relations in life which bring daily duties and opportunities of lovingness, the most satisfactory of all ties is this effective invisible intercourse of an elder mind with a younger.

"That quotation in your letter from Hawthorne's book offers an excellent type both for men and women in the value it assigns to that order of work which is called subordinate, but becomes ennobling by being finely done.

"Yours, with sincere obligation,

"M. E. LEWES.

"By-the-way, Mr. Lewes tells me that you ascribe to me a hatred of blue eyes—which is amusing, since my own eyes are blue-gray. I am not in any sense one of the 'good haters'; on the contrary, my weaknesses all verge towards an excessive tolerance and a tendency to melt off the outlines of things.

"The Priory, 21 North Bank, Regent's Park,  
"Jan. 16, '73."

## CORRESPONDENCE.

## THE BASQUE SUFFIX -K.

San Remo: Jan. 8, 1882.

Prince Bonaparte tries to explain the suffix *k* as being an ablative, and says:—

"The only way to understand how the same word may represent Latin 'a me' in the first (*nik egiña*, 'done by me'), and 'ego' in the second, phrase (*nik egin daut*, 'I have done it'), consists in admitting that the suffix *k* is, in both instances, capable of being rendered by the ablative."

(See ACADEMY, December 17, 1881.) I think that this is not the only way, or the right way. First, it is not quite consistent to say that *nik* represents "by me" in the first, and "I" in the second, instance. *Nik* is rendered "by me" for want of a better expression; and *nik*, in the second instance, is not "I," but *I + k*, which makes all the difference. Further: "In fact, the strictly literal translation of *nik egiña* is—*ni*, Latin 'me'; *k*, 'a,' &c. But *nik* is never 'me,' and *k* is never 'a.' To translate *nik* by 'by me' is only a rendering of it in order to adapt it to Latin or English syntax. These details being settled, let us examine the four principal points in Prince Bonaparte's discussion.

I may first remind the reader that, according to Prince Bonaparte's theory, the auxiliary flexion, "I have," &c., *daut*, &c., is not an auxiliary flexion, but a demonstrative pronoun; and, according to my theory (exhaustively discussed and explained in my Grammar), it is an auxiliary flexion, like those of all other languages.

1. I do not see, even from Prince Bonaparte's point of view, what we gain by rendering the

two sentences by the ablative. *Nik egiña* is not to be translated otherwise than by "done by me;" but *nik egin daut* becomes, on the contrary, ungrammatical—"I have done it by me," for this would be the literal translation. I believe that this is not the right explanation. *k* is the suffix of action, and there does not appear to be more difficulty in accepting *k* as such than there is in accepting "s" as the suffix of plural, either in English or in French. The Basque language has no declension, no cases, and never distinguishes formally between nominative and accusative. When action is to be expressed, independent of case, the Basque language suffixes *k*—indifferent, of course, if this way of expression suits other languages. *Ni* is the personal pronoun (always independent of case) "I" here as a nominative; but, in the verbal flexion, *narak* (*n-er-a-k*), "thou mayest me" (see, call, &c.), *n* is the accusative "me," and *ni + k* is "I" represented as acting. It is not necessary to point out that, in *nik egin daut*, *nik* is superfluous; the *t* of *daut* is the constant representation of "I." Let us suppose that *k* is the last remnant of an active participle, say "acting;" then *nik egiña* is "I acting done it." Why is "I acting" not as good as "by me"? What has the rule of Latin or English to do with the rule of Basque? The English "by" wants an accusative with it, the German "bei" a dative; thus the German literal translation of "by me" would be "by to me."

2. "*Nik egin daut* may be strictly rendered by Latin *ni*, 'me'; *k*, 'a'; *egin*, 'factum'; *dau*, a variation of *gau*, 'hoc'; *t*, 'ego.' Here the difficulty arises, from Prince Bonaparte's theory, that the verbal flexion is a demonstrative pronoun. *Egin daut*, or, emphatically, *nik egin daut*, is "I have done it;" *dau-t*, "I-have-it, I hav't."

3. If *dau* is, according to Prince Bonaparte, a demonstrative pronoun, it cannot be at the same time a verbal flexion; but, as Prince Bonaparte appears to admit this time the verbal flexion, there is no difficulty in translating *egin daut* or *nik egin daut*; the emphatical expression corresponds to "moi je l'ai fait."

4. "That it would be absurd to regard a Basque noun followed by *k* now as a nominative, now as an ablative." If we consider the difficulty, not from a Latin or French point of view, but from a Basque point of view, it soon disappears. As the Basques need not be concerned about what other languages have thought proper to adopt as their rules, we may conclude that there is nothing nonsensical in their way of expressing themselves. The Basques speak thus according to their grammar.

I may add the interesting fact that, along the Mediterranean, real confusion between nominative and accusative is the rule. No one here says, "Io non so" ("I do not know"), but everyone always says, "Me non so" ("Me do not know"); and this error is not common only to uneducated people, but to educated people also, and stretches much farther inland than the sea-coast. It is not necessary to quote the French "C'est moi." W. VAN EYS.

## THE MANUMISSIONS IN THE LEOFRIC MISSAL.

Lincoln's Inn: Jan. 17, 1882.

Mr. Bradley will find an illustration of the office of *hlof-brytta*, loaf-distributor or steward, in a list of the "Customs of North Curry," Somerset, published by Mr. F. H. Dickinson as an Appendix to the Index volume of the Somersetshire Archaeological Society in 1876. Mention is there made of a "Berebrittus;" whether a distributor of "bere," barley, or "beor," beer, does not clearly appear—probably the latter.

Mr. Bradley's identification of the places mentioned on the eighth leaf of the Missal

agree almost entirely, I find, with those I suggested when the entries were first printed (*Transactions* of the Devon Association for 1876, viii. 147). There is one exception, however—Swuran tun. For this Mr. Bradley proposes Sourton. Here I differ, finding, as I suppose, Swurantun in the Domesday Svrintonne—Exch. D., 103 (2)—or Surintona—Exon D., p. 112—which was too large and valuable a manor for Sourton. Surintone I take to be Werrington. Sourton is to be found, I think, in Siredone—fol. 118 (3); Exon, p. 453; see *Devon Transactions* for 1881 (xiii. 129).

Borslea seems to re-appear in Boslie, Bosleia—fol. 105 (4); Exon, p. 265; and this is almost certainly Bowsleigh, in Bratton Clovelly parish. It would be interesting if any correspondent of the ACADEMY, knowing the spot, can say whether appearance or tradition confirms the ancient importance of this place.

Lamburnan is evidently Lamerton, the town on the Lamburn stream, as appears from the name Lamburn Bridge, just as Ashburton is the town on the Ashburn, Oakhampton is the town on the Ocmund or Oakmont, Torrington the town on the Toric or Torridge. All these derivations are demonstrable, Kemble's suggestion as to the Teorringas (Saxons i. 474) being, for once, a mistake.

Cyricford, which, if it survives, is now probably Churchford or Charford, seems to have disappeared alike from maps and records. Charford in South Brent seems too far off, and, moreover, belonged to the church of Buckfast.

Tiwarhel is plainly Ty warn hayle, the "house on the saltmarsh," in Perranzabuloe. It formed the subject of a grant by Eadgar in 980, as appears from the Exeter charters. Oliver (Mon., p. 183, col. 1 n), or Sir E. Smirke, speaks of "the priory of Tywarnhaile. For the 'priory' there seems no authority beyond the suggestion contained in the name, and the analogy to Ty war dreath, the "house on the sands," on the South coast.

Bræg is conjectured by Mr. Warren and Mr. Bradley to be Breage, three miles west of Helstone. But this seems too distant. Nor does Breage, by that name, occur in Domesday. Breaca, the name of a local saint, would scarcely become contracted into Bræg. I suggest that Bræg is no other than the Brige of Domesday—fol. 114 (4); Exon, p. 383—probably so called as being situate near the then lowest bridge over the Tamar. This not only belonged to Ruald Adobed, but was his residence before he became a monk, whence the name Bridge-Ruald, Bridgerule. Possibly he was stationed here, with a view to his military experience, as a custodian of the bridge against restless Cornishmen, his own not far-off relatives in blood and race. JAMES B. DAVIDSON.

Combe Vicarage, near Woodstock: Jan. 14, 1882.

In the ACADEMY of to-day Mr. Henry Bradley says: "Clymes tun was probably near Stoke Climsland." I think "Clymes tun" may, perhaps, be traced in "Climson," the name of a farm to be found in the Ordnance map, about half-a-mile east of Stoke Climsland church. Daniel and Samuel Lysons, in *Magna Britannia*, vol. iii., "Cornwall," 1814, p. 294, write, under "Stoke Climsland," as follows:—"Aldren . . . , Climsmon, many years a seat of the Doidges, Burraton . . . , and Lower Hampt . . . are now farms."

Again, Mr. Bradley says:—"Tiwarhel seems to be the Tiwarthel of Domesday. There was formerly a barony of Alwerton and Tiwarnale (or Tiwernel) in Cornwall; but I do not know whether this is the same place." D. and S. Lysons (*ibid.*, p. 261) write, under "Perran Zabuloe," as follows:—"The manor of Tywarnhaile, being a moiety of the ancient manor of that name, was granted, in 1337, to Edward

the Black Prince. . . Tywarnhaile barton is occupied as a farm." In "Tywarnhaile" we get the *h* of Tywarhel.

As to Lamburnan, D. and S. Lysons (*ibid.*, p. 260) mention Lambourn as one of "the principal villages" in the parish of Perran Zabuloe; while on Lambourn is a paragraph beginning as follows:—"The manor of Lambourn, held under Tywarnhaile, belonged to the Lambourns as early as the reign of Henry III." It seems to me possible, however, that Lamburnan is Lamerton, a parish which is, as the crow flies, about seven miles north-east of Stoke Climsland.

J. HOSKYNs-ABRAHALL.

In Mr. Henry Bradley's letter under this heading, which appeared in the last number of the ACADEMY, *Eihelsie* was written by mistake for "Birhsie."

#### "END" OR "AND" ?

Berlin, SW, Kleinbeerenstr. 7: Jan. 14, 1882.

I have every reason to believe that the note upon the second edition of my *Alt- und Mittenglisches Übungsbuch* in the ACADEMY of January 7 was written by a very dear friend of mine. But much as I am obliged to him for his kind words about my little book, I cannot help standing up in defence of *end* for & in the "Moral Ode," printed by me for the first time from fol. 64 of the Egerton MS. 613.

I think my friend is quite right in saying that "and" written out in full occurs in the text six times (*cf.* ll. 1, 7, 10, 69, 71, 82), but "end" written out in full occurs still oftener: not five times as he says, but at least as many times again (*cf.* ll. 41, 143, 171, 209, 246, 261, 264, 265, 269, 289). As "end," therefore, occurs much oftener than "and," and is, besides, the more characteristic of the two forms, I could not but expand & by *end*; and I have accordingly done so to the last line of the version in question. When my friend says that the last half-page of my text has *and* eight times, he has overlooked the fact that all the lines in that half-page, as well as six lines in the preceding one, are taken from a different version by way of supplement (*cf.* "*schluss aus E*," p. 61, before l. 371).

If the frequent occurrence of *end* gives my text "a very odd look" in the eyes of people who expect to find in Early-English works the same spelling that they learnt at school, this cannot be helped. The form "end" in itself is no more irregular than, *e.g.*, "then" or "when;" and it boasts of pretty old age, being found in the oldest version of Cædmon's Hymn, which, by-the-way, my friend is mistaken in calling "Bede's 'Cædmon's Hymn,'" for Bede gave only a Latin translation, not the English original.

J. ZUPITZA.

#### THE EARLIEST FRENCH VERSION OF GUARINI'S "PASTOR FIDO."

Taylor Institution, Oxford: Jan. 12, 1882.

M. P. Deschamps and G. Brunet, in their valuable Supplement to Ch. Brunet's *Manuel du Libraire* (published in 1878), have made the following entry:—"Guarini: *Le Berger fidèle*, pastorale, de l'italien, Paris, P. Mettayer, 1598;" adding, in a foot-note, "Suivant toutes les probabilités, ce serait la première traduction française de ce poème célèbre." Permit me a few words in the ACADEMY to correct this error, and to point out a still earlier French version recently acquired by the Curators of the Taylor Institution at Oxford for their library. It bears the title: "*Le Berger Fidèle*, pastorale, de l'italien du seigneur Baptiste Guarini, Paris, chez F. Mettayer, DMXCV." (*etc.*, instead of MDXCV. = 1595).

I may add that the Curators of the above library, with due regard to the considerable

collection bequeathed to the university by Robert Finch, and deposited in the Taylor Institution, have now brought together, as a speciality, not less than 126 different editions and versions in various languages of this celebrated pastoral.

H. KREBS.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 23, 4 p.m. Royal Asiatic: "Arab Voyages to India in the Ninth Cent. & A.D.," by Mr. E. Thomas; "Recent Archaeological Discoveries in Phrygia," by Mr. W. M. Ramsay.  
5 p.m. London Institution: "Are there Coalfields under London?" by Prof. J. W. Judd.  
8 p.m. Royal Academy: "The Composition of Pictures having a Decorative Character," by Mr. E. Armitage.  
8 p.m. Aristotelian: "Aristotle's Logic and Metaphysics," by Mr. W. A. Gasson.  
TUESDAY, Jan. 24, 3 p.m. Royal Institution: "The Mechanism of the Senses," II., by Prof. J. G. McKendrick.  
8 p.m. Colonial Institute: "Natal in its Relation to South Africa," by Mr. J. R. Saunders.  
8 p.m. Civil Engineers: "The Analysis of Potable Water, with Special Reference to the Determination of Previous Sewage Contamination," by Mr. C. W. Folkard.  
8 p.m. Spelling Reform: "Varieties of Pronunciation," by Mr. Tito Pagliardini.  
WEDNESDAY, Jan. 25, 8 p.m. Society of Arts.  
8 p.m. Zetetical: "The Gradual Triumph of Law over Brute Force," by Mr. Henry Richard, M.P.  
8 p.m. Geological: "Fossil Fish-Remains from the Armagh Limestone, from the Collection of the Earl of Enniskillen," by Mr. J. W. Davis; "An Extinct Cheiloneurid Reptile (*Notosaurus costata*) from Australia," by Prof. Owen; "The Upper Beds of the Fifeshire Coal-Measures," by the late E. W. Binney and Mr. J. W. Kirby.  
THURSDAY, Jan. 26, 3 p.m. Royal Institution: "Corals," II., by Prof. H. N. Moseley.  
7 p.m. London Institution: "The Flute," by Mr. John Radcliff.  
8 p.m. Royal Academy: "The Composition of Historical and Incident Pictures," by Mr. E. Armitage.  
8 p.m. Society of Arts.  
8.30 p.m. Antiquaries.  
FRIDAY, Jan. 27, 8 p.m. Browning: "Why I like Mr. Browning," by Miss Mary A. Lewis; "Notes on the Genius of Mr. Browning," by Mr. James Thomson.  
8 p.m. Quakers: "Sand," by Mr. J. G. Waller.  
9 p.m. Royal Institution: "The Museum and Libraries of Alexandria," by Mr. R. S. Poole.  
SATURDAY, Jan. 28, 3 p.m. Royal Institution: "Louis van Beethoven," by Prof. Pauer.  
3 p.m. Physical: "The Fluid Density of Metals," by Prof. W. Chandler Roberts and Mr. T. Wrightson; "The Apparatus for Calculating Efficiency," by Mr. C. Vernon Boys; "A New Electric Meter," by Mr. C. Vernon Boys.

#### SCIENCE.

*Life, Letters, and Journals of Sir Charles Lyell, Bart.* Edited by his Sister-in-law, Mrs. Lyell. In 2 vols. With Portraits. (John Murray.)

MODERN geology owes to no one a heavier debt than to Sir Charles Lyell. Other geologists may have surpassed him in the extent of their stratigraphical work, in the minuteness of their study of rocks, in the accuracy of their knowledge of organic remains. But Lyell towers high above all the geologists of his generation by virtue of that wide knowledge of nature which enabled him to solve, on rational grounds, so many of the great problems of the earth's history. His range of view was far wider than that of others who, like Humboldt, had been much greater travellers. Even his love of conchology failed to fetter him. In his firm grasp of those fundamental principles which must guide the geologist in his researches, Lyell stood supreme; and, in applying these principles to the interpretation of geological phenomena, he set to work with a rigour of logic almost unknown to his fellow-workers. Indeed, if we set aside Mr. Darwin and the late Mr. Poulett Scrope, we shall probably leave him, on this point, without a peer in the ranks of contemporary geologists.

Whatever tends to reveal the intellectual development of such a man must needs prove absorbingly interesting to the student of

geological history. If the two handsome volumes which have just been published do not offer, on all points, so complete a revelation as we could desire, they yet give us a fuller and fairer presentment of the man than we could have expected from anything short of an actual autobiography. Let us acknowledge at once that the biographer has done her work with rare delicacy of touch. Mrs. Lyell has taken care that the editor shall not overshadow the subject of the memoir, and has modestly screened herself as much as possible from the reader's view. In short, the volumes may be described, in geological phraseology, as a conglomerate made up of Sir Charles's letters and of fragments of his journal, bound together by only so much editorial cement as is absolutely necessary to give cohesion to the mass. In mode of treatment, the book reminds us not a little of Mrs. Browne's affectionate biography of her brother, Prof. Beete Jukes; while in form the volumes recall Prof. Geikie's admirable *Life of Sir Roderick Murchison*.

To what extent was Lyell indebted to previous writers for that system of geological philosophy with which his name is associated? Upon this vexed question a good deal of light is shed from the pages of these memorials. Every impartial observer recognises the potency of those natural agents which are busily dealing with the earth at the present day; the only question is whether such agents, unaided by any greater powers of the past, are competent to effect all that the geologist seeks to explain. Lyell held that, given sufficient time for their operation, they unquestionably were equal to the work. Yet he did not deny the possibility of an increased intensity in the former operations of Nature. Only he hesitated to summon any Titanic forces to his aid until he had exhausted all the resources which Nature employs at the present time. The sensational school of geology which he opposed had done its best to minimise the importance of the "actual" order of Nature; it turned from the teachings of to-day, and let loose its imagination upon the past; it required that, at the close of each geological period, the curtain should fall, and then at its rising discover an entirely new order of things. Lyell did more than any other man to purge geology of these crude conceptions; and he may assuredly be pardoned if, in his efforts to place the science upon a rational basis, he was occasionally tempted to become rather too staunch a stickler for the absolute uniformity of the course of Nature. His general moderation, however, is evident in the following passage from a letter to Whewell:—

"The former intensity of the same or other terrestrial forces may be true; I never denied its possibility; but it is conjectural. I complained that, in attempting to explain geological phenomena, the bias has always been on the wrong side; there has always been a disposition to reason *a priori* on the extraordinary violence and suddenness of changes both in the inorganic crust of the earth and in organic types, instead of attempting strenuously to frame theories in accordance with the ordinary operations of Nature."

According, then, to Lyell, the course of Nature has been practically uniform throughout geological time, and if our earth has ever

been the theatre of colossal forces it must have been at so remote a period as scarcely to come within a measureable distance of the earliest record of the rocks. This was the essential teaching of his famous book, *The Principles of Geology*. Now it has often been pointed out, and was indeed acknowledged by Lyell, that Hutton, in his *Theory of the Earth*, enunciated similar views. It is, therefore, with some curiosity that we turn to a letter addressed by Lyell to Fitton, in which he explains his relation to Hutton, and attempts to appraise his predecessor's work.

"I found it difficult to read and remember Hutton, and though I tried, I doubt whether I ever fairly read more than half his writings, and skimmed the rest. Considering at how late a period as compared to Steno, Hook, Leibnitz, and Moro he came into the field, and consequently how much greater were his opportunities, I think his knowledge and his original views were confined to too small a range of the vast science of geology to entitle him to such marked and almost exclusive pre-eminence as you contend for in his behalf. . . . I have a letter of Basil Hall's in which, after speaking of points in which Hutton approached nearer to my doctrines than his father, Sir James Hall, he comments on the manner in which my very title-page did homage to the Huttonians, and complimented me for thus disavowing all pretensions to be the originator of the theory of the adequacy of modern causes."

Coming now to the direct question of the originality of the matter in the *Principles*, we receive unexpected aid from a letter written by Lyell to his friend Scrope, who was about to review the first volume of the book on its appearance in 1830. The review duly appeared in the *Quarterly*, and Scrope received from Murray an honorarium of £100. Here are some extracts from the letter:—

"Von Hoff has assisted me most, and you should compliment him for the German plodding perseverance with which he filled two volumes with facts like tables of statistics; but he helped me not to any scientific views of causes, nor to my arrangement. The division into aqueous and igneous causes is mine, no great matter, and obvious enough. . . . My division into destroying and reproductive effects of rivers, tides, currents, &c., is, as far as I know, new—my theory of estuaries being formed is contrary to Bakewell and many others, who think England is growing bigger. In regard to deltas, many facts are from Von Hoff, but the greater part not. All the theory of the arrangement of strata in deltas and stratification, &c., is new, as far as I know, and the importance of spring deposits. . . . That all my theory of temperature will hold I am not so sanguine as to dream. It is new, bran new. Give Humboldt due credit for his beautiful essay on isothermal lines; the geological application of it is mine, and the coincidence of time 'twixt geographical and zoological changes is mine, right or wrong. . . . My labour has been greater than you would suppose, as I have really had so little guidance."

These extracts, which we have been tempted to insert for the purpose of vindicating Lyell's claim to originality, have occupied so much space as to shut out any remarks which we might desire to make on Lyell's other scientific work. One of his greatest contributions to geology was unquestionably his classification of the Tertiary strata; but for this, and for other interesting matter, the reader must turn to the original volumes.

There he will find a large collection of letters affording in many places delightful reading, not only on scientific matters, but on a variety of social topics. The letters are written in a pleasant style, and, though rarely, if ever, brilliant, are never dull. A few of the letters we should like to have had suppressed, especially those in which the amiable and gentle Lyell, by a process easily understood, poses as the apologist for slavery.

Those who had not the advantage of knowing Sir Charles will gain an excellent notion of the man from these memorials. The touch of the biographer is not often to be discerned; but his portrait, limned by his own hand, stands out upon the canvas clear and sharp. A man of singularly sound judgment, accustomed to sift evidence on scientific questions, and to hold the scales of justice with no trembling hand—an earnest struggler after truth, manfully doing battle against scientific error not less than against popular prejudice—a man of unswerving purpose, devoting his days to the furtherance of his favourite science—an enthusiast, yet not a recluse—a teacher whom the younger generation of geologists looked up to as their undisputed master, yet himself a simple learner to the very close of life—such a man was Sir Charles Lyell. F. W. RUDLER.

#### NOTES OF TRAVEL.

DURING the present year we may hope to have one of the remaining mysteries of the unknown part of Eastern Equatorial Africa revealed by European research. From native report only we know that a considerable distance to the north of Mount Kenia, in the country of the Rendile Gallas, there is a great lake called Sambura, which has yet to be seen and described. Mr. J. M. Schuwer, we believe, intends to visit it; and, if he has been able to adhere to his plans, he has by this time started from Fadaai on the journey which will take him through the unexplored region in which it is situated. Dr. Stecker, too, who has lately done such excellent work in Abyssinia, also hopes to see this mysterious lake on his way to the coast.

LIEUT. HOLM, of the Danish Navy, who was engaged during the summer of 1880 on preliminary investigations in Southern Greenland, has lately returned to Copenhagen after prosecuting more extensive researches during the past summer. The expedition under his command was sent out for purposes of geographical and geological exploration, and their attention was mainly directed to the south coast of Greenland and the large islands lying off it. They have, however, also explored the whole of the country as far north as the latitude of the Tessermin Fjord on the west coast, and bring back some curious information regarding the nature of the icy wastes which they traversed. They have also determined with great accuracy the precise position of Cape Farewell.

THE Russian scientific expedition to the estuary of the River Obi has been very actively engaged during the past season, and Col. Moisseieff reports that a number of positions have been determined astronomically. As one result of their labours, he says that the eastern coast-line of the gulf is found to be placed from 20 to 25 kilometres too far to the east on our maps. It is not yet known whether a similar remark applies to the west coast; but, if it does, the Yamal peninsula will become exceedingly narrow.

SINCE the news was first received of the arrival of the *Jeannette's* boats at the mouth of

the Lena, there has been much speculation as to what discoveries she had made, and whether she had succeeded in reaching a very high latitude since she was last seen in September 1879. In America great hopes have been formed of the gains to science stored up by the expedition during the twenty-one months previous to the vessel being crushed in June last. We fear, however, that all these hopes are doomed to disappointment, and that we have little to learn but a tale of terrible suffering, for the *Jeannette* was caught in the ice on October 1, 1879, and there remained till she was crushed. The latest telegrams from Irkutsk, we regret to say, give no news of Lieut. De Long's boat.

THE Italian Geographical Society have awarded a gold medal to Lieut. A. M. Massari for his journey across Africa from the Red Sea to the Gulf of Guinea. Prince Giovanni Borghesi, who is styled the Mæcenæ of the expedition, has been elected an honorary member for his services in connexion with it; and a gold medal has also been dedicated to the memory of the late Dr. Matteucci, the leader of the party.

SIGNOR PIAGGIA, the Italian traveller, is now at Khartum, and is stated to be preparing for an expedition into the Galla country.

At a recent sectional meeting of the Russian Geographical Society, M. Potanin communicated some details of his journey last summer among the Votiaks, who inhabit the southern districts of the government of Viatka. Unlike the Tcheremisses, who believe in numerous deities, the Votiaks have only one god, their conception of whom resembles that of the Christian Trinity. Their name for this being is Inmar-Koldyshin; and legends of his descent on earth, and appearance to men, are current among them similar to those which are found among the tribes of the Caucasus and Mongolia. M. Potanin also gave an account of a Votiak festival which he witnessed, and at which sacrifices were offered.

#### SCIENCE NOTES.

Is the so-called "Lower Old Red Sandstone" of Ireland really Silurian?—A valuable contribution to this vexed question has just been made by Mr. G. H. Kinahan, in a Report to the Royal Irish Academy on the geology of the Fintona and Curlew mountain districts. Overlying the Pomeroy series, which he regards as of Cambro-Silurian (Lower Silurian) age, is a large series of red, purple, and greenish sandstones, shales, and conglomerates, which have hitherto been regarded as Lower Old Red Sandstone. They are, probably, the equivalents of the Dingle or Glengarriff grits in the South-west of Ireland. All these are now assigned by Mr. Kinahan to the Silurian formation. Mr. Bailey, who supplements the Report by some useful palaeontological remarks, has found characteristic Llandovery fossils, such as *Pentamerus oblongus*, in beds in Co. Mayo, previously described as Old Red Sandstone. It is notable that the so-called "Lower Old Red" of Ireland is rich in eurites, or "basic felstones," with their associated tuffs. Mr. Kinahan has elsewhere given his reasons for refusing to apply the phrase "Old Red Sandstone" to any series of rocks in Ireland, holding, with Dr. Haughton, that the Old Red is but a "phantom formation."

M. DUNOD, the well-known scientific publisher of Paris, has just issued the first part of a new Encyclopædia of Chemistry, edited by M. Fremy, of the Institute. This part consists of two volumes, and contains ten chapters, each dealing with some of the general principles of chemistry, and signed by the writer. The price of the two volumes is 50 frs. The second part, which is already well advanced, will treat of the metalloids.

MESSRS. GERMER-BAILLIÈRE have published an authorised translation by M. G. Lamy of Prof. Huxley's treatise on *Physiography*, and a second edition, entirely recast, of M. Ribot's *L'Hérédité psychologique*.

#### PHILOLOGY NOTES.

THE English Dialect Society will immediately issue to its members the three following volumes, which complete its publications for 1880—the ninth year of the life of this useful society:—(1) "Five Original Glossaries"—the Isle of Wight, by the late Major H. Smith and Mr. C. Roach Smith; Oxfordshire, by Mrs. Parker; Cumberland, by Mr. W. Dickinson; North Lincolnshire, by Mr. E. Sutton; Radnorshire, by the Rev. W. E. T. Morgan; (2) "George Eliot's Use of Dialect," by Mr. W. E. A. Axon; and (3) William Turner's *The Names of Herbs* (1548), edited, with introduction, index, and scientific identifications, by Mr. James Britten. The two first publications for 1882, both of which are far advanced at press, will be (1) the third and concluding part of Messrs. Britten and Holland's *Dictionary of English Plant Names*; and (2) the second and concluding part of Messrs. Nodal and Milner's *Glossary of the Lancashire Dialect*.

THE following is a brief record of the work accomplished by the French schools at Athens and at Rome during the past year:—At Athens, M. Hauvette-Besnault has written a monograph on the Archons, with special reference to their position in the middle of the fifteenth century, when they were already giving place to the elected strategi; M. Salomon Reinach, who is still engaged upon excavating the ancient cemeteries at Myrina and Cyme, has prepared a paper, with numerous illustrations, upon the pottery of Asia Minor; M. Bilco has written upon the Public Games in Greece; M. Clero upon Embassies among the Greeks; and M. Barilleau upon the sources of Ancient Greek Law and upon Marriage Settlements among the Greeks. At Rome, M. de la Blanchère has written five chapters of a monograph on Terracina; M. Lacour-Gayet several chapters of what is intended to be a history of Antoninus Pius; M. Albert Martin has collated a MS. of Athenaeus, and written upon the scholiasts of Aristophanes; M. Thomas has compiled two "excellent" memoirs—upon Francesco da Barberini, in connexion with the history of Provençal literature, and upon the *Entrée de Espagne*, a Franco-Italian *chanson de geste*; M. Jullian has presented a "careful" study of the Domestici and the Protectores, or the Imperial bodyguard from the third to the fifth century; M. Faucon, who is occupied with copying and analysing the registers of Boniface VIII., has written upon a curious episode connecting this Pope with the history of Verdun; M. Vigneaux has written upon the Praefectus Urbis from his judicial aspect.

THE project for establishing an American school at Athens, first started by the Archaeological Institute of America, is being actively taken up by some of the principal colleges. It is proposed to found fellowships, as a reward for distinguished proficiency in classical studies, to be tenable at Athens for a period of not less than two years. The director of the school would be a Professor of Greek from one of the affiliated colleges. Meanwhile, what are Oxford and Cambridge doing, or thinking of doing?

THE death is announced of M. Charles Graux, a young French scholar from whom much was expected in Greek philology. He had visited the Escurial and other libraries for the purpose of collating Greek MSS.; and only last autumn he enjoyed special facilities for pursuing his researches in the Vatican. It is feared that

he brought back with him from Italy the seeds of the disease from which he died. It had been his chief ambition to publish a revised text of Plutarch.

UNDER the title of "Germanischer Bücherschatz," J. C. B. Mohr, university publisher at Freiburg-i-B. and Tübingen, is issuing a useful series of little volumes illustrating the early history of the Teutonic peoples. Five have already appeared—*Tacitus de origine et situ Germanorum*; Einhard's *Life of Karl the Great*; the first part of *Beowulf*, edited from the Cottonian MS. in the British Museum, by Dr. A. Holder; Otfrid's *Evangelienbuch*, edited by Dr. Paul Piper; and Jordanis' *De origine actibusque Getarum*, also by Dr. Holder. Nithard, Bede's Ecclesiastical History, and Saxo Grammaticus are to follow. The general editor of the series is Dr. Holder.

A FRENCH translation is announced, by C. P. T., of Tiele's *Vergelijkende geschiedenis der Egyptische en Mesopotamische godsdiensten* (Amsterdam, 1869-72). The work has been revised, and in part rewritten, and cannot fail to advance the study of the subject among French-reading students. The first book, relating to the religion of Egypt, is also to appear in an English translation (Trübner); but why the first book only?

#### MEETINGS OF SOCIETIES.

##### NEW SHAKSPEARE SOCIETY.—(Friday, Jan. 13.)

F. J. FURNIVALL, Esq., Director, in the Chair.—The first paper read was on "Suicides in Shakspeare," by the Rev. J. Kirkman. He contended that the important thing was not the mere act, but the intention, the mental conflict. All who pondered on "To be or not to be," all who had in them Tennyson's "Two Voices," were potential suicides. Hamlet thought a thousand suicides, but committed none; he was the Regius Professor of the Emotions of Suicide. In women, emotion becomes uncontrollable; in men, it goes out in reasoning. Of the fourteen suicides in Shakspeare—seven men and seven women—only two were British women; there was not one British man. "Why should I play the Roman fool?" said Macbeth. The motives to the crime were insanity (1) from love, as in Ophelia (whose suicide seemed to be the one act of her own judgment); (2) from remorse, as in Lady Macbeth, Enobarbus, &c.; shame, as in Lucrece; love and despair, as in Romeo and Juliet; abhorrence of life, as in Timon; nothing else to do, as in Othello; the evading of public shame, as in Cleopatra; the high Roman notion of not being taken captive, as in Brutus, Titinius, &c.; the escape from woe, as in Gloucester. Shakspeare did not appear to condemn suicide in any of his characters. He made Hamlet and Imogen talk of the "canon 'gainst self-slaughter;" but there was no direct canon against it in Scripture, unless it was included in the Sixth Commandment. The main thing he cared for was the two voices always in the soul.—The second paper was by Mrs. J. H. Tucker, of Clifton, on Constance, insisting on her motherhood as the key of her character, the centre of her life, in which her individuality was almost absorbed.—The third paper was by Mr. C. H. Herford, on Shakspeare's character, contending that it was shown by his plays, which were part of his life and self, and which, in their gradual progress and changes, showed the development of the character of their writer. In religion, while fair to Romanists, he was certainly no Papist; and, while assuredly a Protestant, he could plead for Jew, he just to heathen, and yet expose Puritanic hypocrisy. In politics, if he was severe on the Roman mob, he was no less hard on the Roman Patricians; and in his day, as the English poor had not the intelligence and education they have now, it was impossible for him to treat them with the respect that is willingly yielded to them now.

#### FINE ART.

##### ART BOOKS.

*Bartolozzi and his Works.* By Andrew Tuer. (Field and Tuer.) A couple of imposing volumes, produced with all the taste of the printer's art, and admirably bound in vellum, come to us concerning this agreeable engraver, for whose works there has lately been a somewhat ridiculous rage. We are a little disappointed with the book. Bartolozzi, as an engraver, was a clever copyist; a clever interpreter, if we will. Had he been engaged in the copying or interpretation of any large proportion of noble work, honour might fitly be paid to him, at least after it had been seen that honour had been paid to the masters whom he reproduced. But Bartolozzi, though himself no bad designer, was largely engaged in the reproduction of very second-rate artists, nor did he bring to bear upon that reproduction any great power or flexibility; adroit he undoubtedly could be. The fancy subjects of his which are most popular cannot lastingly satisfy anybody who appreciates what is more than merely pretty in Art. To have seen one is to have seen almost all, as far as essentials are concerned—merit, of course, will differ; an absolute equality can hardly be maintained; but in the main what is noticeable is sameness, and not variety; a certain weak-kneed grace is the characteristic of nearly all that are popular. In a word, these things are decorative; a few of them in circular or oval frames look well on a wall; but ill-advised would be the person who should set out to collect and carefully store them, as one may collect and store van Leydens, Marc Antonios, Rembrandts, Hogarths, Méryons, or the line and mezzotint work after Turner. Bartolozzi, perhaps, is most at home with the designs of Cipriani and Angelica Kaufmann, which, with their own undeniable, but feeble and wearisomely repeated, type of grace, have not even the academic virtue of correctness along with their academic emptiness. The pseudo-Greek head, the long but fleshy figure, the arm lazily extended, the nerveless legs, with their superficial elegance, but with no firmness or precision of modelling—all this accosts us from the window of every second-rate print-shop nowadays, because it is a momentary fashion; and it is a poor business if it is to be considered substantive Art. Now Mr. Tuer appears to us, in his diligent enthusiasm, to be too little aware of the rank to which these things must before very long be relegated. The pleasure of collecting them has carried him too far. He neither offers us criticism upon them nor seems to think that criticism upon them is missing. In a work upon Bartolozzi—a head of an atelier, a clever and adroit craftsman—the facile artist might conceivably have been put in his proper place. A monograph need not avoid comparisons. But even if the writer preferred to confine himself to his immediate subject, in a narrow sense, he might profitably have made plainer the distinctions between the different orders of Bartolozzi's work; for there are different orders, though it is but one that happens to be particularly popular. The book contains a fair share of information, no doubt laboriously sought for, and certainly pleasantly conveyed; but Mr. Tuer knows that, as far as biography is concerned, the time for writing Bartolozzi's life—for getting the material for it—was half-a-century ago. That Mr. Tuer was not employed upon the task at that period is certainly not his own fault; he is only to be sympathised with for having come into the world too late for the quite complete execution of the business he has proposed to himself; but, this being so, we would fain have found him more critical. Criticism was wanted. We would gladly have seen him distinguish between the effect of Bartolozzi's work when

it is done on a large scale and when it is done on a small. He might have told us that the "Tickets"—those graceful designs which tasteful concert-givers issued to a fortunate public—are to be prized in part because their scale is small, and the work in them on that account seemingly sharper out and more precise, a certain dainty finish here taking the place of the too habitual laxity, and the mechanism of the work being, therefore, less apparent. In part, too, they are to be valued, Mr. Tuer might have told us, because in them are included a large proportion of the more beautiful designs. Why, some of these little things—the tickets for the Benefit of Mme. Banti, for the Benefit of Giardini, for "a Concert of Musick," and the like—are really worth collecting and storing away. In good condition, they are rare and admirable. But Mr. Tuer's information about them is of the most meagre kind; yet this is a matter as to which theatrical and musical records might, we should suppose, have been searched with the certainty that the search would be profitable. Too much space is occupied by the reprinting of an ancient priced-catalogue, which is only a curiosity, and no real guide nowadays, and by what is surely superfluous information regarding the auction-rooms of Christie and Manson and of Sotheby, and still more superfluous information about the history and past and present eminence of various dealers and traders. This is permissible gossip; but a book is hardly the place for it. Here, however, we have almost done with such comment as is not generally favourable. When we come to the portions of the book which deal with technical matters, what we find has clearer *raison d'être*, and is indeed well done. The chapter on "Engraving," in stipple, in particular is full of knowledge, and of knowledge lucidly conveyed. The illustrative plate is as much to the purpose as is the writing. The Catalogue proper is not a *catalogue raisonné*, but generally a mere list; we admit that had it been a *catalogue raisonné* we might have thought much of the labour wasted—it would have had to chronicle so large a proportion of same and idle things. Mr. Tuer has done well in drawing attention to the designs for Fan mounts. His illustrations are, with hardly an exception, welcome; and they are exquisitely printed. The "St. Giles's Beauty" and the "St. James's Beauty" are really in wonderful preservation; and the "Cupid and Psyche" and "Love and Fortune," reproduced by Mr. Cook on a small scale from the originals, are amazingly delicate and fortunate examples of later engraving. We implied, to begin with, that the printer's part in the book has been performed to perfection. The writer's has been performed with good-will.

**Black and White Sketches.** By Members of the Glasgow Art Club. With Descriptive Letter-press by Robert Walker. (Glasgow: Gillespie Bros.) The Glasgow Art Club is an association of Scottish painters which was started in 1867 for mutual encouragement and culture. At first its schemes and proceedings were on the most modest scale, but as years went on the undertaking prospered; the Club is now in possession of commodious premises in Glasgow, and since 1875 its members have made their appeal to the public by annual exhibitions. Of late the artists of the West have had their attention very specially directed, by the excellent Black and White Exhibitions of the Glasgow Institute, to the works in light and shade of the masters of the French and Dutch schools; and, in emulation of Continental efforts, the Glasgow Art Club now issues a volume of lithographic studies of landscape and figure subjects. It is inevitable that the book should provoke comparison with similar works by foreign draughtsmen; and it is no less certain

that one cannot disguise the fact of the distinct superiority of the latter equally in technical dexterity and in qualities of thought and sentiment. We must, however, remember that for many years the Dutch and especially the French painters have found a public ready to welcome and to purchase their etchings, charcoal sketches, and other works in *chiaroscuro*; while, until quite recently, there has existed no market for this class of art in Scotland, where drawing dealing with form and with light and shade has been pursued almost exclusively for private study, and in preparation for works in colour. To the present volume each of the members of the Club has contributed a sketch. It is not always, and in every sense, true that "the whole is greater than its part," and certainly the book would have gained had a more fastidious taste presided over the selection of its contents, and winnowed away some of the inferior work which now encumbers it. Certainly so bald and puerile a sketch as the female profile entitled "Wandering Thoughts" called for no labour of the lithographic printer for its dissemination, but might well have been suffered to remain in the uniqueness of its original drawing. Among the more interesting subjects of the volume is the "Village Washing Stream, Normandy," by Mr. D. Murray, A.R.S.A.—a quaint glimpse of timbered gables, seen beyond running water, and through a vista of high walls overhung by those grotesquely contorted boughs of fruit trees which appear so often, and so effectively, in the paintings of this artist. The shadows in the foreground stream fall somewhat in their hardness and want of transparency. In his "Return from the Pic-Nic," Mr. J. Miller deals with a vigorous effect of driving rain-cloud, and gives much breadth and quietude in the space of distant sky. Mr. E. A. Walton contributes "A Pastoral," strongly reminiscent of Continental work, and effective—though wanting in refinement and subtlety—in its sharply contrasting light and shade. Mr. A. K. Brown is simple and direct in method in "Our Village;" Mr. J. Henderson has a placid seascape with shipping, seen beneath a misty sunrise; and Mr. P. Buchanan, Mr. Pratt, and Mr. E. S. Calvert show work of varying skill. One of the best of the figure-subjects is Mr. T. McEwan's "Kind Granny," excellent in the expression of its well-conditioned aged face, but marred by the clumsy drawing of hands and wrists. Mr. D. Fulton gives a graceful study of a young haymaker, and Mr. R. C. Crawford depicts the charms of a pretty orange-girl. The pleasantly discursive letterpress of the volume is from the pen of Mr. R. Walker, the vigorous secretary of the Glasgow Institute.

**The Life and Works of Robert Hewetson, Boy Painter and Poet.** By H. B. Hewetson. (Sonneschein.) This is an infinitely touching book; the story of an exceptionally pure and gentle nature, richly endowed with artistic gifts and far-reaching aspirations, which were weighted by a soberness of feeling far beyond his years. Before he was eighteen the ardent spirit left a world which would soon have profited by his work had he been spared. Mr. Hewetson writes a slender thread of narrative in excellent taste, and strings on it his artist-brother's letters, poems, and fairy tales. The reader insensibly sympathises with his sorrow for the rare soul entrusted to our earth for so short a time. We imagine that this is the highest praise to bestow upon the biography. The main interest of the book rests in the phototypes of the youthful artist's drawings. There is no hesitation of touch, no faulty sentiment, in these first-fruits of genius. Founded on a careful study of the early masters, they are the outpourings of a fresh, enthusiastic youth, instinct with beauty and true sentiment. The same perception of ideal beauty and grace which is seen in Blake

characterises Robert Hewetson's drawings; and even the sombre tones of a phototype cannot veil the purity of colours, matching those of Fra Angelico, in which we are assured that so virgin a soul was wont to paint. Born in 1863, the boy-artist only lived until last year. "One of the Frightened Disciples," as the Lord approached the ship walking on the water, is an exquisite study of expression, marvellous for a painter of Hewetson's tender years. An "Adoration" is grouped most felicitously; while the face of the Madonna (a portrait of the artist's mother), which has been enlarged for this work, is full of ideal devotion and love. As the artist studied in Edinburgh, the sketches show the development of his powers. That of "Mrs. Landmann" (p. 39) is characteristic and eminently graceful. Almost his last drawing was a chalk study of the Barberini Faun, which obtained the Queen's Prize last year. The massiveness and yet the delicacy of the drawing are very striking. The thoughts of the poet are better than their expression, but they were evidently the spontaneous overflow of feelings irresistibly drawn to painting as the master-passion, and have received no polish. The fairy tales are simple, and yet set in a splendour of diction which again bespeaks the colourist. One or two of R. Hewetson's letters show how accurately he had conceived the province of true art. The correctness of his perceptions is evident in the manner in which he contrasts the meretricious paintings of Doré with the masterpieces of sacred art in the twelfth and thirteenth centuries. And another letter shows that he had embraced art with his whole soul, and rightly deemed that this is the only temper consistent with the true worshipper. We close this deeply interesting record with a conviction that English art suffered a serious loss in the same bereavement which plunged into sorrow the relatives of Robert Hewetson.

**Saints and their Symbols:** a Companion in the Churches and Picture Galleries of Europe. By S. A. G. (Sampson Low.) Very compact and entertaining, and quite as full and accurate as could be expected.

WE have received from Messrs. J. S. Virtue and Co. the bound volume of *The Art Journal* (New Series) for 1881. As we have noticed the numbers of which it consists from time to time on the occasion of their appearance, we need only state that this handsome volume contains no less than thirty-seven plates, besides innumerable wood-cuts in the text and head- and tail-pieces. We are glad to notice that the plates are very fairly divided between engravings, etchings, and facsimile reproductions, and that due honour is always assigned to the engraver.

**Petits Musées de Hollande et grands Peintres ignorés, etc.** Par C. Charles Casati. (Didier.) This pamphlet, though containing what are little more than notes and memoranda of different exhibitions, is valuable for the care taken by the author to record the inscriptions and dates found upon the various works of interest which he mentions. Among the "peintres ignorés" he alludes specially to Ravensteyn and Vermeer or van der Meer, of Delft, Jan de Bray (pupil of Frank Hals), Cornelis, of Haarlem, and Marten van Heemskerck. It is not surprising that the works of most of these men should be comparatively little known out of Holland, as it is only at Haarlem that Jan de Bray and at The Hague (and other places in Holland) that Ravensteyn can be properly studied; and their principal works have never been engraved. Last winter's exhibition at the Royal Academy revealed the presence of two fine Vermeers in this country; and now that his style, with its strong touch and peculiar harmonies of blue and amber and green, is becoming more

generally known, it may be hoped that some more discoveries of the same kind will be made. It is much to be desired that some etcher of first-rate sympathy should do for Ravensteyn what Unger has done for Frank Hals, and include among his works that magnificent picture at Haarlem—"The Officers of the Archers of St. Adrian"—which is now erroneously ascribed to van der Helst.

M. S. LARPENT has sent us a little pamphlet, printed in French (Christiania: Thronsen), about the well-known picture at Dresden which was once absurdly attributed to Leonardo da Vinci, and is now generally described as the portrait of Hubert Morett, jeweller to Henry VIII., by Holbein. M. Larpent, however, has here expended not a little ingenuity in seeking to prove that the portrait is really that of Charles Solier, comte de Morette, a somewhat notable personage of his time, of Piedmontese origin, and one of the French hostages in England in 1518. His arguments, we may add, are drawn rather from historical documents than from the methods of technical art criticism; but they deserve to be considered.

#### NOTES ON SOME OF THE OLD MASTERS AT BURLINGTON HOUSE.

AMONG the numerous and excellent works this year to be admired with so much convenience at Burlington House, not a few will be regarded by art students as filling up blank pages in the history of painting. Some of these have already been announced and welcomed as unexpected revelations. Others, however, require further investigation.

In accordance with the well-founded prerogatives of the lenders, the pictures are entered in the catalogue with such names of artists as they are pleased to suggest; but for many reasons these suggestions cannot be expected to be always judicious. Collecting works by Old Masters is a very old fashion, but the predilection for special masters will always undergo changes. Catalogues of past centuries enumerate hundreds of masterpieces by Giulio Romano. These pictures are not lost, but most of the attributions have been altered with the increasing dislike of his style. Within the last few years paintings with the name of Botticelli seem to have become more common in London than in Florence, his native town, which is yet reputed to possess most of his genuine works. There has scarcely been any exhibition for some time without some pictures attributed to him. This year there are two, hung close together: "Atalanta's Race" (195), lent by Mr. J. S. Budgett; and "Virgin with Child and St. John," lent by Mr. James Young (196). Leaving apart the question whether the subject in the first-named picture is really Atalanta's race, we cannot refrain from saying that, in looking at the picture, nothing in the world would have brought to our mind the name of the greatest dramatic composer among the quattrocentists except the label on the frame. The "Tondo" (196) appears to us to be one of the finest works of Raffaellino del Garbo. The fact that Raffaellino's master, Filippino Lippi, was a scholar of Botticelli may therefore be regarded as a plausible excuse for the apparent mistake in assigning the picture to Botticelli. Another equally important and characteristic work of Raffaellino was exhibited three years ago, in the same room, under the name of Domenico Ghirlandajo.

One of the finest Florentine pictures in Gallery IV., "A Virgin and Child with St. John" (203), lent by Mr. B. Fox, has, to its lasting misfortune, been placarded, probably by some speculative picture-dealer, with the forged signature "GA\* FRANCIA BONONIAE F.A.D.MCI" [sic]. The catalogue makes an attempt to check

this imposture in substituting an "Unknown" in the place of the signature. This picture is in an excellent state of preservation, and we have, therefore, not the least difficulty for the study of its peculiarities in drawing and colouring, by which the individual style of its real author can easily be recognised. The grand line, for instance, which indicates the folding of the mantle near the lap of the Virgin is peculiar to Fra Bartolomeo's composition, but the painting is evidently not his own. After examining closely the details, we have come to the conclusion that its author is Fra Bartolomeo's friend, Mariotto Albertinelli, by whom there is a well-known picture in the Louvre, signed and dated 1506. There is probably no third picture out of Italy so well entitled to be classed as a standard work of this master as Mr. Fox's pseudo-Francia.

The school of Ferrara is represented by an early work of Garofalo's (202), lent by Lord Penrhyn, "A Holy Family," painted in a tender grayish harmony of colour, betraying thereby the early manner of the artist. A similar specimen of this somewhat rare class of pictures is in the Fitzwilliam Museum at Cambridge. The composition in Lord Penrhyn's picture seems to have been a favourite one of the artist. It recurs, with little variation, in a large picture of the Dresden Gallery and elsewhere. Another picture belonging to the same school has been lent by Mr. F. R. Leyland (188). It represents the Virgin and St. Joseph in adoration, and is ascribed to Lorenzo Costa, the master of Francesco Francia. The only plausible reason which we can imagine in support of this attribution is the circumstance that Costa's name is better known than that of one of his fellow-countrymen, Francesco Bianchi, who appears to us to be the real author of this picture. Bianchi's works are rare, and every new one coming to light deserves to be specially noticed. Notwithstanding their morose and languid character, they have a claim to consideration, even above their real merits, on account of the very old tradition that young Correggio was a pupil of Bianchi. No doubt the style of the picture before us seems far from giving support to this tradition; but we must not forget that Correggio was only sixteen years old when Bianchi died in 1510, at the age of seventy-three; and, if we compare the picture in question with others by the same master, it becomes evident that this one is to be placed among his earlier productions. As a proof of our assertion that Bianchi and not Costa was the real author of the picture, it will suffice to draw attention to the peculiar shape of the hands, with long thin fingers, the swollen eyelids, and the style of the landscape, never to be met with among the numerous pictures by Costa. See, for instance, the large altar-piece in the National Gallery, which is signed and dated 1505. A comparison with another picture in the same gallery, also bearing the name of Costa on its label (895), would not be so much to the point, because in this instance the authorship of the Florentine Pier di Cosimo seems to be indisputable (see Frizzoni, *Galleria Naz.*, pp. 13, 14, and *Dulwich Gallery Catalogue*, p. 41). We only refer to it here because this very picture is well adapted to guide us when investigating the authorship of a highly interesting altar-piece in Gallery III., ascribed to Ridolfo Ghirlandajo (150), lent by Mr. Budgett. There is, we think, a very close resemblance in the two pictures with regard to the modelling of the faces and the brownish tone of the landscape, which are characteristic features of the style of this master, who influenced so many of the best-known Florentine painters.

In the "Flora" (139), lent by Mrs. Morrison, the style of Bernardino Luini is so obvious, especially in the drawing of the hands—perhaps

the only part of the painting which is left free from restoration—that it is almost superfluous to say that this *replica* of one of the best-known pictures by Luini is not the work of Leonardo da Vinci. But it is, perhaps, worth while to mention that panel pictures by Luini, which are rather scarce in other Northern countries, are frequently to be met with in private collections in England, where, as a rule, they are ascribed to Leonardo da Vinci.

A place of honour has very justly been given in the same principal room to another picture of Mrs. Morrison's splendid collection, "A Holy Family" (162), which bears the name of Rubens. This composition is, if we are not mistaken, identical with one of Rubens' masterpieces in a Continental gallery. The picture before us would, therefore, be only a *replica*. On a close examination, it cannot be denied that the execution is somewhat timid—e.g., in the modelling of the head of St. Joseph, which has nothing of the energetic freedom of Rubens' brush. Again, in the modelling of the nude infant Christ and the little angel, we miss those cold gray-blueish tones by which Rubens always counterbalanced the warm light in substitution of the deep and dark shadows employed by other artists. The colouring of the draperies is very brilliant, but less graduated in the tones than Rubens used to paint. There are, on the other hand, some palpable characteristics which lead to the conclusion that this is an early work of van Dyck's, when a pupil of Rubens. In proof of this we may refer to the tender and rosy tones of the flesh parts, and the smooth rendering of the landscape. The somewhat irregular outline of the faces of the infants, with their very short noses and excessive jaw-bones, are faults only to be met with in early work of van Dyck. The modelling of the Virgin's elegant hand has still something of Rubens' style, and is not yet of the ever-recurring shape which van Dyck adopted in all his later works. But the massiveness and nervousness of the hands, as Rubens used to form them, has here evidently undergone a sensible alteration, already adapted to the tendencies of van Dyck's art. The picture has, from this point of view, a special historical value, as early works of van Dyck are scarce in this country. There is a portrait of a gentleman in the National Gallery (52), well known as a favourite subject for copying students, which is commonly considered as being an early work of van Dyck; but we would not propose to compare it with Mrs. Morrison's picture in confirmation of our theory, as, to our regret, we are unable to recognise the hand of van Dyck in this beautiful work. In judging from the above-mentioned characteristics of individual styles, we cannot refrain from confessing our heterodox belief that this is a genuine production of Rubens—probably contemporary with "Le Christ à la Paille," and, therefore, painted about the year 1617. This opinion, however, does not stand alone. When, some years ago, we communicated our suggestion to the late compiler of the National Gallery Catalogue—to whom the discovery is due that the man here represented is Cornelius van der Geest—he told us that he had already come independently to the same conclusion. There are a few other pictures by Rubens and by van Dyck in this country which indicate that there existed more intimacy between the two than has hitherto been elucidated by the study of written records. It may be worth while to allude here to the origin of the first famous picture of van Dyck, the "St. Martin on Horseback," in the church of Saventhem. The painting itself is, perhaps, less known than the romantic story by which Campo Weyerman has explained its origin. The compilers of the Catalogue of the Antwerp Museum have already suggested that this picture may, perhaps, only be a free copy from a composition by Rubens,

of which they knew an engraving. But we think that this problem can conclusively be solved only by a reference to two pictures preserved in this country—van Dyck's original sketch for the picture at Saventhem, a small panel-piece, now at Dorchester House; and Rubens' representation of the same subject—a composition of eight figures (one more than in van Dyck's sketch) larger than life-size—in one of the saloons of Windsor Castle. Van Dyck apparently borrowed from Rubens the general arrangement of the composition and the attitude of the saint, who is in the act of dividing his cloak. In Rubens' picture the saint's countenance is, perhaps, less imposing; and there is less submissive reverence in the movements of the beggars. Yet no one who has had an opportunity of comparing the two pictures will doubt that the merit of van Dyck's dramatic composition is chiefly due to a derived inspiration. However, the general tone and the harmony of colours are in both pictures quite independent; and this might lead to the conclusion that van Dyck sketched the St. Martin only from memory.

The portrait of a lady by Rembrandt (63) cannot well be Rembrandt's daughter, as the picture is called in Mrs. Morrison's collection. This picture, which we have not found mentioned either in Smith or in Vosmaer, is signed, but not dated. It appears to us to have been painted about the year 1654. The person represented must have been more than twenty years of age, and, therefore, none of Rembrandt's children can here be taken into account. With regard to the style, there are, perhaps, no pictures of his that come so close to it as the celebrated female portrait in the Salon carré of the Louvre, and still more the *genre*-picture (54) in the National Gallery, dated 1654. Notwithstanding the great difference between the gay look of the woman in the last-named picture and the melancholy expression of the portrait at Burlington House, we venture to suggest that in both pictures the model is the same. This would imply that there really existed some intimacy between the artist and the unknown lady; but the subject of the *genre*-picture does not allow us to dwell further upon the nature of this connexion.

J.-P. RICHTER.

#### WESTMINSTER ABBEY AND THE SCHOOL.

THE memorial given below has been sent to us for publication. It has already received a number of important signatures, among them the following:—Sir Charles Anderson, Bart.; F. Burton (Keeper of the National Gallery); Matthew Holbeache Bloxam, M.A., F.S.A.; Sir Henry Cole, K.O.B.; Sir Henry Dryden, Bart.; the Rev. J. T. Fowler, F.S.A.; Edwin Freshfield, V.-P. Soc. Ant.; the Rev. William Greenwell, F.R.S., F.S.A.; J. T. Micklethwaite, F.S.A.; H. S. Milman (Director Soc. Ant.); William Morris, M.A.; Octavius Morgan, F.R.S., F.S.A.; John Henry Parker, C.B., F.S.A.; F. O. Penrose, M.A.; Edward Peacock, F.S.A.; J. L. Pearson, R.A., F.S.A.; and the Rev. Canon Venables.

Westminster Abbey, with all its monastic buildings, is so exceptional a monument of real national importance that it would be most lamentable for a part of it to be sacrificed to the interests of any school, however flourishing. In this case it would be doubly to be deplored, as there is little doubt that, sooner or later, Westminster School must remove into the country, if it is to be a successful boarding-school; while, if it is to be a day-school, its encroachments upon the Abbey buildings will have been needless.

"MEMORIAL TO THE RIGHT HON. W. E. GLADSTONE, M.P., FIRST LORD OF THE TREASURY, &c., &c.

"Sheweth—

"I. That your memorialists are deeply interested in the preservation of Westminster Abbey and its ancient precincts, which they look upon as emphatically a National Monument:

"II. That Westminster School, by virtue of a clause hurriedly and incautiously introduced into the Public Schools Act, has recently come into possession of a portion of the Abbey buildings which includes monuments of art and history dating from the eleventh to the seventeenth centuries:

"III. That the school can make no use of this property without destroying these valuable and interesting remains:

"IV. That such destruction of public property will not be compensated by any increase in the usefulness of Westminster School, because it has disregarded the suggestions of reform made by the Royal Commission of 1864, viz., that if it is to remain at Westminster it should become a day-school only, or if it still continues to be a boarding-school should remove into some locality more obviously suitable to the health and morals of the scholars—suggestions, the acceptance of which is acknowledged on all sides to be necessary to the revival of the school:

"V. That it is much to be deplored, therefore, that encroachments should be made on a National Monument of such importance and of such great educational value to the country, by a body which, since it resists reasonable reform, must be considered as moribund:

"VI. Your memorialists therefore believe that the interests of the public demand that enquiry should be made into the circumstances under which Westminster School has come into possession of an important part of the precincts of Westminster Abbey, and humbly pray that a Royal Commission may be issued to consider and report upon the whole question of this encroachment upon Westminster Abbey."

#### OBITUARY.

GIOVANNI DUPRÉ, the greatest of modern Tuscan sculptors, died at Florence, on the 10th of this month, in his sixty-fifth year. He was born at Siena of humble parentage, and at an early age manifested a talent for art. His training, like that of most of the great artists of Italy, commenced with the study of ornament; and at the beginning of his career he was a wood-carver. The first important works which he executed in wood were a statue of Santa Filomena and a crucifix. The genius of Dupré subsequently found its expression in his marvellous statue of the dead Abel. Hitherto the taste in sculpture of his countrymen was entirely bound up in imitations of the antique, preserving few traces of real greatness; affectation was often substituted for simplicity, purity, and dignity. In his "Abel," Dupré opened up a new path to sculpture by a faithful imitation of nature in its most perfect form. The realism of his statue so startled the adherents of formality that they insisted that it was a cast from nature. The writer of these lines remembers the exhibition of this beautiful work, and hoped that the knell was then rung of the frigid inanities of the purists. They were not, however, so easily killed; but at the present time they have few representatives. Giovanni Dupré gave the impulse to a better and truer view of art. He combined, with his close study of nature, a thorough comprehension of form and detail as these must be represented in marble or bronze. He never forgot the dignity of sculpture. If we cannot sympathise with all his designs, we must feel that, in this accomplished artist and worthy citizen, Italy has lost one of those great sculptors who carry on the best traditions of an art in which she generally excels.

DURING the past week the French Institut has lost two of its most distinguished members—M. Charles Blanc, of the Académie des beaux-arts; and M. de Longpérier, of the Académie des inscriptions et belles lettres. Of the former, it is sufficient to say that he was the founder of intelligent art criticism in France, for which he had qualified himself by learning painting, under Delaroche, and also engraving. M. de Longpérier enjoyed a scarcely inferior reputation in the world of archaeology. Since 1838 he had been Keeper of the Egyptian department at the Louvre; but his interests were wide enough to include Greek vases and Persian numismatics.

Of Sir Daniel Macnee, P.R.S.A., who died on January 17, we hope to have a notice next week.

#### NOTES ON ART AND ARCHAEOLOGY.

AT a general assembly of the Royal Academy held on the evening of January 18, Mr. Henry Woods, painter, and Mr. G. F. Bodley, architect, were elected associates.

WITH a view to promote art in Wales, a proposal is on foot to found a "Cambrian Academy of Arts," which shall have its home at Llanudno, the accepted art centre of the Principality. It is suggested that an annual exhibition should be held in the summer months of works in oil and water-colour, chalk-drawings, sculpture, &c., by artists who either reside in Wales or have studied there.

EARLY this month the Corporation of Leeds purchased from Mr. John Holmes, of Roundhay, the well-known Yorkshire antiquary, his valuable collections of prehistoric antiquities and British and foreign pottery—the result of forty years' diligent research—with the intention of making it the nucleus of a public collection for a museum in the town of Leeds.

WE hear that Mr. Ernest Radford, whose letter on the "Andrea del Sarto" of Mr. Browning we recently quoted, and whose translations of Heine we give in another column, has joined the literary staff of the *Artist*.

MR. W. G. PATTERSON, of Edinburgh, has sent us an etching, by Mr. C. Lawrie, after the portrait of Burns, drawn in red chalk by his friend Archibald Skirving. This portrait, which is a very interesting one, is now in the possession of Mr. George Rennie, of whose father, the celebrated engineer, a similar drawing was made by Mr. Skirving at the same time. In our opinion, a facsimile reproduction would have had far more value, for the etching before us cannot be considered satisfactory as an independent work of art. The term "etching" is widely interpreted nowadays; but the distinction between the *technique* of the etcher and the line-engraver need not be still further confused, as they are in this case.

AT the meeting of the Royal Society of Edinburgh on January 16, a paper was read on a cist discovered in a gravel mound at Parkhill, in Aberdeenshire. The cist was composed of four large slabs of stone, enclosing a small urn, only five inches high, and several bones, together with fragments of wood charcoal. The peculiarities of the "find" are—first, that bones of a hog were mixed with those of a man; second, that charcoal was found with buried bones. This latter circumstance indicates, according to Mr. Joseph Anderson, that Christian interment had not entirely overcome Pagan burning.

IT is announced that the Turkish Government has decided to establish a school of art at Constantinople, under the charge of Hamdi Bey, a former pupil of the great French painter M. Boulanger. The chief object is to encourage

architecture and the industrial arts; but other purposes will not be neglected. Lectures in Turkish, open to all, will be given on painting, sculpture, architecture, ornamentation, engraving, and aesthetics. A library and a collection of casts will also be provided. For some time past Hamdi Bey has been Director of the Museum of Antiquities at Tchিনি Kiosk. Besides setting the whole of this collection in order, he has obtained from a member of the French school at Athens a catalogue of the objects in marble and bronze, numbering more than 600; and this will shortly be published in Turkish and French.

EXPERIMENTS have been made by M. Deck, the celebrated *faiencier* of Paris, with a view to replace M. Baudry's mural paintings at the Opéra with copies on tiles, should it be found impracticable to use the electric light to illuminate the house. The paintings have already suffered from the gas. M. Legrain accurately copied one of the panels, and, after it was fired, the surface was treated with acid, in order to reduce the brilliance of the glaze. The success is said to be perfect, the copy having the same tone and unreflective surface as the original painting.

M. ANTONIN PROUST has informed the artists who obtained grants of money to assist them in travelling for the purposes of study at the close of the last Salon, that the usual quarterly reports will not be required of them, but that they will be expected, at the end of the year, to send their sketches to a special exhibition.

THE rooms containing the important collection of Chaldean antiquities discovered by M. de Sarzec, and now in the Louvre, have been opened to the public.

THE *Portfolio* commences the year with an excellent number. M. Dujardin's héliogravure of Mc Ardell's mezzotint of Reynolds' portrait of Mrs. Chambers has not the velvety quality of the original engraving, but it leaves little else to be desired. Mr. Frederick Wedmore's serious study of the sketches of William Müller is well illustrated, especially by Mr. C. O. Murray's very brilliant and sympathetic etching of the splendid sketch of the Lion Tomb, Xanthus. These and many of Müller's sketches convey the artist's vivid personal impression with almost unexampled force both of line and colour; and, though Mr. Wedmore evidently feels the true character of the artist's power, and praises him both strongly and well, we think he is too careful in demonstrating that his sketches do not possess certain qualities which are foreign to their nature. Mr. F. G. Stephens, in a first article on Hans Holbein the younger (and greater), describes with his usual learning and care the result of personal study of the treasures of the museum at Basle. He agrees with Rumohr, Wornum, and Paul Mantz that the four upright panels painted with eight scenes from the last days of Christ are not (as thought by Dr. Woltmann and other critics) the work of the great Holbein. He thinks they are by an unknown painter of Basle, "of very extraordinary ability." The last article is not the least in importance. It is the first of a series of papers, by Mr. H. G. Statham, called "Notes on Ornament," in which he has condensed his admirable lectures at the Royal Institution.

THE current number of the *Gazette des Beaux-Arts* contains an appreciative article, by M. Alfred de Lostalot, on the children's books of Caldecott, Walter Crane, and Kate Greenaway; and another on Ribera and his picture of the "Pied-bot" in the Louvre. The rest of the number is occupied with continuations of articles previously noticed and reviews of illustrated books.

THE excellent series of art handbooks published under the direction of the South Kensington Museum are not being imitated or rivalled, but they may rather said to be supplemented by a series of well-written and well-illustrated little books now being published by M. Quantin, called "Bibliothèque de l'Enseignement de Beaux-Arts." Four of these books appeared last month—*La Peinture hollandaise*, by M. Henri Havard; *La Mosaïque*, by M. Gerspach; *L'Anatomie artistique*, by M. Mathias Duval; and *L'Archéologie grecque*, by M. Collignon. It will be seen that some of the subjects are general and some special, and that they comprise every description of art—ancient and modern, emotional and decorative. In the present year we are promised no less than twenty volumes, each of which will be written by an author whose name is a guarantee for the value of the contents. Thus *L'Ornementation* has been undertaken by our valued contributor, M. Ph. Burty; *La Peinture*, by M. Paul Mantz; and *L'Archéologie orientale*, by M. Maspero. The series is superintended by M. Jules Comte, head of the Educational Department of the Ministry of Fine Arts, and published under its patronage. The series will be of high value to all students and lovers of art; and it need scarcely be said that in the matters of type and illustration M. Quantin is not likely to fail. The binding selected is strong and useful, as well as elegant.

MR. J. STEVENSON has written an account in the New York *Tribune* of his researches among the *pueblo* Indians of New Mexico and Arizona, conducted on behalf of the Smithsonian Institute. He explored a number of rock-built towns, one of which he estimates to have contained a population of 100,000. Dwellings are excavated out of the rock for sixty miles along the face of a winding cliff. Mr. Stevenson has brought back a collection of many thousand objects of pottery, &c.

THE Prince Stirbeg, who possessed all the drawings of Carpeaux, has given the whole to France—some to Valenciennes, the birthplace of the great sculptor, some to the Louvre, and some to the Ecole des Beaux-Arts. The number of them is astonishing. Those given to the Ecole alone amount to about 1,200.

THE material known as Spence's Metal has been applied with the greatest success to many ornamental purposes. Composed principally of iron pyrites, it has the properties of melting at a low temperature and cooling rapidly. These enable it to be cast in gelatine moulds, so that the most elaborate carving, with all the under-cutting and fine work, can be reproduced in *facsimile* swiftly and surely. A perfectly sharp casting can be obtained by pouring this metal at a temperature of 250° F. into a gelatine mould which melts at 90°. Chilled at once, the metal forms a hard skin before the gelatine has time to melt. Afterwards, the heat of the metal melts the mould, but too late to injure the casting; and if both be allowed to cool together the mould can be used again. When taken out of the mould, the metal has much the appearance of black Wedgewood, and is susceptible of the same amount of polish. Statues and bas-reliefs of any size can be cast with accuracy, and the finest work, such as the plate of a steel-engraving or the carving of a Chinese card-case, can be exactly reproduced. Its capability of withstanding exposure to the weather renders it very suitable for the decoration of architecture.

## THE STAGE.

WE doubt whether Mr. Herman Merivale's "Cynic"—"the shadow of an old legend in modern life"—can be a theatrical success. The public is perfectly able and willing to enjoy a bitter little satire that shall turn "Faust" to ridicule, and shall represent Margaret as a young woman whose original purity was distinctly overrated—and the piece might run for 300 nights if Mr. Arthur Sullivan were disposed to undertake the music; but a serious translation of the story of "Faust" into modern English life is a more vexatious matter, and considerably less entertaining. It is this that Mr. Merivale has attempted in the piece in which Mr. Vezin and Miss Litton enact principal characters; and he has been obliged, of course, in making the attempt, to deprive Mephistopheles of supernatural power. There is little compensation for its absence; and, if the force of Mephistopheles is considerably diminished, there is likewise a certain lack of greatness in the wickedness of which he is guilty. The heroine of the story, though possibly as worthy, is distinctly less interesting and less poetical than Margaret; and Miss Litton—the actress who impersonates her—is not a likely artist to endow the character with even its proper share of pathos and passion, for it is in these qualities that the actress is least gifted. Miss Litton is preferable in that old-world comedy which is wholly intellectual, and which makes no demand upon the emotional faculties. Mr. Vezin gives to the modern Mephistopheles—an evil Count Lestrange—the characteristics of the part; and, among other actors, Mr. A. Wood lends character to a minor person of the drama. The work, it is felt throughout, is the production of an accomplished and scholarly man of letters. Only time can prove whether it is likewise a popular play. But the signs, thus far, are those of a *succès d'estime*.

"OURS," the late Mr. Robertson's popular military comedy, was to be revived at the Haymarket Theatre to-night (Saturday), the part of the heroine being assigned to Mrs. Langtry, who therein makes her first professional appearance on the stage. The lady will appear also in some morning performances of "She Stoops to Conquer."

It is the intention of Mr. Thomas Thorne to present at the Vaudeville Theatre a series of carefully managed revivals of old comedies. The first—for which a strong cast is already prepared—will be that of "The School for Scandal," with which the theatre has before now been fortunately associated. Indeed, the play has even now been performed at the Vaudeville oftener, we suppose, than at any other house, not excepting the theatre at which it was originally produced.

## MUSIC.

### THE CARL ROSA COMPANY.

NEARLY forty years ago Spohr was studying and rehearsing Wagner's "Flying Dutchman" previous to its production under his direction at Cassel. The original and romantic music "à la Berlioz," as Spohr termed it, interested him greatly; and in a letter to a friend he wrote as follows:—"I think I am so far correct in my judgment when I consider Wagner as the most gifted of all our dramatic composers." About the same period Berlioz was at Dresden, where he heard "The Flying Dutchman," and the last three acts of "Rienzi" (at that time two evenings were devoted to the opera—the first and second acts being given on the first day, and the three last on the second). In a letter he expressed his opinion that "M. Wagner donnait une preuve de capacité plus que suffisante pour attirer sur

lui l'attention et l'intérêt." Such were the opinions of two illustrious musicians, neither of whom was inclined to overpraise the works of a contemporary. From that time down to the present Wagner has continued to excite the greatest attention and interest abroad; and now, in the year on which we have just entered, all his acknowledged operas are to be performed in London. "The Flying Dutchman" was the first of his works heard in this country; it was produced in Germany in 1843, but not here till 1870, and "Tannhäuser" was only given for the first time in London thirty-one years after its original production at Dresden.

Mr. Carl Rosa was not deterred by the announcements of Wagner operas to be given in May and June from making that composer's works a marked feature of his present scheme; and the crowded houses to hear "Lohengrin" and "The Flying Dutchman" last Saturday and Monday (January 14 and 16) prove that he has made a wise choice. All who take an interest in Wagner's art theories and dramatico-musical productions know that more than a cursory glance is necessary in order rightly to understand and appreciate them; and the Carl Rosa performances will be most welcome not only to all who intend hearing the same works conducted by Herr Richter, but also to those who will hear, perhaps for the first time, the master's later productions. Wagner's operas are not so many specimens of one and the same style, but they all represent some special phase in the history of his mental development. "Rienzi" is a work "full of youthful fire," to which the composer "does not attach any special importance." In "The Flying Dutchman" he began "to draw the laws for the form of his conception from a different source than the sea of recognised publicity which lay before him." "Tannhäuser" and "Lohengrin" show still further developments; and in "Tristan" the composer thinks he has taken a "wider step than he had done from his first standpoint—that of the modern opera—to 'Tannhäuser.'" The "Nibelungen," another very wide step in advance, is, in the opinion of many, Wagner's greatest creation.

The performance of "Lohengrin" last Saturday at Her Majesty's Theatre was a success. Herr A. Schott appeared as Lohengrin; his acting was excellent, and his singing more satisfactory than on the occasion of his *début* two years ago; yet in the last act he showed unmistakable signs of hoarseness. Miss Gaylord (Elsa) acted her part with pensive simplicity; her singing, however, was at times lacking in strength and freshness. Miss Josephine Yorke (Ortrud) was excellent both in her acting and in her singing. Mr. Ludwig was the Telramond, Mr. Crotty the Herald, and Mr. Pope the King.

It is scarcely necessary to speak in much detail of the performance of "The Flying Dutchman" on Monday evening. The principal feature of interest was the first appearance of Mme. Valleria as Senta. Her singing was very fine, and her impersonation of the ill-fated maiden most pleasing and sympathetic. Mr. Ludwig gave a thoughtful and impressive rendering of the Dutchman's part. Mr. F. C. Packard and Mr. J. W. Turner, as in former seasons, were the Eric and the Steersman; Miss Yorke took the small part of Mary; and Mr. Hervet D'Egville made a creditable first appearance as Dalaud.

Both operas were splendidly put on the stage. The chorus sang well, especially on the first night. The excellent orchestra, with Mr. J. C. Carrodus as leader, was conducted with tact and efficiency by Mr. A. Randegger. Owing, probably, to the lowering of the pitch, the wind was at times out of tune; and on Monday night the performance was somewhat marred by one or two mishaps.

J. S. SHEDLOCK.

## AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,  
186 Strand, and Messrs. CURTICE & Co.,  
Catherine Street, Strand.

Copies of the ACADEMY can also be obtained  
every Saturday Morning in EDINBURGH of  
Mr. MENZIES; in DUBLIN of Messrs. W. H.  
SMITH AND SONS; in MANCHESTER of Mr.  
J. HEYWOOD. Ten days after date of publi-  
cation, in NEW YORK, of Messrs. G. P.  
PUTNAM'S SONS.

## PARIS.

Copies can be obtained in Paris every Satur-  
day morning of M. FOTHEBINGHAM, 8 Rue  
Neuve des Capucines.

Ready, Vol. I., 400 pp., small 4to.

**HISTORY OF THE IRISH CONFEDERATION** and the WAR in IRELAND, 1841-43. Now for the first time published. In 2 vols. With Portraits, &c. Edited by JOHN T. GILBERT, F.S.A., M.R.I.A. A very small number has been printed. Subscription, £1 5s. per vol.; large paper, £2 2s. per vol. Vol. II. will be issued in March, 1882. Subscribers' names received in London by B. QUARTICH, 15, Piccadilly; and in Dublin by the principal Booksellers.

Just ready, 1 vol., 8vo, pp. xv+458, with Ten Maps in Facsimile from rare old Woodcuts, cloth, 20s.

## ELTON'S

## ORIGINS OF ENGLISH HISTORY.

"Awaited with so much interest in many quarters."—*Academy*.  
London: BERNARD QUARTICH, 15, Piccadilly.

Now ready, crown 8vo, 4s. 6d.

**M. T. CICERONIS DE LEGIBUS LIBRI**  
TRES. A Revised Text, with English Notes. By W. D. PEAR-  
MAN, M.A., St. Peter's College, Cambridge.

Cambridge: J. HALL & SON,  
London: SIMPKIN, MARSHALL, & CO.; HAMILTON, ADAMS, & CO.

No. XXVI. Price Six Shillings.

THE

## DAVID DOUGLAS' LIST.

Now ready, in 2 vols., 8vo, 32s.

## THE EARLDOM OF MAR.

IN SUNSHINE AND SHADE DURING FIVE HUNDRED YEARS.

BY THE LATE

ALEXANDER, EARL OF CRAWFORD AND BALCARRES.

Now ready, Second Edition, price 3s. 6d.

## ERRORS IN THE USE OF ENGLISH.

BY THE LATE

WILLIAM B. HODGSON, LL.D.,

Fellow of the College of Preceptors, and  
Professor of Political Economy in the University of Edinburgh.

"Those who most need such a book as Dr. Hodgson's will probably be the last to look into it. It will certainly amuse its readers, and will probably teach them a good deal which they did not know, or at least never thought about, before."—*Saturday Review*.

"Perhaps at no period in the history of our language was such a work as this needed so much as it is at present. It would save the feelings of many a lover of pure English were all forced, as a preliminary exercise, simply to read Prof. Hodgson's collections of 'Errors in English.'"—*N. B. Daily Mail*.

"Beyond all doubt, Prof. Hodgson has attained his object—viz., to set forth the merits of correctness in English composition by furnishing examples of the demerits of incorrectness—to bring home the abstract rule that a sentence must be lucid in order and logical in sequence."—*Athenæum*.

"This little volume will surely do excellent service, and we strongly recommend it for the study of all."—*Manchester Examiner*.

"This posthumous work of Dr. Hodgson's deserves a hearty welcome, for it is sure to do good service for the object it has in view."—*Academy*.

"His conversation, as everyone who had the pleasure of his acquaintance knows, sparkled with anecdote and epigram, and not a little of the lustre and charm of his talk shines out of these pages."—*Scotsman*.

"The book is neither large nor expensive, but it contains a great amount of careful and scholarly criticism."—*Aberdeen Free Press*.

"No one who aims at a pure style of English composition should be without this book."—*Educational News*.

WORKS BY MR. W. F. SKENE,

Historiographer-Royal for Scotland.

## THE FOUR ANCIENT BOOKS OF WALES.

Containing the Cymric Poems attributed to the Bards of the Sixth Century. By WILLIAM F. SKENE. With Maps and Facsimiles. In 2 vols., 8vo, 32s.

## THE CORONATION STONE of SCOTLAND. With Facsimiles and other Illustrations. In 1 vol., small 4to, 6s.

## CELTIC SCOTLAND: a History of Ancient

Alban. In 3 vols., 4to., Illustrated with Maps. I. History and Ethnology. II. Church and Culture. III. Land and People.

"Forty years ago Mr. Skene published a small historical work on the Scottish Highlands which has ever since been appealed to as an authority, but which has long been out of print. The promise of this youthful effort is amply fulfilled in the three weighty volumes of his maturer years. As a work of historical research it ought, in our opinion, to take a very high rank."—*Times*.

THE RHIND LECTURES IN ARCHAEOLOGY, 1879 AND 1880.

MR. JOSEPH ANDERSON.

## SCOTLAND in EARLY CHRISTIAN

TIMES. By JOSEPH ANDERSON, Keeper of the National Museum of the Antiquities of Scotland. Demy 8vo, with numerous Illustrations. First and Second Series, price 12s. each.

MR. CHARLES LANMAN.

## RECOLLECTIONS of CURIOUS CHARAC-

TERS and PLEASANT PLACES. By CHARLES LANMAN, Author of "A Summer in the Wilderness," &c. In 1 vol., demy 8vo, 12s.

[Now ready.]

CONTENTS: The Wizard of Antioch—Forest Recollections—The Hunters of the Sea Elephant—Around Cape Horn—Montauk Point—Salmon Fishing on the Jacques Cartier—The Boy-Hunter of Chicoutime—The Potomac Fisherman—Sword-Fish Fishing—Newfoundland—Block Island, &c.

"It is not unpleasant to be sometimes reminded by the appearance of a book of travel, written with great fidelity and wider knowledge than is usually found, how little we know of the world and how large it really is. Mr. Lanman conscientiously notes down all that he has seen and what he knows."—*Saturday Review*.

DR. JOHN BROWN.

## JOHN LEECH, and other Papers. By

JOHN BROWN, M.D., Author of "Horse Subscribers," "Rab and his Friends," &c. In 1 vol., crown 8vo, price 7s. 6d. [Now ready.]

MR. GAIRDNER AND MR. SPEDDING.

## Also MR. SPENCER'S

## DESCRIPTIVE SOCIOLOGY. Compiled

and Abstracted by Prof. DUNCAN, Dr. SCHREFF, and Mr. COLLIER. Four boards. 1.—English, 18s. 2.—Ancient American Races, 16s. 3.—Lowest Races, Negroes, Polynesians, 16s. 4.—African Races, 16s. 5.—Austrian Races, 16s. 6.—African Races, 18s. 7.—Hebrews and Phœnicians, 21s. 8.—French Civilisation, 3s.

A detailed list of Mr. SPENCER'S Works may be had on application, WILLIAMS &amp; NORTON, 14, Henrietta-street, Covent-garden, London; and 21, South Frederick-street, Edinburgh.

This day is published, crown 8vo, cloth, with Maps, 9s.

## EGYPT:

Political, Financial, and Strategical,

Together with an Account of its Engineering Capabilities and Agricultural Resources.

By GRIFFIN W. VYSE,

Late on Special Duty in Egypt and Afghanistan for H.M. Government.

London: W. H. ALLEN &amp; Co., 13, Waterloo-place.

This day is published, 4to, with Thirty-five Full-page Illustrations, 14s.

## ON AND OFF DUTY:

Being Leaves from an Officer's Note-Book.

By SAMUEL PASFIELD OLIVER,

(Captain Reserve List,) late Royal Artillery, F.S.A., F.R.G.S., &amp;c.

London: W. H. ALLEN &amp; Co., 13, Waterloo-place.

This day is published, in 1 vol., price 4s.

## THE DUBLIN UNIVERSITY CALEN-

DAR for 1882. Also, price 4s., DUBLIN EXAMINATION PAPERS: being a Supplement to the University Calendar for 1882. London: LONGMANS &amp; Co.

## THEATRES.

## COMEDY THEATRE.

Lessee and Manager, Mr. ALEX. HENDERSON.

To-night, at 8, the enormously successful Comic Opera, THE MASCOTTE. Written by FARNIE and REECE; Composed by AUDRAN. Messrs. Lionel Brough, F. Gaillard, H. Bracy, T. P. Haynes, W. Bunch, and Lytton Grey; Mesdames Violet Cameron, Ada Wilson, K. Abrahams, Clara Graham, and Lottie Vesne. The whole produced under the direction of Mr. H. B. FARNIE. Preceded, at 7.30, by SEEING FROU-FROU. Messrs. T. P. Haynes, Lytton Grey, Steyne, and Bunch; Mesdames Graham, Vaucher, Percival, &amp;c. Doors open at 7. Carriages at 11. No booking fees.

## COURT THEATRE.

Lessee, Mr. EDWARD CLARE.

(Under the direction of Mr. JOHN CLAYTON.) ENGAGED, To-night, at 8.45, by W. S. GILBERT. Mr. HENRY J. BYRON specially engaged to play CHEVIOT HILL; Miss MARION TERRY and Mr. KYRLE BELLEVILLE in their original characters. Preceded, at 8, by A WAKING, by CAMPBELL CLARKE. Mr. JOHN CLAYTON in his original character. Doors open at 7.30. Prices from 1s. to 44 4s. Box-office open daily from 11 till 5. No fees.

## DRURY LANE.

Sole Lessee and Manager, Mr. AUGUSTUS HARRIS.

PANTOMIME. To-night, at 7.15, ROBINSON CRUSOE. Messrs. Arthur Roberts, James Fawcett, Charles Lamb, jun., Harry Nicholls, John D'Auban, Harry Payne, J. Ridley, and Harry Jackson; Mesdames Fanny Leslie, Amalia, Emma D'Auban, Mariette D'Auban, Clara Fisher, Luna and Stella; the Children from the National Training School of Dancing, under the direction of Madame Katti Lanner. Ballets by John D'Auban. Designs by Alfred Thompson. Music by Oscar Barrett. MORNING PERFORMANCE on MONDAYS, WEDNESDAYS, THURSDAYS, and SATURDAYS, at 1.30. "The Children's Toy Pantomime Book," free of charge, at the Box-office. The Theatre besieged.

## GLOBE THEATRE.

Manager, Mr. F. MAITLAND. To-NIGHT, at 8.15, a new and original Comedy, in four Acts, by HERMAN MERVILLE, entitled THE CYNIC. Messrs. Hermann Verin, A. Dacre, David Fisher, sen., A. Wood, H. Hamilton, F. Beck, Selton, Medwin, and Gardiner; Mesdames Litton, Louise Willes, Maria Harris, Meredith, Goldroy, &amp;c. Preceded, at 7.30, by ADVICE GRATIS. Doors open at 7. No fees.

## IMPERIAL THEATRE.

To-day, at 3, M. AGOST and his renowned Parisian Pantomime Troupe, supported by a powerful dramatic company, in MACFARLANE'S WILL. The uproarious fun and marvellous pantomime feats with which the piece abounds are received with continuous roars of laughter.

## OPERA COMIQUE.

Managers, Messrs. J. HOLLINGSHEAD and R. BARRETT.

To-night, at 9, a Frivolous Comedy, in three acts, entitled MOTHER-IN-LAW, by GEORGE R. SIMS. Preceded, at 7.45, by an original Operetta. In one act, LOVERS' KNOTS. Words by CUNNINGHAM BRIDGMAN, Music by WILFRED BENDALL. Messrs. W. H. Vernon, R. Temple, R. Erough, G. Temple, G. Moore, J. Edmondson, and Alfred Bishop; Mesdames Sallie Turner, Houlston, D'Aguilar, C. Maitland, and Emily Cross.

## PRINCE of WALES'S THEATRE.

Sole Lessee and Manager, Mr. EDGAR BRUCE.

To-night, at 8.40, a new Comedy in three acts, called THE COLONEL, by F. C. BURNAND. Preceded, at 7.50, by A HAPPY PAIR. Messrs. Coghlan, H. Beerbohm-Tree, W. Herbert, Dankes, Lambert, and R. Buckstone; Mesdames Amy Roselle, Myra Holmes, C. Graham, Costers, and Leigh Murray. Doors open at 7.30. Carriages at 11. Box-office open daily from 11 till 5, under the control of Mr. MILLER.

## PRINCESS'S THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.

To-night, at 7.45, a new and original Drama, in five acts, THE LIGHTS of LONDON, by GEORGE R. SIMS. Preceded, at 7, by the Farce, by J. E. SODER, A PHOTOGRAPHIC FLIGHT. Doors open at 6.30. Carriages at 11. Box-office open from 9.30 till 5. No fees. Stage Manager, Mr. HARRY JACKSON. Business Manager, Mr. H. HERMAN.

## ROYALTY THEATRE.

Manager, Mr. ALEX. HENDERSON.

To-night, at 9.30, a Comedy, Classical Love Tale, entitled PLUTO; OR, LITTLE ORPHEUS and HIS LUTE, by H. J. BYRON, in which the following unrivalled company will appear:—Messrs. W. J. Hill, Felix Bury, and F. Irving; Mesdames Lydia Thompson, Eva Chapman, Maude Taylor, Maude Bramson, Farquhar, M. Herbert, A. Trevor, and Mademoiselle. Preceded, at 8, by an entirely new and original domestic Drama, in two acts, by CHARLES GARVICE, entitled THE FISHERMAN'S DAUGHTER. Preceded, at 7.30, by a Farce. Doors open at 7. Carriages at 11. Box-office open daily from 11 till 5, and at all Libraries.

## SAVOY THEATRE.

Sole Proprietor and Manager, Mr. DOVY CARTE.

To-night, W. S. GILBERT and ARTHUR SULLIVAN'S Aesthetic Opera, FA FINE C O. Messrs. G. Grossmith, Rutland Harrington, Frank Thornton, Walter Browne, and Burdard Leys; Mesdames Leonora Braham, Jessie Bond, Julia Gwynne, Fortunate, R. Braumman, and Alice Barnett. Conductor, Mr. F. Cellier. Entirely new scenery, dresses, and increased chorus. Preceded, at 8, by MOCK TURTLES. Doors open at 7.30. Seats may be secured at the box-office, which may be entered by Houlfort-buildings, Strand. No fees of any kind permitted. Programmes free. The Electric Machines supplied by Messrs. Siemens Bros. &amp; Co.

## TOOLE'S (late FOLLY) THEATRE,

Sole Lessee and Manager, Mr. J. L. TOOLE. Reconstructed and Newly Decorated, will shortly RE-OPEN. The precise date and full particulars will be duly announced.

SATURDAY, JANUARY 28, 1882.

No. 508, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Memories of Old Friends*: being Extracts from the Journals and Letters of Caroline Fox, 1835-71. Edited by Horace N. Pym. (Smith, Elder & Co.)

THE homes of the Foxes were the most pleasant of the country seats that surround the town of Falmouth, and every distinguished visitor who came to it in quest of health found a ready welcome in their houses. They had been an eminent family in Cornwall for several generations, ever since the time, now all but a century ago, when the then head of the house returned the prize that one of his ships had taken during war to its lawful owner in France. Five years ago three of the brothers were resident near Falmouth. Mr. Charles Fox had travelled in many countries, and had contributed scientific papers to the local societies; Mr. Joshua Fox was well known to naturalists for his knowledge of birds and of their habits; and the name of Robert Were Fox, the father of Miss Caroline, was a household word in the world of science for his treatises on the temperature of mines and on mineral veins. No wonder, then, that a constant succession of illustrious strangers came to their doors; and that Miss Caroline Fox, when she entered upon the task, which everyone begins and most people soon end, of keeping a diary, was able to describe the personal traits and the conversations of many scientific savants and famous men of letters. It happened, moreover, that in 1835 there dwelt in the neighbourhood of Falmouth several persons who had been prominent for their learning and their attainments in wider circles of life. Davies Gilbert had put on one side the care of presiding over the Royal Society, and was living in retreat at his pleasant villa on the Fal. Even nearer to the Foxes was the seat of Sir Charles Lemon, who for the first twenty-five years after the Reform Bill practically ruled over West Cornwall. Sir Richard Vyvyan had lost all hope of ever leading the Conservative party in the House of Commons, and was beginning to seclude himself in Trelowarren. Derwent Coleridge was keeping school at Helston, where Kingsley and Cowley Powles were among his pupils; and one of the most amusing pages in this volume describes, from the information of the latter scholar, the conversation of Southey while staying with the son of his old friend and fellow-poet.

Naturally enough, the chief names that we meet with in the early pages of the diary are those of the geological friends who had been

attracted to Penjerrick by the hope of seeing its owner. Dean Buckland was one of them; and, after reading these pages, we are not at any difficulty in finding the source whence his son drew his wit. De la Beche is described as "a regular fun-engine;" and, when he and the diarist went geologising, the greater part of the talk was on other subjects than geology. Sedgwick was graver; but he seems to have been provocative of fun in Sir Charles Lemon. On the day after his return from the five years' voyage in the *Beagle*, Admiral Fitzroy came to Penjerrick to see Mr. Fox's "dipping needle deflector," and to describe his journey round the world. Next month Admiral Belcher was a guest, and earns the praise of being "an admirable observer of many things." In later life, Dr. Lloyd, of Trinity College, Dublin, who died only a few months ago, was a grateful guest; and two venerable men of science, Sabine and Owen, happily still alive, the one a nonagenarian, the other not many years younger, came and talked of their favourite pursuits. Whewell and Lady Affleck were, of course, among the friends of Robert Were Fox; and he managed to draw from the Cambridge Don "a formal contradiction of the choice story about Chinese music," which everyone must be constrained to admit, with Miss Caroline Fox, "was a pity." Miss Fox might have added in her diary that the story would, in spite of this contradiction, go the round of innumerable dinner-parties. Whewell may protest "that he never wrote on the subject; only on Greek music;" but diners-out owe a duty to their hosts, and the story, true or false, must still be repeated.

When Miss Caroline Fox was in her twenty-first year sickness brought to Falmouth some strangers whose conversation exercised a wondrous influence over her mind. From that time the subjects discussed in the diary take a wider range, and its interest deepens daily. John Sterling was the first of these new acquaintances, though Mrs. Mill, with her two daughters, had been living in the town for some weeks, endeavouring to sustain the flickering flame of life in Henry Mill. With Sterling the themes of discussion glanced from earth to heaven. One day the party went to Perran Foundry and viewed the casting of a massive beam for a steam-engine, and the sight brought out numerous allusions to Vulcan's forge and other classical subjects; on another day he would tell them of the sermons of Irving and of the golden lectures of Henry Melvill, which reminded one of his friends of nothing but "the burning of blue lights." If they walked to the sea-shore, Sterling would lead the conversation with a discourse on the characteristics of German literature, with anecdotes of Coleridge and the friends whom he had met at Highgate, or with reflections on the doctrines of the Friends, or of some other religious body. A few days after her introduction to Sterling, another suffering invalid joined the circle. This was Dr. Calvert, whose presence gave just that slight spice of contradiction which was needed to bring out the full force of Sterling's character. By-and-by, still more illustrious persons appeared on the scene. John Stuart Mill came down to be with his dying brother during the

few days of life that were left to him. Sometimes John Mill would talk to his new friends of his father and his literary acquaintances. His father's "confabs" with Conversation Sharp were especially interesting to him; but he did not, in the charm of listening, forget to notice that a favourite good thing would make its appearance more than once. Sometimes he would draw away the veil over his boyhood and tell them of the educational experiments which Jeremy Bentham and his father performed upon his youthful mind. One of the most valuable parts of the diary is the letter which Mill sent to Barclay Fox, giving the history of his well-known essay on Lord Durham's administration of Canada. One night there came a great parcel from Mill containing the *London and Westminster Review* from the beginning, with notes in his own handwriting, and the names of the authors. If the set should still remain at Penjerrick this information should be published for the benefit of the future historian of the periodical literature of England. A close acquaintance with the Mills naturally led to an introduction to the Carlyles. Miss Fox was one of the audience at the lectures on Hero Worship, and noted down a very faithful description of their subjects and of the manners of the lecturer. Mrs. Carlyle gave them some "brilliant female portraiture," and described her husband's dread lest the people at his lectures should be considering that they had not had enough for their guinea. The eight lines on p. 181 in which Sterling sums up the character of Mrs. Carlyle is a striking anticipation of the effect produced on the reader by the *Reminiscences* of her husband. There are a host of interesting anecdotes, and many glimpses of the habits and peculiarities of the celebrities of the past, which we cannot reproduce here. The reader must find them out for himself; indeed, it would be almost a crime to give more than a general description of the contents of this delightful volume. One curious incident we have not the heart to leave unquoted. Mr. W. E. Forster was one of the friends of the Foxes; and thirty-five years ago he wrote to them, while on a visit to Daniel O'Connell's house in Ireland, painting a pleasing picture of the simple habits of the old man "with nine grandchildren flying about and kissing him on all sides." It could not then have entered into the mind of either guest or host that the former would be the ruler of the Irish nation at a critical time in its history.

The volume has been produced with everything in its favour to ensure it a wide popularity. We have rarely met with any work which exercised so irresistible a fascination over our will. It has been well edited, though there are a few misprints which might have been corrected by someone possessing a local knowledge of Falmouth. Two "beautiful boy-children" came to Miss Fox's to dinner; the theory of one was "that in twenty months from this time (he being now of the mature age of four) he shall awake and find himself a man." The name of this ingenious child is printed as Bastin; but that is a disguise for Mr. H. C. Bastian, whose theories in later life have attracted wider attention than was the case in 1841.

W. P. COURTNEY.

*Studies in English History.* By James Gairdner and James Spedding. (Edinburgh: David Douglas.)

THE several papers included in this volume represent an amount of genuine investigation into the main facts of a series of important questions which will cause all students of English history gladly to hail their republication in a collected form. Two only—that on Katharine of Arragon's first marriage and that on the case of Sir Thomas Overbury—are from the pen of the late Mr. Spedding. The remaining six are by Mr. Gairdner. Among these, the two on the Lollards and that on the historical element in Shakspeare's Falstaff, all of which appeared in the *Fortnightly Review* a long time ago, excited some attention at the time by their novel treatment of the views to which they gave expression. The connexion of the last-named article with the former two is to be seen in the theory advanced by the writer—that Jack Falstaff was intended by Shakspeare for the portraiture of “a demoralised Puritan or Lollard,” and that, too, not as of one of a class, but of a particular individual. “It is,” he says,

“tolerably well ascertained that the name of the character, even in Shakspeare's play, was originally Oldcastle and not Falstaff; but owing to the greatly increased reverence for Lollard martyrs which had been inspired by the reading of Foxe, and the growing Puritanism of the days of Queen Elizabeth, it was altered in order not to give offence.”

On the broader question of Wyclif's relation to the Reformation, as its “morning star,” Mr. Gairdner seems still to adhere in the main to his original view—namely, that the metaphor is only permissible if we guard against the confusion of *propter hoc* with *post hoc*. His language, however, on this point is considerably modified. He holds, indeed, that “there is no appearance that the teaching of Wyclif was at the beginning of Henry VIII.'s reign at all in general favour;” and that, “on the eve of Henry's rupture with Rome, nothing that could be called a Lollard sect existed.” But he admits that “the religion of Englishmen in general, if not even of other countries also, was largely tinged with an element which had come down from the Lollard teaching of an earlier day;” and his assertion in the original article that, “so far from Lollardy having taken any deep root among the English people, the traces of it had wholly disappeared long before the great revolution of which it is thought the forerunner,” is altogether withdrawn. We should not be surprised if Mr. Gairdner's researches (almost exhaustive although they may be considered in relation to the English history of this period) were to incline him still further to reconsider his original verdict on this point, even, indeed, at the risk of impugning the strict accuracy of Mr. Froude. “This year,” says Fabyan, writing of 1496, “many Lollers stode with fagots at Poulys Crofs;” and the references to the sect as still active, and calling for repression, throughout Henry VII.'s reign are by no means rare. But the question is one which will probably yet receive elucidation. An article that recently appeared in the *British Quarterly*, which

seemed to promise something, was singularly disappointing in this respect.

On Wyclif's position as a realist—a material point in the relations of a theologian in the fourteenth century—Mr. Gairdner does not touch; nor, again, does he bestow any further attention on the interesting question, now attracting no little attention, with respect to the originality of Wyclif's version of the Scriptures and its claims to be looked upon as the first systematic endeavour to place the Bible in the hands of the English laity. He still holds that Wyclif “placed the precious book, *once for all*, in the hands of the people.” “Its mere popularity,” he says, “seemed not only to impair the old traditional reverence for the Latin text, but in some measure to degrade theology by removing it into the vulgar atmosphere of common life.”

The paper on “Sundays, Ancient and Modern,” well deserved to be reprinted, if only as showing how arbitrary and conventional a thing the observance of the seventh day has been even among the Puritans themselves. “It was on a Sunday that the Reformed Commendators of Holyrood and Coldingham, both of them Lords of the Congregation, rode at the ring in women's clothes.” Yet before half-a-century had elapsed, the Puritans of Massachusetts were enacting,—“No woman shall kiss her child on the Sabbath or fasting day.” Mr. Gairdner supplies some notable instances which serve to show that the movement towards Sabbatical austerity was a thing prior to and apart from the Reformation. In England, its first impulse may certainly be traced back to the Lollards. When it revived in the sixteenth century, along with the rise of Puritanism, it was still a thing of slow growth, and received no encouragement from the earlier Reformers. Archbishop Parker was elected Chancellor of the University of Cambridge on a Sunday; and Queen Elizabeth, when honouring the university with a visit in 1564, witnessed a performance of the “Aulularia” in King's College Chapel on a Sunday evening, although it is to be noted that twenty-six years later she was herself prevailed upon by the citizens of London to prohibit plays from being acted on Sundays within the liberties of the City. The standard whereby the Puritans sought to determine their own practice appears to have been that of “man's invention”—a test which others have since applied to observances which certainly cannot be assigned to the perverted ingenuity of mediæval times.

Mr. Spedding's lengthy paper on Katharine of Arragon's first marriage failed, unfortunately, to receive that intended revision which Mr. Gairdner informs us it would have undergone had it not been for the writer's fatal accident. He holds, indeed, that the revision would have involved little or nothing in the way of positive correction; but most readers, we think, will be of opinion that the article would have gained considerably by being recast and rewritten. Lucidity of exposition and precision of expression were not among the gifts to which the writer could lay special claim, as those who have profited most by his valuable labours on Bacon can testify; and the present paper is remarkably destitute of

literary merit. The really essential points are not brought out with any adequate clearness and force; the grammar is careless; and even the facts appear to be somewhat loosely put together. At p. 89, any ordinary reader would gather that it was a daughter and heiress of the Duke of Orleans, not of the Duke of Brittany, for whose hand Maximilian, King of the Romans, was suitor; while it is distinctly implied that Maximilian was the “accepted suitor” of Anne of Brittany *in the lifetime of her father*. If such were the case, it is more than we gather from the labours of M. Bergenroth or any other authority; and the fact should have received due prominence as an important factor in the policy of the Duchess when she had herself succeeded to the administration of the province. As it is, it looms hazily before us throughout the narrative, and seems hardly in agreement with the other evidence. We infer, however (p. 98), that the engagement was a secret one; although, oddly enough, Maximilian appears (p. 94) as undertaking a formal obligation in Anne's behalf in a manner which can only be explained by supposing that he was recognised as her betrothed husband. Another defect in the narrative is that the date of the year is so irregularly given that it is often difficult to find out what date is denoted by a certain “4th July” or “19th February.” Notwithstanding these drawbacks, however, the article is one of no small value, especially if read along with Bacon's *Life of Henry VII.* Taken in conjunction with that by Mr. Gairdner on Katharine's second marriage, it affords a most useful insight into a subject which, as the writer justly says, “mixes itself up directly or indirectly with all the business of the reign;” and it sheds a new light on the position of France at that important crisis in her history when, materially augmented by the recent acquisition of the duchy of Burgundy, but still lacking Brittany in the west, and Elsass, Lorraine, and Franche Comté on the east, she was passing through a process of consolidation to enter upon that career of aggrandisement which marks the long struggle between the Houses of Bourbon and Hapsburg. J. BASS MULLINGER.

*A Lady Trader in the Transvaal.* By Mrs. Heckford. (Sampson Low.)

ONE would wish to know something more about the antecedents of this vigorous lady who suddenly, without friends or relations, lands at Durban in December 1878, and is equal to anything, from nursing, teaching, and cooking to grooming her horses and ordering and superintending the flogging of a Kaffir. We learn incidentally that she was born in Ireland and has been in India, and, incidentally also, that she went out to learn farming in the Transvaal.

It is extremely unlikely that under present circumstances any more English will attempt a settlement in the Transvaal. Mrs. Heckford's experiences are, therefore, of little use as a warning; but, as a record of the courage, perseverance, and endurance of an Englishwoman, they are well worth reading. We must admire the spirit with which she bears

a constant run of ill-luck, and feel for her when political blunders, which could not have been foreseen, annihilated all her prospects in the country in which she had settled.

At Rustenberg she had her first experience of the trickery which, though it abounds in the Transvaal, is not confined to that part of South Africa. She discovered that the scheme about a farm at which she was to learn was a delusion, and she was left to shift for herself. Equal to the occasion, she forthwith accepted the situation of governess to a family of English settlers, kind-hearted people, who were afterwards ruined by the disastrous peace of last year, and with whom she seems to have remained about a year. Kind as her employer was, he could not resist a piece of sharp practice at her expense, and persuaded her to buy half his farm and part of his stock at what was evidently an exorbitant price. Most gallantly did the lady set to work and persevere on this farm; and one cannot but feel that the same energy and toil would have assured her a comfortable living as a farmer at home, even under the present depressed state of agriculture. Do what she would she could not make Griu-fontein pay; and she left it with the reflection "that South Africa is a bad training school for high-class morality in money matters—or, indeed, in any matter whatever."

Her next venture was a trading one. Filling her wagon with goods, she travelled about retailing them to the Boers and natives as she went. A trader is called a "Smouse," and, if sufficiently sharp and firm, may make large profits. Mrs. Heckford then bought a small farm about twenty-five miles from Pretoria, known as Jackallfontein. No sooner had she taken possession than the war between the English and the Boers broke out, and she, with other English settlers, took refuge in Pretoria. On the hill above Pretoria three camps were formed, exclusive of the camps in the convent and in the prison within the town; the three camps were known as the military, the civil, and the native. Our authoress wrote the greater part of her book while in camp, and thus relieved some of the tedium of the siege, of which she gives an interesting but melancholy account. We read of the same mismanagement which has attended almost all the conduct of our affairs in South Africa. One of the chief difficulties was the native one; the coloured people were thoroughly demoralised; the authorities were afraid of them, and winked at their misconduct. The immense number of them in camp helped the general demoralisation. It was an absolute fact that their leaders knew most of our movements; and there were doubtless many messages sent backwards and forwards between the Boers and their secret friends in camp by means of the natives. The Boers were informed beforehand of the sortie of February 12, were quite prepared for us, and the result was another defeat. Mrs. Heckford well describes the way in which the news of the peace was received—news which brought ruin to almost all in the camp. Had the Transvaal been given up before the Boers took up arms, or on their declaring war, all might have been well, the Boers would not have been divided into two hostile parties, and the English

settlers might have lived on at peace with the Boers. But our Government adopted a course of action which forced the loyal Boers and the English settlers to declare themselves openly, and then left their farms and stock-in-trade at the mercy of their enemies. The condition of these unfortunate people is truly pitiable, and a national disgrace to our country. One of these, a trader, married to a young Boer wife, thus expressed himself to Mrs. Heckford:—

"It has been cruel to us—cruel! If the country was to be given back after all the solemn oaths that it should for ever remain English, why go to war? Why force us who *must* live among the Boers to declare openly against them, or be disloyal? It is not only that we are ruined, it is our domestic happiness that has been destroyed. I am but one among numbers who have thrown up the ties of relationship, of old friendship, only to be cast off like an encumbrance. Numbers like me have turned love into hatred, have closed doors upon themselves which were ever open to them before."

Any hypocritical pretence that after going to war we gave in because the Boers were in the right is disallowed by Mrs. Heckford.

"Even the Kaffirs jeered at us. In the midst of all this, a large body of Boers were seen riding close past the camp. Henning, Pretorius, Joubert, and Hendrick Schumann rode up to head-quarters on their shaggy nags, and then rode through the camp to greet old acquaintances. How proud those men must have felt that day when the handsomely dressed gentlemen in military attire had to acknowledge them (whom they had termed, and unjustly termed, 'rebels') their virtual conquerors. It was of no use trying to hide the fact under the cloak of generosity; the Boers knew in their hearts that we should not have attempted to fight if there had been any generosity in the matter, and so did we all; and we both knew also that we had found a harder nut to crack than we had expected, and that the Government at home had considered the game not worth playing out."

The authoress concludes her story in Natal. She has given us an amusing and interesting book; and we sincerely trust that she has a future in store for her more prosperous than her past has been. WILLIAM WICKHAM.

*John Amos Comenius: his Life and Educational Works.* By S. S. Laurie, Professor of the Institutes and History of Education in the University of Edinburgh. "Education Library." (Kegan Paul, Trench & Co.)

IN this little book we have a thoroughly good piece of workmanship for which all students of education should be grateful. "The object of this volume," says Prof. Laurie, "is to present Comenius himself to the English reader—not Comenius as I may understand him" (216); and the result has been a very careful piece of portraiture, which gives us faithfully, to the best of my judgment, the "objective" Comenius.

But faithful portraiture sometimes has its drawbacks. There are cases in which, as a well-known epigram "on the portrait of a gentleman" tells us,

"The likeness, hang the artist! is so true,  
Instead of one fat brute we now see two."

It is hard indeed on the memory of the

good old Moravian bishop to quote the epigram in this connexion. I merely do it to introduce the question: Is Comenius worthy to be the subject of an accurate study such as Mr. Laurie has made of him? No one who cares for the history of education will doubt that he is well worthy. Comenius was the first man who tried to get some conception of education as a whole; who considered, first, what is the aim of education, and, secondly, how that aim may be attained. In thus considering the *aim*, he was making an immense advance. "Failure," as Ruskin says, "is less frequently attributable to either insufficiency of means or impatience of labour than to a confused understanding of the thing actually to be done;" and this is especially true in education. Most of the conflicting proposals now afloat owe their origin to this confusion, and it would be a great gain if we would learn from Comenius that the first thing to be considered is what we want to do.

As to the means we should employ, Comenius has made many shrewd suggestions, but he also fell into not a few unquestionable errors. Here we see the "shadow-side" of faithfulness in portrait-painting. Mr. Laurie has told us much which, as he is well aware, has little or no intrinsic value. But he could not have given us a right notion of Comenius otherwise. He was no doubt tempted to run over the main writings Comenius has left us, and to single out just what seemed valuable or original. By doing so he might have produced a book which would have better pleased the general reader or students for examinations, but not the student proper. As yet, the general reader may be neglected by the historian of education, but the students for examination are, unfortunately, his principal readers, and he is therefore expected to give in a condensed and portable form what are supposed to be the peculiar tenets of each reformer. This enables his readers to get marks, and in their eyes it is hardly a drawback if they do not get at the truth. It stands recorded in one of the chronicles of Joseph Miller that a clergyman, when putting his choir boys through the customary recitation of the Creed, was informed that the boy who believed in the Holy Catholic Church was minding the cow and could not come. A similar distribution of the articles of the educational creed has been arranged by some historians, or rather epitomisers; and we are in danger of losing the thoughts of the great minds which have been at work on education, and getting in their stead a mere string of names, with labels attached to be quoted in examinations. Our only escape from this perversion of history lies in the study of original sources, or, where this is impossible, of some faithful account of great authorities such as Mr. Laurie has given us in this book on Comenius.

How much this subject suffers when it is thought of only with reference to examinations may be seen by a glance at the last book about it, published in Germany (*Kurzer Abriss der Geschichte der Pädagogik*, von Berthold Müller, 1881). Here we have in twenty-eight small pages an account of all authorities on education in ancient and modern times. With reference to our own chief

authorities, we learn that Locke's was "the pedagogy of the useful and serviceable;" and that "Milton, the author of *Paradise Lost*, was one of the noblest representatives of the Methodists, among whose members John Wesley, the founder of the society, especially distinguished himself." I was lately informed by a candidate for a commission in the army that he knew a crammer who had a splendid "rigmarole" which would get a fellow through any examination in English history. The students in Germany must think themselves fortunate indeed if they derive a similar benefit from the twenty-eight pages of Herr Müller.

Comenius was the first exponent of the educational doctrine of "Realismus" and "Anschauung," a doctrine which seems now established, or at least getting the upper hand, on the Continent, though we, the countrymen of its great discoverer, Bacon, know little about it, and can hardly express it in our own language. Mr. Laurie is, in the main, a champion of this doctrine. He says: "It is only thought about the realities of sense or about the products of thought that can call forth original powers" (p. 7); and again: "It was the study of the realities of sense that was finally to place education [instruction?] on a scientific basis" (p. 12). But in the words I have italicised we see Mr. Laurie's divergence from the realism of Comenius and Herbert Spencer. He holds that Comenius (and I doubt not he could unite with him many modern authorities) "did not fairly appreciate humanism, and accepted the products of the genius of past ages only in a half-hearted way. His eyes were turned to the present and the future" (p. 22). Against the despisers of literature, Mr. Laurie maintains that "the question is as to the field in which the Real is to be sought—in the mind of man or in external nature" (p. 220). So Mr. Laurie would distinguish between "humanistic realism" and "naturalistic realism." Here we touch the great controversy on which the education of the future depends. Two centuries ago Comenius endeavoured to rescue school instruction from verbalism ("that unhappy divorce of words from things") by means of naturalistic realism. But this evil spirit, verbalism, is still in possession of our school system, and it remains to be seen whether naturalistic realism or humanistic is the true charm with which to exorcise it. R. H. QUICK.

*The Candle of the Lord, and other Sermons.*  
By the Rev. Phillips Brooks, Rector of Trinity Church, Boston, U.S.A. (Macmillan.)

MR. BROOKS' reputation as a preacher is not confined to America. The sermon which gives its name to this volume, and which has rather a Puritan sound about it, was preached in Westminster Abbey on July 4, 1880, and attracted some little attention at the time. Its republication will be welcome to those who then heard it, and to the still larger number who only heard of it. It possesses, in common with the sermons that follow it, some rare merits; and conspicuous among them is a tone of thoughtful, chastened eloquence which cannot fail to pro-

duce a definite result. The words are aptly but not artfully chosen; the appeals are made to reason as well as to feeling; and, though vigour and originality are seldom absent, there is no straining after effect by fantastic devices—no mere kindling of excitement by sensational language. Men, as well as women, might listen to such a preacher and own his influence. As a specimen of Mr. Brooks' ordinary style, we select the following passage from an able sermon entitled "The Symmetry of Life," addressed upon Advent Sunday to young men in particular:—

"When a man has length and breadth of life together, we feel at once how the two help each other. Length without breadth is hard and narrow. Breadth without length—sympathy with others in a man who has no intense and clear direction himself—is soft and weak. You see this in the instinctive and strong dislike which all men have for the professional reformer and philanthropist. The world dislikes a man who, with no definite occupation of his own, not trying to be anything particular himself, devotes himself to telling other people what they ought to be. It may allow his good intentions, but it will not feel his influence. The man whom the world delights to feel is the man who has evidently conceived some strong and distinct purpose for himself, from which he will allow nothing to turn his feet aside; who means to be something with all his soul; and yet who finds, in his own earnest effort to fill out his own career, the interpretation of the careers of other men; and also finds, in sympathy with other men, the transfiguration and sustainment of his own appointed struggle."

But from time to time the preacher rises above his own high level, and gives full play to the powers which he more often holds in check. There is real poetry and eloquence in the following:—

"Suppose a human soul looking out into the mysterious and unrevealed experiences of the everlasting world. *The window of death is wide open, and the shivering soul stands up before it, and looks through and sees eternity.* No wonder that it trembles. The warm, bright, familiar room of earthly life, where it has dwelt so long, lies there behind it; and before it, outside the window, the vast, dim, pathless, unknown world of immortality. How shall the soul carry with it the sense of safety and assurance in God, which it has won within His earthly care, forth into this unknown, untrodden vastness whither it now must go? Only in one way; only by deepening as deeply as possible its assurance that it is God—not accident, not its own ingenuity, not its brethren's kindness—that it is God who has made this earthly life so rich and happy. God is too vast, too infinite for earth. He is too vast for time, and needs eternity."

Mr. Brooks reminds us occasionally of F. W. Robertson and Charles Kingsley; but, to use a rather objectionable phrase, he is "a better Churchman" than either of them, and his theology, though broad, is distinctively that of the Church of England. From time to time we come across allusions to the natural and social features of the land in which the sermons were delivered, and the little local colouring thus obtained is not without its attractiveness. But there are certain Americanisms (for which the printer, we suppose, is responsible) which have annoyed us not a little. Even if we are to accept "favor" and "color" and such-like misspellings, we must protest against "Savior"

and the awkward division of the word "knowledge" which repeatedly disfigures these pages. CHARLES J. ROBINSON.

*Bibliotheca Cornubiensis: a Catalogue of the Writings, both Manuscript and Printed, of Cornishmen, and of Works relating to the County of Cornwall; with Biographical Memoranda and Copious Literary References.* By George Clement Boase and William Prideaux Courtney. In 3 vols. (Longmans.)

WE heartily congratulate Messrs. Boase and Courtney upon the completion of their great work, the result of the labour of many years. Only those who have experienced the mental and bodily burden of some twenty years' literary toil upon a single work can appreciate the relief and satisfaction arising from the accomplishment of such a task as these gentlemen set themselves. Their design was not only the production of a *Bibliotheca* of a county which has produced many authors, and among them an unusual number of more than ordinary celebrity; it had a much wider scope. It contemplated the inclusion also of all works relating to the county, though written by persons unconnected therewith; and it went even beyond this, for it was proposed to embrace therein also pamphlets, political tracts, literary and scientific papers, reports of societies, patents, drawings, music, songs, extracts from sale catalogues, maps, MSS., &c. Some of these additional subjects, though not falling within the usual range of a *Bibliotheca*, contain a great deal of information of a very valuable character. In illustration of this we may refer to the selection from the immense mass of the Civil War Tracts of those which relate to transactions in, and affecting, Cornwall during that lamentable internecine strife. How far the list is complete we are unable to say; but the collection is of very great value to anyone who desires to become acquainted with the circumstances and incidents of the Great Rebellion in the South-western counties, and especially so for one who will undertake the much-to-be-desired task of doing for Cornwall what the late Rev. John Webb has done so well, and in so unprejudiced a manner, for Herefordshire and the surrounding counties. Under other special heads—e.g., "Duchy of Cornwall" and "Mining"—will be found many useful notices.

We regret, however, to say, as stated in our last notice of this work, that our authors, unwisely as we think, have, in a large number of instances, exceeded even the wide limitations of their own programme by the insertion of the names of persons who have never written anything upon Cornwall or upon any other subject. Many examples of this might be adduced, but it is undesirable to occupy space by inserting them; and, after all, though this is a blemish to be regretted because it unnecessarily increases the bulk of the work, it is an error on the right side. For, although it is not to be expected that the great diligence and labour bestowed by the authors on the work, which is apparent on every page, has enabled them to disinter every pamphlet, or even every work of a more ambitious character, connected with Cornwall and Cornishmen,

they have produced a *Bibliotheca* which is unrivalled in any other county.

The first two volumes of the work contain an Alphabetical List of Authors, supplemented by concise biographical notes, so that it partakes of the character of a biographical dictionary as well as of a *Bibliotheca*. This is followed by a description of the several works each author has written, with, occasionally, literary notes thereon. Vol. iii. commences with a list of works which could not be included under the names of authors, and which are here classified under the heading of "Subject" and "Place." In this division will be found the Civil War Tracts, &c., to which we have alluded above, and various other interesting matter. And because, during the long period which had elapsed between the time when the first sheets were sent to press (1869) and the completion of the printing, many new books relating to the county had been issued, some of them by authors whose names had already appeared, and others by persons whose names had not been included in the first list, and because of the discovery of other works which had been accidentally omitted, it was found necessary to print a supplemental list of authors. This renders the work as complete, up to the time of publication, as a work of this nature can be expected to be. It contains a vast amount of information relating to Cornish literature, Cornish families, and Cornish men, and is indispensable to all who shall in future undertake to write on matters connected with the county. The value of the work is greatly enhanced by a very copious and excellent Index, to which attention is especially called, for it gives many particulars of a very interesting character not readily found in the text.

JOHN MACLEAN.

#### NEW NOVELS.

*The Question of Cain.* By Mrs. Cashel Hoey. In 3 vols. (Hurst & Blackett.)

*In Trust.* By Mrs. Oliphant. In 3 vols. (Longmans.)

*The Autobiography of Thomas Allen.* By the Author of "Post Mortem." In 3 vols. (Blackwood.)

*A Home Ruler: a Story for Girls.* By Minnie Young and Rachel Trent. (W. H. Allen.)

If Mrs. Cashel Hoey's story is not exactly probable, it is, at least, most ingenious and interesting—interesting, that is, in the more worldly parts, for we must confess to caring very little about the beautiful and guileless heroine, Helen Rhodes, whose simplicity very nearly equals that of the heroine of *Ruth*. Surely it would be quite impossible for any school-girl of seventeen to consent to a secret engagement with a young man whose acquaintance she had casually made in a picture gallery, to suffer him to take a house for her, and to agree to take possession of it and his name prior to the contemplated marriage ceremony (which is postponed for Mr. Lisle to take a trip to England), and not have a suspicion that she was doing "anything wrong." Mrs. Cashel Hoey would doubtless urge as the girl's excuse the fact

that she was practically friendless, for the gentleman to whose care her father had left her, and under whose Parisian roof she was then living, was quite unsympathetic, while his wife was coldly unkind. Still, if a woman has no knowledge, she is never without instincts, and these would have speedily helped Helen to gauge the meaning of her lover's proposal. From the moment of his appearance the experienced novel-reader detects that Mr. Frank Lisle is one of the things "that are not what they seem;" and, in spite of much ingenious mystification on the part of the author, one quickly surmises that he is Mr. Frederick Lorton, brother to Helen Rhodes' temporary protectress. A severe illness prevents his returning to Paris and Helen, and he soon falls in love with a professional beauty, who is drawn with a great deal of skill. To unravel the intricacies of this part of the story would be unfair both to author and to reader, but the complication is managed with much cleverness, and is, so far as we are aware, entirely original. Although usually in favour of tragic dénouements, we should have liked a happy ending for Miss Chevenix, the beauty by profession, who had some good in her after all. It is not, however, made very clear what was the reason of Mr. Lorton's attraction for her, as during the period of their acquaintance he seems to the reader entirely without charm. It is also a pity that the title selected was not more appropriate; for the story divides itself so distinctly into two halves, each of which could almost stand alone, that it would have been better to have chosen some catch-word to include both. The more adventurous portion turns on that common event, a robbery of jewels, and has incident and interest enough for two ordinary novels.

It is difficult to feel the reality of a book when heroine number two, aged nineteen, remarks, not ironically, in the year of grace 1881, "You could stop us from going back to this will of 1868 that was made before I was born." Apart from this little blunder, however, there is, as usual, much to like in Mrs. Oliphant's new novel, *In Trust*, though—unfortunately also as usual—we feel that it is rather long. Anne Mountford is drawn firmly and clearly; we respect her, but could have desired for her the gift of humour. Rose, her half-sister, is merely the Phœbe of *Salem Chapel* in a higher sphere, equally true to nature, and equally irritating. The plot is a simple one. Mr. Mountford, a worthy and obstinate country squire, informs his daughter Anne at the opening of the story that, if she persists in a hastily formed engagement with a "Douglas of nowhere," he will leave a large sum of money, which he obtained through his marriage with Anne's mother, to Rose, the daughter of his second wife. Anne, like Catherine in *Washington Square* on a similar occasion, declines to be bullied. Her father makes his will, and leaves the money to her only in trust for Rose, but adds a sealed and secret codicil, providing that should, three years hence, her marriage with "Douglas of nowhere" be broken off, she is to regain possession of her property. We cannot help thinking that the hero has rather hard measure dealt out to him. Like many

another man, he saw the truth of the precept, "do not marry for money, but go where money is," and when the money disappeared what was he to do? All Anne's friends obviously think him very mean-spirited not to marry her without it, and are for ever calling on him and asking when something is to be "settled." But, though he was certainly not very energetic in his search after work, he was not the kind of man to exist contentedly on a few hundreds a-year, and what is the use of undertaking a burden too heavy for your strength? The end of the story seems rather hurried, and Rose's conduct improbable. Three years is a very short period for a girl, who is only "common-place" after all, to unlearn the instincts of the trust and loyalty of a lifetime, and turn into a bundle of selfishness, vanity, and sordid desires. The men of the story are, on the whole, natural, with the exception, perhaps, of Heathcote Mountford, who is a virtuous shadow.

As a combination of vulgarity and dulness, the *Autobiography of Thomas Allen* has seldom been equalled. The description of an English school and the low jokes—if such they may be called—by which the masters were in the habit of instructing the boys, are too repulsive to be quoted; nor do we find much more pleasing the conversation of a gentleman friend of the little school-boy, who loves to talk of the murderers he has seen hanged, and keeps a museum of their relics. The rest of the book is in the same style.

It would be interesting to know how the joint authors of *A Home Ruler* divided their work. It is apparently the first attempt of two very young girls, who have talked over earnestly "what they should do if they lost all their money," and have embodied the result of these conversations in this little story. There is a good deal of promise and vigour about it, and the writers may by-and-by rise to more important work.

LEONORA B. LANG.

#### RECENT VERSE.

*The Festus Birthday Book.* (Longmans.) This book comes not inappropriately to remind the present generation of a volume (or, if anybody likes, a series of volumes) which had for a time a somewhat foolish vogue, and which has since suffered from a somewhat foolish oblivion. It may even be said that Mr. Bailey's work is peculiarly suitable for the rather eccentric use to which, after the example of its betters, it is here put. For the quality of thought in it distinctly exceeds the quality of expression. Posterity is not very likely to decree to the author of *Festus* the position of a great poet; but it will probably, if it troubles itself about him at all, give him that of a thinker nearly always dignified, sometimes profound, and occasionally original.

*Sungleams.* By the Rev. R. Wilton. ("Home Words" Publishing Office.) Those who have enjoyed Mr. Wilton's previous volumes of half-secular, half-sacred verse will find no falling off in this. It consists of fifty rondeaux and fifty sonnets; and not the least part of its interest to a literary reviewer is that it will very likely carry the knowledge of the gracious form of Villon and Marot into not a few circles which would otherwise have known nothing of it.

Mr. Wilton is, it is hardly necessary to say, a diligent student of old English literature, and he has his reward in a command of language at once devout and scholarly, fervent and graceful.

*The King's Missive, and Later Poems.* By J. G. Whittier. (Sampson Low.) This is a pretty little edition, in parchment binding, on hand-made paper with good margins, of, as we understand it, all or most of Mr. Whittier's poems since the collected edition of 1869. It is never either seemly or necessary to criticise such "last fruit off an old tree" as if it were the first fruits of an orchard new in the market; and Mr. Whittier is too old a friend to those who have made acquaintance with him to need recommendation.

*Sir Hervey's Bride, and other Poems.* By J. O'Reilly Hoey. (Marcus Ward.) We rather like this volume, if for no other reason than that it is delightfully unlike other volumes. How many living bards or bardlets, for instance, have we who would dare to write such a stanza as

"There is a rustling in the trees,  
I hear a fairy step draw nigh,  
A form of light my vision sees,  
How timidly her lambent eye  
With which the opening orbs that gaze  
And gaze again in mute amaze  
And still astonishment, may try  
In vain, though in their prime, to vie  
Around her roams, as by she flees."

There is something very pleasing in these Byronic or would-be Byronic echoes. They testify to an independence of judgment which makes one more than willing to pardon a certain feebleness of execution. Mr. Hoey's minor poems are, perhaps, too provocative of wicked feelings worthy only of Mephistopheles and his like. A complimentary address to Osman Pasha, in which the panegyrist politely remarks (or makes the late Alexander II. remark),

"Pasha, permit this cymetar  
Once more to dangle by thy side;"

"Florianna," a serenade, which, if it be intended for a burlesque (but of this there is no sign), is quite superlative; and above all a poem on Agincourt, where Mr. Hoey, evidently well acquainted with the chronicles, has the pluck to write,

"With palsied step from gory fields  
They rush where blood was vainly shed"

—all these things are too much for us; we do not feel equal to the occasion.

*Patrick Hamilton.* By T. P. Johnstone. (Blackwood.) The annals of the Scotch Reformation are not exactly calculated to inspire bards. It is true that it is not long since we came across a person who thought proper to exult in verse over the brutal and cowardly murder of Card. Beaton; but there are probably not many people nowadays of so strong a stomach. The death (less brutal and cowardly, because there was law for it and fair warning given to the victim, but sad enough) of Patrick Hamilton, which, in a way, was the cause of Beaton's and many another tragedy, is a subject which no man need be ashamed to handle sympathetically. Mr. Johnstone has made a touching little drama of it. His verse is unequal, occasionally good in dialogue, generally weak in the lyrics which intersperse it, but oftener good than bad. The steadfast faith of the young martyr, and his peculiarly affecting circumstances, are well brought out. We ought to add that there are two rough but attractive etchings of St. Andrews and Maryburgh respectively. The poem on Columbus which ekes out the little book is not strong.

*Darroll, and other Poems.* By W. C. Spens. (Edinburgh: David Douglas.) This volume consists of a long narrative poem in the

Spenserian (we are not punning) stanza; of some minor pieces of the same general kind; of a considerable number of epitaphs, mostly in sonnet form; and of many miscellaneous verses, including some on the subject of the Glasgow Bank directors with which we have the pleasure of disagreeing very heartily. Formally there is not much to be said for or against Mr. Spens' verses. He has, however, begun one sonnet, with a line,

"Hereditary leader of the kirk,"

which will always dwell in our memory together with the exploit of a lesser genius,

"Lieutenant-Colonel to the Earl of Mar,"

and that of an infinitely greater

"Lord Lyon King at arms."

It would take a long time to explain the community of the ludicrous in the three, but it exists.

*Legends of the Heart.* By Gerald Bendall. (Holmes.) Mr. Bendall (from whom, if we mistake not, we have had some work of not inconsiderable merit in the past) has, among the cunning bards who bribe their critics with pretty books, hit upon not the least pretty. His few poems are presented in a square 16mo, bound in blue boards, with parchment back, and with paper, not *verge*, but thick, destitute of unholy gloss, and altogether satisfactory. Of some of the poems which this paper bears on its surface we are not quite prepared to pronounce favourably. "The Dutchman's Doom" deals with a story which wants a stronger hand than Mr. Bendall's; and "The Demon Lover," which follows it, is unwise in thus challenging a comparison with the magnificent ballad of the same name which every lover of poetry knows. But we have found in "The Waltz" some stanzas which are worthy of the *format*, and no lover of books can say more.

"Fast and fast; fast and fast;  
Could the measure only last,  
Free from break or rude disaster,  
Ever faster, ever faster,  
Till our life were overpast."

"Turn and turn; turn and turn;  
Till the heaven and earth should burn,  
Stars go out and leave no traces,  
While through the eternal spaces  
Flying, we new love might learn."

There are many claims to the title of poet, but by common consent not the weakest is to have said what many other people have thought.

*Hypermnestra: a Graeco-Egyptian Tale.* By G. G. Turner. (Longmans.) We prefer, on the whole, two lines which appear unsigned on Mr. Turner's title-page to anything within the covers of his book:

"Lust spits its light on modern days from fat  
hysteric wick,  
Lust writhe in alcoholic dreams for biting kisses  
sick."

This is followed by an antithetical couplet on love, of which we are glad to hear that Mr. Turner has a much better opinion. But the notion of a fat hysteric wick is pleasing and characteristic of the maker—the candle-maker, in short. Of the body of the poem we cannot say very much except that "aerial" rhymes to "dell," and that Mr. Turner describes *Hypermnestra* by the line—

"Pale grew the red pomegranate near the hue of  
her scarlet mouth."

Evidently the red pomegranate was afraid of the scarlet mouth's intentions. One more example of Mr. Turner's style may perhaps suffice—

"Thus to the traitor sitting *solitaire*  
Through the quiet opening door crept a small  
air."

*Lays of a Londoner.* By Clement Scott. (David Bogue.) Mr. Clement Scott's poems are of a sufficiently amiable kind, being chiefly poems of the affections, enforced with satire of the sort common in the pages of *Punch*, where, indeed, it would appear that not a few of these verses have figured. No generous soul can quarrel with a Muse which pleads for lifeboats, compassionates the woes of City clerks, and, after her manner and powers, criticises life in an affectionate Christmas-carol and hot-punch sort of fashion, not without intervals of patriotism, sexual affection of a decent kind, and other respectable emotions. Every now and then, when the author follows very closely some of Thackeray's rhythms, he exhibits very considerable powers of imitation. Perhaps the only caution he needs is to take care that his satire is just. A wrong note here is fatal. Thus, for instance, his City clerk ironically remarks of the British workman, "He'd strike if they gave him my weekly wage; and they never ask him for the income-tax." Now, "my weekly wage" has just been stated to be under a pound, and we certainly are not aware that income-tax is levied on any income of fifty pounds a-year, be it clerk's or workman's.

*The League of the Iroquois.* By Benjamin Hathaway. (Chicago: Griggs; London: Frubner.) As far as the ordinary critic can discern, this is an attempt to tell again in verse much the same story as Mr. Longfellow told a quarter-of-a-century ago in "Hiawatha;" but with a sterner attention to the authorities and with less attention to poetical requirements. Whether Hayowentha is the same as the husband of Minnehaha or another than he must be left to the anthropologist to say. The profane reader judges that he is another than he, and does not like him quite so well. However, our old friends Pau-puk Keewis and Kabibo Nokka, and Shingebis the Diver, and a great many more of them re-appear in rhymed eight of iambs instead of in Mr. Longfellow's fluent trochees. Yet Mr. Hathaway will bear reading even by most persons who remember the very strong man Kwasind and the wrinkled old Nokomis, and their fellows, through a kind of mist of childish memories which maturer judgment does not care to reduce to strict critical appreciation. The book is nicely printed, and its cover is plentifully adorned with totems.

*Daphnis, and other Poems.* By H. G. Hellon. (Kegan Paul, Trench and Co.) It is an appalling, but, we fear, a certain, fact that Mr. Hellon thinks the second syllable of *Artemis* long. We read,

"The heart that proud *Artemis* moved."

And with that infinite, but much misunderstood, charity which always animates the heart of the critic, we hoped that it might be scanned in anapaests, thus:—

— | ~ ~ | ~ ~ |

although the corresponding line

"I live, live only to be loved"

was but too plainly an iambic dimeter. But elsewhere, alas! there is

"With *Artemis* the huntress maid."

And though this might, as it stands, certainly be scanned as an iambic dimeter, the corresponding lines are but too clearly anapaestic—

"And away to the forest shade."

So there is no help for it. Now it is not an unforgivable crime to be ignorant of Greek, but it is an unforgivable crime to write poems about Greek subjects and to make false quantities in them.

*Forest Songs, and other Poems.* By John Todhunter. (Kegan Paul, Trench and Co.) In this tiny volume the inspiration of Heine seems to have been uppermost with Dr. Todhunter, or, rather, the wish to be inspired by that great

poet. The alternations of wild legend and short sentimental song and pastoral description are obviously Heinesque (we abstain ascetically from a horrible pun which we have never seen in print, but which, no doubt, has been printed in reference to imitations of this particular inimitable). We have read worse things of the kind than the following

"SONG.

"As drooping fern for dewdrops,  
For flowers the bee,  
Wave-weary birds for woodlands,  
Long I for thee.

"As rivers seek the ocean,  
Tired things their nest,  
As storm-worn ships their haven,  
So I thy breast."

*Douglas, and other Poems.* By J. M. Sutherland. (Douglas: "Times" Office.) This is one of those volumes of local verse which show, at worst, a healthy local feeling and a desire after literary excellence. Nor are Mr. Sutherland's verses by any means the worst of their kind.

*Bits of Life.* (Trübner.) This little book is anonymous; but, as the well-known cracked globe, o'erarching rainbow, and at *spea infracta* are engraved very carefully on the title-page and cover, it is to be supposed that the author is of the family of Hope. His device is prettier than his verse. The book is a kind of dialogue or semi-dramatic narrative in very rough octosyllables. The principal interlocutor's name is Charles, and he is designated at the head of his speeches by the hideous abbreviation, "Chas." Here is one of the deliverances of "Chas." :—

"It was, I own. I'm sorry now.  
The poor lady knows not how  
One can hate sin and stop away  
From churches on the Sabbath Day.  
But there are heaps outside the Church  
Who leave those in quite in the lurch,  
And foremost stand to aid their race,  
'Gainst all the ills that here have place."

There may be "heaps" who can see why this sort of slovenly twaddle should be forced into doggerel verse. If so, the heaps leave us quite in the lurch.

*A Book of Lyrics.* By Joseph Skipsey. (David Bogue.) This is a new edition, apparently with additions, of some poems by a working collier in the Newcastle coal-field. They can be praised with much less than the allowance usually necessary in such cases; they are often melodious, and seldom either trivial, grotesque, or heavy.

*The Blessed Hope.* (Williams and Norgate.) This dainty volume contains three lyrics and 234 "Shakespearian" sonnets, all inspired by the writer's perplexity at the loss of an idolised father. All the sonnets bear superscription *in nomine patris* (not *in nomine*), as if the writer's father were their moving force. Almost all of them contain hypermeters; a few of them contain commendable lines in couplets; the whole of the first lyric is pretty, some of it rather more than pretty.

#### NOTES AND NEWS.

A RUMOUR has reached us that the publication may be expected shortly of an important work by Carlyle, hitherto quite unknown, describing a tour in Ireland in 1849.

THE Vice-Chancellor of the University of Cambridge has convened a meeting of members of the Senate for Tuesday next, January 31, at 2.30 p.m., in the Cavendish Laboratory, to take steps to procure a portrait of the Chancellor, the Duke of Devonshire, who has filled that high office for twenty years, and who himself built and fitted out for physical research at his

own cost the building in which the meeting will be held.

WE hear from Oxford that some of the friends and old pupils of Prof. Fowler have decided to commemorate his election to the Presidency of Corpus Christi College—or rather his departure from Lincoln—by presenting him with a testimonial, towards which more than £150 has already been subscribed. It is proposed that the testimonial shall take the form of a silver *épergne*.

THE philosophical faculty of the University of Breslau has conferred upon Mr. T. W. Rhys Davids the honorary degree of Philosophiæ Doctor, in consideration of the services he has rendered to the comparative study of the history of religious belief. We may add that Breslau has the reputation among German universities of being specially stringent in the granting of such degrees.

MR. E. B. NICHOLSON, of the London Institution, has resigned his seat upon the Council of the Library Association.

WE understand that the interesting article in the current number of *Blackwood* entitled "Marginalia" is from the pen of Miss Helen Zimmer, who has here rescued from oblivion some of the most characteristic thoughts of Coleridge.

WE hear that Messrs. Besant and Rice have received a commission to write a story for the summer number of the *Illustrated London News*.

MR. KARL BLIND will contribute an article on "The Constitutional Conflict in Germany" to the forthcoming number of the *Nineteenth Century*.

AN inaugural lecture was delivered last week at Bedford College, Portman Square, by Mr. J. Cotter Morison, on "The Higher Education of Women considered in Relation to Women's Rights and Women's Duties."

THE Government have made a grant to Aberdeen University for the purpose of extending the library buildings at King's College so as to provide accommodation for 25,000 additional volumes. The grant will be included in the estimates in the ensuing session of Parliament.

THE third edition of Prof. Hales' *Milton's Areopagitica* is now in the press.

A MEMBER of the Browning Society calls our attention to the curious misunderstanding, by the Cambridge Public Orator, of the word *faultless*, in the description of Andrea del Sarto as "the faultless painter." The epithet is well known to apply to the painter's unerring accuracy of line and style; but Mr. Sandys, in his deservedly praised oration on the conferment of the Doctor of Laws degree on Mr. Browning at Cambridge, actually rendered "faultless" by *sine fraude*, if the contemporary report is to be trusted; and this, when Andrea's swindling King Francis out of a large sum of money is one of the most notorious events in the artist's life.

A CORRESPONDENT writes to us to complain of the length of time taken by the Library Association to issue the volume descriptive of their proceedings at Edinburgh in the autumn of 1880. It is some months ago since it was stated that nothing but the index was required for the completion of the volume, but it still remains in the press. The council should endeavour, in the interests of the society, to expedite its publication.

THE Hon. Roden Noel proposes to deliver a lecture on "Mr. Robert Browning," with readings from his works, at the Lecture Hall, Jasmine Grove, Anerley, at 8 p.m. on Tuesday next, January 31. This will be a repetition of

a lecture given at the Midland Institute, Birmingham, last November.

THE next volume of Messrs. Kegan Paul, Trench and Co.'s "Parchment Library" will consist of the dramatic essays of Charles Lamb, with a Preface by Mr. J. Brander Matthews on Lamb as a dramatist and as a critic of the drama. The frontispiece will, probably, be an etching after Hogarth's portrait of "Peg Woffington," now in the Garrick Club.

WE learn that Mr. Charles Welsh has in preparation a work, which will be published by Messrs. Griffith and Farran, entitled *A Book-seller of the Last Century: being Some Account of the Life of John Newbery and of the Books he published, with a chapter on the later Newberys*. "The philanthropic publisher of St. Paul's Churchyard," as Goldsmith, in his *Vicar of Wakefield*, has called him, is a figure of some interest in the literary history of the eighteenth century. He is not only to be remembered as the publisher of *Goody Two Shoes*, and kindred works. He was intimately associated with Dr. Johnson, Oliver Goldsmith, Smart the divine, and many others; and he busied himself with projects of a seemingly more important character than the publication of works for the young. The volume will be supplemented by an alphabetical list of books published by the Newberys from about 1730 to 1800, which the author has spent some years in compiling.

MESSRS. S. BAGSTER AND SONS will publish in a few days Hudson's *Critical Greek and English Concordance of the New Testament*, revised by Dr. Ezra Abbot, Professor of New Testament Criticism in Harvard University, and one of the American Revisers. This Concordance claims to show how every Greek word is translated in the Authorised Version in every passage where it occurs, and also to exhibit the various readings of the most ancient MSS. and of the best critical editions.

THE New Shakspeare Society's first book for this year will be Mr. Furnivall's re-edition of the *Digby Mysteries* from the MSS., to open the seventh series of the society's publications, that of the Mysteries, Miracle-Plays, Interludes, &c., before Shakspeare's time. These Mysteries are in the North-Midland dialect, but contain only three of the full series. Mr. Furnivall, however, adds to those before printed a fourth, in two parts, on "The Burial and Resurrection of Christ," which evidently once belonged to the Digby volume. The fragment of the "Morality of Wisdom, who is Christ," formerly treated as one of the Digby set, will now be called one of the "Macro Moralities"—whose MS. contains a complete copy of it. It is in the Southern dialect, introduces the Holborn Quest, and must be put down to London. The book is nearly ready.

NEXT week will be issued to the members of the Hunterian Club part vii. of the Bannatyne MS. (completing the text), and Lodge's *Looking Glasse for London and England* (1598), these two being the second instalment for the seventh year. There will shortly be ready for the eighth year *Euphues Shadow* (1593), *Poorer Mans Talente* (? 1623), and miscellaneous pieces. The following also are in preparation :—(1) Bibliographical Index to Lodge's works; (2) Mr. Edmund W. Gosse's *Life of Lodge*; (3) Notes, Glossary, and Indexes to Lodge's works; and (4) Notes, Glossary, Indexes, &c., to the Bannatyne MS.

*The Confessions of a Medium* is the title of a book which Messrs. Griffith and Farran will publish immediately. It is written by one who states only what he knows, and the truth of the narrative is vouched for. They will also issue *The Care and Treatment of the Insane in Private Dwellings*, by Dr. Lionel A. Weatherly, being

an amplification of a paper recently read by him at a meeting of the Medico-Psychological Society at Bethlehem Hospital.

THE same publishers have in the press a story of an allegorical character, entitled *Halek*: an Autobiographical Fragment, by Mr. John H. Nicholson; and a tale by Miss Cecilia Luashington, entitled *Over the Seas and Far Away*.

A NEW edition of the *Bibliography of Ruskin*, corrected and augmented to the present time, is in the press, and will be issued shortly by Mr. Elliot Stook.

THE National Federation Union have republished, in pamphlet form, Mr. Sydney Buxton's Dialogue on "Free v. Fair Trade," which appeared in the December number of the *Contemporary*.

MR. W. DAVENPORT ADAMS will contribute to the February number of the *Theatre* an article on "The Decline of Pantomime," and to the February number of the *Churchman's Shilling Magazine* a paper on "A Clerical Essayist."

MR. HORACE WEIR, a popular writer of short tales, has prepared a series of stories, entitled *Romance and Reality*, for publication in the provincial and colonial press, and, eventually, in book form. The dramatic incidents of these tales are not drawn from the imagination, but are supplied by the newspaper accounts of actual occurrences.

MR. F. ROSS, author of *Celebrities of the Yorkshire Wolds*, will shortly commence in the *Hull Miscellany* a series of papers on "The Poets and Poetry of Yorkshire."

AMONG the most valuable additions to the Advocates' Library at Edinburgh during the past year is the collection known as "The Biddell Papers," bequeathed by the late Earl of Crawford. This consists of 129 volumes of historical and genealogical documents and annotated books.

ON January 21, the editor of the *Glasgow Herald* was presented with his portrait, in recognition of his public services, and in anticipation of the centenary which that newspaper is about to celebrate.

WE have mentioned some recent gifts to the Peel Park Museum, Salford, which is one of the great holiday resorts of the Lancashire artisans, and not of them only, but of their "mates" for a hundred miles. Since we wrote, it has received from Mr. O. Heywood the present of Calderon's "Queen of the Tournament." An effort is being made to make the collection of still greater educational value by means of lectures pointing out the historical and scientific value of the contents of the museum, art gallery, and library. The first lecture of the course was given by Mr. W. E. A. Axon, whose "Visit to the Peel Park Museum" was an introductory sketch of the uses and value of museums and picture galleries. Mr. W. H. Bailey follows with "Inventors of Spinning and Weaving Machinery;" Mr. J. G. Mandley, with "Salford in the Olden Time;" Mr. George Evans discourses on "Thackeray;" Mr. A. Heywood, jun., notes the connexions of "Time and the Almanac;" and Mr. J. H. Nodal concludes with "Lancashire in Fiction: a History of the County as told by its Novelists." The lecture system should be more fully developed in connexion with libraries. At Liverpool lectures have been highly successful for some years past, and a special hall has been built. At Leicester the Curator of the Museum gives an occasional "gossip" on natural history. These seem to us excellent methods of awakening attention and teaching visitors really to see the objects set before them.

THE annual meeting of the New York Historical Society took place on January 3. Among the contributions to the library during the past

year were mentioned the genealogical and heraldic library bequeathed by the late Stephen Whitney Phoenix; and a third contribution of works relating to American history from the library of the late George Brinley, of Hartford.

MR. H. H. BOYESSEN writes to the *New York Critic* that Mr. Kristofer Janson, one of the four authors who receive an endowment from the Norwegian Parliament, has settled in the United States as a Unitarian minister. His reputation is founded upon a long series of tales of peasant life, written in the vernacular, which is closely allied to the old Norse or Icelandic language. It is to continue his labours among the people, though in another sphere, that Mr. Janson has emigrated to America, where the total number of persons of Scandinavian descent is estimated at 600,000.

WE are promised a contribution of some importance to the history of the Massacre of St. Bartholomew from the pen of Hermann Baumgarten, Professor of History in the University of Strassburg. It will be entitled *Vor der Bartholomaeusnacht*, and will be published by Messrs. Trübner, of Strassburg.

THE *Oedipus Tyrannus* of Sophocles was to be produced at the Globe Theatre, Boston, U.S.A., on January 23, and at New York a week later. The actors are all professionals, with the exception of Mr. George Riddle, a professor at Harvard College, who takes the part of Oedipus. It is stated that Mr. Riddle is also the only one who will speak in Greek. There is to be a chorus of sixty, and an orchestra of forty performers. The music is that written by Mr. Paine for the performance at Harvard last year.

M. ROTHSCHILD is about to issue a serial illustrated work which will do for Paris what he has already done for Venice and Florence. The choice of illustrations has been entrusted to MM. Cousin and Champeaux, and among the contributors are MM. Jules Simon, de Chennevières, Yriarte, Leroy-Beaulieu, Claretie, Sarcey, and Laugel. The first part will appear in February.

A COMMISSION was lately formed at Piatigorsk for the purpose of examining and defining the exact place of the duel which proved fatal to the Russian poet Lermontov. The conclusion arrived at, after close investigation, is that the spot hitherto accepted is not the true one. A contemporary witness named Evgraf Chalov states that the duel occurred near the foot of the Mashuka Hill, and other evidence corroborates this view. The commissioners invite further evidence, but in default of this it is proposed to proceed with the erection of a memorial to the poet on the spot indicated by Chalov.

K. KONEGEN, of Vienna, is about to publish a new edition of the complete works of Friedrich Schlegel, revised and annotated by Dr. J. Minor.

AN interesting work on the historical, geographical, and philological importance of German family names has just appeared from the pen of Dr. Albert Heintze, who has devoted years of research to this subject (Halle: Waisenhaus).

THE third *fasciculus* of the fourth volume of the Dictionary of the Accademici della Crusca has just appeared at Florence. It comprises from the last section of the word *Disarcicato* to the fifth of *Disunito* (pp. 481-720).

SIGNOR GARGIOLLI is editing, with introduction, notes, variants, and appendices, an unpublished work by G. B. Niccolini, entitled *Vespro Siciliano*.

AN important sale of books is fixed to take place at the Hôtel Drouot on February 6 and

the five following days. The catalogue (which is published by M. A. Durel) includes original editions of the *Discours de la Méthode*; Bossuet's *Oraisons funèbres*; the *Roman de la Rose*; *Les faits maître Alain Chartier*; Jean Marot, Bonsard, Scarron's *Virgile travesty*, *Manon Lescaut*, the *Mémoires de Commines*, &c., the *editio princeps* of Herodotus and of Thucydides, the Aldine Plato, &c.

THE *Revue critique* for January 9 contains an appreciative review, by M. James Darmesteter, of Mr. F. W. H. Myers' *Wordsworth in the "English Men of Letters" series*.

THE American Library Association has prepared a Bill, to be laid before Congress, by which one library in each congressional district, as well as another to be named by the representative, and also every library in the United States containing over 100,000 volumes, shall receive gratuitously all public documents ordered to be printed, provided that the libraries undertake to preserve them for public use.

B. Q.: a Biographical and Bibliographical Fragment. This dainty brochure of twenty-two pages, printed on hand-made paper, with wide margins, not a letter more on the title-page than those we have transcribed, and short Arabic inscription occupying the last page, is a specimen of the limited editions which are so frequently issued at present to be joys for ever to the book-collector. Only twenty-five copies have been struck off, and presented by Mr. Wyman to a little association of enthusiastic bibliographers, or, as they appropriately term themselves, the "Sette of Odd Volumes." The book is a biography of Mr. Bernard Quaritch, with full particulars of the Catalogues he has issued; from the first, in 1848, which consisted of a single leaf, to the magnificent volume of bibliography sent out in September 1880, containing 2,395 pages and describing 28,009 books. Mr. Quaritch, as might be expected, was a book-lover from his birth, and ought to have first seen the light in a library, though the fact is not stated in this "Fragment." But every line of it shows the persevering activity of one pre-eminent among the Sosii of the century.

MR. HARRISON has sent us Burke's *Peerage, Baronage, and Knightage* for 1882, being the forty-fourth edition of that invaluable work. Among the new features is the Table of Precedence which Sir Bernard Burke issued as a separate volume last summer, and which was noticed in the ACADEMY at the time (see No. 481). There is also here given for the first time a memoir and the arms of the Duke of Albany, and a list of the holders of the Albert medal. With regard to the new territorial designations of regiments, we notice that such *post-nomina* as "the Buffs" are omitted. Unless we are greatly mistaken, these still remain part of the official name—in brackets.

#### ORIGINAL VERSE.

##### BEFORE SUNRISE

ON HELVELLYN.

OVER the peaks of huge crags uncreate,  
Across the stricken stars usurped domains,  
Through mutinous vapours to her realm terrene—  
Behold she comes, the morn inviolate.  
Girdled with fire, radiant of face, elate,  
Leaping the lit waves of the steep ravine—  
Here first since eldest time the earth hath seen  
Her venture's trail, in heaven articulate.

Say not the world grows old: Behold arelong  
Forth from the mountains come the swift and strong  
Who scale the heights to greet the deathless day;  
And in the abysmal plains the sick and sore  
Following their feet shall see the imminent gray  
Glad dawn has never breathed o'er sea or shore.

T. HALL CAINE.

## OBITUARY.

MR. DANIEL PUSELEY, who died at 21 Rochester Road, on the 18th inst., aged sixty-seven, was an industrious compiler; but, as most of his works appeared under the *nom de guerre* of "Frank Foster," his name was but little known to the world. Under that pseudonym he published a variety of works, the most successful of which were a *Popular Guide to the Watering Places of England and Wales* and a *Colonial Directory of Sydney, Melbourne, and New Zealand*. The first edition of the latter work appeared in 1862; in 1865 a fifth edition was issued in three volumes. A cognate work on the rise and progress of the three colonies of Australia, Tasmania, and New Zealand came out under his own name; and in his own proper person he came forward as the author of *A Record of Eminent Commercial Houses* (1858 and 1860). He laboured to the last. A few weeks ago there appeared from his pen an attack on the financial swindles of the day—a fruitful field for employment which no man can exhaust.

## MAGAZINES AND REVIEWS.

THE strongest portion of the *Westminster Review* consists in its survey of contemporary literature, which continues to be well sustained. In the notes upon India we are glad to observe so little said about Afghanistan. In nothing was the policy of the late Indian Administration more mischievous than in the absurd predominance which it induced English opinion to assign to foreign policy. There is still room for improvement in this respect in the weekly telegram of the *Times*. In the current number of the *Westminster* attention is rightly drawn to the pressing question of the education of the children of poor Europeans and Eurasians. In the face of the large sums annually subscribed at home for Indian missions, it is significant to hear that the Government proposes to grant £10,000 a-year, from taxation on the natives, to provide white children with Christian instruction. Another article, entitled "The Basis of England's Power in India," also deserves notice. The writer evidently knows something of India; and while we are not concerned to dispute his main proposition—that the natives do not constitute a nationality—we may point out one or two of those mistakes in fact from which no writer on Indian matters can keep free. It is the reverse of the truth to say (p. 26) that the Bengalis "are, of course, with few exceptions, Hindus in religion;" or (p. 29) that "most of the Mahomedans of India are, like the Persians, heretical Shiāhs." According to the census of 1872, the Mahomedans of Bengal numbered 20,000,000, or almost one-third of the total population; and among these, at least, it may safely be said that the Shiāh sect counts only a few dozens. Again, the Gurkhas—i.e., those in our own army—are twice described as Buddhists! The Gurkhas proper, who form the ruling race in Nepal, are Hindus; it is only the subject population that is Buddhist. Our Gurkhas, it is needless to add, are members of the ruling race.

THE *Revue historique* publishes a chapter of a forthcoming work by the late Paulin Paris, father of M. Gaston Paris, consisting of studies on various points of the history of Francis I. The specimen now published shows that the book will contain much serious and thorough criticism. The present article is on "Louise de Savoie et Semblançay," and is a vindication of Louise from the charges so generally repeated, that she diverted money from Lautrec in his Italian campaign, and ruined Semblançay to screen herself. M. Callery writes an excellent paper on "Les Douanes avant Colbert et l'Ordonnance de 1664;" it is full of details of

great importance for the economic history of France. The most valuable work undertaken by the *Revue* is its attention to historical bibliography; and a paper by M. Cordier on the literature relating to China is an admirable addition to this important branch of historical study. It is noticeable that England, which, perhaps, contributes least to European history, does most for the Oriental peoples.

In the *Revista Contemporanea* of January 15 Señor Rodríguez Villa publishes the autobiography of Fernandez de Medrano (1646-1705), who was head of the Spanish Military School at Brussels at a time when no scientific instruction could be obtained in the mother country. After long interruptions, R. Ferrer's descriptive letters on the Almaden quicksilver mines, and Diaz Sanchez' "Guia del Archivo de Simancas," are resumed. The latter catalogue the papers concerning the Inquisition and Ecclesiastical Patronage. The extreme jealousy of the Inquisition is shown in the "Informaciones de Genealogía y Limpieza de Sangre de los Empleados y dependientes del referido Tribunal." Capt. S. Bermejo continues his "Impresiones de Viaje," giving a decided preference to the arsenals of Kiel and Berlin over those of Austria. Becerro de Bengoa treats of various applications of electricity to the conveyance of sound, signs, and images.

## TWO LETTERS OF THE DUKE OF MARLBOROUGH.

I.

"Au camp de Soignies  
"ce 22<sup>e</sup> août 1707

"Monsieur  
"J'ay receu les deux lettres que vous m'avez écrites le 9<sup>e</sup> et le 12<sup>e</sup> de ce mois et vous assure que Monsieur Stanyan m'a fait un véritable plaisir de me recommander un correspondant dont les lumières nous pourront enfin tirer de l'incertitude ou nous avons esté pendant toute la campagne touchant nos affaires en Allemagne. Pour moi j'ay toujours esté du sentiment que les troupes n'y manquoient point, mais il est vray aussi qu'on ne doit jamais s'attendre à aucune chose considerable des troupes quelques nombreuses qu'elles soient sans des chefs non seulement de capacité mais aussi d'un zèle et accord unanime et disinteressé pour le bien du service. Ainsi il n'y a rien plus à souhaiter de votre costé que l'arrivée de S. A. E. de Hanovre à la teste de l'armée, car il y a tout lieu d'espérer que par son credit et autorité ceux qui sont à cette heure en division seront réunis et les affaires remises autant que le peu de tems qui reste pour la campagne le permettra.

"En ce pais icy nous avons fait tout notre possible pour joindre les ennemis, sans les pouvoir engager, et le tems pluvieux qu'il a fait depuis plusieurs jours nous a obligé à quitter la poursuite, car les chemins sont presque partout impraticables. Si le bon Dieu nous fait naître enfin l'occasion d'entreprendre quelque chose, on ne la negligera point. Vous m'obligerez sensiblement de continuer à me donner de vos nouvelles et s'il se passe quelque chose icy qui le merite je vous en ferai part aussi. En attendant je vous prie d'être assuré que je serai fort aise de vous marquer partout l'estime avec laquelle je suis

"Monsieur

"Votre très humble et très obéissant serviteur  
"Le PR. ET DUC DE MARLBOROUGH."

II.

"Au camp d'Aure ce 1<sup>er</sup>  
"Septembre 1707

"Monsieur  
"J'ay receu l'honneur de votre lettre du 22<sup>e</sup> du mois passé et vous suis sensiblement obligé du plan que vous m'avez envoyé de la situation des deux armées. On me mande depuis que Monsieur le margrave de Bareith étoit sur le point de quitter l'armée avec quelques autres généraux, de sorte que je me flatte que Monsieur l'Electeur d'Hanovre trouvera une meilleure harmonie entre ceux qui resteront que par le passé. Nous sommes marchés hier du camp de Soignies à celuy tant proche de

Cambron, mais les ennemis ayant appris notre mouvement ont marché à la petite pointe du jour avec précipitation ayant laissé du bagage et des provisions dans leur camp, dont nos soldats ont profité. Ils sont postés à présent entre Mortagne et Tournay, l'Ecaut derrière eux dans le dessein selon toutes les apparences de passer cette rivière sur le premier mouvement que nous ferons en avant.

"Je suis très sincèrement Monsieur  
"Votre très humble et très obéissant serviteur  
"Le PR. ET DUC DE MARLBOROUGH."

These two letters and the fragment of a third—dated "Au camp de Hulchin [?] ce 25 Septembre 1707"—are to be found in a volume of MSS. belonging to the public library of the town of Bern (MSS. Hist. Helv. xiii. 145). They are directed "à Monsieur le General Major d'Erlach," the same whose biography may be read in the *Allgemeine deutsche Biographie*, vol. vi., p. 216: Hieronymus von Erlach, born 1667, fought on the side of the Imperialists in the War of the Spanish Succession, and was a regular correspondent of Prince Eugène of Savoy.

ALFRED STERN.

## THE MYTH OF ER.

THE Myth of Er, the son of Armenios, with which Plato concludes his *Republic*, is one of the most charming episodes in his works. The story, however, was not of his own making. Though Plato calls Er a Pamphylian, the name of his father Armenios points to Armenia, and it was from Armenia that the legend originally came. M. Emine, in his Russian translation of Moses of Khorene (pp. 254, 255), has pointed out that Er is Ara the Beautiful, beloved by Semiramis, the Assyrian queen, according to Armenian legend, and slain on the field of battle. Mar Apas Catina, from whom Moses of Khorene quoted the story, related how that Semiramis, in passionate love for the beauty of the Armenian king, vainly sought his hand, and, all other means of persuasion failing, marched against him with the army of Nineveh. A fierce battle was fought on the plain of Ararat, so called from the hapless prince who was slain there by the soldiers of the Assyrian queen. In an agony of grief Semiramis called her gods to help, and essayed, by magical art, to recal the dead man to life. But though her efforts were useless, she calmed the Armenians by pretending that "the gods Aralez" had restored him from death. As M. Emine says, it is clear that in the original form of the myth the dead man was actually brought back to life; it was the influence of Christianity which caused this portion of the story to be modified. The spirits called Aralez still had their place in popular belief as late as the fourth century of our era, since, according to Faustus Byzantinus (v. 36), it was said of the Armenian general Mushegh (A.D. 384) that, "as he was a brave man, the Aralez would descend and restore him to life."

Now, there can be little doubt that in the legend of Ara we have but a repetition of the Myth of Aphrodité and Adonis, of Istar and Tammuz, of the beautiful Sun-god beloved by the goddess of nature, and slain by the winter only to return once more to life. M. Fr. Lenormant has long since shown that Semiramis is the Assyrian Istar, the Greek Aphrodité; and the story of Semiramis, borrowed by Ktésias from Persian writers, is but a rationalised form of the old Babylonian myth of the goddess of love and war. The Armenian Ara is the Accadian Tammuz, whom the Phœnicians called Adonai, Adonis, and we must see in him a name of the ancient Armenian Sun-god.

But who were the Aralez? The Armenian writers tried to explain their name from the verb *lezul*, "to lick," as though they had

"likened" the wounds of Ara and so restored him to life. This is plainly a mere piece of *Volksetymologie*. Babylonian mythology, however, here comes to our aid. The under-world to which Tammuz descends is called in the Accadian legend the land of Arali; and Arali, though the land of the dead, is also the land where "the waters of life" bubble up from under the golden throne of the spirits of heaven and earth. Arali, moreover, was the lofty mountain on whose summit the heaven rests, and was rich with gold, like the regions beyond the Hyperborean mountains in Greek story. It lay in "the extremities of the north," the place of shadows, and seems to have been identified in later times with the mountains of Ararat, the very spot where the tale of Ara was localised. We are, therefore, tempted to believe that the gods of Arali were the prototypes of the "gods Aralez" of Armenian legend.

The belief, I think, becomes almost a certainty when we turn to the list of Assyrian kings given by Ktésias. Ktésias professed to have derived his statements from Persian originals, and the progress of cuneiform research has supplied us with evidence that he spoke the truth. The earlier part of his Assyrian history consists of Assyrian myths rationalised in the way in which, as the opening chapters of Herodotus show, the Persians were accustomed to treat the mythology of their neighbours. I have already alluded to the Myth of Semiramis; and her son Ninyas "the Ninevite" is also called Zames—that is, the Assyrian Samas or Samau, "the Sun-god." The two successors of Ninyas were Arios and Aralios, with whom Moses of Khorene makes Ara I. and Ara II., the son of Semiramis, contemporary in Armenia. Now, Aralios seems plainly our Arali, while Arios seems equally plainly Aria, "the destroyer," the Accadian name of Nergal as King of Arali. Nergal, or Aria, was the Sun-god during the hours of night and darkness, as Tammuz was during the time of daylight and summer.

Whether or not Ara is the same word as Aria is, I think, doubtful. The Greek form Er speaks against it; and it is better to suppose that Er, or Ara, was an Armenian name for the Sun-god, which, in later times, was confounded with the Arios of Ktésias. I hope to show in a memoir I am preparing on the cuneiform inscriptions of Van that the Aryans did not make their way into Van or Ararat until after the seventh century B.C.; at all events, non-Aryans were ruling there in the time of Assurbani-pal. In both language and physiological type they resembled the Georgians of to-day. In their dialect the Sun-god was called by a name which seems to read *Ardinis*; unfortunately, in the only passage in which it is written phonetically, the reading of the second syllable is uncertain. According to the rules of Vannic grammar, the stem of *Ardinis* would be *ardé*, which is itself a derivative from the root *ar* by the help of the suffix of agency—*di*. *Ardinis* was also the name of a city whose deity was honoured with special sacrifices, and sacrifices were further offered to "the dead belonging to Khaldis" and "to the Khaldises of the dead." Khaldis, I should add, was the supreme god of Van, whose inhabitants were called "the men of Khaldis."

How Plato came to localise the Armenian Er in Pamphylia I cannot explain. What is certain, however, is that the legend had its primitive home in the highlands of Armenia, and originally described the death and resurrection of the Sun-god. The myth must have come from Assyria, like the worship of the goddess Ishtar herself, whose name was transformed into Sar or Saris by the people of Van, and reminds us, however remotely, of the Greek Semiramis.

A. H. SAYCE.

# RICHARD MILESON.

Laverton Rectory, Bath.

I now send the promised account of Richard Milesen.

Though belonging apparently to a Suffolk family, Milesen was a native of Yorkshire. He was born in 1607, and educated for five years at Bury St. Edmund's. He entered Caius College, Cambridge, as a sizar, June 8, 1624, and matriculated July 8. He took his B.A. degree in 1628, and his M.A. in 1631. The account of him in the Jesuit archives at Rome states that he took also the degree of B.D. But this is an error, as is also the statement (mentioned in my last letter) that he was a Fellow of Caius. He was Branthwaite scholar, but ceased to be so after October 15, 1631. For the dates of his matriculation and degrees I am indebted to the Rev. H. R. Luard, the University Registrar. The published Catalogue of graduates does not go back beyond 1659—a fact of which I was not aware when I wrote my letter in the ACADEMY of July 2, 1881. The account of Milesen's early history as given in the Roman archives was not derived from himself, and contains several inaccuracies. That given in the other Jesuit documents, from which Mr. Foley has sent me extracts, was derived from Milesen himself.

We do not know the date or place of his ordination, nor the origin of his acquaintance with Mountagu. But we find from Walker's *Sufferings of the Clergy*, quoted in the ACADEMY of July 16 (there was a slight error in that quotation—the correspondent who kindly sent me the extract wrote "Richard A. M. Milesen," instead of "Richard Milesen, A.M."), that he was Prebendary of Coleworth in the cathedral of Chichester. Unfortunately, as I know from Dean Burgon and Canon Swainson, there is a gap in the Chichester Cathedral Records from 1618 to 1662, so that they do not furnish any information respecting him. There can, however, be no doubt that he owed his stall to Mountagu, who was Bishop of Chichester from 1628 to 1638. It seems not improbable that he was Mountagu's curate at Petworth—a living which the Bishop held *in commendam* along with his see. It does not appear that he was ever beneficed in the diocese. In May 1638 Mountagu was translated to Norwich, and Milesen accompanied, or shortly followed, him to that diocese. On October 9 of that year he was instituted to the rectory of Beccles in Suffolk, on the presentation of Charles I., no doubt through Mountagu's influence. On December 4 he was instituted to the mediety of the rectory of Oatfield, in Norfolk, on the presentation of Mountagu himself. On November 27, 1640 (in the Appendix—attributed to John Hare, the Richmond Herald, who died in 1720—to Browne's *Posthumous Works* the date is wrongly given as February 27, 1640—i.e., 1641—a mistake which is repeated by Blomefield, iii. 654), he was collated to the archdeaconry of Suffolk, and installed December 23, in the place of Robert Bostock, who had held the office for ten months only—viz., from February to November—see the extract from Wood quoted by Mr. Hoskyns-Abrahall in the ACADEMY of July 23. By "Feb. 1639" Wood, of course, meant what we should call "Feb. 1640"—a circumstance which I strangely overlooked in a previous letter. It is singular that Sir Duffus Hardy (ii. 489) retains Le Neve's "Feb. 1639," instead of changing it to "1639-40," as he usually does in such cases. We do not know at what date Milesen became Mountagu's chaplain. But in the Roman account a very remarkable circumstance is mentioned of him in that capacity—viz., that he was in the habit of receiving the confessions of sixty men and women, including the Bishop's own wife. In 1640 he resigned Beccles, possibly in con-

sequence of his being appointed Archdeacon. But he retained Oatfield till 1642, on August 17 of which year a new rector was collated. His name was James Routh. Was he an ancestor of the venerable President of Magdalen? He was appointed by Bishop Hall. Blomefield (ix. 291) has made a strange confusion in his list of the Rectors of Catfield.

No doubt Milesen's resignation of Catfield was owing to his having become a Romanist. This must have occurred after February 17, on which day he appointed Dr. Kinge as his official in the archdeaconry. It does not appear whether he ever formally resigned the latter office. His successor was not appointed till September 1660 and it is not stated (as it usually is) how the office had been vacated. His conversion to Romanism is attributed to the famous Jesuit Edward Knott (whose real name was Matthias Wilson, but who also wrote under the name of Nicholas Smith), the Provincial of the Jesuits in England, in reply to whom Chillingworth had shortly before written his celebrated *Religion of Protestants*. But Milesen was not content with merely joining the Church of Rome. He determined also (no doubt through Knott's influence) on becoming a member of the Jesuit Society. Under the assumed name of John Daniel, he entered that society at Watten (near St. Omer) on April 30, 1643, and afterwards became Professor of Holy Scripture at Liège. In 1651 he was sent to the English mission in the Suffolk and Norfolk district, and was an active missionary for more than ten years, when he returned to the Continent. After filling various offices at Watten, Ghent, and Liège, he died of apoplexy at the last-named place on November 21, 1668. A more detailed account of his doings as a Jesuit will be given in the forthcoming seventh volume of Mr. Foley's *Records*.

It seems strange that the secession of a man holding his position should apparently have excited so little attention in England. The only contemporary notice of it which I have been able to discover is in the *Legenda lignea* (1653), where he appears as fifteenth in a list of fifty-three seceders. He is there called simply "M. Rich. Millesent," a name differing in one letter only (and not at all in pronunciation) from that given in Bayle from the King's College Register. Wood was evidently ignorant of his secession and subsequent history, and puts his death "some years before" 1660, whereas it occurred in 1668. And he seems to have been very imperfectly informed respecting his previous history. He does not mention his connexion with Mountagu or with Chichester, and though he calls him "M. of A." does not give his college or university. Apparently, his information was derived solely from some list of the Archdeacons of Suffolk. It is strange that Bliss did not add a note about him. Walker tells us more, but does not say from what sources he derived his information. He refers to Wood; but the only part of his account which was derived from him is that he was "M. of A." and Archdeacon of Suffolk. In one point his account differs from that of Wood—viz., in rightly putting his death after 1660, though he says that he did not know "the precise time." He says nothing about his becoming a Jesuit. It would be interesting to know whether Sir Thomas Browne, who was no doubt personally acquainted with Milesen when he was Mountagu's domestic chaplain, was aware of his secession and subsequent history; but Browne does not mention him. His name occurs, as we have seen, in the list of Archdeacons of Suffolk in the Appendix to Browne; but that was not written by Browne himself. There can, however, be little doubt that Milesen was one of those whom Bishop Turner,

the non-juror, was thinking of when he thus expressed himself in a sermon preached at Whitehall before Charles II. on November 5, 1684, of which I have seen a copy in Sion College Library:—

"May not I challenge all our Accusers, that reflect on so great a body of the Clergy, which consist (as I said) of ten thousand at least: To name but ten of the whole Clergy; ten men of any Note, either for their Dignity or Learning, who in the worst of Times, under the greatest Temptations, fell from the Church of England to that of Rome?"

Among those who heard this sermon was Evelyn, who mentions it in his Diary, giving, however, "five" instead of "ten." Apparently either (1) "five" is a misprint, or (2) Evelyn did not report the number correctly, or (3) Turner changed the number when he printed the sermon. It is worth noting that Evelyn adds, "And this was to my certain observation a great truth." J. H. BACKHOUSE.

PS.—Mr. Mullinger has kindly written to me about "S. P. (or Pa.) P." He says that he has often met with that affix, and that it stands for "Sanctae Patristicae (sc. Doctrinae) Professor." He tells me also that Dr. Walter Crome, in the same year in which he gave the MS. to Caius, gave some works to the Cambridge University Library, a list of which is printed by Mr. Bradshaw in a paper which I have no means of consulting. He refers also to p. 323 of the first volume of his own *History of the University of Cambridge* for another notice of Crome.

Can any of your readers explain "LM.M.M. D.D.C.Q." in the Dedication (to the memory of James I.) of Mountagu's *Apparatus* (Oxford, 1635)?

## CORRESPONDENCE.

### THE BASQUE SUFFIX -K.

6 Norfolk Terrace, Baywater, W.: Jan. 19, 1882.

Mr. van Eys imagines I have said that the suffix *k* is an ablative; and when quoting my words in support of his assertion, takes great care to suppress those which follow the comma after the word *ablative*, and to replace them by a full stop. My words were (see ACADEMY, December 17, 1881):—

"The only way to understand how the same word may represent Latin *a me* in the first and *ego* in the second phrase consists in admitting that the suffix *k* is in both instances capable of being rendered by the ablative, although the Basques, with great propriety, call it *active*."

Now, between saying that a suffix is a Basque ablative and that a suffix is capable of being rendered by the so-called Latin "ablative" or represented by it, there is a difference which can only escape the person who did not scruple to suppress the word "active" in quoting my statement. The Basque suffix *k*, I repeat, is an active suffix, although capable of being rendered either by the Latin ablative or by the Latin nominative. As the criticism of Mr. van Eys bears not upon what I have said, but only upon what it suits him to make me say, I take a final leave of him with the wish that he may abandon the absurd supposition, contradicted by all the Basque dialects, either ancient or modern, that the suffix *k* is a remnant of an active participle.

L.-L. BONAPARTE.

Paris: Dec. 31, 1881.

Great as is Prince Bonaparte's authority in Basque matters, his hypothesis (ACADEMY, December 17, 1881, p. 707), which consists, if I mistake not, in considering the active singular nominative suffix "*k*" as an ablative, or rather as an instrumental suffix, appears to me to be neither justifiable nor to tend to any useful purpose. It has, it is true, the advantage of supporting the Prince's Basque verbal theory; but—as that theory has always appeared to me wholly inadmissible, inasmuch as it is not proved by the observation of material facts, demands too many and too complex morphological and phonetical phenomena for its explanation, and is founded on a metaphysical and imaginative basis—that consideration can have no weight with me in the argument.

As regards, however, the nominative *k*, Prince Bonaparte insists on the strange anomaly of regarding a Basque noun followed by *k* as representing at one time a nominative subject of a transitive verb, and, at another, an indirect regimen or an ablative. Such an "absurdity" cannot, and does not, exist in Basque. It is a mere hypothesis suggested by considering only the translation of the Basque phrase into a modern analytical European language. For a Basque, in both *nik egina* and *nik egin dut*, *nik* has one and the same meaning, "I," "ego." Where an Englishman says "made by me," a Basque says "I thing-made," "ego factum" (and not "a me

factum"); just as, in the same manner, the Dravidian says *nān konda puli*, "the tiger I have killed," or "killed by me," "ego occisus tigris," as well as *nān puliyi kondān*, "I have killed the tiger," "ego tigridem occisi," in which two instances the same word *nān* is employed, and in the same sense—viz., "I." We are dealing not with a morphological problem, but with a syntactical and functionary one.

I take this opportunity of rectifying a slight mistake in your report of the Americanist Congress at Madrid (ACADEMY, October 29, 1881, p. 330). My friend Padre F. Fita wrote that I spoke in support of his interpretation of the Sigüenza inscription. I spoke in the session of September 28 but once, and with reference solely to the proposal for the erection of a Chair of Basque in the University of Madrid, which I energetically supported.

JULIEN VINSON.

### CHAUCEY'S "DRY SEA."

King's College, London: Jan. 22, 1882.

There has been, and is, much doubt as to what is meant by "the dry sea" in Chaucer's *Book of the Duchess*. A writer in the *Saturday Review* plausibly suggested the desert of the Great Sahara; and there are current several other suggestions of more or less value. But I am much inclined to think that the phrase may be best explained by a reference to Mandeville's *Travels*—a book that must have been thoroughly familiar to Chaucer—and to the account given by that veracious writer of a sea of sand. See Mr. Halliwell-Phillips' edition of *The Voyage & Travaile of Sir John Maundeville Knt.*, pp. 27, 28:—

"And he [Prester John] hathe in his Lordships many grete marveyles. For in his Contree is the See that men clepen the Gravelly See that is alle Gravelle & Sond with outen ony droppe of Watre; & it ebbeth & floweth in grete Wawes as other Sees don; & it is never stille ne in pee in no maner oecoun. And no man may passe that See be Naveye ne be no maner of craft; and therefore may no man knowe what Lond is beyond that See. And alle be it that it have no Watre, 3it men fynden there in & on the Bankes fulle gode Fische of other maner of kynde & schappe thanne men fynden in ovy other See; & thei ben of righte goode tast, and delycious to mannes mete."

Here is "a dry sea" with a vengeance. Surely this is what Chaucer means.

Mandeville seems to have derived his account of this remarkable phenomenon from Oderic of Portenau.

JOHN W. HALES.

### MR. CUMMINGS'S "LIFE OF PURCELL."

9 Emilienstrasse, Leipzig: Jan. 14, 1882.

In Mr. Cummings's *Life of Purcell*, reviewed in the ACADEMY of the 7th inst., an unpleasant story about the composer's death is mentioned and combated. It was said that Mrs. Purcell objected to her husband's late hours, and took the strong, but not unprecedented, measure of keeping the door locked against him. She did this once too often, and Purcell caught a chill from which he died. Mr. Cummings has found little difficulty in showing a variety of improbabilities in the scandal, and he has given the evidence of friends in favour of Purcell's private character. But he has not succeeded in finding any direct proof of the happiness of his married life. Those who are careful of the memory of our great English master will, I think, be glad to read an incidental notice confirming Mr. Cummings's judgment, written by Wanley, the librarian to Edward Harley, Earl of Oxford, and to his successor, in the first quarter of the eighteenth century. It occurs in the first volume of the *Catalogue of the Harleian Manuscripts in the British Museum*, pp. 642, 643, where a cantata by Stradella

gives the garrulous librarian occasion to expatiate as follows:

"This Alessandro Stradella was, as I think, a Venetian, and was, in his time, one of the greatest Masters in Music that Italy had ever bred, with respect either to the Church, Stage, or Chamber. He excelled not only in Composition, but in an extraordinary hand, so as to be accounted the best Organist in Italy. He was a comely Person, and of an amorous nature. And finding a Baroness who was admired by the Heir of the Family of Cornaro (or Colonna, I remember not exactly which) to be a most beautiful personage, witty, airy, Mistress of an admirable Voice, and a professed Lover of Music, he instructed her therein, and she was so far improved by him, as to sing the best of any Woman in Italy. He undermined her other Adorer, and rendered himself so agreeable to her, as that at last she consented to run away with him to Genoa, where (soon after his coming) he was shot in the back by his revengeful Rival. . . . When Mr. Henry Purcell (who had only seen two or three of his Compositions) heard that Stradella was assassinated, & upon what account, he lamented him exceedingly; nay, so far as to declare, that he could have forgiven him any injury in that kind; which, those who remember how lovingly Mr. Purcell lived with his Wife (or, rather, what a loving Wife she proved to him) may understand without farther explication."

The friend's testimony may be somewhat weakened by the qualification in the closing sentence; it is, at all events, unambiguous as to the point at issue—namely, the behaviour of Mrs. Purcell. REGINALD LANE POOLE.

[May not this passage be intended to bear a sarcastic interpretation?—ED. ACADEMY.]

#### "WYNBROWES" IN CAXTON'S "CHARLES THE GRETE."

Berlin, SW, Kleinbeerenstr. 7: Jan. 12, 1882.

In Caxton's "Charles the Grete" (p. 26 of Mr. Herrtage's edition for the Early-English Text Society, 1880-81) we read that Charlemagne "had the eyen like a lyon sparklyng lyke a cole by furyous regarde, his wynbrowes grete." Mr. Herrtage explains *wynbrowes* by "eyebrows" no doubt correctly, but he is wrong in adding, "Evidently a corruption of *eyebrowes*." Caxton's *wynbrowes* answers to the German *wimper*, whereas *eyebrowes* corresponds with the German *augenbrauen*. New-High-German *wimper*, "eyelash," is a corruption of Middle-High-German *winbrā*, *wintbrā*, Old-High-German *winbrāwa*, "eyelash," "eyebrow;" cf. also Middle-Low-German *winbrā*, "eyebrow." The Old-English form of the word was either *\*windbrēw* or *\*windbrā*. For the loss of the *d* cf. to answer, Old-English *andswarjan*; gospel, Old-English *godspell*; lawn, Middle-English *launde*; lime, Old-English *lind*; to winnow, Old-English *windujan*, &c. J. ZUPITZA.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, JAN. 30, 5 p.m. London Institution: "The Real Value of Mechanical Inventions to Civilisation," by Mr. Frederic Harrison.

7 p.m. Actuaries: "A Certain Method of Distributing the Surplus among the Assured, and the Construction of an Equitable Scale of Office Premiums with Reference thereto," by Mr. H. W. Manley.

8 p.m. Society of Arts: "Recent Advances in Photography," Cantor Lecture I, by Capt. Abney.

8.30 p.m. Geographical: "Across Iceland by the Springisandr Route," by Mr. Outhbert E. Peck.

TUESDAY, JAN. 31, 3 p.m. Royal Institution: "The Mechanism of the Senses," III., by Prof. J. G. McKendrick.

8 p.m. Society of Arts: "The Social and Physical Capacities of New Zealand for Tea and Silk Cultivation," by Mr. W. Cochran.

8 p.m. Civil Engineers: Discussion, "The Analysis of Potable Water."

WEDNESDAY, FEB. 1, 7 p.m. Entomological.

8 p.m. Society of Arts: "Stained Glass Windows," by Mr. L. F. Day.

8 p.m. British Archaeological: "Stone Circles at Duloe, Cornwall," by Mr. C. W. Dymond; "The Excavations of a Roman Villa at Benissa," by Mr. W. Myers.

THURSDAY, FEB. 2, 3 p.m. Royal Institution: "Corals," by Prof. H. N. Moseley.

7 p.m. London Institution: "The Causation and Phenomena of Dreams," by Mr. James Sully.

8 p.m. Linnean: "The Medical Use of *Medicago uncinata*," by Mr. Otto Tepper; "Elephants' Fluken," by Gen. Benson; "Botanical Sketch in Connection with the Geological Features of New South Wales," by Mr. Robert D. Fitzgerald; "Observations on Animal Intelligence," by Mr. Otto Tepper.

8.30 p.m. Antiquaries.

FRIDAY, FEB. 3, 8 p.m. Philological: "Correction of English Spellings," by Mr. H. Vogin; "Points of English Grammar," by Mr. H. Sweet.

9 p.m. Royal Institution: "Action of Molecules, Free and Constrained, on Radiant Heat," by Prof. Tyndall.

SATURDAY, FEB. 4, 3 p.m. Royal Institution: "Beethoven," by Prof. Pauer.

#### SCIENCE.

*The Religions of India.* By A. Barth. Authorised Translation, by the Rev. T. Wood. "Oriental Series." (Trübner.)

THE books hitherto written on the religion or religions of India have been distinguished by one of two predominant tendencies. The earliest treatises on the subject, written before the Vedas were generally accessible, naturally confined themselves entirely to the later forms of Hinduism. On the discovery of the earlier literature, the more general plan was to look upon it as the sole source of the later developments—to consider that to explain the Vedas, and what had grown out of the Vedas, was to explain the whole history of religious thought in India. From both these points of view Buddhism was of little importance. Modern Hinduism used to be considered altogether apart from it; and those who looked upon the Vedas, and especially upon the Rig-Veda, as the only really fundamental and important part of the problem, stopped in their researches at the period when Buddhism commenced. These two tendencies are still observable even in recent works. Prof. Monier Williams, in writing an account of "Indian Wisdom" in more than 500 pages, devotes less than thirty to the Vedas and only a few pages to Buddhism; and Prof. Max Müller, in his Lectures on the Origin and Growth of Religion as Illustrated by the Religions of India, confines his attention as regards India exclusively to the pre-Buddhist period, and almost exclusively to the Rig-Veda. In his opinion,

"the only original, the only important, period of Sanskrit literature which deserves to become the subject of earnest study far more than it is at present, is that period which preceded the rise of Buddhism."

It is inevitable that a third tendency should make itself felt. No explanation of the religion of India can possibly be finally accepted as accurate or complete in which the most influential religious movement which ever took place in India is ignored, and the greatest of India's sons is practically left out of the account. No scheme of the history of Indian religious beliefs can be rightly proportioned in which undue stress is laid upon any one phase of it, or in which the continuity of cause and effect through all the many centuries of that history is not adequately set forth.

It is this unparalleled continuity, persistence of belief in India which is really one of its most distinctive and most instructive characteristics. In no other civilised country in the world, even China itself not excepted, has the primeval human belief run so complete and so consistent a course, and lasted on so long

without yielding to any of those more modern forms of religion which have been founded by individual men. In this long history the Rig-Veda has preserved for us an invaluable record of a part, but only a part, of the religion of the Indian Aryans at an early, but by no means the earliest, stage in the development of their ideas. It gives us a picture of the more advanced views of certain classes; but before, around, and beneath those views there existed a whole legion of popular animistic superstitions which influenced, perhaps, more often and more deeply the daily lives of ordinary men, and of which the record must be sought elsewhere. At the very time when the hymns were being sung to the great gods the hearts of the people were being haunted by all kinds of petty fears; they were addicted to sorceries, incantations, perhaps even obscenities; and were seeking, by charms or by worship, to avert from themselves, or turn against their private foes, the anger of malignant spirits. As M. Barth very justly remarks, "a religion which, like that of the Rig-Veda, sees alongside of it practices like these, and refuses to adopt them, is in so far a moral religion." But we must not overlook the fact that the practices were there. And as the Vedic religion sank, or grew, into the ritualism of the Brāhmanas, the old animistic delusions still continued, though in ever-changing forms, perhaps, and in different details, to influence the masses of the people.

The conflict of opinions deepened as philosophy and the scepticism of common-sense, on the one hand, began to open the mental vision, and as the recognition of law, or of ancient custom, on the other, began to develop into emotional and ethical conceptions. These ideas found, no doubt, their most striking expression in Buddhism. But they began long before Buddhism arose, and they continued after it fell. Buddhism did not drop from heaven upon the plains of India, and then vanish as miraculously away. The long centuries of its power cannot be treated as a kind of cleft in Indian history, divided by sharp precipices from the past and from the future—a gap which may be jumped over with impunity. Those centuries of struggle between animism, ritualism, philosophy, and ethics—each of them powerful, during the whole period, within, as well as without, the Buddhist church—ended in the name of its Founder being no longer heard, and the yellow robes of the members of its Order being seen no more in the Valley of the Ganges. But it is only an adequate appreciation of that lengthened struggle which can afford the correct point of view from which accurately to understand the condition of the new order of things which followed upon it. A complete history of the religion of India—for, though manifold, it is essentially one—would not, therefore, lose sight in the Vedic times of the popular faith; in the description of later Hinduism it would not be content to enumerate the names and dates of the many sects and the many gods without attempting to estimate the origin and the force of the philosophical or ethical conceptions which gave them birth; and it would present a continuous picture in which the central struggle would fill a proportionate space.

It is in this respect that M. Barth's volume is especially welcome. It is, of course, not complete. It originally appeared as an article in an encyclopædia—the *Encyclopédie des Sciences religieuses*; and it only purports to be a sketch, and to be more concerned with statement of facts than with speculative deductions. But in its statement of the facts as a whole it is more complete than any other single work accessible in English, though there are other works which are much more complete as regards particular periods. It makes some attempt also to preserve a due proportion in the treatment of the various parts, and to give for each period a completeness to the picture. While the deeper side of the later movements is brought out with much judgment and insight, the lower forms of the Vedic times receive not a little notice. "I am far from believing," says the author,

"that the Veda has taught us everything on the ancient, social, and religious condition of even Aryan India, or that everything there can be accounted for by reference to it. Outside of it I see room not only for superstitious belief, but for real popular religions, more or less distinct from that which we find in it; and on this point we shall arrive at more than one conclusion from the more profound study of the subsequent period."

It is fair to add that these words are taken from the Preface, and that in the body of the work itself this view is made more evident by the general mode of treatment than by any prominence that is given to a statement of what these popular religions actually were. But this opinion, nevertheless, dominates the representation which is given of the Vedic Hymns.

The least successful part of M. Barth's book, as might naturally be supposed in the case of a writer who looks at things from an especially Sanskrit standpoint, is that which deals with the great central struggle. The proportion is here inexact, the details not always reliable, and the judgments somewhat one-sided. A valuable feature of the work is a carefully selected bibliography, from which no important works in the previous literature of the subject seem to have been omitted. This last addition to Messrs. Trübner's "Oriental Series" is, therefore, not only a valuable manual of the religions of India, which marks a distinct step in the treatment of the subject, but also a useful work of reference.

T. W. REYS DAVIDS.

#### MR. PATRICK GEDDES ON THE NATURE AND FUNCTIONS OF THE "YELLOW CELLS" OF RADIOLARIANS AND COELENTERATES.

ON Monday, January 16, a communication was read before the Royal Society of Edinburgh by Mr. Geddes, which not only sets at rest the vexed question as to the nature of these bodies, but presents us with an entirely new aspect of the economic inter-relations of the animal and the vegetable kingdoms.

Mr. Geddes' researches on animal chlorophyll paved the way to the present discovery. He had already proved that such animals as *Convoluta*, *Hydra*, and *Spongilla* vegetated by their own intrinsic chlorophyll; and he has now satisfactorily shown that certain Radiolarians and Coelenterates vegetate, as he terms it, "by proxy—by rearing copious crops of Algae

in their own tissues and profiting by their vital activities." Cienkowski and others had contended that the "yellow cells" in question were algae, for this reason, among others, that they continued to live and multiply long after the death of the animal. But, when Mr. Geddes set to work last October at the Naples Zoological Station, the whole subject was obscured by contradictions. After repeating the observations of Cienkowski on the Radiolarian yellow cells, he began an independent examination, which resulted in establishing their character as true algae. Not only is their mode of division thoroughly algal, but starch, as described by Haeckel, is invariably present. The cell-wall is of true vegetable cellulose, and the yellow colouring matter is the same as that of diatoms. In *Veilella*, in sea-anemones, and in a Rhizostome Medusa (*Cassiopeia borbontica*), similar organisms were found. Alluding to the methods of examination, Mr. Geddes says:—

"The failures of former observers in obtaining these reactions (in which I at first shared) have been simply due to neglect of the ordinary botanical precautions. Such reactions will not succeed until the animal tissue has been preserved in alcohol and macerated for some hours in a weak solution of caustic potash. Then, after neutralising the alkali by means of dilute acetic acid, and adding a weak solution of iodine, followed by strong sulphuric acid, the presence of starch and cellulose can be successively demonstrated in the same preparation. Thus, then, the chemical composition, as well as the structure and mode of division, of these yellow cells are those of unicellular algae. I, therefore, propose for this alga the generic name of *Philozoon*, and distinguish four species differing slightly in size, tint, mode of division, &c., to which the names of *P. radiolarium*, *P. siphonophorum*, *P. actinurum*, and *P. medusarum*, according to their habitat, may be conveniently applied."

Then follows a long enquiry into the mode of life and functions of these organisms. Reminding us that the colourless cells of a plant share the starch formed by the green cells, Mr. Geddes urges that it is impossible to doubt that, when the vegetable cell dissolves its own starch, some must needs pass out by osmosis into the closely enveloping protoplasm of the surrounding animal cell, which possesses abundance of amylolytic ferment. Further, the nutritive functions of the animal gain by digesting the *Philozoon* at its death. On the other hand, the carbonic acid and nitrogenous waste produced by the animal cell are necessities of life to the alga, which, in removing them, performs an intracellular renal function. Yet further, during the sunlight the alga constantly evolves nascent oxygen into the surrounding animal protoplasm,

"and thus we have foreign vegetable chlorophyll performing the respiratory functions of native animal haemoglobin, and the resemblance becomes closer when we bear in mind that haemoglobin frequently lies as a stationary deposit in certain tissues like the tongue of certain molluscs and the nerve-cord of *Aphrodite* and *Nemerteans*."

The details of the experiments and observations on which these statements are founded are of the highest interest, and the fertility of resource which directed them is as striking as the ingenuity shown in the interpretation of the phenomena.

"Thus, then, for a vegetable cell no more ideal existence can be imagined than that within the body of an animal cell of sufficient active vitality to manure it with abundance of carbonic anhydride and nitrogenous waste, yet of sufficient transparency to allow the free entrance of the necessary light. And conversely for an animal cell there can be no more ideal existence than to contain a sufficient number of vegetable cells, constantly removing its waste products, supplying it with starch and oxygen, and being digestible after death. . . . In short, we have here economic inter-relations of the animal and the vegetable world

reduced to the simplest and closest conceivable form."

That this is no mere case of parasitism is further proved by the fact that it is exactly those animals containing the algae which show exceptional success in the struggle for existence, instead of the weakened state to be found in the host of a parasite. They are not only far more abundant, but are capable of enduring greater hardships than their less fortunate allies.

To botanists, these investigations bear a very peculiar interest. No nearer analogue to this "consortism," if it may be called so, of the animal and the vegetable (algal) cell can be found than in that of the fungal and algal cells of the lichens. It is so apparent throughout that it is needless to enter into a detailed comparison. One point in the analogy, however, strikes me as noteworthy. The young gonophores of *Veilella* which bud off from the parent colony start in life with a provision of *Philozoon*. One cannot but be forcibly reminded by this of the function of the hymenial-gonidia of such lichens as *Dermatocarpon*, *Polyblastia*, &c., as described by Prof. Stahl. The hymenial-gonidia, which are the offspring of the thallus-gonidia, are carried up in the formation of the apothecia, and are cast out along with the spores. Falling in the same neighbourhood, the spores, on germinating, enclose with their filaments the hymenial-gonidia, which ultimately become the thallus-gonidia of the new lichen. The fact that among these animals the most closely allied to each other morphologically differ thus widely physiologically, bears comparison with the near relations of the fungal parts of the lichens with the other ascomycetous fungi.

Mr. Geddes' able essay on "Insectivorous Plants" in the last volume of the *Encyclopædia Britannica*; his original investigations into the function of the chlorophyll of the green Planarians; and, lastly, these researches, present us with three distinct aspects of the economic relations between plants and animals. For bringing forward the two latter, Mr. Geddes can hardly be sufficiently thanked by biologists.

GEORGE MURRAY.

#### OBITUARY.

M. THUROT.

GREEK learning in France sustains no slight loss by the death (on the 17th of this month) of M. Charles Thurot, of the Institut, following so close upon that of M. Oh. Graux, announced in the ACADEMY of last week. A nephew of the François Thurot who, at the beginning of this century, did so much to revive classical studies in France when the Revolution had all but swept away the old learning, Charles Thurot was, like his uncle, a teacher, and a teacher of rare capacity and excellence. After serving as professor at sundry provincial colleges—at Pau, Reims, Besançon, Clermont—he became, in 1861, professor at the Ecole Normale, where he worked and taught till the final moment, when a sudden attack of a malady from which he had long suffered carried him off at the age of sixty-two. Thurot was all his life a zealous student, and as a Greek scholar claims a high place among the best of our time. His versatility was such that, besides being a recognised authority in Aristotelian criticism, he was able to write an admirable monograph on the educational system in the mediæval University of Paris, and, during the latter years of his life, he even commenced a great work on the history of French pronunciation. Notwithstanding this variety of interests, however, he was the most thorough and accurate of men, conscientiously scrupulous about details, with a horror of anything that

savoured of pretence or sciolism. He accordingly welcomed the scientific movement which a younger generation of scholars started some fifteen years ago, and was one of the first contributors to the *Revue critique*, just as recently he lent a helping hand to the *Revue de Philologie*. An unostentatious kindness and generosity of nature made him ever ready to assist other labourers in the field of learning; and there are many who have reason to say that in Thurot they have lost one of the best and most sincere of friends. I. BYWATER.

### THE ORIGIN OF THE ARABIC NUMERALS.

I HAVE recently come upon a clue which may possibly lead to the discovery of the missing link in the history of the ciphers which we know by the name of the Arabic Numerals.

These ciphers were introduced by the Arabs into Spain, whence, during the twelfth and thirteenth centuries, they spread over Europe. They are plainly identical with the Gobar or "dust" ciphers of the Arabs, which are found in the tenth-century MS. written at Shiraz, in Persia. According to the Arab tradition, they came originally from India, and a comparison of the Indian numerals in their tenth-century forms with the Gobar ciphers shows this tradition to be correct.

The foregoing results were established by Woepcke in his *Memoire sur la Propagation des Chiffres Indiens*, which was published in 1863, and they have been confirmed by the subsequent researches of Cantor and Friedlein. But the source from which the Indian ciphers were obtained has hitherto been regarded as an unsolved problem. Analogy suggests an alphabetic origin; either the first ten letters of some alphabet being used as numerical signs, as in Greek or Hebrew, or the initial letters of the words denoting the numbers being similarly employed. This last hypothesis was that adopted by Woepcke, who attempted to explain the Gobar ciphers as the initial letters of the Sanskrit numeral words from one to ten—*eka*, *dva*, *tri*, *chatur*, *panchan*, *shash*, *saptan*, *ashtan*, *navan*, *dasan*. He bases his argument on the old Indo-Pali alphabet, as exhibited in the fourth-century Gupta inscription from Girnār.

The epigraphic materials at Woepcke's disposal were obviously inadequate, and recent researches have shown that his theory is untenable. The ancient Kawi or Javanese ciphers have now been recovered by Cohen-Stuart (see his *Kawi Oorkonden*) from an inscription of the year 841 A.D.; and these Kawi numerals have been shown by Dr. Burnell to be modifications of the ciphers used in the inscriptions of the Vengi dynasty, which probably belong to the fourth or fifth century A.D. These, again, can be traced to the numerical signs employed in the inscriptions of the Western Caves, which are assigned to the first centuries of our era. When these primitive forms of the Arabic numerals are compared with the letters of the old Devanāgarī or Indo-Pali alphabet, as exhibited in the inscriptions of Asoka (250 B.C.), or in the subsequent inscriptions of the Kanishka and Gupta dynasties, it becomes manifest that Woepcke's theory breaks down, there being no appreciable resemblance between the Cave numerals and the contemporary Indo-Pali letters, whether those letters be taken in their alphabetic order or as the initials of the numeral words.

This, briefly stated, is the present condition of the problem. None of the Devanāgarī alphabets supplying the required prototypes, it seemed desirable to undertake a careful examination of all other possible sources from which the ciphers might have been obtained.

It is hardly necessary to state that the

Edicts of Asoka, with one exception, are written in the Indo-Pali alphabet, which subsequently became the parent of all the existing alphabets of India. But on a rock at Kapur-di-giri, west of the Indus, on the very frontier of Afghanistan, there is engraved a copy of the Edicts written in a totally different character, which may be styled the Ariano-Pali, or Indo-Bactrian, alphabet. This, as Mr. E. Thomas has proved, is an alphabet of the Pehlevi type, and ultimately of Aramean origin. It is best known from the Kapur-di-giri inscription, but it is also employed on coins and inscriptions of the Bactrian and Indo-Scythian princes from the time of Asoka (250 B.C.) down to the year 79 A.D., when it finally becomes extinct. It is from this alphabet—the early alphabet of Bhochara, Afghanistan, and the Punjab—that the Arabic numerals may, as I venture to think, have been derived.

I first attempted to reconstruct the probable primitive order of this alphabet, imagining that the first ten letters might possibly correspond to the ten ciphers. This attempt manifestly failed, since the Cave cipher for "five" was found to be identical in form with the Indo-Bactrian *p*, and in no known alphabet is *p* the fifth letter. But since *p* is the initial of the Sanskrit *panchan*, "five," it seemed possible that, if Woepcke's original hypothesis were to be tested by the Indo-Bactrian instead of by the Indo-Pali alphabet, it might yield the long-sought solution of the problem. Further investigations have so far confirmed this conjecture that I now venture to submit it to the judgment of Indian epigraphists.

The identity in form of the Cave cipher for 5, and the Indo-Bactrian *p*, is so absolute as to leave nothing to be desired. The case of the 4 is, perhaps, even more convincing, as the forms are more complicated, and therefore a merely accidental similarity is less likely. In Sanskrit, "four" is *chatur*, and the Cave cipher for 4 closely resembles the Indo-Bactrian character for *ch*, and is almost undistinguishable from the slightly differentiated character which stands for the almost undistinguishable sound *chh*. So far, the agreement is more than sufficient. "Six" and "seven" are *iaṣ* and *saptan* in Sanskrit, and here again the Cave ciphers for 6 and 7 correspond very tolerably in form with the two Indo-Bactrian sibilants *s* and *ṣ*. Here our first difficulty arises, as the sibilants are apparently interchanged. The difficulty is, perhaps, not so formidable as it appears, since the interchange of sibilants is a well-known feature of the North-Western dialect. Thus, if we compare the Kapur-di-giri version of the Edicts with the version on the rock at Khalsi, only 400 miles to the south-east, we find that in corresponding words the Khalsi *s* is represented at Kapur-di-giri by either *s*, *ṣ*, or *ṣ*. There are half-a-dozen instances in the fourth Edict alone. The interchange of sibilants may, therefore, probably be explained as a mere dialectic difference.

The origin of the ciphers for 8, 9, and 10 is not so obvious, but it seems not impossible to refer the cipher for 8 to the conjectural ligature *as*, for *astan*, "eight"; that for 9 to *n*, the initial of *navan*, "nine"; and the cipher for 10, which is found in a Punjab inscription, written in the Indo-Bactrian alphabet during the reign of Kanishka, to *d*, the initial of *dasan*, "ten."

The signs for 1, 2, and 3 are of more doubtful origin. In the Cave inscriptions, these numbers are denoted by — = ≡, from which the curved Vengi symbols were manifestly obtained. It seems possible that the Kawi and Devanāgarī ciphers may have come from the same source, though till intermediate forms are discovered it is impossible to speak positively. But as in the inscriptions of Asoka the numbers 4 and 5 are expressed by |||| and |||||, a notation subsequently superseded by the initials of the

words *chatur*, "four," and *panchan*, "five," it is not impossible that this method of acrologic notation may have received a further extension; so that the ciphers 1, 2, and 3 may have been derived from the initial letters of *eka*, *dva*, and *tri*, to which they bear some resemblance. Probably, the question can only be settled absolutely by the discovery of transitional forms for these three ciphers.

I may add that in the Cave inscriptions the higher numbers are also denoted by symbols which appear to be of alphabetic origin. The initials of the numeral words would not be available, having been already employed to denote the lower numbers. Hence the first unappropriated consonant seems to have been selected, at least in some instances. Thus the sign for 70 agrees precisely in form with the cerebral *t* of the Indo-Bactrian alphabet. In Sanskrit "seventy" is *saptati*. The *s* having been already used to denote 7, and the *p* for 5, it would seem that the next available letter was taken to denote 70. In like manner the symbol for 60 resembles the dental *t*, the first letter not already used in the word *ṣaṭti*, "sixty." Such a rule in the choice of numeral symbols would, doubtless, be an aid to memory.

The Arabic Ciphers.						Letters of the Indo-Bactrian Alphabet.
European.		Gobar.	Indian.			
Sec. XIV.	Sec. XII.	Sec. X.	Sec. X.	Sec. V.	Sec. I. A.D.	Sec. II. B.C.
1	1	1	1	1	1	
2	2	2	2	2	2	
3	3	3	3	3	3	
4	4	4	4	4	4	4 = chh
5	5	5	5	5	5	5 = p
6	6	6	6	6	6	6 = s
7	7	7	7	7	7	7 = ṣ
8	8	8	8	8	8	8 = as?
9	9	9	9	9	9	9 = n
10	10	10	10	10	10	10 = d

The above table exhibits the chief stages in the history of the Arabic numerals according to the foregoing hypothesis. The first column shows the ciphers of the fourteenth century, when they had practically assumed their present forms. The second column gives the earliest European forms, from MSS. of the twelfth century. The Gobar numerals of the Arabs come next (col. 3). The three following columns contain the Indian ciphers of the tenth, fifth, and first centuries, and are followed by the suggested alphabetic prototypes taken from the Indo-Bactrian coins and inscriptions of the second and first centuries B.C. The table has been compiled from the forms given by Wattenbach, Woepcke, Friedlein, Burnell, and in the *Corpus Inscriptionum Indicarum*.

ISAAC TAYLOR.

## NOTES OF TRAVEL.

MR. HENRY COLE has sent home to the Church Missionary Society some interesting notes on his agricultural operations at Mpwapwa, in East Central Africa, in the course of which he refers to an excursion to Kongwa, previously unvisited by Europeans. Scarcity of food at Mpwapwa compelled both himself and the natives to obtain supplies from Kongwa, not because it is a more fertile locality, but because caravans do not go there. It lies at the foot of very high hills, some ten miles from Mpwapwa, and far from any caravan road. On the way, some beautiful vale and mountain scenery presented itself to the view, but the country was untenanted save by birds and wild beasts. At Kongwa, as soon as the object of their visit was known, Mr. Cole and his companion were well received by the inhabitants, many of whom had never seen a white man before.

DURING his recent journey through Makua-land, the unexplored region lying between Masasi and Mozambique, the Rev. Chauncy Maples, of the Universities' Mission, advanced as far as Meto, which is situated in about S. lat. 13° 25', E. long. 37° 58', six miles beyond the Mtepesi River. The cowardice of his native followers prevented him from continuing his journey to Mozambique, and he thus lost the opportunity of visiting a reported snow-capped mountain about half-way on the road. According to information which he obtained at Meto, this mountain is called Irati, and is about 130 miles distant to the south-south-east, and its white peak is visible from that town in very clear weather; in the hot season rifts are said to appear in the summit, and the melted snow rushes down in torrents into the valleys below. Mr. Maples suggests that this isolated snow-mountain may form one of a chain of lofty peaks, of which only Kilima-Ndjaru and Mount Kenia are at present known to us, but which may extend far into Somali-land on the north. We may perhaps hope that Mr. H. E. O'Neill—Capt. Elton's successor at Mozambique—who has already shown himself determined to take up the exploration of this neglected region, will find an opportunity for testing the accuracy of the report.

FROM Brisbane we learn that the party which has for some time been engaged in exploring the northern part of Queensland has returned to Cooktown. They have met with but few minerals during their journey, but have found country well adapted for sugar cultivation and other agricultural purposes. They appear to have encountered some hostility on the part of the natives at Princess Charlotte Bay and the Melver River.

M. MIZON, who was sent out some time back to take charge of one of M. Savorgnan de Brazza's stations in Western Equatorial Africa, arrived at Franceville, the station on the Upper Ogowé, on September 22. He was at once to continue his journey, and to join M. de Brazza, who has been engaged in founding a third station on the River Alima, which he discovered in his first expedition, and in his second proved to be an affluent of the Congo.

PROF. GRÖBLI, of Zürich, accompanied only by the guide Salomon Zweifel, ascended the Tödi on December 31. He has been blamed in the Swiss press for adventuring upon so dangerous a piece of work at such a time of the year, with only one companion.

THE *Handelszeitung* of St. Gallen reports that Dr. Konrad Keller, Professor of Zoology in the University of Zürich, has undertaken a scientific exploration to the shores of the Red Sea, at the instance of the East Swiss Geographical-Commercial Society. He will be

absent for some months; and in addition to his specific object—the study of the animal life of the sea—he is charged with the compilation of a report upon the neighbourhood in its geographical, ethnographical, and commercial aspects.

THE January number of Petermann's *Mittheilungen* contains a geological map of Western Africa by Dr. Lenz, based in a large measure upon that explorer's own researches, as well as a map of Wrangel Land. Herr Schuber furnishes some further particulars of his trip to the Galla country to the south of Fadassi. There can be no doubt that African geography will become largely indebted to this Dutch explorer, although in this particular instance he failed in accomplishing all that he had proposed to himself, owing to the hostile attitude of the Gallas. Even this trip, short as it was, has let in a flood of light upon the region drained by the Dedhesa and the upper Sobat. On the possible value of the results of the journey which Herr Schuber is now undertaking to the Victoria Nyanza, we said something last week.

WITH the present month the French Geographical Society have made a change in regard to the publication of their *Bulletin*, which has hitherto appeared a long time after its date. In future it will be divided into two parts, one of which will be issued quarterly, and contain maps, memoirs, and documents of any length; while the other will be published twice a month during the session, under the title of *Compte-rendu des Séances*.

## SCIENCE NOTES.

*The Nature of Meteorites.*—The extraordinary views put forth some time ago by Dr. Hahn as to the presence of organic structures in meteorites have met with ample refutation in the shape of a Memoir, by Prof. Carl Vogt, recently presented to the French Academy of Sciences by M. Daubrée. The author affirms, after a searching study of the subject, that Dr. Hahn has no foundation whatever for his conclusions; that all the pretended organic structures are purely inorganic; and that in no single case do they present the microscopic structure of the organisms for which they have been mistaken—such as crinoids, corals, and sponges.

MISS C. E. HOPELEY has, it is well known, been for a long time collecting information respecting the Ophidiæ. The result of her labours will shortly be given to the world in a work to be published by Messrs. Griffith and Farran, which will be illustrated with coloured and other pictures by Mr. A. S. Elwes, mostly from nature. In it popular errors and prejudices are traced to their sources, and the serpent is presented to the reader from a zoological point of view, divested of prejudices and superstition. Original matter from personal observation enters largely into the work, and the great utility of zoological gardens and museums will be seen.

AN international congress of ethnologists is to be opened at Geneva on April 2, divided into the seven following sections:—Origin and migration of peoples; ethnology; descriptive ethnography; theoretical ethnography; manners and customs; political ethnography; international regulations.

## PHILOLOGY NOTES.

BROTHER H. A. JÄSCHKE, of Herrnhuth, has finished the Tibetan-English dictionary on which he has been engaged, on behalf of the India Office, for the past eight years. He was one of the party who founded the Moravian mission at Kyelang, in the northern extremity

of British Lahaul, in 1853. This mission still exists; and an interesting account of it may be found in the late Andrew Wilson's *Abode of Snow*. Brother Jäschke himself returned to Europe in 1868. He has before issued several works on Tibetan, notably a grammar and a romanised dictionary, which were auto-lithographed at the mission station of Kyelang. The full title of his new work is "A Tibetan-English Dictionary, with special reference to the prevailing Dialects. To which is added an English-Tibetan Vocabulary." We hope to give shortly an adequate notice of this important contribution to Oriental philology.

ONE of the resolutions passed by the Semitic section of the Oriental Congress at Berlin last September was to urge the publication of the photographs of the remains of Persepolis, taken by Dr. F. Stolz in the summer of 1878, in company with Dr. Andreas. Messrs. Asher and Co., of Berlin and London, have now undertaken to carry this resolution into effect. They propose to issue these photographs, numbering 150 in all, in two large folio volumes, edited, with notes, by Prof. Th. Nöldeke. The first volume will illustrate the sculptures and inscriptions on the palaces of Xerxes, Artaxerxes Ochus, and Darius at Persepolis, and on the Hall of a Hundred Columns. In the second volume will be given the tomb of Darius at Istakhr, the tomb of Cyrus at Pasargadae, as well as the monuments and inscriptions of the Sassanidae to be found at these two places and at Shahpur. The first volume will appear in April of this year, the second in October. Up to March 15, the price to subscribers will be £10 for each volume.

WE learn from the *Nation* that Tsai Sih Yung, an *attaché* of the Chinese legation at Washington, has prepared a translation into Chinese of the Constitution of the United States, together with an elaborate Commentary. The work, which obtained the entire approval of Prof. Williams, of Yale College, has been officially forwarded to Peking, where it has won for its author the title of *tayen*, or scholar of the third (the highest) degree.

THE publication of texts goes on apace in Germany—so fast, indeed, that the same work not unfrequently appears in more than one edition. A new series is announced by Herr Max Niemayer, of Halle, under the title of "Altdutsche Bibliothek," edited by Prof. Hermann Paul, of Freiburg. The first volume will consist of the poems of Walther von der Vogelweide, edited by Prof. Paul himself. There will shortly follow the *Heliand*, by O. Behaghel; *Otfried's Evangelienbuch*, by R. Kögel; *Reinhard Fuchs*, by K. Reissenberger; *Gudrun*, by Barend Symons; the works of Hartmann von Aue, by Prof. Paul; *Tristan*, also by Prof. Paul; *Meier Helmbrecht*, by W. Braune; *Reineke Vos*, by Fr. Prien. Each volume will give a carefully revised text, with a short introduction upon the literary importance of the book. The price will be such as to bring books many of which are now rare within the reach of all.

M. PAUL GIRARD, a former pupil at the school of Athens, read theses on the two following subjects for his degree of Docteur ès Lettres at the Sorbonne:—the Locri Opuntii; the Asclepieion at Athens, according to the latest discoveries.

THE *Monatsschrift für Geschichte und Wissenschaft des Judenthums* for January opens with the beginning of a new series of Karaitic studies by Dr. Frankl (now joint-editor with Dr. Grätz). To wait any longer for the catalogue of the Firkowitch MSS. seemed inexpedient, on account of the misleading statements which abound in the first part of Fürst's *Geschichte des Karäerthums*. For the centre of these new studies Dr. Frankl takes the *Eshkol hakköfer* of

Yehuda Hadassi, written at Constantinople in 1148. Dr. Grätz discusses some points in the topography of Palestine according to Josephus and Pliny. Dr. Frankl publishes some documents concerning Moses Mendelssohn, the friend of Lessing; and Dr. Landsberger communicates facts relative to the history of the Jews in Brandenburg about the middle of the fifteenth century. In the preceding numbers, we may call attention to Dr. Grätz's historical article on "Jullos the Patriarch," from whom Origen states that he had gained information on various points of Biblical scholarship. The "Jullos" or Vilel, referred to must be the son of the patriarch Gamaliel II., and brother of the subsequent patriarch, Judah II. Dr. Grätz also writes in the November number on Agrippa II. and the condition of the Jews after the fall of Jerusalem, and on the Jewish stone sarcophagi in Palestine.

### MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Jan. 10.)

GEN. PITT-RIVERS, President, in the Chair.—Mr. Bryce-Wright exhibited a series of sixteen portraits of the Incas, copied from the originals in the Temple of the Sun.—Mr. Worthington G. Smith exhibited some stone implements from the North-east of London.—Gen. Pitt-Rivers read a paper on "The Entrenchments of the Yorkshire Wolds and Excavations in the Earthenwork called Danes' Dyke at Flamborough." At Danes' Dyke the author had found flints and flint-flakes, clearly proving that the constructors and defenders of the earthenwork used flint, and lived not later than the Bronze period. The whole district was the scene of the operations of a people much earlier than the Danes, and therefore the term Danes' Dyke was a misnomer.—In the absence of the author, the Director read a paper by Mr. J. R. Mortimer on "The Discovery of Ancient Dwellings on the Yorkshire Wolds."

NUMISMATIC SOCIETY.—(Thursday, Jan. 19.)

JOHN EVANS, ESQ., D.C.L., President, in the Chair.—The President read a paper on a hoard of Roman coins found near Nuneaton some time ago. Many pieces having been dispersed at the time that the urn in which they were deposited was dug up, only thirty-nine coins came into Mr. Evans's hands. These all consisted of the *denarii* class, and extended from the reign of Vespasian to that of Marcus Aurelius. The coin to which the latest date could be assigned was struck in the twentieth tribunitian year of Aurelius, A.D. 116, the date at which the hoard must have been concealed. The district in which these pieces were found was fairly peopled in Roman times, the station of Mandessedum, now Mancetter, not being far off. Although the number of coins examined is small, there are among them several rare and new varieties.—Dr. Aquilla Smith communicated a paper on the Irish coins of Richard III., in which he brought to light some very important Proclamations and Orders of Council relating to the coinage of Ireland during that reign. These documents were discovered by Dr. Smith in the Record Office at Dublin. The special point in them was the establishing, in the first year of the reign of Richard III., a new coinage for Ireland of a different type and standard to that then in circulation, which was after the type of the English coinage, but of a much lower and debased standard. Besides that, the number of forgeries was so great that the coinage became almost valueless. Dr. Smith gave an account of the new coinage issued in compliance with these Proclamations and Orders. It appears that the first mint to put the Acts into force was that of Drogheda, which was shortly afterwards followed by those of Dublin and Waterford, these last towns becoming in a short time the only legitimate places of issue.

ROYAL ASIATIC SOCIETY.—(Monday, Jan. 23.)

SIR H. C. RAWLINSON, V.P., in the Chair.—A paper was read from Mr. E. Thomas on "Arab Voyages to India during the Ninth Century A.D."

The decipherment of a Nagari legend, containing the word *Valarajya*, on certain Arakan coins suggested a new and unexpected explanation of the title *Balhara* used by the Arab merchants who visited India at that period. There can be little doubt that this name is the same as Bará Rái, meaning Lord Paramount. The sway of the Balhara must at this period have covered all the outlets of the Ganges, their chief capital being Monghyr. Mr. Thomas pointed out that it was an error to identify Djorz or Djorz with Al-Iuzr or Gujarat.—Mr. Ramsay contributed a paper on "Recent Researches in Phrygia," in which, with some modification, he supported the views previously advanced by M. Perrot.

### FINE ART.

*The Avon from Naseby to Tewkesbury.*  
Etchings by Heywood Sumner. (Seeley & Co.)

THERE is a special charm in a series of pictures which, in their choice of subjects, follow the course of some English river in all its windings, growing as it passes on from valley to plain and from village to town. The presence of the same quiet stream gives unity to the group of subjects, while endless variety is to be found in its course—from its mirror-like, sky-reflecting surface as it glides along in open country between low banks, its masses of inky blackness as it flows under groups of over-shadowing trees, or its clear, sharp reflections as it passes the walls of some old castle or country church. Mr. Heywood Sumner, in his series of Avon etchings, has caught with great skill and artistic taste many of these richly varied effects. Even in those plates where the Avon itself does not appear, there is generally something brought out in the character of the slopes or foliage which suggests the not far-off presence of the stream.

The series, as a whole, aims, and for the most part with great success, at reproducing those rapidly fleeting effects of light and shade, moving cloud and changing sky, which the quick needle of the etcher can so often catch when any slower and more laborious process must have let them slip. Some of the cloud effects are most admirable, especially the plates of Bidford Bridge, Stoneleigh Park, and Black-down Poplars. The last plate is a very masterly one; the two tall poplars which form the chief motive of the picture, standing up strong and dark against the sky, are drawn with great care and obvious truthfulness, and their scanty leafage is very skilfully indicated. The drawing of tree forms is very good in all the plates; those of Stanford and Charlecote Parks are especially worthy of study from the great care and faithfulness with which Mr. Sumner has rendered the complicated interlacings and subtle foreshortenings of the branches of great trees in their April nakedness. Some of the atmospheric effects are very clever—such as the distant view of Tewkesbury, with the great Norman tower of the abbey church, and the long slope of Bredon Hill, dark against a luminous evening sky, while a low-lying white mist rises from the flooded meadows, and forms a thin veiling line along the ground.

Several of the plates represent street scenes or views of buildings—subjects which are specially difficult to treat successfully. If they are done by an architect, he knows too

much, and consequently sees too much, and tries to put unimportant detail into his picture—an attempt fatal to breadth of effect. An ordinary artist, on the other hand, from technical ignorance of styles and details, fails to see aright, and so misses the distinguishing character of the building he is trying to represent. Mr. Heywood Sumner appears to have attained to the happy mean of knowledge on this point, and succeeded in giving the architectural features with sufficient truthfulness, without spoiling the general effectiveness and breadth of his picture. The east view of the abbey church of Tewkesbury is a good example of this; and so is the plate of the picturesque old gate-chapel at Warwick—a fine subject, and well brought out, with broad masses of light and shade.

One or two of the plates are not etched, but are pure dry-point work; these are not the most successful. The dry-point, except in the hands of a few artists whose peculiar style it suits, is generally more fitted for touching up or giving "glazes" to a bitten plate than as a means for producing all the lines.

Mr. Heywood Sumner's work, on the whole, deserves very high praise, and cannot fail to be a source of great pleasure to the rapidly increasing number of people who understand and appreciate the art of the "peintre graveur."

J. HENRY MIDDLETON.

### THE UFFIZI GALLERY AT FLORENCE.

THE Commissioners appointed to examine the works of art deposited and neglected for so many years in the magazines of the Uffizi have completed their labours, and have set aside a large number of pictures for permanent exhibition. To make room for these, it has been necessary to remove the drawings of the Old Masters and the tapestries which occupied the long winding galleries between the Uffizi and the Pitti Palace. The prints are to remain where they now are; the drawings have been arranged chronologically, and with much taste, by Signor Nerino Ferri in three handsome, well-lighted rooms which they occupied many years ago; what is to be done with the tapestries is not yet decided. One thousand three hundred portraits are now placed in the long gallery over the Ponte Vecchio and in the passages beyond. These represent the earlier and later Medicis, and are arranged chronologically with their wives and families. There are also portraits of Popes, of Sovereigns and Princes, of native and foreign nobles, and of eminent men of different nationalities, including the series formerly in the gallery above, most of which look apocryphal.

Such a collection of historic portraits is undoubtedly interesting, but they have, in a few instances only, any merit as works of art. The Court painters appear to have been the worst which could be selected. As examples of costume these pictures are instructive, and in some cases amusing. The steady decline of taste in dress after the first half of the *cinquecento* is very apparent. The Grand Dukes of the House of Lorraine are remarkable in a double sense: they must have been the plainest men in Europe, and the dress of the time was so unfortunate that they all look like footmen in gay liveries rather than sovereign princes. The four portraits by Sir Peter Lely purchased by Cosimo, Prince of Tuscany, when in London, are in the collection, as well as portraits of James III. and his sister as

children, in a picture by Largillière. These establish the fact that the artists employed by the English Court were incomparably superior to those who painted at the same time in Tuscany.

Other pictures have been selected which represent festivals, games, and processions, which are interesting as illustrations of manners and customs; and, besides these, there are some altar-pieces and smaller panels, by artists of eminence, which are all in bad condition at present, but may be put into better order by careful restoration.

It was hoped that the Municipality would grant the use of some very suitable rooms in the upper story of the Palazzo Vecchio, but it appears that these are to be appropriated to a municipal museum. It will therefore be necessary to extend the Florence Gallery in some other way.

To English people the most interesting addition to the contents of the galleries may fairly be considered the three portraits of Sir Frederick Leighton, Mr. Millais, and Mr. Watts. We must feel truly grateful to these Academicians for lifting the English school out of the slough of despond which it has so long occupied in Florence, represented as it has been by a few flimsy, ill-drawn portraits, one alone saving its credit—that by Sir Joshua Reynolds, although even that is not equal to his reputation. From occupying the last place, with this one exception, when compared with other modern schools, it is not an exaggeration to say that these portraits have raised the British school into the first rank.

The Florence collection represents at least 460 years of artistic succession, most of the portraits being painted by the artists themselves. It is a remarkable circumstance that, with few exceptions, they are inferior to their reputations. The only painter perfectly free from what may be *mauvaise honte* is a woman—Madame Vigée le Brun, who has painted her portrait with charming *sans-froid*. Time and the operations of restorers have destroyed the general effect of the portraits of the Old Masters: the heads are distinct, whether well or ill painted, but the costumes are dingy or black. It appears that all the modern artists who have contributed their portraits have felt depressed by these circumstances; and they have almost invariably represented themselves in black dresses, illumined by no ray of the intense light which is concentrated on the heads. We have had enough of this untruthful convention in England, but the three portraits which have lately arrived are free from it. It may be anticipated that they will not be placed among the pictures of the Old Masters, but that a new room will be provided, where modern artists may compete with each other on fair terms, unoppressed by a fanciful necessity of toning down their work till it resembles the effects produced by time and by decay.

If we compare these excellent pictures with portraits in other parts of the same galleries which are better preserved than those of the artists, an impression is made which it is not disrespectful to mention. The portraits of the great masters are manifestly influenced by their habits as mural painters or as men who lived when mural painting flourished. Thus, whether they were painted with the minute finish of the early Italians and Flemings, or with the breadth and *impasto* of the later Venetians, we find them invariably monumental in style. It is not surprising that modern portraits, painted under different conditions and free from similar influences, should present notable differences of treatment. Assuming that it would be desirable in special cases to paint portraits on the principles of the Old Masters, it may be worth while to enquire whether it is possible to restore, or to replace,

the conditions under which they painted. It may be considered hopeless that England should ever become a home of monumental art; thus artists are likely to continue to paint for exhibitions and private collections in which their pictures are shown under conditions which are absolutely the reverse of those which prevailed when mural painting was in the ascendant. If, instead of the usual jumble of little and big pictures of every class in public exhibitions, having no relation to each other in size or subject, some attention could be paid to scale, so that on the same wall there might be gathered together historic pictures and portraits only, the results would be something not far removed from the effect of mural painting, and an opportunity of contrast and comparison would be given which might be equally beneficial to the artist and to the public taste. Greatness of manner and breadth of *chiaroscuro* might be developed; and the portraits, whether head-size, kitkat, or half-length, would look better than when placed with a village festival on one side, a storm at sea on the other, and a flaming sunset overhead, as may now be the case.

CHARLES HEATH WILSON.

### "RESTORATION" IN ITALY.

At a committee meeting of the Society for the Preservation of Ancient Buildings held on January 13, at 9 Buckingham Street, Adelphi, the question of promulgating in Italy the principles of the society was discussed.

Great as has been the injury done to buildings and other works of art in Italy by centuries of neglect, the recent passion for renovation is still more fatal. A fresco may be much damaged by lamp-smoke or other injuries, but there is at least something of it left; while so-called "restoration" generally leaves absolutely nothing of the old painting visible. The coarse modern *tempera* paintings on the walls of the Cappella Bardi in Santa Croce, Florence, are a very poor consolation for the destruction of some of Giotto's best fresco work. The horrible way in which Santa Maria Novella was stripped a few years ago of the best part of its fine fifteenth-century fittings (see the *South Kensington Museum*), the repainting of the Bargello Chapel frescoes, including Dante's portrait, and the renovation of the whole palace in the most glaring cockney-Gothic style are some instances in one city only. The Bigallo is now in the hands of the restorers, and will soon come out "as good as new." Even the church of San Spirito, one of Filippo Brunelleschi's finest works, is now threatened.

It was decided that the committee of the society should communicate with friends in Italy with the view of getting some articles published on the subject in that country. The matter is a difficult one, as the Italians are pardonably jealous of any foreign interference, and are only too glad to be able to throw in our teeth such acts of vandalism as the destruction of the west end of St. Albans or the impending rebuilding of Magdalen Bridge at Oxford.

### OBITUARY.

SIR DANIEL MACNEE, P.R.S.A.

SIR DANIEL MACNEE, whose death was briefly announced in the ACADEMY last week, was born in 1806 at Fintry, in Stirlingshire. His father died when he was very young, and his family removed to Glasgow, where the lad was educated, and, at the age of thirteen, apprenticed for four years to John Knox, a local artist of some repute, under whom Horatio Macculloch and William Leitch, the water-colourist, were studying at the same time. He then worked as a lithographer for a year, and afterwards,

along with Macculloch, was engaged at Cumnock painting the plane-wood snuff-boxes for which the town was then celebrated, and in Edinburgh, making designs and colouring prints for Lizars, the well-known engraver. While in Edinburgh he studied in the "Trustees' Academy," which has been the Alma Mater of so many of the best Scottish painters; and by 1820 he had gained some popularity by his independent works, and was one of the twenty-four Associates of the Royal Institution who then made a successful application to be admitted members of the Scottish Academy, which had been started three years before. His early pictures were mainly figure-pieces, like "The Harvest Cart," "The Peat Sledge," and "Going to Market," but he gradually confined himself more exclusively to portraiture, and he soon returned to Glasgow, where he found a wide field for the exercise of his art. As a portrait-painter he was distinctly one of the school of the last generation, never attempting to turn his works into pictures by picturesque and elaborate treatment of dress and accessories, but concentrating his full force upon the face, in which, in his best works, he attained delicate expression of flesh and excellent truth of likeness. Among his most successful subjects may be mentioned "Dr. Wardlaw," which obtained a gold medal at the Paris International Exhibition of 1855; "Lord Brougham," "Viscount Melville," "Dr. Baxter," "Lord Inglis," and "Mrs. Bough." In 1876, on the death of Sir George Harvey, Macnee was unanimously elected his successor as President of the Scottish Academy, an honour which was followed by knighthood, and by the bestowal of the LL.D. degree by the Glasgow University. He now removed to Edinburgh, and devoted much of his time to the business and interests of the Academy, endearing himself, by his unaffected kindness of disposition and his rare social qualities, to a wide circle of friends, who now mourn his loss. In particular, he possessed singular narrative and dramatic powers, as a teller of racy Scottish anecdotes, of which we had a typical example only two months ago at a supper given by the Edinburgh Pen and Pencil Club to Mr. Irving. Sir Daniel was a humorist of the best and truest sort, one whose laughter-stirring stories were founded on the keenest and kindest observation of human nature.

J. M. GRAY.

JOHN LINNELL.

PERHAPS nearly all that we can know quite definitely concerning John Linnell and his place in English Art, is that by his death the career is over of one who was for many years a leader of the English school of painting. Linnell, who died last week in his country home in Surrey, was born as long ago as 1792, and the greater portion of his work was done at a time and under conditions of which the present frequenters of picture exhibitions can have little knowledge. A mere enumeration of his canvases, the titles of which may be culled from catalogues, conveys no knowledge worth having; and a Linnell exhibition, embracing alike his earlier and his later labour, becomes a necessity for those who would estimate at once the range and the originality of his work. The present generation has seen only the fag end of his life, though it happens, fortunately, that all but the very end has been productive of characteristic effort. Of course, for the last few years the artist, who was in his ninth decade, had done nothing worth mention. He was, indeed, practically in second childhood. But some of his best pictures, and those by which he is now best known—some of his quite finest landscapes—were the work of old age, and it is certain that he never painted better than when he was seventy. He only became properly a landscape painter when he was

past fifty; his earlier years having been much engrossed with portraiture, though he was, for a while, along with William Hunt, a pupil of Varley, the early leader of landscape in water-colour. The criticism which declares that by Linnell "gorse, and heather, and waving corn, and quivering timber were drawn with every tint and spot of light and droop of leaf or twig visible and traceable" can hardly be accurate, for, indeed, Linnell, as the writer of it knows and understands, was not a pre-Raphaelite. But it is true that in his work the detail of Nature assumed a form to which in the looser landscape of modern France it is a stranger. Among landscape painters, Linnell was a colourist—his colour was potent and massive, rather than delicate and refined. He was a man of imagination, and in his own art there are, here and there, suggestions of Blake, of whom he learnt something, and suggestions of Samuel Palmer, to whom he taught something. The Blake collector will be interested in knowing—if, indeed, he does not know already—that John Linnell was the possessor of very valuable and important examples of Blake's genius. The aged artist whose death we record was never a member of our Royal Academy, though he was continually an admired exhibitor at its annual shows. At one time, perhaps, he desired election, and could not obtain it. Later on, it was offered to him, and he was in a position to decline it.

PROF. M. WAGMÜLLER.

MANY persons in this country will have heard with regret of the death of the sculptor Prof. M. Wagnmüller, which took place at Munich in December last. He was chiefly known here through portrait-busts exhibited in our Academy. Among his sitters were Prof. Owen, the late Sir Arthur Helps, and the late Mr. Brassey. The bust of the latter was so much liked that no less than seventeen copies were ordered of it in marble for different societies. Those who remember our sculpture gallery twelve years ago and more will certainly admit the improvement that has taken place in portraiture—the more earnest endeavour to follow Nature than was then the case. This change is not a little owing to the works of Prof. Wagnmüller, which, by their truth and vigour of treatment, stood out against our more loaf-life productions. If the improvement is apparent here, it is still more so in his own country, where sculptors a few years ago were still under the baneful influence of Sohwanthaler. Wagnmüller started life as a mason, but he managed to find time for study at the Munich Academy, while at the same time he was supporting his parents by his labour. Besides his portraits, his chief works were a memorial monument, for which he received the Legion of Honour at the Paris Exhibition; a group representing "Mercy" for an hospital at Haidhausen; several allegorical groups, of colossal proportions, for the King of Bavaria, to be placed in his palaces at the Ohim-See and at Linderhof; and also the Liebig monument, which last, we believe, remains unfinished at his death. While engaged on this monument, and on the works for the King, who seems to have been over-anxious to have them speedily completed, Wagnmüller was appointed juror to the Munich Exhibition of 1879, in which position he offended many by his awards. There is no doubt that the overwork, and the strain on his sensitive nature caused by the unceasing attacks of disappointed competitors, accelerated a severe liver complaint from which he was suffering, and which was the immediate cause of his death.

Of William Miller, the eminent line engraver and interpreter of Turner, we shall speak at length next week. We now content ourselves

with recording that he died on January 20, at Sheffield, in the house of his son-in-law, Mr. Daniel Doncaster; and that he was buried on January 23 in the graveyard of the Friends meeting-house, Pleasance, Edinburgh.

NOTES ON ART AND ARCHAEOLOGY.

A WORK descriptive of the beauties of the Isle of Purbeck, by Mr. Chas. E. Robinson, author of the *Golden Hind*, and illustrated by Mr. Alfred Dawson, will shortly be issued to subscribers. It will contain about twelve etchings and photo-intaglio engravings, these latter being produced by the new process which Mr. Alfred Dawson has been endeavouring for some years to perfect; and about eighty typographic-etching vignettes in the text. It will differ in at least one respect from the general run of topographical books, author and artist having been over the ground gathering the materials in company.

THERE is a small collection of choice modern pictures now to be seen at Mr. Lefevre's gallery in King Street, St. James's. Among them are some well known—Marks' "Jolly Postboys" and Eyre Crowe's "Brothers of the Brush," both of which have been excellently etched by Victor Lhuillier. There is a good example of Henriette Browne, two of Edouard Frère, and three fine works by Goodall. A very powerful little landscape by E. J. Gregory is one of the most notable of the collection; but the palm is carried off by Rosa Bonheur and Alma-Tadema, the first of whom sends an Italian greyhound in a green lane, and the latter a water-colour version of his "Fredegonda and Ohilperic," in three scenes, and the life-size head of a lady holding a beautiful exotic flower to her face. This is painted in oils, and exquisite in colour.

WE have lately enjoyed an opportunity of seeing the important collection of paintings in oil and water-colours which are shortly to be sold at Plymouth by the executors of the late William Eastlake. Among the oil-paintings we may mention three by Sir Charles Eastlake and a Welsh mountain scene by B. W. Leader. The well-known work of Mrs. Coleman Angell is represented by nine finished drawings. By Frederic Taylor, of the old Water-Colour Society, there are eight beautiful examples. Other well-known artists whose paintings found their way to the folios of this amateur are Philip Mitchell, of the Institute of Painters in Water-Colour; J. A. Whittaker, Smallfield, and David Cox, jun., all of the old Water-Colour Society; Sir Robert Collier, Skinner Prout, Arthur Shelly, and many more. Perhaps, however, the most interesting feature of the collection will be a large number of important works and sketches by the late Samuel Cook, the Plymouth water-colour painter. His work at the Institute attracted Mr. Ruskin's attention in 1856; and assuredly it is no less worthy of our attention now than it then was of his. If someone should do for Samuel Cook what Messrs. Dowdeswell and Dowdeswells have done for George Manson—what has been done lately for so many artists—we are confident, as pure and genuine painting becomes daily more scarce, that a great pleasure and a great surprise would be in store for all true lovers of the water-colour painter's art.

PROF. MASPERO has succeeded in making satisfactory terms with the villagers whose dwellings and mosque encumber the Temple of Luxor; his only difficulty being with Mustapha-Aga, the local British consul, whose demands are said to be exorbitant. The temple is likely to yield results of the highest archaeological interest. It was begun by Amenhotep III., carried on by Seti I., Rameses II., Horus,

Sabaco, and Alexander Cegus; and the great pylons erected by Rameses II. are sculptured with battle-scenes similar to those at Abou-Simbel, and inscribed with a version of the heroic poem of Pentaur.

MANCHESTER has just entered upon its season of art exhibitions. The Athenaeum Graphic Club, a useful society chiefly composed of amateurs, has held a very meritorious exhibition. The picture of Hans Makart—to which the bitterest opponent will not refuse the right to be called "great"—is now on view at the Royal Institution. "Dian's Hunting Party" is, like the painter's previous works, unlikely to conciliate English prejudices, but the grasp and mastery of the artist are undeniable. Along with it are shown some interesting examples of Munich painters. In another room of the same building Miss Thompson's "Scotland for Ever" is appealing to the patriotic, as well as to the artistic, sympathies of the public. The Manchester Society of Women Painters has had a small, but very successful, exhibition in the Old Town Hall. The principal contributors were Miss Isabel Dacre, Miss Annie L. Robinson, and Miss Eleanor S. Wood. Their strength is in the direction of the figure, and they have evidently taken a serious view of their art. Miss Robinson's "Metaphor of Spring" and "Youth and Morning," Miss Dacre's "Helen," and Miss Wood's "Haunted Room" are especially notable; the latter would serve very well for a popular engraving. The men artists are busy preparing for the exhibition of the Manchester Academy which opens next month. Some interesting local portraits are likely to be shown, among them one of "Edwin Waugh," the Lancashire poet, by Mr. William Percy; and one of "Mr. H. H. Howorth," the historian of the Mongols, by Mr. W. H. Johnston. While on art matters, it may be mentioned, as a matter of regret, that the proposed transfer of the Royal Institution has for the moment fallen through. It is not thought, however, that the difficulties which have intervened are insuperable.

THE late Mr. Joseph Edwards, the Welsh sculptor, left his library and such works of art as might be deemed suitable to the Cymmrodorion Society; but a hope has been expressed that the casts and sculptures which remain may be preserved in some Welsh centre, such as Cardiff, which already possesses the nucleus of a fine-art gallery.

THE Lord Mayor has granted the use of the Egyptian Hall on February 28 for a *conversazione* for the purpose of promoting the interests of the City of London Society of Artists, and exhibiting sketches and works of art to be balloted for among the fellows and subscribers to the society. All information can be obtained from Mr. E. W. Parkes, 11 Queen Victoria Street, E.C., hon. secretary.

THE report of the autumn exhibition of the Arts Association, Newcastle-upon-Tyne, has been issued. The exhibition was opened on August 26 and closed on October 29. The total number of works hung was 774, of which eighty-one were contributed by local artists; the number of works sold was 130, representing a catalogue value of £3,000. It is proposed to hold the exhibition of 1882 during the months of June and July.

MESSRS. SOTHEY and Co. will sell next week the collection of coins and medals of the late George Walpole White. Among them are several rare *cinqcento* medals and *plaques*; and a piedfort of a pound of Queen Elizabeth, which is believed to be unique.

THE thirty-eighth volume of the *Archaeological Journal* contains a Catalogue of the fine collection of helmets and mail exhibited last year in the rooms of the Institute. This most careful

and interesting production is the result of great labour on the part of two distinguished men—the Baron de Cosson and the late Mr. Burges. The latter was occupied on his portion of the volume almost to the end of his life. The Catalogue, with its learned "introductions" to each section, is not only a worthy record of a singularly perfect gathering of certain portions of ancient armour, but a standard work of the highest authority on this subject. Its usefulness as a book of reference is greatly enhanced by the fifteen plates, containing no less than 223 illustrations drawn from photographs of the objects exhibited. As all of the drawings were corrected from the originals, their accuracy is indisputable.

We have received the first part of a periodical called *American Etchings*, edited by Ernest Knauff, and published by the Art Interchange Publishing Company of New York. The part contains one etching only—a charming piece of rustic scenery in the manner of Constable by Kruseman Van Elten, the well-known etcher—Dutch by birth, but American in his art. The etchers of America are so strong that it is quite time they had a periodical of their own, and it is to be hoped that their best men (Farrer, Parrish, the Morans, Church, and many more we could name) will contribute to this serial. The letterpress is printed in red, on buff paper, an innovation which is somewhat trying to the optic nerves.

We are informed that the Municipal Council of Rome has nominated the Commendatore Shakspeare Wood as a member of the General Commission for the International Exhibition of Fine Arts to be held at Rome in December. Mr. Shakspeare Wood's long residence in that city, and his practical knowledge of art, are good reasons, among others, for so judicious a nomination.

THE late Charles Blanc has bequeathed the whole of his collection of books to the library of the Institut, with a request to the librarian to hand over such as he may not want to the library of the Ecole des Beaux-Arts. Charles Blanc's collection was specially rich in works illustrating the history of art, of a kind which the funds at the disposal of the Institut do not permit it to purchase.

THE next number of the *Gazette des Beaux-Arts* will contain a memorial article on the late Charles Blanc, from the pen of M. Paul Lefort.

### THE STAGE.

THE revival of "Ours" at the Haymarket Theatre need scarcely occasion a discussion on the characteristics of Robertsonian comedy; nor is the part of the heroine so important a one as to subject Mrs. Langtry, who plays it, to detailed or unfavourable criticism. The piece has in it some elements of Nature which were wanting to the current literature of the Stage at the time at which Robertson wrote, and the performance has in it not a few elements of charm. At the same time, "Ours" is wanting in strength, in solidity, in accuracy of portraiture; and Mrs. Langtry's performance has still to acquire the finish which a somewhat flimsy comedy demands perhaps as urgently as a more complete and forcible one. Mrs. Bancroft appears in the piece, resuming her old part, with only a little less than her accustomed vivacity and aplomb. The representation is generally of a kind to please, and it is likely to be continued for a fair number of nights. Two other comedies by the same author will probably be performed later in the year, after which the Haymarket management is likely to be thrown back

upon the resources of contemporary authorship.

THE old and historic theatre of Bristol, upon whose boards Garrick played, and of whose proportions and acoustic properties he expressed admiration, has lately passed into new hands, which promise to be enterprising. Bristol, though it was long a school for actors, has never been a theatrical town in the sense in which Liverpool and Manchester are theatrical towns; but it is probable that the competition which arises from the presence of two first-class playhouses will add at once to the attractions of the theatres and to the playgoing propensities of the population. We have this week seen the performance of a pantomime at the elder Bristol theatre; and it may be interesting to state of it that, while the decorations and scenic display were, like Antonio's securities, "sufficient," the whole performance was conducted in a truer spirit of pantomime than any that it is easy to discern among the superfluous magnificences of Drury Lane and Covent Garden. The company that Mr. A. Melville has organised is thoroughly up to its work. The old story—that favourite country story of St. George which the mummings of Somerset and Gloucester still delight to perform in remote country-sides at Christmas time—is kept to with a vigilance that would please Mr. Blanchard, though it might hardly satisfy the independent spirit of his Drury Lane interpreters. A family of really marvellous agility and grace—known as "The Cobras"—go through a performance of pure pantomime in a fashion that the Vokeses in their best days could not possibly have excelled. In their kind, they are unapproachable. And at Christmas time these agreeable pranks may easily be pardoned even on boards which witnessed not only Garrick's exercises in tragedy and comedy, but, sixteen or seventeen years ago, the first successes of Miss Kate Terry, Miss Ellen Terry, and Mrs. Kendal.

### MUSIC.

#### SATURDAY AND MONDAY POPULAR CONCERTS, ETC.

SIR W. STERNDALE BENNETT's sextett in E sharp minor (op. 8), for pianoforte and strings, was performed at the Popular Concerts for the first time in 1876, and, for the second time, last Saturday afternoon, Mdle. Marie Krebs on both occasions taking the difficult, but brilliant, pianoforte part. This work was written in 1835, the composer being then in his nineteenth year. He had already at that period established for himself a high reputation as a pianoforte player; his great love and partiality for the instrument will best explain, if it cannot justify, the predominance of the piano part in the sextett. The work is one of very great promise, and it is to be regretted that the composer in after-life should have devoted so little attention to the cultivation of chamber-music. We need not attempt a detailed analysis of this bright, youthful production. The form of each movement is thoroughly orthodox; the various themes do not, it is true, display any marked individuality (in the first and last movements the influence of Mendelssohn is specially felt), but everything is expressed in a natural and flowing manner, the developments are orderly and unlaboured, and the whole work is easy to follow and pleasant to listen to. The *andante* is particularly graceful, and, in our opinion, the best of the four movements. It is not surprising that a youth of nineteen who could write such music should have won the approbation and friendship of Mendelssohn and Schumann. The work was admirably interpreted by Mdle. Krebs and MM. Straus, Ries, Hollander, White, and Piatti. The programme commenced with Spohr's popular quintett in

G major (op. 33, No. 2). The analytical programme-book, giving an account of Spohr's chamber-music, says:—"The *double quartett* may be cited as his own invention." Yet Spohr, in his Autobiography, writes:—

"After I had completed the third quartett of op. 58, a fancy seized me to carry out an idea I had long conceived, and of which, if I am not mistaken, Andrew Romberg, when we played a quartett together for the last time before his death, first spoke of—viz., to try my hand at a double quartett. The circumstance that Romberg had entertained the idea for several years without ever attempting it incited me to it yet more."

And he (Spohr) also informs us that a young composer of the name of Pape once sent him a double quartett in MS. Mdle. Krebs played Beethoven's so-called "sonata pastorale" (op. 28), and, with Signor Piatti, the first, second, and fourth of Schumann's "Stücke im Volkston." The two artists acknowledged the *encore* by repeating No. 2; and Mdle. Krebs also played a piece by Scarlatti after the sonata. It is to be regretted that artists of such standing should encourage a bad system.

On Monday evening, Johann Svendsen's octett in A major (op. 3), for strings, was performed for the first time at the Popular Concerts. This is one of the earliest works of the promising Norwegian composer. Last season his very interesting overture entitled "Sigurd Slembe" was heard at the Philharmonic Society; and Mr. Manns, Mr. Ganz, and others have from time to time performed works from the same pen. Johann Severin Svendsen, born at Christiania, in 1840, went to Leipzig in 1862, after six years' service in the Norwegian army, and studied the violin under Ferdinand David, and harmony and the theory of music under Hauptman and Richter. In the octett, an early work, the composer submits most unwillingly to the bonds and shackles of form, and tries to express his thoughts in an original manner. He really has something to say, and his writing shows character, poetry, and imagination. The development of his talent will be watched with interest, for, with greater mastery of form and sterner self-criticism, he will doubtless accomplish great things. The principal theme of the opening *allegro* is not particularly attractive, and yet it plays a very conspicuous part throughout the movement. The *scherzo* is full of humour, but much too long. The *andante cantabile* is the most concise, and the *finale* the most characteristic, of the four movements. The work was well played and well received; and we shall probably soon hear more of this composer, who has written symphonies, quartetts, a quintett, concertos for the violin and violoncello, &c., and also arranged for orchestra works by Bach, Schumann, and Liszt. Mdle. Krebs played as solos two of Mendelssohn's "Songs without Words," and the characteristic piece No. 4 from op. 7. This last is in every way suited to show off the pianist's perfect technique and brilliant style of playing. The programme concluded with Spohr's pianoforte trio in E minor. The programme-book still continues to inform its readers that Spohr composed three pianoforte trios; the correct number, as we have once before mentioned, is five.

Mr. H. F. Frost, organist of the Savoy, gave an organ recital, last Tuesday evening, at the Lancaster Hall, Notting Hill. The programme contained an interesting selection of works by German, French, and English composers. Mr. Frost was very successful in his rendering of the *adagio* from Beethoven's septett, Wagner's prelude to "Lohengrin," and Batiste's showy *offertoire* in D major. The programme concluded with a rondo (from a MS. sonata) by Mr. Frost.

## LITERATURE.

*Scotland in Early Christian Times.* Second Series. The Rhind Lectures in Archaeology for 1880. By Joseph Anderson, Keeper of the National Museum of the Antiquaries of Scotland. (Edinburgh: David Douglas.)

(First Notice.)

THIS second series of Rhind Lectures cannot be treated as a separate work. In the first series (noticed in the ACADEMY of July 9, 1881) Mr. Anderson described

"the structural remains and relics of the Early Christian Time in Scotland which are exclusively ecclesiastical in their origin and use. In this volume, comprising the Lectures delivered in 1880, the subject is continued and brought to a conclusion by the description of objects which, though not strictly ecclesiastical in origin or use, are yet closely connected with those that are so, either by the character of their art or by their associations. The second series of Lectures is therefore the necessary complement and continuation of the first, completing the description and classification of the various types of existing relics which give testimony to the nature and quality of the art and culture developed and brought to maturity in connexion with the civilisation of Early Christian Times in Scotland."

In the first series we had descriptions and comparisons of the structural remains, as churches, chapels, monastic habitations; and of the existing relics, as books, bells, croziers, and reliquaries. In the second series we have descriptions and comparisons of the decorative metal-work, as brooches, &c.; of decorative stone-work, as monuments, which latter is so extensive a subject that it is divided into several heads—the Art of the monuments, the Symbolism of them, the inscriptions in Celtic and Oghams, and the inscriptions in Runic and Roman letters. At the commencement, Mr. Anderson defines "archaeology" to be the elucidation of sequence and area in special classes of remains—not of date and duration. Then, as we gain our knowledge of people and things long past through the knowledge of people and things less remote from our day, Mr. Anderson elected to instruct his audience by "ascending instead of descending the stream of time," presumably in the way by which he acquired his own knowledge. He chose the twelfth century as the starting-point

"because the border-land which lies between the historic and the non-historic begins here to be definitely historic. . . . When we go beyond this boundary (upwards) we take leave of nearly all the common materials of history, . . . and, instead of things which give dates and

incidents, we have only things which give types and systems."

This method, however, he has not observed in the stone monuments, in describing which he has begun in the middle, as finding there characteristics from which he could infer earlier and later types. Mr. Anderson is peculiarly fitted to undertake such a task as the one he has accomplished. He is well acquainted with a great part of Scotland; he has been for many years curator of the Museum of the Society of Antiquaries of Scotland (a well-arranged and instructive collection, though sadly pinched for room and money); he lives among the remains of which a large part of his lectures treat; and, finally, he has the capability to make use of the advantages he possesses. This daily and thorough acquaintance with the antiques of which he treats is fully shown in the comparisons of different works of art. Above all, he has the advantage of a good library, and has visited many of the foreign museums, and compared their contents with those at home. The lecturer frequently refers to MSS., not for the sake of the texts, but of the illuminations and form of letters; and though he does not profess to give dates, yet we get, here and there, approximate dates of certain forms. Doubtless, the farther we go back in time, or, at least, in civilisation, the less change took place in a given span of time, and the more localised certain forms were.

The Celtic form of brooch is shown to be a ring nearly complete, flattened at the two ends, with a pin longer than the diameter of the ring. The ornament consists chiefly of serpentine and lacertine creatures interlaced. Besides these zoomorphic forms, there are spirals of so-called trumpet patterns which are found in no art but Celtic art. The penannular form is also of Eastern make, and, in fact, used to this day in India. Specimens of it are among the large brooches from Skaill in the museum. With one of these penannular brooches found in Inverness-shire was found a coin of Mercia of 795–818. This brooch Mr. Anderson supposes by its style to belong to the earlier period of the type. The Scandinavian brooch of the period was oval and bowl-shaped, with a different style of ornament. As might be supposed from the relations of the North of Scotland with Norway, instances are met with of Celtic ornaments on Scandinavian ground, and *vice versa*. Christian Celtic ornaments have been found in Pagan Scandinavian graves. It is sad to read of the destruction by melting of vast numbers of remains which at the present day would be valued at 100 or 200 times their value as metal. The law of treasure-trove has much to answer for. Of one find of silver reliques more than 400 ounces are known to have been melted (p. 36). Instances are given of the intermixture of the cross with "the unknown symbols," and of the conjunction of Scandinavian runes with Celtic art. There is proof of "a national school of decorative art."

A lecturer is always under this disadvantage—that he is forced to state facts without the opportunity of giving the evidence to support his assertions. The time at his disposal does not in general admit of this. In testing the merits of the lectures when printed,

the reader is under the disadvantage of finding facts stated without the possibility of examining the evidence. Although the subject is extensive, Mr. Anderson has managed generally to prove his case. But, notwithstanding the localisation of certain types of form and ornament, we are apt, perhaps, to underrate the amount of transit of merchandise even in much earlier times than those under consideration. Fibrolite celts from Sardinia have been found in Brittany; and the late Mr. Lukis, of Guernsey, had a project to trace the lines of commerce by the remains dropped at various places. He failed, however, to fix the track of these celts. In Gotland, on the Baltic, quantities of cufic coins and many articles from the district of Bagdad have been found, and in this case the line of commerce is known. Probably, through Gotland came the silver ornaments found at Skaill. The remains of Celtic metal work have, of course, remained underground till of late years, but the next class of remains of which the lecture treats have for the most part remained open to all men—the stone monuments. Why these latter are not as truly ecclesiastical as bells and croziers is not apparent.

The most important class of monuments treated of are erect slabs shaped to a regular form, approaching a parallelogram in plan and in elevation, never themselves in the form of a cross, but having for their enrichment the cross in various forms, "the unknown symbols," human figures, animals of real and imaginative existence, and interlaced work, both zoomorphic and of pure plait, for the most part in low relief. This class of monuments are scattered over the eastern half of Scotland, from Fife to Caithness,

"but there is a wider range in which they are not found. They do not occur in the Hebrides, nor on the western mainland from Cape Wrath to the south of Argyll. Nor is there a single example south of the Clyde or south of the Forth. They do not occur anywhere in Ireland, or in Wales, or in Cornwall. There is nothing like them in England, France, Scandinavia, or Italy, or anywhere else in the world."

The cross with four semicircular recesses at the junctions of the arms with the main stem Mr. Anderson considers "specially Celtic," and the same form with the circle or four quadrants extending from arms to stem "also Celtic." This circle is in England commonly called "a glory," but in p. 252 it is explained to mean deity, "without beginning and end." The cross with rectangular recesses at the junctions of the arms Mr. Anderson states "is also specially Celtic." This form often has a square placed on the centre of the cross, and is well seen in the Logierait example, p. 66. In this case the carver made one rectangular recess and seven of the segmental form. The form with rectangular recesses *without* the square only occurs on one stone, illustrated p. 161. In some cases a pattern is continuous over the square and the adjoining parts of the cross; but in theory the square is there. The square with segmental recesses is seen at p. 106. "No form of cross created by any other art is the same as the Celtic form," p. 120. (This statement is much modified at p. 111.) P. 82: "The most distinctive characteristic

of Celtic art is the absence of foliage. It was zoomorphic, but not phyllomorphic. It had reached its culminating point before a single foliageous scroll makes its appearance." This foliage is a departure from the purity of Celtic art, and is the characteristic of the later "free-standing crosses," especially of those in the West Highlands. These, exemplified in St. Martin's cross at Iona, have other characteristics in form, and have *no Celtic* inscriptions. Mr. Anderson states that the *slabs* with the cross and symbols never bear the representation of a crucifix, while the free-standing crosses usually do. In Ireland, the non-appearance of the crucifix on the Celtic slabs is equally noticeable. These free-standing crosses Mr. Anderson divides into two classes—one ornamented in the Celtic style, but without the symbols; the other ornamented with foliage, and frequently bearing a crucifix. On p. 86 he notices the small boulders at Iona bearing a cross. He is wrong in supposing the second was found in or close to the cathedral during the repairs. It was found in a field-dyke very near Cladh an Disaert. A very similar one is figured, found in Aberdeenshire. He suggests that they may belong to an earlier type than those previously described; but, from their small size, they seem more allied to the Hartlepool grave-stones than to the Scotch slabs. Other rude erect slabs are described which have a cross or five crosses rudely engraved on them. The crosses vary in form, but most are slightly *pattee*—in one case *potent*. No evidence of the relative date of these stones is adduced. Mr. Anderson knows nothing to connect any of the classes described with the Columban church, and supposes that they did not long precede the twelfth century. As to the ornamentation of the monuments, "the probability is that the higher phase was developed in Ireland at an earlier period than in Scotland."

There is one form of cross which is not described or illustrated in these Lectures, and so presumably not found in the eastern districts. It is seldom or never "free-standing," but is incised or relieved on slabs. It has semi-circular ends to the four limbs, and often a square or circle, solid or open, at the intersection. It is often to be seen in MSS. At Iona there is one large example (there called "an Irish cross"—Drummond, plate ix.), a fragment of another large slab and some examples more or less fragmentary of smaller slabs. It is very remarkable that Mr. Anderson did not find any example among the cross-adorned slabs of his principal group. This form is on two stones at Inish Caltra, Co. Clare, and examples are given in Petrie's *Round Towers* (pp. 327-29), and in Petrie's *Christian Inscriptions*. It is on seven of the peculiar Anglo-Saxon sepulchral stones found at Hartlepool, where no doubt it is owing to Irish influence.

The statement that the forms illustrated are specially Celtic is somewhat modified at p. 111; and Mr. Anderson is of course immediately opposed by the Manx examples, but he disposes of that difficulty by supposing that Gaut learned his trade in a Celtic workshop. But how was it that all over England the first described form became the usual Anglo-Saxon form—for

instance, the Lancaster cross? There are no pre-Saxon crosses in the Midland counties. The crosses of the Isle of Man are distinguished by the length and slenderness of the shaft and the contraction of the arms of the cross. They are of the eleventh and twelfth centuries. It is remarkable that none of the forms of the cross which Mr. Anderson states to be specially Celtic came to be used heraldically. The form with the square imposed got into use in the Greek Church. Then of the interlacing of pure plait and of serpentine and imaginary creatures, it is stated "that no nation ever used it as the Celts have done;" but the numerous fragments of Anglo-Saxon crosses in England bear the same style of work, as also do the church door-frames of the tenth century from Norway, of which casts are in the Kensington Museum. Whence did the Norman architects get their interlaced work? The fret-work is rarely, if ever, to be seen in England. Startling as the lecturer's statements are in the face of these facts, they ought not to be rejected without knowing the evidence on which he has based them.

At p. 72 are described a class of grave-stones which have been called "hog-backed," partaking, according to Mr. Anderson, of the pure Celtic style and of the twelfth-century style. They are unknown in the Midland counties of England, but in vol. xiv. of the publications of the Associated Architectural Societies some found in Yorkshire are described and illustrated by Mr. Rowe, who considers them Saxon of the ninth century.

HENRY DRYDEN.

*A Lady's Cruise in a French Man-of-War.*  
By Miss C. F. Gordon Cumming. In 2 vols.  
(Blackwood.)

MISS GORDON CUMMING has followed up her experiences at Fiji by another two volumes of further exploration among the isles of the Pacific. She had the good fortune to receive an invitation on board a French man-of-war which was starting to convey an "Amethystine Bishop" in charge of the Roman Catholic churches in the Pacific, so that he might make the tour of his diocese. She found Mgr. Elloi, as well as Capt. Aube, who commanded the *Seignelay*, to be most delightful companions; and all on board the ship seem to have done their best to make her comfortable. Under the auspices of the Bishop, the author saw much of the Roman Catholic propaganda in the places visited, and is thus able to describe what has been done by this means to Christianise the natives, as well as the operations of the various missions from England, America, and Australia. All these societies for the conversion of the heathen owe Miss Gordon Cumming a deep debt of gratitude, not only for the valuable reports she has made on what they have accomplished, but also for her defence of their cause against detractors. In this last book will be found ample details of the struggles which the missionaries of every sect have had to contend with; their early difficulties, when the islanders were idolaters and cannibals; how the white man appeared in another character, that of the buccaneering adventurer, the kidnapper,

and the swindling trader, and became the opponent of the missionary. To this antagonism the author ascribes much of the adverse criticism which has appeared against the good work done in the Pacific.

Although Miss Gordon Cumming was so highly pleased with her French companions, not those only on board the *Seignelay*, but also those she met at Tahiti and other places, this does not prevent her from pointing out the plans of the French in the Pacific. For some time back they have been very active in that region, annexing islands and appointing kings; good coaling stations have been secured, and everything done to establish a "French centre" which shall attract the commerce of the Pacific, including Australia. The grand finish to this will be the opening of the Panama Canal, when it is hoped that the Pacific will become, what they used to call the Mediterranean, a "French lake." Along with other European nations, France will no doubt get her share of the trade of that part of the world; but the chances are that, in the future, America will dominate in the Pacific, and San Francisco become the great port of that sea, as Liverpool is at present of the Atlantic. Who can predict the political condition of Australia a century hence? Before long her power, too, is likely to tell for something on what the sailor called the "starboard side of the Equator."

To give an example of the wonders of the islands which the author describes. At Vavau, where the whole of the "coast is cavernous," there is a coral cave about forty feet wide and the same in height, with an entrance to it some distance below the surface of the sea, so that it can only be entered by good divers. The first to discover it was a young Tongan, who loved the daughter of a great chief. He prevailed on his lady-love to fly with him, and this was their hiding-place for some months. For the fair Tongan to dive down to the opening, and come up again inside of this marine palace of love, was a very easy matter. Another cave at the same locality is described, into which a boat can sail. From the description of the water forming a floor of lapis-lazuli, it must be something like the Blue Grotto of Capri; but its coral galleries and stalactite pillars, as well as its size, must make it much grander in every way. It is impossible to give extracts which will convey an idea of the loveliness of the scenery of these isles. The volumes must be read to accomplish this; and in them will be found some very beautiful illustrations from the author's pencil, which, combined with her "pictures in words," will make the reader yearn to visit such exceptional wonders.

In this book, as in that on Fiji, Miss Gordon Cumming has done good work in collecting, wherever she was able, the old customs, legends, and mythology of the isles she visited. These are now disappearing so rapidly under the influence of missionaries, traders, and various importations from every civilised region that in a very short time the interesting details of what these primitive barbarians believed, and the ceremonies they performed, will be forgotten

and lost. They seem to have had a rich collection of gods. Ancient stone worship was one of their forms of religion. Among the Samoans egg-shaped stones were held in reverence. In the Union Isles, the great god Tui Tokelau took the form of a rude stone carefully wrapped up in mats; and no eye ever looked on him except those of the king, who was the high-priest, and even the king could only approach him once a year, when the old mats were removed and new ones put on. In the more developed form of worship among the Hindus, more particularly in Southern India, the sacred stone emblem is often dressed in a piece of cloth. Pausanias gives us another instance in his description of Delphi, where he says: "You will see a stone of a moderate size. This they anoint with oil every day, and during every festival cover it with new shorn wool." This stone, according to the tradition preserved by Pausanias, was that swallowed by Saturn as a substitute for the newly born Jupiter; and it had a cloth round it, in the tale, when it was presented to Saturn. The cloth in this case is understood to have represented the "baby-linen;" but the widespread use of cloth in connexion with the stone-symbol throws a doubt on this interpretation of the Greek story. The "Feather God" of the Tahitians held a high place in their estimation; when they went to war he was carried in the sacred canoe, and was supposed to ensure the presence of the god with them in their battles. Sharks, centipedes, and almost every variety of animal were raised to the dignity of deities. The skulls of the dead were sacred, particularly those of old women, which were stuck on the top of a pole and placed in gardens to secure good crops. The story of Jason sowing the dragon's teeth appears to our modern mode of thought a mere allegory; but it is possible to look at it in a new light, and believe, even though the story of the Golden Fleece may be in the main mythical, that something like that peculiar kind of dental manuring was within the limits of human faith when we read that with the Samoans the scattering of the teeth of old women over a yam plantation was believed to be an infallible means of securing a plentiful harvest.

Miss Gordon Cumming, among other subjects, deals with the origin of the natives, and inclines to a Japanese migration; but she has to acknowledge that the usual theory of a Malay origin derives strong confirmation from the identity of languages. She has described some very important remains of stone structures which ought not to be overlooked in considering the ethnology of the Pacific Isles. It is very doubtful if these can be the work of the races now found there. In the island of Tonga-Tabu is a trilithon formed of huge blocks. The stones are hewn, the height above ground is fifteen feet, and the lintel is let into deep sockets cut in the uprights. The natives know nothing about the purpose of this monument, nor who erected it. A drawing of it is given in the work. Others are said to exist, but not so large. In the Island of Nukuhiva, one of the Marquesas, there is a series of vast terraces, about a hundred yards long by twenty wide, forming gigantic steps on the mountain side. These

are built of oblong blocks of stone, some of them being as much as fifteen feet long by five or six wide. In Papa Nui, or Easter Island, are also platforms of cyclopean masonry, on which stood hundreds of stone figures eighteen feet high. These remains show either that the present inhabitants had at one time reached a much higher condition of civilisation, or that another race must have existed who were capable of producing such monuments.

It may be worth noting the existence of the old Jewish custom—"that a widow must become the wife of her deceased husband's brother, or, failing him, of his nearest male relative." In Tahiti, as in Fiji, a woman of the highest rank may marry whom she likes; but a man is allowed no such choice. A chief must be particular that the maiden he takes as his wife has blue blood in her veins, for the child derives its rank from the mother. Hence it may often happen that a son is a much more important person than his own father.

WILLIAM SIMPSON.

*Autumnal Leaves.* By F. G. Heath. (Sampson Low.)

Just a hundred years ago William Gilpin improved the leisure which he could snatch from his clerical duties at Boldre, in the New Forest, by writing on the picturesque beauty of the neighbouring woodlands. He showed, by the effects of grouping, of the various habits and foliage of the different native trees, and of the general character of arboreal scenery, the aesthetical value of forests and trees. His opinions have been occasionally corrected and deepened in modern times, but are in the main irrefragable. Mr. Heath is one of his most ardent disciples, and in the first part of the present book takes us in early autumn through the sadly shrunk boundaries of the forest which was so dear to his master. Unlike Mr. Wise, he does not trouble himself much about its history or archaeology, but bids us enjoy the feast of colour and delicate outline which forms the special charm of the New Forest when autumnal tints begin to darken its summer splendour. The beauties of the Avon Valley, and especially of that most delightful village of old-fashioned flowers and quaint cottages, Ibbesley, are lovingly dwelt upon. Bramshaw Hill and Stonycross, the more distinctively woodland district of the Forest, form a fine contrast to them. Few things can be imagined more pleasant in early spring or autumn than to follow Mr. Heath's footsteps by flaming gorse and purple heather, under great oaks clothed in many-coloured lichens, and beeches whose drooping foliage creates a grateful coolness amid their russet-floored avenues, and so to test his enthusiastic descriptions of ancient Ytene. Perhaps he scarcely brings out what distinguishes the New Forest from all other British woodlands—its variety; but then his thoughts were chiefly occupied with the many-shaded colours of its leafage. Thanks, however, to Mr. F. G. Short's clever pencil, a glance at his coadjutor's sketches will supply this deficiency. They reproduce with extreme fidelity that softness and time-honoured peacefulness which mark English forest-scenery. Mr. Short's "English Lane,"

and the vignette of the "Queen's Bower Stream, Brockenhurst," will call up many pleasing reminiscences for all who know the New Forest.

The purpose of the book, however, is mainly to point out a fresh line of study to those fond of woods and trees in the character of their autumnal markings. Most people have revelled in the reds and yellows of woodland scenery during a frosty October before winter's gales have rudely stripped the foliage; but Mr. Heath calls us to a subtler discrimination of tints while as yet incipient decay has only partially filled the stomata of the leaves with earthy matter, and the vivid chlorophyll which they showed in summer is fading before the stronger development of those other pigments which Mr. Wallace calls collectively chromophyll. Yet Mr. Heath cannot reduce these tints to any regular scheme, or found any law upon their regularity of succession in each tree. They are confessedly varied and uncertain. But he would bid us concentrate our attention on the fainter tones of colour in autumnal leafage, and entirely eliminate that arch-enchanter, Frost. Seeing it is almost entirely to the agency of frost that we owe the blazes and smudges of red and purple splendour which light up October's forest glades, we cannot but think this, from an artistic point of view, a mistake; and, as the author owns, the effects of late autumn on forest scenery are not more certain and unvaried than those of early decay. However, Mr. Heath here states,

"it is in the early autumnal tinting that the charm of colour lies, and it is then that there is the greatest wealth of contrasts in wild nature. Hence, in representing this especial aspect of autumn, it has been sought to give the most typical and prominent of autumnal leaves, and these will be found figured in the coloured plates."

Most persons looking at these very careful transcripts of leaves with such preconceived views of brilliant autumnal colouring as we have expressed above will at first be somewhat disappointed. The leaves are of uniform tints—brown, dark green, and sad yellow; and we miss those glories of crimson and gold which are usually associated with our miniature Indian summers. This impression partly wears away on looking into the exactness with which the venation and denticulation of these leaves are expressed. The very absence of strong colour often brings out the midrib and branched-work of foliage more distinctly. The character of a leaf, in a word, is more easily distinguished at this early stage than when its low-toned colouring has flushed into a fuller splendour. The botanist may "peep," as Wordsworth has it, over the one; but, unless we much mistake, the lover of artistic effect and beauty on a larger scale will prefer the other, and mentally associate the autumn woods with glowing shades of crimson and gold. But these plates are admirable for the most part as transcripts of the stage which Mr. Heath has chosen, if slightly wanting in some cases in that gloss which decay does not disturb at first. One or two we should quarrel with, however, as they stand. Thus it may be questioned whether the sycamore leaf of plate iv. ever

preserves its evenness of contour and remnants of green when so large a proportion of brown hues has crept over it; but of this point we would not speak positively without further examination. On the horse-chestnut, however, in the same plate, we can dogmatise, as we happened to make a special study of the decay of its leafage this autumn. Its green tints were never blended with a dark yellow shade, as is here represented, but were checkered with a brighter hue from the beginning of decay. The ribs were very visible throughout the whole period of the fading, and here Mr. Heath has properly emphasised them. In the next stages, yellow waxes more and more vivid, prevails more entirely over any shade of green, and is splashed with crimson should frost forestall the leaf's fall, or else in humid weather the golden hue continues until the very end. Such seems to be the general law of decay in a horse-chestnut leaf; but careful observation will show that each leaf differs in minor details. It is, therefore, possible—e.g., in a very wet autumn—that Mr. Heath's figured leaf might be found in some localities. Only this year, and never before, so far as we can remember, have we noticed such a scheme of colour. Have lovers of brilliant foliage ever observed the marvellous hues of red and yellow which in late autumn clothe horse-chestnuts when they depend over water? In such a position they become veritably what Mr. Allingham calls "Indian princes."

But we must stop. It is easy to desiderate in Mr. Heath's medlar leaves those streaks of crimson which they put on in October, and especially those flaming bars which clothe the wild cherry more distinctively than any other woodland tree; but it is difficult to do justice to the extreme accuracy of drawing in these transcripts, and to Mr. Heath's patient care and watchfulness which have given them to all lovers of foliage. He has justly earned a fresh tribute of gratitude from all students of our woods and lanes. It is with much satisfaction that we find him dwelling on the charms of old hawthorn hedges. No more beautiful constituent of scenery, both in shape and tints, can be found than such an old-world rambling hedgerow. The tree itself is one of the most picturesque of our native flora, as dear to the painter as the etcher. The author has a keen sense of beauty in early autumn. "Standing by a tree at that time," he writes,

"and looking in among the foliage, the variety of tinting is often seen to be very beautiful. Fresh green leaves, side by side with red and yellow and reddish yellow and reddish orange, the green merging insensibly in some leaves into the yellow or orange, the orange into pale red, and the pale red into glowing crimson"—

present a singularly attractive picture.

While thanking Mr. Heath, however, for these early gifts of autumn, we own to a longing that his eyes could be purged with euphrasy, and be rapt to the North to note the wonders wrought by frost in late autumn. Perhaps he will charm us in a future volume with some of these effects; and, if so, we would bid him in conclusion not to forget the drooping gold of the birches on Tweedside at that season, so different from the pale, sad-coloured leaves here figured, the

glorious reds and yellows of the two mighty mountain ashes before the little inn at Dalwhinnie, or the full splendour of their autumnal dress when the ring-ousels come to eat their crimson berries at Loch Laggan. With these memories before our mind's eye, Mr. Heath's figure of mountain-ash foliage looks poverty-stricken indeed.

M. G. WATKINS.

*Songs in Minor Keys.* By C. C. Fraser-Tytler (Mrs. Edward Liddell). (Macmillan.)

THE simple title of this volume describes its contents equally modestly and happily. Mrs. Liddell is a minor singer, who has well established her title to the name. She has produced a book that displays feeling and thought no less conspicuously than music and beauty—a book distinguished by a varied tone and temper, full of sunshine and shadow, and wholly free from alloy of unworthy matter. She has not attained to, as she has not attempted, the higher reaches of love, sorrow, and death which only the greater singer can compass. We do not know that there is even one line in this beautiful volume that seems to us to touch the level of imaginative ardour that is essential to a poem, finally and definitely to vitalise and distinguish it. We do not think we have met with a single passage that quite realises an absolute vividness of vision; but we have marked many passages, and might have marked more, which are full of a quiet inspiration, and exhibit an individual attitude of mind towards the joys and sorrows of every-day life, a genuine spring of unaffected feeling and fire of religious fervour.

Mrs. Liddell is alone, or almost alone, among minor poets in not being imitative. She has a voice that is musical, flexible, and her own, whatever its limitations of compass or quality. But her best gift is invention (that pole-star of poetry, as Keats considered it); and, though this is an endowment she enjoys in no very exceptional measure, it is always present, and even conspicuous, in her poetry. The short narrative poems in this volume are attractive from their tenderness, pathos, and searching introspection, but most of all from their natural healthfulness of incident and mood.

One of the sweetest stories is entitled "The Highland Glen." It is told in dialect by a poor woman who lived in a dull, cobwebbed street of a Scotch town. When she was a comely Highland lass her lover came out of the deep glen between the hills and took her back with him to his city home. But she could never outgrow the love of her Highland glen, and the memory of it remained with her amid coarser scenes. Her husband had died early, and, during the forty years of her destitute widowhood, she treasured the recollection of the sunny home of her girlhood; and now that she is grown gray and bent, her kith and kin all gone to God, every stick and stone and cranny of it comes back to her as she totters daily to look upon the poor little green tree that grows at the corner of the smoky street.

"But for the bonny glen my heart cries sair,  
I dream I'm standin' knee-deep in the burn;  
I see the rowans noddin' overhead,  
I hear the mavis sing aboon the fern."

The story is very simple, very tender and touching; full of natural and homely pathos, and a directness of appropriate metaphor.

We think the poem entitled "Absolution" is the best thing in the book. It is a story of English lovers parted by "the gaunt figure called the world," and coming together again in St. Peter's, Rome—the man as priest, the woman as penitent seeking absolution. In the interval of separation the woman has been married, but the old love survives; and she comes to confess the wrong she does to husband and children in nourishing a dream of the days long past. Her eyes are never raised to the face of the priest as she tells the story of a love at first so deep and pure that holy men like the Father himself need not have shrank from it.

"Stay! there is one stain more. If I should see  
His face—again—on this side of the grave,  
My God! and if he called me, 'Will you come?'  
I sometimes think I should not choose but go!  
Pray for me, Father—I have told you all.  
But God is gracious—do not you be hard—  
But answer, Father, and then shrive me so!"

She rises from her knees absolved, and with averted face goes her way, her heart at ease; but the priest, undiscovered to the end, reveals the secret of his identity, and of his love and suffering, in a prayer, and dies the same night. The story, which, like the others in the volume, is slight, but beautiful, has certain features that are agreeably and legitimately reminiscent equally of Rossetti's "Last Confession" and Longfellow's "Evangeline."

"Felicita" is the title of the longest poem in the volume. It is the name of a beautiful Italian model who is found by an English sculptor sitting on the piazza steps, in Rome, waiting for hire in her calling. She becomes the wife of the Englishman, and everything goes well until buyers begin to fail. Reduced finally to destitution, Felicità (without consulting her husband, whose English pride, presumably, might have rebelled) steals out, for the first time in her wedded life, in the coloured vest, folded kerchief, and silver earrings she once wore, and with her baby in her arms, to the Spanish steps she used to frequent. On the way she enters the church of San Carlo, takes of the holy water, kneels down on the marble floor, and comes out with a stronger purpose.

"Out again, out into the warm bright street,  
Out of the chilly aisle and into light.  
I thought the curtain easier pushed aside  
In passing out than when I passed within,  
But maybe 'twas my soul had grown more strong."

She does not wait long for hire as a *contadina*, and before nightfall she returns with a lighter heart and a *scudo* in her purse. The husband, angry at first, becomes at length reconciled to the untoward fortune that renders him dependent for livelihood on the just earnings of his wife's beauty. Presently the sculptor is invited to the house of an English purchaser, and, with great reluctance, his wife, being also invited, is prevailed upon to accompany him. The house is full of English ladies, to whom Felicità's beauty is at first attractive; but very soon the whispered rumour that she is a model passes from lip to lip, and brands her with a class disgrace. The husband moodily removes his wife from

a scene where prolonged stay would subject her to further insult. There is nothing better in the book than this description of the return homeward:—

"We spoke no word, as through the darkened street,  
We trod so proudly, that were smote so sore.  
What use to speak, cast forth of fellow-men  
To other men as cruel as their kind?  
What use to murmur in the other's ear  
Of love that, long assayed, forgot to doubt?  
What use to toss wild wailings up to God,  
Who hears our silence as man hears our speech?"

No reader will say that this is not true poetry. The husband declines in health, and in a year he dies. The story is told throughout with genuine pathos; the poem has many passages of very marked beauty, and some few passages of exceptional fervour. A certain tendency to discursiveness in the narrative is at once a blemish, as interrupting the progress of the action, and a point of merit, as affording opportunity for many poetic episodes.

We cannot say that we consider the blank verse of the poem always remarkable for strength or variety. Dr. Johnson used to say that blank verse was nothing, in his opinion, if not gorgeous. He had formed his canon of taste on the blank verse of Milton, and Mr. Tennyson has shown us that it is not impeccable. But, though gorgeousness may not be a necessity of blank verse, sonority may justly be considered essential to all verse of that species except such as is dramatic, for sonority lifts it out of the uncertainty that pertains even to the most rhythmic prose, and imparts to it the inevitableness and emphasis of rhyme. Mrs. Liddell's blank verse is rarely sonorous. The sonnets in her volume are not of the best. Though full-thoughted and otherwise valuable in substance, they lack some needful definiteness of outline, and are no more than on a level with many poems miscalled sonnets by gifted writers who have not yet quite realised what it is exactly that this form of poetry requires above and apart from the rhyme-arrangement denominated Petrarchian. The symbolism of certain of these poems—"Love and Art" and others—is cumbrous, and therein Mrs. Liddell is manifestly out of her depth. Perhaps she is most at ease in such a poem as "Naomi," half-lyric, half-narrative, full of tenderness and simple pathos, the story and song of a sweet and sunny Naomi, five years old, and of her baby-sister Naomi, five years dead.

Altogether, the atmosphere of the book is distinctly an atmosphere of sadness, but not of sadness prolonged until it becomes painful, but brightened by hope, and losing nothing of its natural effect from an undue dwelling on the night side of Nature. The devotional pieces have sometimes a fervour that recalls Miss Rossetti ("Thou hast suffered" is a beautiful exposition of ascetic passion), while the descriptive passages have an autumnal sweetness that reminds us occasionally of Mrs. Webster. The diction is free from the current euphuism, being in the main simple, direct, and choice, and often distinguished by equal force and purity. In short, Mrs. Liddell is, in our view, a typical minor singer, delightful in her adequacy and not less so in her unambitious modesty. T. HALL CAINE.

## NEW NOVELS.

*Poor Archie's Girls.* By Kathleen Knox. (Smith, Elder & Co.)

*The Garden of Eden.* (Bentley.)

*Waiting.* By A. M. Hopkinson. (Sampson Low.)

*Blackfriars Bridge.* By Rose Metcalfe. (Remington.)

*Only a Twelvemonth; or, the County Asylum.* (Marcus Ward.)

*Die Frau Bürgermeisterin.* Von Georg Ebers. (Stuttgart und Leipzig: Deutsche Verlags-anstalt.)

THE contemplative critic frequently has to notice the odd fancy which authors have for naming their books from the weakest parts of them. *Poor Archie's Girls* is a very powerful and even original novel, with a weak vein of comedy running through it provided by the sayings and doings of two maiden aunts. These old creatures, who are neither amusing nor particularly life-like, call their nieces "poor Archie's girls." The interest of the book, however, which is of a somewhat strained character, but very considerable for all that, has nothing to do with poor Archie or his sisters. Given a solitary Scotch sealoach, cut off by an almost inaccessible mountain at its head from the more populated country; an old fool of a minister with two daughters—the one ten years younger than the other; a shy and awkward laird, who has hardly visited his house and property more than once since he was a boy, and on that one occasion has contrived to bear the blame of the ill-doings of an unprincipled companion; and, lastly, a family of reprobates dwelling high on the mountain side, and regarded with horror by everybody—the experienced reader will see that the materials for tragedy are present, supposing the artist to have the requisite skill. Miss Knox is not wanting in that skill, though her effects are achieved at a certain cost of probability. The entanglement of Mildmay Grant, the elder and angelic sister, with Joseph Roy, the clever member of the reprobate family; the ready acquiescence of the laird in a story so improbable on the face of it that no man of ordinary intelligence, even were his temper as suspicious as Othello's, and his enemies as cunning as Iago, could be caught by it; and the rapid translation of Joseph from an utterly ignorant and half-savage mountaineer into an accomplished man of letters—these are things which, when the book is put down and its tenor reviewed in cool blood, hardly commend themselves. But it is not the least evidence of an author's power to be able to keep defects of this kind in the background by mere force of narrative skill during the reading itself; and Miss Knox has in great part succeeded in doing this. Her power of description (not the set description which is mere superadded ornament, but the much rarer kind which works itself into the story and helps or makes its effect) is very considerable. The solitudes of Ben Lyon, its perilous heights and abysses, and the rare resting spots among them have, as they are here presented, not a little power of imposing.

The anonymous *Garden of Eden* is another book which is much better than the average run of novels. It is in part at least a musical novel, and we shall own with frankness that a black mark is set in our minds against musical novels as being almost invariably dull and bad. *The Garden of Eden* is, however, far from dull, and, though it has some grave defects, it is also far from bad. The worst of these defects is perhaps the extraordinary jargon in which the author occasionally indulges. Here is a very mild instance: "The memory of that episode was to Clifford as the unabstracted bullet to the warrior." "Unabstracted" for "unextracted" is a charming Malapropism, no doubt, but it does not add to the sentimental effect of the passage. The same sort of thing, occasionally complicating the style into a tangle of thought and speech which the reader is helpless to unloose, occurs very frequently. Nevertheless, the book has interest. The heroine, Althea Biron, is possessed of a powerful voice, and a very curious and impressionable character. She is "taken up" by a musical baronet and a musical peer in order to be trained for the stage; and the tribulations she undergoes, partly in consequence of amatory distractions, partly because she does not in the least understand the position of half-genius and half-dependent which she is expected to assume, form the staple of the book's plot. The two lovers—"Jack," straightforward, but rather stupid, and Clifford, the aristocratic ensnarer, who is in turn ensnared—have merit, as well as the object of their affections. Every now and then, too, the author says in her queer phrase something which was worth saying in a dialect resembling that of ordinary mortals.

The third novel on our list is distinguished from those which have just been noticed by being (unlike them) very much like a good many other books. There can be no surer sign of second-handness than that an author should submit to the troublesome, foolish, and, to all sensible readers, disgusting bondage of the present tense. *Waiting* is not wholly written in this odious parody of a style, but a good deal of it is. Now it is quite clear that no one would commit this folly except as a matter of "corrupt following." The fallacy is obvious. Mrs. or Miss — has written a book in the present tense; the book which Mrs. or Miss — has written is popular; therefore books written in the present tense are popular. "And then he goes and does it" in order to be popular likewise. If it had not been for this drawback, *Waiting*, though neither in whole nor in part particularly original, would have been a readable enough novel of an ordinary kind. There are some oddities about it. Who, for instance, is "Stewart Mill?" He is evidently a literary gentleman suited for the perusal of learned and strong-minded young ladies, for Miss Hopkinson repeatedly has recourse to him when she wants to indicate the course of reading of such persons; but, possibly owing to the incompleteness of our acquaintance with English literature, we don't know anything about him. To make up for this unknown author there is some pathos in the book, and a mad-dog incident of merit.

Did Miss Metcalfe, we wonder, revise her proofs, or can a slanderous legend, which little birds have whispered, to the effect that some publishers stipulate that authors shall not bother them with corrections, be founded on fact? Few novelists, surely, would allow the persistent headline "Blackfriars Bridge" to disfigure their books if they could help it. However this may be, *Blackfriars Bridge* is a pleasant little story, slight, but full of good feeling and very fairly told, with occasional touches of something that looks as if the author had some tinge of humour in her. The plot is very simple, dealing only with the aberrations, bodily and spiritual, of a compositor who leaves home and his true love first to disseminate free-thought literature and then to go and fight for the Commune at Paris, and, escaping death, returns to happiness and a better mind.

The greatest possible sympathy with the author of *A County Asylum* (which we are assured is an over-true tale) cannot make us call it in any way a good book. The author is too full of her wrongs to subordinate Nature to art in the fashion necessary for fiction. Nor even as a piece of pleading is the thing effective. It has the very common effect of pointing out, not errors in a system which can be rectified, but personal shortcomings which cannot. Heaven knows our lunacy laws are not ideally perfect. But if parents are anxious to get rid of troublesome invalids, if family doctors almost without invitation fall in with this desire, if asylum physicians are careless, asylum nurses and matrons capricious and harsh (and this is what the allegations here made amount to), the very best system in the world obviously admits of abuse. No legislation can possibly guard against a concatenation of individual malpractices.

Prof. Ebers has at last abandoned his beloved Egypt, and transported the scene of his historical novel-practice to a very different country and time. The famous siege of Leyden in 1574 has provided the framework of *Die Frau Bürgermeisterin*. The characteristics of the story are, however, not very different from those of the Egyptian series, though it has the advantage over that series of dealing with less unfamiliar material and requiring less display of deliberate and elaborate erudition. The merits are, as before, very clear and careful portraiture and description; the defect, a certain lack of what can only be called "story interest."

GEORGE SAINTSBURY.

#### SCHOOL BOOKS.

PROF. PALEY is indefatigable. Out of seven volumes of "Cambridge Texts, with Notes," now lying on our table, all but two bear his name; and, as these two are merely reprints of the late Mr. Long's editions of the *de Amicitia* and *de Senectute* of Cicero, Prof. Paley may be said to enjoy a practical monopoly of this series at present. He gives us first an edition of Homer's *Iliad*, Book I., for which we should be more grateful if it had not been lately preceded by what we think a decidedly better edition on a similar scale—that of Mr. Monro (Clarendon Press), lately reviewed in these columns. Next we have three contributions to the series from Sophocles—*Oedipus Rex*, *Oedipus Coloneus*, and *Antigone*—which again have had, to some ex-

tent, the wind taken out of their sails by the recent editions of Messrs. Campbell and Abbott. Not that we consider these latter editions as perfect; on the contrary, we think that there is ample room for an advance upon them. But, on the whole, we doubt whether Prof. Paley has made such an advance as is required to supersede them. The *Troades* of Euripides, on the other hand, is an addition to our library of class-books for which we are genuinely thankful to the editor. Whatever defects modern critics have discovered or imagined in the structure of this play, it is at least a highly characteristic specimen of the Euripidean drama—full of pathos and effect; rhetorical, doubtless, and occasionally sophistical; but to quarrel with a play of Euripides on these grounds is, in our opinion, a mere anachronism. Prof. Paley's commentary possesses the merits and (we fear we must add) the defects which we have noticed in his other recent writings. His style of translation is at times little short of repulsive. It is really too bad to put into the mouth of an "orator of rhymes" like Euripides language half mean, half pompous, such as appears in the translation of ver. 341—"Do get hold of that crazy girl, or she will run nimbly off to the Achaean host." We notice that in ver. 498 the editor finds a difficulty which we do not feel in the expression *μῆας ἔρα*. There is a similar reiteration in a parallel passage at ver. 368, and the juxtaposition of the two words here strikes us as particularly effective. In ver. 454, *σοι* is, perhaps, merely *ethical dative*, rather than (Paley) "to you"—i.e., aloft into the sky. But we have no wish to pick small holes in what we think, on the whole, a piece of good and useful work. Let us rather commend Prof. Paley's *Troades* to the notice of teachers in want of a convenient edition of a good and fairly easy play.

ONE or two other books on our list may be noticed as breaking new ground, and deserving commendation accordingly. Mr. Pearman's *Cicero de Legibus* (Cambridge: Hall and Co.) is especially welcome. School editors of Cicero have devoted themselves far too exclusively to certain stock portions of his works, and those portions by no means always the most readable or the most instructive. It is certainly strange that so interesting and well-written a treatise as the *de Legibus* should have remained so long in what the editor calls "the limbo of Latin notes." Mr. Pearman's present edition shows a wide acquaintance with the labours of his predecessors, and a power of exercising sound judgment of his own on disputed points of reading and interpretation. But we think that once at least his judgment has failed him, when in section 6 we find Lambinus's eccentric conjecture "iuncidius" admitted into the text in place of the MSS. reading "iucundius." Of all the emendations mentioned by Mr. Pearman, "iuncidius" seems to us by far the most improbable; and if the evidence for the existence of such a word in Latin at all rests only on this passage, Latin lexicographers are probably fully justified in ignoring it.

MR. BELCHER'S *Livy*, Book II. (Rivingtons), is also an essay in a comparatively new field. The editor's notes on points of archaeology and history are compendious and sensible; and there is a good Appendix on the "patria potestas"—a subject which most students will have found puzzling, if not unintelligible. On the side of "pure scholarship" the book is somewhat weaker. The note on viii. 8 is surely a mere mare's nest. "Non crediderit" does not mean "whether he believed;" but "whether he disbelieved;" and there is no "correlation of non—an" in the sentence at all, but merely such an ellipse of "utrum" as is familiar to all scholars; such as we find, for instance, in

Horace's "Lucanus an Appulus anceps." In ii. 9 the editor repeats a note of Ernesti's asking "in what sense Lucretius could be *maior dignitate* than Collatinus." But the whole context shows that this is not Livy's meaning. Lucretius is "*maior aetate ac dignitate*," not "*quam Collatinus*," but "*quam ceteri*," mentioned in the preceding sentence. The use of "ipsius" in the clause which follows is an additional argument, if any be needed, for this way of understanding the passage. Again, in v. 8 it is simply incredible that "poena" can mean "a public duty." We should have thought it impossible to read the whole chapter and arrive at such a conclusion. Lastly, we must protest against taking "*dolo*" in vi. 1 as an ablative, and construing "*dolo viam*" "the approach to his object by treachery." Beyond question, *dolo* is here a dative, to be taken with *obseptam*.

FROM Dublin (Browne and Nolan) we receive a new edition of *Livy*, Book I., by Mr. L. C. Purser. Readers familiar with Prof. Seeley's edition will not gain much from the use of this book; but it seems carefully put together, is cheaper and more portable than Prof. Seeley's standard work, and will be found more convenient for school use by teachers who prefer the "appendix" to the "foot-note" form of commentary.

OWEN'S *Pontic Epistles*, Book IV., by W. H. Williams (Newman), is called by its author "the hasty compilation of six weeks in the summer vacation." We cannot help thinking that, if the work was worth doing at all, it was worth the expenditure of more labour upon it than such a statement suggests. However, we have glanced through several pages of notes without finding any such blunders as the author might have been expected, and (we must add) would have deserved, to make under the circumstances.

MR. BENNETT'S *Selections from Virgil*, "The Aeneid" (Rivingtons), comprises about 2,000 lines from the whole *Aeneid*, arranged in sections of varying length, and strung together by a thread of connecting narrative. The notes make no pretensions to originality, but are well-suited to their purpose. Perhaps it is a pity to mutilate a great classic like the *Aeneid* in this sweeping fashion; and we are not quite satisfied with Mr. Bennett's apology for the practice contained in his Preface. But if the thing was to be done, we do not see how it could have been done better.

WE have received—*ecce iterum!*—Prof. Paley's long-expected edition of the text of *Sophocles* (in the "Cambridge Greek and Latin Texts"); *Exercises in Latin Syntax and Idiom*, by E. B. England (Macmillan)—a careful, but very uninteresting, set of Rules and Exercises, based on Roby's Grammar; and another volume in the series of "Elementary Classics" (Macmillan), *Horace, Odes 2*, by T. E. Page.

WE also have on our table a pile of little volumes published by Messrs. George Bell and Sons in their series of "Grammar School Classics." They consist of the whole of *Virgil* (*etc.*), in nine parts, abridged from Conington's edition by Profs. Nettleship and Wagner and the Rev. J. G. Sheppard; and a revised edition of Macmichael's *Anabasis*, in four parts, with a life of Xenophon, Itinerary, Index, and three maps. The notes to the *Virgil* are in too small print to be easily read even by young eyes. This is a matter which all publishers of "school books" should see to.

## ORIGINAL VERSE.

NATURE.

("So will I build my altar in the fields.")

—S. T. COLERIDGE.)

THIS mount shall be our fane, a hallowed place!

No acolyte shall swing the thurible,  
 Nor whispering worshipper his rosary tell;—  
 No priest shall here stand robed in lawn and lace;  
 But the Eternal shall look down thro' space,  
 And we will gaze and wonder:—it is well!

Here where the heath-flower and the wild thyme  
 dwell,  
 How sweet is life, how fair, how full of grace.

In place of prayer we'll chant our joyous praise,  
 And with glad voices sing in Nature's choir:  
 These lines of fir shall see on Sabbath-days  
 Our faces flushing with our heart's desire,  
 As up the mountain-side, thro' wooded ways,  
 We seek that peace to which our souls aspire.

SAMUEL WADDINGTON.

## NOTES AND NEWS.

DR. A. C. BURNELL, the eminent Sanskrit scholar (and more than a Sanskrit scholar, as our readers know), has finally decided to retire from the Madras Civil Service. His health will not permit him to return to India, even for the three years that would qualify him for a full pension.

We are glad to be able to announce that the Philological Society's great English Dictionary, which has been so many years in preparation, is at last nearing its haven of the Clarendon Press. Its present editor, Dr. Murray, hopes to hand over the copy of part i., two-thirds of "A," at the end of next month, though he hardly hopes to see the book complete before the end of the century. There will be twenty-four parts; and now is the time for volunteers to come forward and help to sort and prepare the remaining slips for sub-editors, and for the more capable helpers to offer to act as sub-editors. A good pull and a strong pull for a few months now might see all the work sub-edited this year.

We hear that Mr. W. Congreve, British vice-consul at San Remo, and brother of Dr. Richard Congreve, is printing an Italian version of Comte's *Catechism*, as revised by Comte himself, which hitherto has existed only in Dr. Congreve's English translation.

We are not to look for Mr. Browning's fresh volume of *Dramatic Idylls* till the spring. It will be somewhat larger than the two former series were. Five or six Idylls are written, two of some length, the others shorter.

MESSRS. MACMILLAN AND Co. will publish immediately a work by the late Lord Justice James upon *The British in India*, edited by his daughter, Mrs. Schwabe. From our recollection of a letter on the Irish question addressed to the papers by the Lord Justice about two years ago, we have great hopes of a sympathetic as well as a vigorous treatment of the subject.

MESSRS. LONGMANS will publish this spring two more volumes of Mr. Lecky's *History of England in the Eighteenth Century*, covering the period from 1760 to 1784; and also the first portion of Mr. Froude's *Life of Carlyle*, being a history of the first forty years of his life, 1795-1835. This latter will also consist of two volumes; and it will contain two portraits and four other illustrations etched on steel.

THE same publishers announce as in the press a *Memoir of Augustus De Morgan*, with Selections from his Letters, by his widow; and *Reminiscences of Oriel College and of the Oxford Movement*, by the Rev. T. Mozley.

A COMMITTEE has been formed at Aberdeen to collect subscriptions for a memorial to the

late Dr. Black, Professor of Humanity, who died recently at the early age of forty-seven. While the ultimate object is to found an annual prize for Latin in the university, it is proposed to allot the interest of the sum raised during the first few years for the benefit of Dr. Black's widow and children.

THE centenary of the *Glasgow Herald* was commemorated by a dinner on January 27, at which several interesting speeches were delivered. Among the guests, besides Principal Caird, Sir William Thomson, and several other professors of the university, were Mr. Cooper, of the *Scotsman*, and Mr. Leng, of the *Dundee Advertiser*, showing a pleasing harmony among the three chief newspapers published north of the Tweed. At the dinner held in London on the same evening, the toast of "Literature" was responded to by Mr. William Black, who, we believe, began his literary career on the staff of the *Herald*, and in the columns of which his "Daughter of Heth" first appeared.

A SIMILAR event is celebrated by *Chambers's Journal*, which has now reached its jubilee. In the current number, Mr. William Chambers contributes a most characteristic article, full of autobiographical details, describing the history of himself and of his paper during the past fifty years.

MESSRS. RIVINGTONS will shortly publish a volume of *Studies in Philosophy, Ancient and Modern*, by Mr. W. L. Courtney, Fellow of New College, Oxford, author of *The Metaphysics of John Stuart Mill*.

PROF. ALTHAUS has in the press, for Brockhaus' "Neuer Plutarch," a biography of Lord Beaconsfield.

THE demand for dainty little waistcoat-pocket volumes seems to be daily increasing, and the supply keeps pace with it. Messrs. Griffith and Farran, who have just issued *The Churchman's Daily Text-Book* in that form, will publish immediately *Queen Mab*; or, *Gems from Shakespeare*, arranged and edited by C. W.

We understand that a new and cheaper edition of *Every-day Life in our Public Schools*, with a much-enlarged glossary, will shortly be issued by the same publishers.

MESSRS. F. V. WHITE AND Co. have in the press a new novel in three volumes by Lady Constance Howard, a daughter of the Earl of Winchelsea and Nottingham.

MR. W. A. BAILLIE-GROHMAN, author of *Tyrol* and the *Tyrolese*, *Gaddings with a Primitive People*, &c., has recently received the first class knight's cross of the Saxe-Coburg House Order, in recognition of his contributions to English and German travel literature.

We are asked to state that the play announced for a morning performance, called "Merely Players," has no connexion with the novel of the same name by Mr. J. Fitzgerald Molloy, who has, however, given his consent to the use of the title.

A SECOND rudimentary book on "Legible Shorthand" will be issued by Mr. Pocknell, on February 15, entitled *Monosyllabic and Progressive Exercises*, being an alphabetical list of all short words, classed according to the rules of the system, with numerous illustrations and exercises.

A SERIES of papers on "Mr. Ruskin and his Teachings" will be contributed to the New Series of *House and Home* by Mr. Edmund J. Baillie, of the Ruskin Society, beginning with the number published to-day.

MR. FURNIVALL's lecture on "Mr. Browning" at the Working Men's College, Great Ormond Street, has been transferred from

March 11 to this evening, February 4, at 8.30, on account of the illness of the lecturer originally appointed for to-night.

A CORRESPONDENT at Melbourne writes:—"Mr. Francis Ormond, the gentleman who founded the college bearing his name, has offered to give £5,000 towards the establishment of a working-man's college in Melbourne, provided a similar sum be subscribed by the public."

M. ALPHONSE DAUDET contributes to the current number of the *Nouvelle Revue* a second chapter of his literary autobiography. The first, which appeared some months ago, and to which we drew attention at the time, described the genesis of his first successful novel, *Fromont jeune et Risler aîné*. The present article treats of the not less successful *Jack*, in which of all M. A. Daudet's works the influence of Dickens is perhaps most visible. The author here tells us a good deal about the original characters and the original scenes upon which the story was based. He says that it took him nearly a year to write, being the longest and the most quickly written of all his books. And he quotes from a letter addressed to him by George Sand that she was so deeply moved by reading it that she could not take up her own work again for three days. The article, besides, is full of interesting disclosures regarding the author's manner of composition.

M. ZOLA's new work, "Le Pot-Bouille," has begun to appear as the *feuilleton* of the *Gaulois*, which, be it remembered, is now the organ of M. Jules Simon. Some comment, therefore, is naturally heard that the *Gaulois* should announce it as the work "du maître dans l'art de fouiller les bas-fonds de la société." A legal difficulty also threatens. M. Zola has given to one of his characters, who is an advocate in the Court of Appeal, the name of Duverdy; and it appears that there is actually an advocate of the Court of Appeal at Paris bearing that very name. This M. Duverdy claims a property in his own name, and has brought an action for damages, which he assesses at 1,000 frs. (£40) a day.

It has been stated that a number of letters of Schiller, addressed to his physician, Privy Councillor Stark, were to be published shortly. Prof. Ernst Martin, of Leipzig, into whose hands these letters have recently passed by purchase, writes to the German papers to say that "good taste and piety" alike prevent him from giving to the world these confidential communications from a patient to his physician; and he reserves to himself the right of publishing any portion that he may think fit of the epistolary remains of Stark, who numbered among his correspondents Goethe, A. von Humboldt, Duke Karl August of Weimar, the Dowager-Duchess Amalie, &c. Prof. Martin's determination does him honour.

A LIFE of Klopstock, by Herr Franz Müncker, is announced for publication this coming spring.

THE prize for the most valuable work in political and moral science produced in Belgium during the past five years has been awarded by the Belgian Government, on the unanimous report of a jury, to M. Emile de Laveleye, for his *Lettres sur l'Italie*, his *L'Agriculture belge*, and the new edition of his *La Propriété et ses Formes primitives*.

WE learn from *La Cultura* that Signor Carlo Prayer recently had the good fortune to discover in the archives of the old Republic of Genoa the diplomatic correspondence of the Genoese agent in London, Francesco Bernardi, beginning in 1651, and continued without interruption, except during the embassies of Count Ugo Fiesco and Giovan Luca Durazzo, to the year 1662. The obligation imposed upon Ber-

nardi of keeping his Government accurately and dispassionately informed of the important events then happening in England, and his intimacy with the Protector ("di cui era molto dimestico per amicitia antica e suo entrinsecato"), render these documents of some historical importance. Count Fiesco likewise gives an accurate account of his embassy, of Cromwell's system of government and military forces, and of a conversation with Card. Mazarin. The notes made by the Secretaries of the Republic on each letter, on which the replies of the Consigli dei Serenissimi di Palazzo were based, are preserved, and are of considerable value. Signor Prayer proposes to publish, as a first instalment, the documents from 1651 to the death of Cromwell, and to proceed with the remainder if he meets with sufficient encouragement from the literary public.

COUNT LEO TOLSTOI is writing a series of five new tales for the Moscow *Russkaya Mysl*, the general title of which is to be *Nabliudeniia Khristianina* ("Observations of a Christian"). As the title indicates, these tales will bear a strongly religious character. It is said that the distinguished author read the first tale of the series to some of his friends, and that the vivid sketch of Christian family life in Russia which it contains proved singularly affecting. The second tale will have an autobiographical interest, having been suggested by the author's interview with an ascetic, whose whole-hearted devotion to an ideal impressed him strongly as a proof that it was still possible to live a life of sanctity even in this secular age.

A SIXTH volume has appeared of Karl Hillebrand's *Zeiten, Völker und Menschen*, containing essays on (among others) Sainte-Beuve and Guizot.

MESSRS. MAISONNEUVE have just brought out an *Almanach des Traditions populaires*, to be continued annually. It is edited by M. E. Rolland, whose valuable *Faune populaire de la France* has been reviewed in these columns. It contains, *inter alia*, an attempt at a complete bibliography of the publications of the last three years relating to folk-lore; and seventeen of the songs of Brittany, with the music in some cases.

A POSTHUMOUS work by M. Villemain, entitled *La Tribune moderne en France et en Angleterre*, has just been published by M. Calmann Lévy.

WE take the following Slavonic notes from the *Revue critique*:—A quarterly Review, in German, entitled *Die südslawische Revue*, has just appeared at Agram, which proposes for its object to keep the foreign world informed of the intellectual movement among the Southern Slavs. A literary journal is announced to appear fortnightly at Serajevo, the capital of Bosnia. The last volume of the "Starine," or old texts published by the Academy of Agram, contains, beside several inedited chronicles, a paper in French upon the Republic of Ragusa in 1766, by M. La Maire, French consul at Coron. The *Slovinac*, or *Sluv*, a review appearing at Ragusa, has published several translations into Croatian, or rather adaptations, of plays of Molière, which were acted at Ragusa in the last century.

THE deserved success of the *Cambridge Examiner*, which Miss M. Hewett has now conducted, we believe, for more than a year, has led to the appearance of a not unfriendly rival in the *Oxford Examiner*. As the names do not entirely explain themselves, we may state that both these periodicals are intended to assist students in preparing for the local examinations of the two universities. They are published (in London by Mr. Edward Stanford) on the 15th of each month. They consist of a series of papers, for self-examination, set by

women only, whose names are given as a guarantee; and the women who set them also undertake to look over answers and make suggestions. It is evident that these *Examiners* supply a want; and, at the lowest, they show a praiseworthy attempt on the part of women to help themselves.

## OBITUARY.

T. E. CLIFFE LESLIE.

BY the death of Mr. T. E. C. Leslie, which has been announced within the last few days, the ACADEMY has lost a valued contributor, and economic science a highly original investigator and a lucid and vigorous expositor.

He was the second son of the late Rev. Edward Leslie, Prebendary of Dromore and Rector of Annahilt, in the county of Down. He was lineally descended from Charles Leslie, the nonjuror, author of *A Short and Easy Method with the Deists*. He received his early education from his father, was sent to a school in England at the age of ten, and in 1842 entered Trinity College, Dublin. He was a distinguished student there, having obtained, besides other honours, a classical scholarship in 1845, and a senior moderatorship (gold medal) in logic and ethics at his degree examination in 1846. (It is interesting to observe that a similar distinction was won in 1847 by the late John E. Cairnes.) He became a law student at Lincoln's Inn, was for two years a pupil in a conveyancer's chambers, and was called to the English Bar. But, having been in 1853 appointed Professor of Political Economy and Jurisprudence in Queen's College, Belfast, he devoted himself to the study of these subjects as the work of his life. As the duties of the chair required only occasional brief visits to Ireland for the purpose of lecturing and examining, he continued to reside in London; and became a contributor to most of the leading English Reviews and other periodicals of articles on economic and social questions. Several of these articles were collected, and some new ones added, in a volume which he published in 1870, entitled *Land Systems and Industrial Economy of Ireland, England, and Continental Countries*. A detailed analysis of this volume was given by J. S. Mill in a paper in the *Fortnightly*, in which he pronounced Mr. Leslie to be "one of the best living writers on applied political economy." Mill, it may be here mentioned, had sought his acquaintance on reading his first essay in *Macmillan*, and ever after showed a respect for his opinions and a kindness towards himself which Mr. Leslie always gratefully acknowledged.

Among the portions of the work on "Land Systems," which most attracted attention were the accounts given of the economic condition and social characteristics of some of the less-known districts on the Continent which Mr. Leslie had visited from time to time, observing not scenery only, but men and manners. In this sort of delineation he was particularly happy. Mill said that "no one was able to write narratives of foreign visits at once so instructive and so interesting." One of the most pleasing specimens of this kind of essay, belonging, however, to a somewhat later period, is the article on Auvergne in the *Fortnightly* for December 1874. Two essays of his appeared in volumes published by the Cobden Club—namely, the "Land System of France" (second edition, 1870) and "Financial Reform" (1871). The former of these is an earnest vindication of the *petite culture*; the second, an elaborate argument in favour of direct taxation. Both have, we believe, been translated into French and German.

Some years ago the University of Dublin conferred on Mr. Leslie the honorary degree of

LL.D.; and in 1879 the Provost and Senior Fellows of Trinity College published for him a volume of collected *Essays in Political and Moral Philosophy*. This volume contains some of his best work—the fruit of his full-grown powers and maturest thought. Amid so much that is excellent may be specially named the articles on "The Political Economy of Adam Smith," on "German Political Economy," on "The Philosophical Method of Political Economy," and on "Political Economy and Sociology."

In a notice of the late Prof. Cairnes by Mr. Leslie, which appeared in the ACADEMY at the time of the death of that distinguished economist, he expressed his admiration of "the heroic fortitude and public spirit" which enabled Cairnes, under physical suffering of the most prostrating kind, to "maintain so high a place in the philosophical and political history of his time." It is no secret to Mr. Leslie's friends that he, too, was for years impeded in his work by a painful and depressing malady, to which in the end he succumbed. That he was able to do so much has often surprised those who knew him best; and, had his life been prolonged but a little space, he would have given to the world a substantial and imposing proof of his energy and industry, as well as of his fine powers, in a work on Economic and Legal History, to which he had long looked forward as the principal fruit of his studies. The MS. of this treatise, when much progress had already been made with it, was unfortunately lost by Mr. Leslie when travelling in Germany in 1872; but it is believed that he had since then occupied himself in rewriting the missing portion, as well as in continuing the work, and that a large part of it has been left in such a condition that it may yet see the light.

During the closing days of his life, Mr. Leslie was employed in the examination for the vacant Dublin Chair of Political Economy, in which the heads of the university had requested him to take a part. Faithful to his ideas of duty, he persevered to the end in executing this task, with the assistance of a trusted colleague, in spite of the exhaustion caused by the fatal disease. He died at Belfast on Friday, January 27, in the fifty-fifth year of his age.

This is not the place in which anything like a satisfactory estimate of his merits as a thinker, or of the permanent value of his work, can be attempted. But we may indicate what it is that constitutes the originality of his position in the world of thought, and gives him a place apart among contemporary economists. It is well known that for some time a strong dissatisfaction, rising in some quarters to the height of a revolt, has shown itself against the *a priori* method, which has been generally, though in different degrees, followed by economic writers. In opposition to that method, and to much of the doctrine founded on it, "with its fictitious completeness, symmetry, and exactness," a historical school has appeared in several European countries, which rejects the attempt to deduce all economic phenomena from the (so-called) universal principle of the "desire of wealth;" and, regarding the present economic structure and state of society as "the result of a long evolution," holds that it must be studied in the whole complex development of which it is the final product. Of this philosophic movement Mr. Leslie was the principal representative in these islands; he was recognised both at home and abroad as the head of the English historical school of political economy.

Though he broke in his own person the narrow routine which too often shuts in English economists from any large acquaintance with the writings of their Continental brethren, he did not merely appropriate the views of the latter, and import them for the instruction of his

fellow-countrymen. Far otherwise. His tendencies to the historical method were, indeed, only confirmed—not inspired—by his studies in foreign economics. The first impulse in this direction came to him not from that source, but from the personal teaching of Sir Henry Maine, and from the example of the application of historical enquiries to jurisprudence afforded by the writings of that eminent thinker. Mr. Lealie was strikingly original in his mode of presenting the new ideas in relation to his own science; and the form in which he exhibited them appears to be more philosophical, and less open to just criticism, than that which they assume in the works of the Continental economists.

In his article in *Hermathena* on "The Philosophical Method of Political Economy" (reprinted in the volume of 1879), of which it is not too much to say that it marks an epoch in the history of the science, he maintains, with great force of reasoning and wealth of illustration, the following propositions, which may be regarded as embodying the fundamental doctrines of the English historical school:—

"The economical condition of English [or any other] society at this day is the outcome of the entire movement which has evolved the political constitution, the structure of the family, the forms of religion, the learned professions, the arts and sciences, the state of agriculture, manufactures, and commerce. The philosophical method of political economy must be one which expounds this evolution.

"The method must be historical, and must trace the connexion between the economical and the other phases of national history.

"The phenomena of wealth may be made the subject of a special enquiry by a special set of enquirers, but the laws of co-existence and sequence by which they are governed must be sought in the great science of society, and by the methods which it holds out."

If, as is the conviction of the present writer, the future course of economic studies is destined to follow the lines here indicated, it may be expected that the significance of Leslie's labours will be from year to year better understood, and that his fame will rise with the progress of the science to which he devoted his life.

JOHN K. INGRAM.

THERE was a time in the history of the Wesleyan Methodist Church when it seemed probable that it would be rent in twain. This was in the year 1849, when three of the ministers, Messrs. Everett, Dunn, and Griffiths, were expelled from the Connexion. These three members of the Wesleyan ministry had circulated some very severe strictures upon a few of their brethren; and, on their refusal to discontinue the publication, they were driven from the pale of the Church. The strife raged with virulence for nearly three years, and the literature of the controversy is profuse. Mr. Samuel Dunn died on January 24 at Hastings, where he had been stationed for some years. He was a born disputant, and never happy except when engaged in preaching or publishing—equally ready either to attack an opponent in his own religious body or to "unmask" Socinianism and Popery. His first work was published at Pembroke in 1821, and there are at least sixty different books and pamphlets which bear his name. After his expulsion from the regular ministry of Wesleyanism he became what is called a "Free Church Methodist" minister, and ministered in a chapel built by his followers. At the time of his death he only lacked a few weeks to have completed his eighty-fourth year.

### MAGAZINES AND REVIEWS.

THE *Nineteenth Century* continues to devote itself to discussing the burning questions of the day, though this month we have nothing about Ireland. The articles by M. Joseph Reinach upon French politics, and by Herr Karl Blind upon the state of Germany, are specially valuable. For the rest, we observe that the so-called "symposium" has become a duel at long ranges. There are no less than three replies to papers that appeared in the same Review for December. But the *Nineteenth Century* is growing less and less literary. The only article we need notice here is that by the Rev. Dr. Wright, upon "The Babylonian Account of the Deluge;" and that is merely a summary of what two scholars have recently published in German.

THE *Fortnightly* is an excellent number. Mr. Swinburne gives us three sonnets, in his later manner, upon the Papacy, which are somewhat inconveniently crowded into a single page. Mr. Frederic Myers writes some very sweet verses on Mr. Watts's pictures, which recal Mr. Tennyson at his best by more than one suggestion. The title of Sir Henry Maine's paper on "The King and his Successor" will puzzle those who do not recollect its predecessor, which appeared, we think, in the November number. That we thought extremely suggestive; this is only a clear statement of what is within common knowledge. By far the most original article, though admitted to be based entirely upon second-hand information, is that which comes first—"Relations of Religion to Asiatic States," by Sir Alfred (formerly Mr. A. C.) Lyall. This, again, is most unfortunately named. It treats of China alone, and of the three forms of religion which there hold sway side by side, not only tolerated alike by the State, but each equally constituting a part of the political system. All students of comparative religion should read this important contribution to their science.

WE have received the first number of the *Manchester Quarterly* (London: Trübner), a journal of literature and art, issued by the Manchester Literary Club. It cannot be denied that the contents are somewhat thin, and also somewhat uneven. We have been most pleased by the sonnet on "The River Dee," by Mr. George Milner, author of *Country Pleasures*; and (in a different sense) by Mr. H. H. Howorth's paper on "The Idealism of Berkeley." "Gipsy Folk Tales," by Mr. H. T. Crofton, would have been better, we venture to think, if it had been longer. We must not forget a photographic reproduction of a charcoal drawing by Mr. George Sheffield, which is itself almost worth the price of the Review.

*Harper's* for February is even more attractive than usual. The capital articles on "London Journalists," with their accurate portraits, are succeeded by one on "French Political Leaders," illustrated with very clever sketches of Gambetta and other Deputies. The number is prefaced by a portrait of Victor Hugo which is a marvel of wood-cutting; and the articles by George Lathrop on "A Clever Town built by Quakers" (Pennsylvania), and "Henry Irving at Home," by Joseph Hatton, are two out of many that are well worth reading, as well as looking at for the sake of their beautiful cuts.

*Le Livre*, in its first issue for the new year, has gone through one of the changes which Mr. Tennyson associates with spring, permuting its sober old coat of gray for one of a somewhat gayer shade. The more important part, the interior, is very good. There are few more appropriate kinds of illustration for such a periodical than portraits, especially portraits not generally known, of the great authors. The head of Voltaire, which we recently noticed, is followed up here by a very welcome drawing, from the graver of that good artist

and good bibliophile, M. Jules Adeline, of the Rouen portrait of Corneille, attributed to Philippe de Champaigne. This is so different from the more common one of Le Brun, which has been popularised in a thousand different forms, that it is difficult to believe in the identity of the subject; and yet the authenticity of both is said to be undoubted. This plate, which gives the Champaigne likeness for the first time in black and white, will be a most welcome "insertion" for the album of M. Marty-Laveaux's beautiful edition. There is another plate, the illustration to the *Amants magnifiques* from Boucher's well-known Molière series. M. Adeline has accompanied his portrait with a scholarly notice. M. Champfleury gives some more of his always interesting Romantic reminiscences and explorations; and M. Drujon continues the "Books with Keys."

### TWO NOVEL POINTS IN INTERNATIONAL COPYRIGHT.

THE attempt made by Mr. Samuel L. Clemens (Mark Twain) to obtain a Canadian copyright for his new book—*The Prince and the Pauper*—to which we have before referred, seems to be exciting a good deal of interest in America. So far as we can understand the complicated story, the facts are these:—Mr. Clemens possesses, of course, a copyright in the United States, which, be it remembered, none but a citizen of the United States can acquire under any circumstances whatever. In addition, he possesses a copyright in the United Kingdom and generally throughout the dominions of the Queen—Canada alone excepted—in virtue of having published the book first in England at the time that he was staying at Montreal. Yet more, it is contended that, as incident to this latter copyright, he has also acquired a *qualified* copyright even in Canada. He claims that he is protected against any reprint of his book there, though we understand him to admit that he is not protected against the importation of copies on payment of a royalty or duty of twelve and a-half per cent. This latter form of protection, or *absolute* Canadian copyright, can only be acquired by a person who is "domiciled" in some part of the British possessions. The Canadian authorities, who are in this matter the Department of Agriculture, have decided that a temporary residence with the express object of acquiring copyright does not constitute domicile. In short, Mr. Clemens, being already in possession of an American copyright, an English copyright, and a qualified Canadian copyright, has failed only in his attempt to acquire an absolute Canadian copyright, which, it may be added, not even an English author can acquire except on the condition of reprinting in Canada.

This result has naturally attracted fresh attention on the other side of the Atlantic to the general question of a treaty between England and the United States. It is seen that no treaty will be satisfactory to which Canada, with its peculiar position as regards copyright, is not a party. Sir Leonard Tilley, the Canadian Minister of Finance, is understood to have conferred with the British ambassador about this very subject on his recent visit to Washington.

France and Belgium, on the other hand, whose mutual position as regards copyright bears a close analogy in Europe to that of the United States and Canada, appear to have come to a very convenient, though somewhat novel, arrangement. The two Governments have agreed to add a new article to the treaty of commerce signed last October, by which the benefit of "the most favoured nation clause" is extended to international copyright. The French Chamber sanctioned this addition to the treaty on January 30. It is also proposed to introduce a similar provision into

the treaty now being negotiated with Switzerland. Spain, it appears, is the country aimed at as that which at present gives and receives the largest measure of justice to authors as regards France. Between these two countries it is provided that copyright in the one (as well as the authority over translation) shall prevail also in the other for precisely the same duration and under precisely the same conditions.

#### PRINTERS' "READERS" AND MODERN SPELLING.

The London Association of Correctors of the Press have passed the following resolutions with reference to the "Partial Corrections of Modern Spellings" approved of by the Philological Society, and a correspondence thereupon between Mr. F. J. Furnivall and Mr. A. F. Whittaker, secretary to the Association:—

"1. Printers' readers in carrying out their duty have no personal opinions upon the spelling of their authors.

"2. They follow the ordinary spelling of approved dictionaries as the easiest available standard, thus carrying out the general instructions of their employers.

"3. If they impose either their own personal opinions or the spelling of Early English authors upon the work which passes through their hands, they run the risk of either paying for a reprint out of their own pockets or of losing their situations.

"4. But if any author desires to have his own spelling, punctuation, &c., implicitly followed, he has only to give instructions to that effect, and the reader will see that it is done.

"5. While unable just now to express an opinion for or against 'Partial Corrections,' &c., this Association can say distinctly that, if the Philological Society will induce any individual publisher to admit them in works printed for him, the printers' readers of London will carry them out faithfully, as a matter of duty, just as at present they put in operation the ordinary method of spelling which is most usual."

#### CORRESPONDENCE.

##### BISHOP THIRLWALL'S APPOINTMENT TO ST. DAVID'S.

Aberdeen: Jan. 30, 1882.

The record of Thirlwall's promotion to the see of St. David's, as given in the first volume of the "Letters," leaves out some curious circumstances that came to my knowledge incidentally a number of years ago.

My informant in the matter was Thirlwall's schoolfellow and friend Grote, the historian. The vacancy in the see of St. David's concurred with a vacancy in the deanery of Durham, both having been formerly held by the same person. Lord Melbourne was Minister at the time. What I remember distinctly as to the filling up of these offices was this. Something or other brought the matter up in conversation with Grote, and he mentioned the facts, together with an opinion of his own, which he held very strongly. His statement was that the appointments were actually managed by Charles Buller, who had two men to promote, Thirlwall and Waddington. How Buller assigned the two vacancies we know; but Grote's decided opinion was that he had made a mistake—meaning that he ought to have given Waddington the see of St. David's, and Thirlwall the deanery of Durham. He added, with an emphasis quite unusual to him, "If that had been done, it is as sure as anything can be, that Waddington would have died Archbishop of Canterbury." While he considered that the post of a dean was the one peculiarly suited to Thirlwall's scholarly tastes and pursuits, he held that Waddington was the man of business, *par excellence*, and that his business aptitudes would infallibly have marked him out for the highest episcopal position.

Grote's very accurate memory, and his intimate acquaintance with the facts as they happened, sufficiently guarantee the authenticity of these particulars. Still, the question arises—How came Lord Melbourne to take Charles Buller's advice as to the appointment of a bishop? He himself was sufficiently acquainted with Thirlwall's character and claims, and was in every way competent to form his own judgment as to the filling of the vacancy.

On this point I can offer a very probable surmise. We are to remember that in 1837 Melbourne deliberately passed over Thirlwall, when the see of Norwich was vacant, because the Bishops of Ely and Chichester gave a verdict of want of confidence in his orthodoxy; Melbourne having expressly asked their opinion on his translation of Schleiermacher's Essay on Luke's Gospel. Now there was nothing in the course of the three following years to remove the ban thus created; in 1840 he stood exactly where he was in 1837. In point of fact, however, Melbourne was induced, so we are told, to ask another opinion on Thirlwall's orthodoxy, in the hope, perhaps, that it might be more favourable. Archbishop Howley being appealed to, stated that he saw no objection to Thirlwall's promotion, and it took place accordingly.

Now, the way that I would fit Grote's story

into the narrative is this: Charles Buller, urged by another power, which I will notice presently, went to Melbourne and pressed upon him the claims of Thirlwall. The old objection would, of course, be started. Buller would endeavour to meet this in his own winning fashion, the result being that Melbourne made his second appeal on the question of Thirlwall's orthodoxy. This being successful, Buller had obtained his vantage ground, and Melbourne would then condescend to discuss with him the disposal of the two vacancies. On no other supposition can I account for Grote's statement that Buller had in his hands their mode of allocation to the favoured candidates.

But I am able to bring another party into the transaction—I mean John Mill. His share in it is purely inferential, but the circumstantial evidence is very strong. In the first place, he had a prodigiously high opinion of Thirlwall's ability as a member of the Speculative Debating Society; he admired his supposed liberality of mind; and had warmly welcomed his *History of Greece*. In the second place, Charles Buller never performed any public act of importance without consulting Mill and being guided by him; and this piece of promotion was one of the very things that the two would be sure to take counsel upon together. Thirdly, John Mill took the very first opportunity of lauding the appointment. In an allusion to Thirlwall (probably made for the occasion) he used these words—"whom we now, with exultation, call Bishop Thirlwall." If the thing had been his own handiwork, he could not have been more jubilant. Lastly, I can remember a joke of his, which pointed to the cause of the previous failure of Thirlwall to get a bishopric. The joke was—"You see, Melbourne could not countenance anyone that was disrespectful to St. Luke." I merely put this with the other circumstances to show how deeply Mill was implicated in Thirlwall's promotion.

I would now start the question—"Why was not Grote's opinion taken as to the allocation of the two vacancies?"—in order to give what I think a reasonable conjecture, which must rest on its own intrinsic probability. Waddington stood very high in Grote's esteem, from personal knowledge; but there was nothing about him to excite the enthusiasm of either Buller or Mill. Their pet was Thirlwall, and their wish would be to give him the best thing going, without making fine distinctions, such as Grote may have urged upon them.

I have put the whole case as known to me before your readers, and leave them to judge of the inferential part for themselves. You will no doubt consider it as somewhat remarkable that the making of a bishop should depend upon three Radicals, the most important of the three, in all probability, being John Mill.

A. BAIN.

#### THE MANUMISSIONS IN THE LEOPRIC MISSAL.

98 Roebuck Road, Sheffield: Jan. 23, 1882.

With all deference to Mr. Davidson's local and documentary knowledge, I cannot help thinking that Swuran tun is Sourton. The names correspond accurately; in fact, I had conjectured that the modern form would probably be Sourton before I knew of the existence of any place so named. The Svrington of Domesday (= *Swuring tun*) is essentially the same name; whether the place designated is the same is, of course, another question. On the other hand, Siredone (= *Scir dūn*, Sheardown or Shiredown) is a totally different name. Mr. Davidson's identification of Siredone and Sourton, if it be dependent on any supposed similarity between the names, is certainly untenable. As I have not at present access to Domesday, I cannot form any opinion as to the probabilities of the

case apart from the evidence of nomenclature. With regard, however, to Mr. Davidson's argument against the identity of Svrington and Sourton, I would remark that there are many places (e.g., Newbold, in Derbyshire) which appear from Domesday to have been of great importance, but which are now, and have been for centuries, altogether insignificant.

Mr. Davidson is doubtless right with respect to Borslea. In the Cal. Inqq. Post Mortem, I. 93 (temp. Edw. I.) I find Spreyton, Borele, and Sourton mentioned together, and these three names occur in connexion in several later entries.

The identification of Lamburne with Lamer-ton (*Lamburnan tūn*), which Mr. Davidson has established, had occurred to me as a possibility, but I did not venture to make the suggestion publicly, for want of evidence.

Bræg seems to stand for the Cornish equivalent of the Welsh *bre*, a hill. The modern English form of Bræg would normally be Bray. In Cornwall it might be represented differently, but such names as Brey Down, Brey Hill, are found in the maps of the county. If, as Mr. Davidson intimates, Breage is only another form of "St. Breock," it is, of course, impossible that that place can be the one in question. Mr. Davidson's suggestion of Bridgerule implies (if I have understood him correctly) that Bræg, in an Anglo-Saxon document, can represent the Anglo-Saxon word *brycg*—a supposition which I think he will find, on consideration, to be inadmissible.

HENRY BRADLEY.

#### MR. CUMMINGS'S "LIFE OF PURCELL."

London: Jan. 30, 1882.

Humphrey Wanley's note in the Harleian Catalogue respecting Stradella and Purcell is quoted by Hawkins in his *History of Music* vol. iv., p. 253.

I did not refer to it in my *Life of Purcell*, because it was questionable whether Wanley wrote ingenuously or satirically, and I doubted the truth of the whole statement. Wanley says Stradella was shot in the back, and that after the murder his mistress went to France and Italy to sing; whereas, in truth, Stradella and his wife were stabbed and murdered at the same time. Again, Wanley dates the assassination in 1670, at which time Purcell was twelve years old, and could not have made any remark bearing on his own experience, for he married in 1681. I am aware that recent search has thrown some doubt on the precise year of Stradella's death, but it could not possibly have been later than 1681. Taking these facts into consideration, I do not regard Wanley's note as of much value. WILLIAM H. CUMMINGS.

#### THE ABBREVIATIONS IN BISHOP MOUNTAGU'S DEDICATION.

Laverton Rectory, Bath: Jan. 31, 1882.

With the kind help of a correspondent (H. R. Tedder, Esq., Librarian of the Athenaeum Club), I think that I have made out these abbreviations.

If (as seems probable) "LM." is a printer's error for "L.M.," the letters may stand for "Libens merito merenti monumentum dono dedit consecravique." J. H. BACKHOUSE.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 6, 5 p.m. Royal Institution: General Monthly Meeting.

5 p.m. London Institution: "An English Weed," by Mr. Grant Allen.

7.30 p.m. Aristotelian: Discussion, "Contingency." 8 p.m. Society of Arts: Cantor Lecture, "Recent Advances in Photography," II, by Capt. Abney.

TUESDAY, Feb. 7, 3 p.m. Royal Institution: "The Mechanism of the Sense," IV., by Prof. J. G. McKendrick.

8 p.m. Biblical Archaeology: "Birds of the Assyrian Records and Monuments," by the Rev. W. Houghton.

8 p.m. Society of Arts: "The Trade Capacities of Newfoundland," by Mr. E. Hepple Hall.

8 p.m. Anthropological Institute.

8 p.m. Civil Engineers: "Candle Power of the Electric Light," by Dr. Paget Higgs.

8 p.m. Shoehand.

8.30 p.m. Zoological: "Classification and Distribution of the *Aeluriones*," by Prof. St. George Mivart.

"Some Points in the Anatomy of the Indian Dart (Plover melanogaster), and on the Mechanism of the Neck in the Darters in Connexion with their Habits," by Mr. W. A. Forbes.

"Some Recent Corals from Madeira," by Prof. P. Martin Duncan.

WEDNESDAY, Feb. 8, 8 p.m. Society of Arts: "The Manufacture of Ordnance," by Col. Watland.

8 p.m. Zoological: "The Sacredness of Human Life, and its Bearing on the Question of Capital Punishment," by Mr. G. B. Shaw.

THURSDAY, Feb. 9, 8 p.m. Royal Institution: "Corals," IV., by Prof. H. N. Moseley.

7 p.m. London Institution: "Spinning Tops," by Mr. John Perry.

8 p.m. Mathematical: "The Formulae for the Transformation of Elliptic Functions," by Prof. H. J. S. Smith.

8 p.m. Telegraph Engineers: "The Filen Arc Light," by Mr. H. F. Joel.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 10, 8 p.m. New Shakespeare: "Hamlet's Speech of Some Dozen or Sixteen Lines," by the Rev. M. Wynell-Mayne.

"Shakespeare and Euphuism—Euphuism an Adaptation of the Spanish Guevara," by Dr. F. Landmann.

9 p.m. Royal Institution: "The Climate of Town and Country," by Prof. Frankland.

SATURDAY, Feb. 11, 3 p.m. Royal Institution: "Beethoven," by Prof. Bauer.

8 p.m. Physical: Annual General Meeting; "The Relations between the Electromotive Force of a Daniell's Cell and the Chemical Affinities Involved in its Action," by Dr. C. R. Alder Wright.

### SCIENCE.

*Freaks and Marvels of Plant Life.* By M. C. Cooke. (S. P. C. K.)

THIS queer little volume might, without irreverence to our great naturalist, be succinctly described as *The Orthodox Darwin*. For some time past, the Society for Promoting Christian Knowledge has been remarkable for the growing breadth and liberality of its spirit; but we were hardly yet prepared to find it undertaking to spread the main results of Mr. Darwin's minute researches into the physiology of plant life. Of course Dr. Cooke writes under all reserves; he almost ignores the doctrine of evolution and natural selection, and he says nothing that could by any stretch of imagination be conceivably supposed to shock the most sensitive orthodoxy. His aim is simply to present the world in general, and young people in particular, with the positive or certain, as opposed to the theoretical or hypothetical side of Mr. Darwin's observations and teachings. The books which he here condenses and expounds in popular language are not the *Origin of Species* and the *Descent of Man*, but the *Insectivorous Plants*, the *Habits of Climbers*, and the *Power of Movement*; and from these he has cut out everything which bears upon the doctrine of descent with modification. Still, even this is a great deal. To the vast mass of readers, Mr. Darwin's name is to this day, in spite of everything, a mere symbol for some unknown but heterodox and dangerous doctrines. Most people of the uncultured and half-cultured sort still know the creator of philosophic biology only as the author of an absurd theory that men are descended from monkeys, which somehow once lost their tails, and so took incontinently to the use of language and the practice of the industrial arts. This theory they have heard mentioned only to be laughed at in private, or to be denounced as atheistic and immoral from a hundred pulpits. When such people learn from a book stamped with the imprimatur of a great orthodox religious society that Mr. Darwin has been for years a patient

and accurate observer of biological facts, that his works contain more information on animal and vegetable life than any other books ever written—in short, that he is the acknowledged chief of modern science—they may, perhaps, begin to understand that even the ludicrous monkey theory must not be cavalierly rejected without at least half-an-hour's modest consideration. They may learn, too, that the monkeys are only a small part of a vast and comprehensive evolutionary scheme; and they may possibly even feel some faint suggestion of a nascent critical doubt whether, after all, their own utter ignorance is quite certain to lead them to much wiser conclusions than Mr. Darwin's wonderful and encyclopaedic knowledge.

So much for the object of Dr. Cooke's book, which, on the whole, appears to us a commendable one. As to the manner in which it has been performed, we can hardly speak so highly. To begin with, Dr. Cooke seems to have sacrificed too much to the exigencies of the position. He is, we take it, himself a Darwinian; but, having been asked to condense certain of Mr. Darwin's works for an orthodox audience, he has certainly gone too far in the way of tacitly suppressing the evolutionary argument, and implicitly suggesting the method of design. That he should say nothing about natural selection is well and good; no doubt it was so stipulated in the bond; but that he should put down causes in which he cannot himself really believe is less praiseworthy. Yet he ends his introductory chapter by quoting a piece of verse which asks why flowers with bright petals should spring "in the silent wilderness, where no man passes by." Dr. Cooke undoubtedly knows that their bright petals are merely intended for the attraction of insects; but the poem declares that their object is "to minister delight to man, to beautify the earth." Perhaps we may be told that this is only poetry; but even poetry should not be quoted in a popular scientific work so as to strengthen unscientific preconceptions. Nor do we think he need have ended almost the only passage where he alludes in passing to Mr. Darwin's general theory with an excerpt from Mr. Bennett, who finds that certain facts of plant life compel him "to recur to the pre-Darwinian doctrine of Design."

The literary and scientific execution of the book, again, does not seem to us wholly satisfactory. It consists for the most part of extracts from Mr. Darwin's minor works, collated with long passages quoted, page after page, from Messrs. Wallace, Hooker, Asa Gray, Burdon Sanderson, Bates, Lawson Tait, and others. The original matter is small in quantity and careless in style. In places, it is true, we get two or three new and interesting observations; but, on the other hand, we also get some exceedingly hazy passages. For example, we are told that the thickness of the shell in the Brazil nut cannot be meant as a protection from monkeys, because other nuts in the same forests are not protected; an argument which would at once overthrow every example of natural selection or of design alike; for it might equally be said that the sting of the nettle could not be protective, seeing that grasses do not sting; nor could the antlers of deer aid them in their battles,

seeing that horses have no horns. Again, the whole chapter on mimicry is founded on a complete misconception of what mimicry really means. Dr. Cooke's illustrations are all taken from such instances as the resemblance between certain euphorbias and the cacti, between helianthemum and potentilla, between the fruit of the maple and of a South American milkwort. Not one of these is a real case of mimicry at all; they are merely cases of adaptive similarity—of like conditions producing like results. True mimetic resemblances only occur between two species of plants or animals inhabiting the same district, of which one species is specially protected while the other is not; whereas the succulent euphorbias are found in Africa and the cacti in America. Dr. Cooke may answer that he prefers to use the term "mimicry" for any resemblance whatsoever; and, of course, in a free country he has a perfect right to do so if he will; but since the word has already an accepted scientific meaning, carefully defined by Mr. Bates and Mr. Wallace, he cannot be surprised if other people object to his proceedings. Any man may speak of a rhomboid as a square if he chooses; yet in geometry this practice is found to be distinctly inconvenient. Nevertheless, after making all deductions, we must allow that Dr. Cooke's book is calculated to do an immense amount of good. The excellence of the material makes up for any defects in the workmanship. It cannot fail to teach all those who will read it a great deal that is new, valuable, and interesting about many strange phenomena of vegetable life.

GRANT ALLEN.

#### THE KELITIBERIAN INSCRIPTION OF LUZAGA.

THE *Boletín de la Real Academia de la Historia* for January contains an excellent facsimile of the bronze plate with a Keltiberian inscription found at Luzaga, near Sigüenza. Neither the exact date nor locality of the discovery can now be ascertained. The plate, which is wonderfully preserved under the circumstances, had been used both as a sconce for a lamp and as a pot-lid before it came into the possession of Don Juan Maria Morales de Huerta-Hernando. It is now definitely acquired for science by the exertions of our learned correspondent, Padre Fita, S.J.

The inscription, which he dates at not earlier than 154 B.C., is thus transcribed by Señor Zobel de Zangroniz in a letter addressed to Padre Fita and published in the present article:—

aregoratoks karvoh kegei  
korkta lutakei aujs irasiohka  
erga vela tkerseks soh  
veisvi mlaiohonoe  
kegis karikoe kegis  
sdn kortkan elasughon  
karvoh thkes sa kortka  
thivohreijis

One of the characters, something like an English capital G, interpreted as "ke," occurs six times, and is peculiar to this inscription. The first word is found on a Keltiberian coin from Luzaga, and on others struck at Numantia, and is probably a tribal or geographical name. With the exception of the leaden plate of Castellon de la Plana, this is the longest Keltiberian inscription yet discovered. The reading of the alphabet seems to be in a more advanced state than the decipherment of the language; and we await with interest the con-

tinuation of the article to learn Padre Fita's suggestions towards the interpretation. Meanwhile, some of the readers of the ACADEMY will, we hope, try their hands at this linguistic problem.

#### THE DISCOVERY OF CONSORTISM OR SYMBIOSIS.

MR. MURRAY's paper in last week's ACADEMY conveys a very erroneous impression as to the discovery of certain facts of great interest in biological science. Mr. Patrick Geddes has certainly never attributed to himself the discovery of chlorophyll in *Convoluta*, *Hydra*, or *Spongilla*; nor can I believe, in the absence of his own statement, that he claims for himself either the discovery of unicellular algae (yellow cells), parasitic in *Radiolaria* and in *Coelenterata*, or any originality in the theory of reciprocal accommodation which he propounds. Mr. Murray probably claims more for Mr. Geddes than that gentleman would claim for himself. At the same time, it is recognised as a fundamental principle of morals in scientific literature that honour shall be given where honour is due. The ACADEMY I cannot suppose is willing to lend itself to the glorification of one man by attributing to him the discoveries due to another.

The presence of chlorophyll as the green colouring matter of *Hydra* and of the Planarian *Vortex* was inferred many years ago by Max Schultze, on the ground of its solubility in alcohol, fluorescence, and destruction by sunlight. Spectroscopic evidence of chlorophyll in *Hydra* and in *Spongilla* was published twelve years ago by Lankester, and *Spongilla* was subsequently studied by Sorby, who was the first to definitely state that chlorophyll-bearing animals must have a plant-like nutritive process, and may be looked upon as "vegetating animals," just as the fly-traps are regarded as "carnivorous plants." Some years subsequently to this Mr. Geddes collected the oxygen given off in sun-light by a green-coloured Planarian, which led him to infer that the green colour was chlorophyll, and that the oxygen was given off through its agency, as in plants. This is, I believe, an exact statement of Mr. Geddes' contribution to the subject.

Secondly, with regard to the "yellow cells," it is not possible to judge from Mr. Murray's very general statement whether Mr. Geddes has observed anything new or not. The phenomenon of "Symbiosis," or "consortism," has been widely recognised since the demonstration of the nature of lichens by Schwendener. The parasitic nature of the yellow cells of *Radiolaria* asserted ten years ago by Cienkowski was universally recognised as very possibly an instance of Symbiosis. Semper, in his *Animal Life* ("International Scientific Series"), p. 75, definitely propounds this view both as to the "yellow cells" of *Radiolaria* and as to the chlorophyll-coloured corpuscles of other Protozoa and *Coelenterata*. K. Brandt has recently published very interesting experiments on these corpuscles, and has discussed the doctrine of Symbiosis in general (*Sitz. der Physiol. Gesellsch.*, Berlin, 1881). Prof. Moseley, in his *Naturalist on the "Challenger"*, expresses the view that the chlorophyllaceous corpuscles with definite capsule, long known as constituents of the living substance of large Foraminifera, are symbiotic algae. And again, Merejowsky, in a recent number of the *Comptes-rendus* of the Paris Academy, ascribes the absence of a body similar to haemoglobin from the tissues of certain polyps to the fact that in them yellow cells, which he recognises as parasitic (symbiotic) algae, take the place of that substance, and provide nascent oxygen for the tissues.

The novelty, therefore, which Mr. Murray ascribes to Mr. Geddes' essay would seem to have no foundation.

It remains yet to be determined how far these minute chlorophyllaceous corpuscles present in the tissues of some of the lower animals are really symbiotic organisms like the gonidia of lichens—how far their presence is due to their having been incepted as food (intracellular digestion), and how far they are products of the tissues themselves in which they occur. No doubt there are cases which fall under each of these categories, and Mr. Geddes' investigations will be valuable as contributions to a knowledge of a certain class among them. JUSTITIA.

#### NOTES OF TRAVEL.

MR. EDWARD STANFORD will publish immediately, as part of his "London Geographical Series," an *Atlas of Universal Geography*, containing forty-four coloured maps, engraved on steel and copper, with an alphabetical Index. This atlas was begun by the late John Arrow-smith; but his original plates have been supplemented by many new ones, and every effort has been made to keep abreast with the progress of geographical knowledge. Special attention has been given to those parts of the earth which are more nearly connected with English interests. The order of the maps follows that adopted by the late Keith Johnston in his *Physical, Historical, Political, and Descriptive Geography*.

MR. JOSEPH THOMSON, the African traveller, has unexpectedly returned to England, his two years' engagement for the geological exploration of the Sultan of Zanzibar's territory having been brought to an abrupt termination. The reason assigned is the extreme dissatisfaction which the Sultan felt at Mr. Thomson's honest and straightforward report on the supposed coal-beds at Itule, on the Lujenda, a few miles above its confluence with the Rovuma. The Sultan had previously sent first an Arab and afterwards a Parsee engineer to examine the locality, and both had brought back reports of the abundance of the coal, and the ease with which it could be worked. Mr. Thomson, however, on examining the so-called coal *in situ*, pronounced it to be nothing else than some irregular layers of bituminous shale, of no practical value whatever.

As the development of North Borneo, under its new owners, will very much depend upon the manner in which the question of Chinese immigration is managed, it is satisfactory to learn that Sir Walter H. Medhurst has consented to proceed to the East as the representative of the North Borneo Company in this matter. His name will inspire confidence in the Chinese, with whose language, probably, no European is more familiar. Sir Walter served for a number of years in the South of China, where the coolie emigration question has always been a prominent one.

It will be remembered that when M. de Ujfalvy returned from Tashkend about a year ago, he left behind him MM. Capus and Bonvalot, who had been able to join the scientific mission through the munificence of M. Bischoffsheim. These two have since been engaged in botanical, zoological, and other investigations in various parts of Turkistan, passing some time at Samarkand and Bokhara; and their reports will, no doubt, prove very interesting. M. Bischoffsheim has lately been informed by M. Capus of their arrival at Krasnovodsk, on the Caspian, which they reached on December 10, after visiting Khiva and crossing the great desert plateau of Ust Urt.

M. DUFOUR and M. ERICKSON, starting from Ikera's residence in Northern Ovampo Land, succeeded in reaching Evare and the forest region beyond, which extends from the Upper Cunene to the Okovango, and abounds in ele-

phants. M. Erickson has already returned from this trip, but M. Dufour, who is a scientific traveller, and not a trader or hunter, persisted in remaining behind.

DR. BAYOL, who has lately returned from Timbo, in the Futa Jallon highlands of West Africa, has brought back with him some native representatives of the Almanys of that commercial centre. He is shortly to deliver an address before the French Geographical Society on the scientific aspects of his journey, during which he made a route-survey of some 1,300 kilometres of country for the most part previously unknown. Some excitement will probably be caused by Dr. Bayol's announcement that for 350 kilometres of this distance he passed through an auriferous region.

M. HENRI DUVEYRIER, the well-known geographer and African traveller, has been elected President of the Central Commission of the French Geographical Society for the present year, in succession to Col. Perrier, who has been appointed Director of the Geographical Service in the Ministry of War.

PART XIII. of Mr. J. Phillips Bevan's *Statistical Atlas* (W. and A. K. Johnston) is more especially interesting just now when the water supply of the metropolis forms a subject of public discussion. The maps exhibit the river basins, and distinguish the towns according to the nature of their water supply. The accompanying tables contain a mass of valuable figures.

#### SCIENCE NOTES.

*A Dinosaur from the Wealden of the Isle of Wight.*—A short paper by Mr. J. W. Hulke, on a large undescribed dinosaur from near Brixton, in the Isle of Wight, has been published, with ample illustrations, in the *Philosophical Transactions*. The remains were discovered some years ago, and the creature received from Prof. Owen the name of *Polacanthus Foxii*, but no description of the fossil has hitherto appeared. After a close study of the bones, Mr. Hulke concludes that they represent a vegetable-feeding animal of immense muscular power, but probably of slow progression. Its dinosaurian affinities are characteristically marked, and it appears to have been closely related to the Wealden *Hylaeosaurus*.

MESSRS. CROSBY LOCKWOOD AND Co. will publish this month *The Coal and Iron Industries of the United Kingdom*, by Mr. Richard Meade, Assistant-Keeper of Mining Records. Besides a description of the coal-fields and the principal seams of coal, Mr. Meade's book will include an account of the occurrence of iron ores in veins and seams, and a history of the rise and progress of pig-iron manufacture since the year 1740. Maps illustrating the position of coal-fields and iron-stone deposits throughout the kingdom will accompany the work.

THE same publishers have also ready a new work by Mr. Lewis D'A. Jackson, entitled *Modern Metrology*, treating of the metrical units and systems of the present century, with an Appendix containing a proposed English system.

A NEW work by MM. Mascart and Joubert, entitled *Leçons sur l'Electricité et le Magnétisme*, is about to be published in Paris. It will form two volumes, to be issued separately; and Messrs. De La Rue have arranged with Dr. Atkinson for an English translation, which is in a state of forwardness.

WE understand that Messrs. Cassell, Petter, Galpin and Co. will shortly publish a work, entitled *The Simple Ailments of Horses: their Nature and Treatment*, by the late Principal and Lecturer on Veterinary Surgery, Edinburgh Veterinary College.

UNDER the title of *Rhopalocera Malayana*, Mr. W. L. Distant will shortly publish a monograph upon the butterflies of the Malay Peninsula. It will consist of six or seven parts, royal quarto, each containing four coloured plates and about twenty-eight pages of letterpress.

At a meeting of the executive committee of the Parkes Museum held on January 27, it was reported that the net profits of the recent International Medical and Sanitary Exhibition had amounted to no less than £1,120. At the same meeting an agreement was sanctioned with the Council of University College, by which it is hoped that a permanent building may be found for the Parkes Museum, at an estimated cost of £30,000. The scheme agreed to embraces three proposals—(1) The building of an addition to the north wing of University College for the purposes of the museum; (2) an endowment for the maintenance and management of the museum; (3) The opening of its museum free to the public, and an arrangement for the representation of University College on the governing body of the museum.

ONE of the last official acts of M. Paul Bert, late French Minister of Public Instruction, was to sign a decree creating a laboratory of biological research at the Collège de France, of which M. Brown-Séquard and his assistant, M. d'Arsonval, were named directors.

M. ALBERT GAUDRY, the palaeontologist, has been elected a member of the Académie des Sciences, in place of the late H. Sainte-Claire Deville.

THE last number of *Nature* contains an interesting account of the Observatory now in course of erection on the summit of Mount Hamilton, California. The cost is entirely defrayed by Mr. James Lick, who has placed in the hands of trustees the sum of 700,000 dollars (£140,000), for the purpose of providing a telescope superior to, and more powerful than, any yet made. Messrs. Alvan Clark and Sons, of Cambridgeport, are now engaged upon making a refracting telescope for them, with an object-glass of no less than thirty-six inches aperture.

*Correction.*—In our announcement last week of the forthcoming work on the Ophidians, to be published by Messrs. Griffith and Farran, initials were given wrongly in two cases: the author is Miss Catherine C. Hopley; the illustrator is Mr. A. T. Elwes.

#### PHILOLOGY NOTES.

PROF. J. P. POSTGATE is lecturing at University College, London, during the present session upon the Romance Languages, with special reference to the needs of students of French, Italian, Spanish, &c. The time is Tuesdays and Thursdays at 4 p.m. We feel sure that nothing else than additional publicity is needed in order to attract to these lectures a large audience.

WE hear that Prof. Strong, of Melbourne University, and Mr. Leeper, Warden of Trinity College, Melbourne, have completed a joint translation in prose of the Satires of Juvenal, which we hope will be published in this country as well as in Australia.

THE *Journal* of the Royal Asiatic Society (Trübner) for January (vol. xiv., part 1) contains ten papers in all—considerably more than usual—and nearly every one of them is of exceptional interest. We can only indicate here the character of their contents. Sir William Muir writes upon "The Apology of al Kindy," written in Arabic by a Christian at the Court of the Caliph al Mamun in the tenth century.

As Sir William has just issued a little book on the same subject, we may return to it more at length hereafter. Mr. Lewis Rice, the scholar of Mysore, tells us about the Jain author of an early Canarese translation of the Bhārata. Mr. William Simpson, from his personal knowledge of Buddhist topos in North-western India, throws some light upon the origin of the familiar Chinese pagoda. Prof. S. Beal gives ingenious reasons for placing Scythian tribes in the valley of the Ganges during the lifetime of Buddha. Prof. B. Jülg, of Innsbruck, contributes a most valuable paper on "The Present State of Mongolian Researches." Prof. Monier Williams sends the Sanskrit ode, with a translation, addressed by the lady *pandit*, Rama Bai, to the Berlin Congress of Orientalists. Mr. Thos. W. Kingsmill, in the longest article of all, describes "The Intercourse of China with Eastern Turkestan in the Second Century B.C.," from the contemporary *Shi-ki*, or Book of History of Sze-ma-Tsien, which illustrates the somewhat earlier account of Strabo. Of M. G. Berth's "Suggestions on the Formation of the Semitic Tenses," we do not feel ourselves competent to say anything. M. Terrien de La Couperie concludes with a note upon "A Lolo MS. written on Satin," to which reference has already been made in these columns.

WE learn from the *Ceylon Observer* that a recently issued Council paper contains translations of ancient inscriptions from the Anuradhapura and Hambantota districts, now in the Colombo Museum. Translations of eleven short inscriptions are given, of which six have already appeared in Dr. Goldschmidt's and Dr. Müller's reports, though in some cases the present translations differ slightly from the previous ones, errors being corrected and *lacunae* filled up. Until facsimiles of the text are published, however, it will be difficult to judge of the accuracy of the readings.

THE French Government, adopting a proposal made by the Académie des Inscriptions, has given an official mission to M. Aymonier to study the languages and inscriptions of Cochin China.

THE library of the late Prof. Schmoelder, of Breslau, will be shortly sold by auction in Berlin. The collection numbers only 1,800 works, but these include several valuable Oriental MSS.

WE learn from the *Revue critique* that two officials in the Turkish Ministry of Foreign Affairs, Munif Pasha and Constanidi Effendi, are engaged upon compiling a Turkish-French dictionary.

#### MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, Jan. 20.)

A. J. ELLIS, President, in the Chair.—Dr. Murray gave his annual report on the progress of the society's Dictionary. Of about a million slips sent out by him, nearly 900,000 had come back. His best contributor was Mr. Austin, of Oxford; his second, an American gentleman; his third, Mr. William Douglas, of London. He reckoned the slips handed over to him by Mr. Farnivall, his predecessor, as two millions and a-half. The seventeenth century had been well read; few fresh words had come in of late, though *abasare* for "abatement" had arrived that very day. The eighteenth century was one of bondage to Addison, &c.; it coined few new words. The nineteenth century was like the seventeenth in its adventurousness and licence. The sixteenth-century books had not been fully read; they were very scarce, and but few had been reprinted. They would doubtless carry back the history of many words 100 years. The sub-editors had worked well, but a few more were still wanted; and sorters were also needed to get the slips into order for the sub-editors. The histories of *antic*, *grotesque*, *-gen* (of "oxygen"), *anther*, *antenna*, and the groups of "astound, astony, astonish," and "praise, price,

prize, prize-ring, prizor," were then given. The English derivatives of *anthropo-* were sixty-seven, as against twenty-two French in Littré. The correspondence had been very heavy; about 10,000 letters had been sent out. The printing of A would begin in March; but the Dictionary could not be finished much before 1900 A.D., unless the Harewood Press Delegates could find more money for the work, so as to enable its editor to give his whole time to it.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 26.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—A communication from the Rev. H. J. Cheales, local secretary for Lincolnshire, was read by the Secretary, describing a bank running between Wainfleet and Boston, called the Tofts, in which are indications of ancient dwellings and fragments of pottery, which were exhibited. These Mr. Cheales took to be British, but, from their being made on a wheel, Canon Greenwell thought they were more probably mediæval.—A report was also read from Messrs. Ferguson and Jackson, local secretaries for Cumberland, on the archaeological proceedings in that county.

BROWNING SOCIETY.—(Friday, Jan. 27.)

CANON FARRAR in the Chair.—The Chairman suggested a broad division of Mr. Browning's works into three classes—(1) those easily intelligible; (2) those requiring deep attention; (3) those not intelligible without profound and loving study. After a few remarks on the expression of the poet's thought, and on the help the society is giving to the students of this poet, papers by Miss Lewis ("Some Thoughts on Browning") and Mr. James Thomson ("Notes on the Genius of Robert Browning") were read.—Miss Lewis said that Mr. Browning's position differs from that of any contemporary poet in that his works are regarded either with strong aversion or still stronger admiration. While asserting that Mr. Browning exercises an enormous power over those who know him best, Miss Lewis admitted the non-attractiveness of his poetry at first sight. All sorts of reasons are given for his "unintelligibility;" but, to her, one decided want in his mind seemed to be his deficiency in the faculty of gauging the apprehending power of the ordinary intellect. The one among Mr. Browning's merits which primarily draws people towards him is his strong, hopeful philosophy of life. The "something" which he "offers the age as a gift" is the constructiveness of his teaching; he emphasises our hopes rather than our fears, our certainties rather than our doubts, our ultimate triumph rather than our present failures. The basis of his tenets is an intense realisation of a loving God and a future life. Failure and imperfection are, according to him, not only no blot on man in God's sight, but they are the very signs of his supremacy in creation. Temptation comes to him "to meet And master, and make crouch beneath his feet."—Mr. James Thomson classed Mr. Browning as a star of the first magnitude in the constellation which includes men of quietly rapacious, indefinitely capacious acquisitiveness. The thorough maturity of Mr. Browning's genius was reached in "Men and Women," published 1855—a collection of poems not only noble in conception and aspiration, but each, in its befitting style, consummate in achievement. Browning's strong, intensely original individuality has a keen relish for the odd, quaint, and grotesque; but, when the subject is so great and solemn as to possess him, he ever rises in expression as in conception with his theme, and imagination incarnates itself in its own proper language of majestic rhythm, tenderest melody, orchestral harmony. The dominant characteristics of Mr. Browning's genius are the restless activity and almost unique rapidity of his intellect; immense range of sympathy, united with an intense and exuberant vitality; and profound, passionate, living, triumphant faith in Christ, and in the immortality and ultimate redemption of every human soul in and through Christ.

FINE ART.  
LETTER FROM EGYPT.

Luxor: Jan. 15, 1882.

THE chief drawback to a *dahabiah* voyage on the Nile is the impossibility of controlling the winds. The boat may be imprisoned for days by contrary winds under a mud-bank, where there is nothing to be seen or done, while a favourable breeze is sure to spring up just as it reaches some spot which the traveller has determined to visit. We suffered greatly from this perversity of weather, a south wind persistently blowing against us when we were in a part of the river where no monuments of antiquity happened to exist. In spite of this, however, it was inevitable that, with at least three ardent archaeologists on board, a little antiquarian work should be done, though some places of interest had to be passed by, and others hastily visited.

Shortly after leaving Cairo, Mr. Flinders Petrie and myself rode to some tombs out in the brow of a cliff between Sakkarah and Abusir, and not far from the pyramids of Abusir. All of them either contained, or had contained, ibis mummies, and two of them had inscriptions. These latter struck me as being the earliest tombs I had seen in Egypt; in one of them was a sitting statue of the defunct, life-size, carved in the rock; while the other, which was the burial-place of a royal scribe, contained a *graffito* in hieroglyphs. The inscriptions of the first tomb consisted of four small tabular lists of offerings, much defaced. Not far from the tombs are the remains of a building formed of granite monoliths, like the so-called Temple of the Sphinx at Gizeh.

We paid two visits to M. Maspero's excavations at Médûm, with the unsatisfactory results of which, so far as inscriptions are concerned, the readers of the ACADEMY are doubtless already acquainted. On the opposite side of the Nile, at a village called Brumel, is an old mound, together with a few fragments of cut stone—among them a granite altar.

El-Haybi, above Beni-Suef, was the next place we had determined to visit. This is the site of a fortress built of mud-bricks by Pinotsem II., a king who has been made famous by the recent discovery at Deir el-Bahari. At the southern end of the fortress are the remains of a tower, the bricks of which are stamped with the names of Pinotsem himself, his son Men-kheper-Ra and his granddaughter, the Princess Ast-m-kheb. The names of Men-kheper-Ra and Ast-m-kheb occur together on one series of bricks, while upon another series is the name of Pinotsem, along with that of the fortress itself, which is given as Ast-m-kheb, showing that it must have been built and named after the birth of the princess. I would suggest that the fortress of Kobbân, in Nubia, where the name of Men-kheper-Ra is also found, was constructed, not by the more famous Men-kheper-Ra, or Thothmes III., but by the later king of the Twenty-first Dynasty. The ground at El-Haybi is strewn with mummies and portions of mummies excavated there by the natives, and in one place there is a cavern filled with huge stone sarcophagi of the Roman period. Some of these have been opened by M. Maspero, but thirty-four are still covered by their lids.

We next stopped at a desolate spot on the eastern bank of the river called Sheikh Hassan, where there are extensive quarries of the Ptolemaic era. I found only one Greek inscription in them, but there is a tomb cut in the rock, the walls of which are adorned with a line of rudely carved galleys. Close to the tomb is a Coptic shrine, also cut in the rock, and once dedicated to a Nubian saint, Moses, with many inscriptions painted in red upon it. Farther

south, below Gebel Sheikh Embarek, and opposite Maghâgha, is a Roman fortress of mud-bricks, where Mr. Petrie found the ground literally strewn with flint weapons and tools. I infer that they have been left by the savage tribes who destroyed the fortress in the closing days of Roman domination.

We next paid a visit to Es-Serîfîyeh, where a huge square mass of rock has been quarried into the likeness of a triumphal arch. The Ramessid quarries at the back of it are full of dog-mummy pits, and we photographed the temple and sculptures cut in the rock below it by Menepthah I. and Ramses III. Lepsius has published the inscriptions, but outside the temple I found and copied a *graffito* in hieroglyphs.

The *dahabiah* was moored for the night a little above the Coptic convent on the Gebel el-Tayr; and the following morning we walked along the cliffs in a southward direction, examining the numerous tombs on the way, until we came to a village called Tehneh. Here there is a Ramessid temple carved out of the rock at the northern corner of the ravine, which runs inland from the village, and a Greek tomb has been excavated in the very middle of the steps by which it was approached. The sides of the cliffs which shut in the ravine are honeycombed with tombs, mostly of the Greek period: unfortunately, those described by "Murray" as containing Greek inscriptions have for the most part been destroyed. Traces of early sculptures can still be detected here and there on the face of the cliff, and I found that the sculptured representation of the gods Sebek and Amun-Ra, which has been ascribed to Ramses III., really belongs to Ramses V. (Ramses VI. of Lepsius). The cartouches of Ramses III. are indeed engraved a little beyond it, but the cartouches which actually accompany it, and which have been thickly plastered over by the bees, are those of Ramses V. The mounds at Tehneh are very lofty and extensive, and in one place is a flight of steps cut between two artificial walls of rock.

At Kom-el-Ahmar, again, to the south of Minieh, there are extensive mounds of the Roman age. Above them is a tomb of the Thirteenth Dynasty, the outer chamber of which has been quarried away. The inner chamber, however, is full of interesting sculptures and inscriptions, which we copied and photographed. The tomb seems to have been perfect when visited by Sir G. Wilkinson; but, like so many others seen by him, has since been destroyed. An almost continuous line of tombs exists between Kom el-Ahmar and Beni-Hassan, where I copied all the Coptic *graffiti*—a task not previously accomplished. Mr. Petrie counted here no less than 181 "wells" leading into tombs cut in the rock on the terrace below that on which the well-known line of tombs stands.

After leaving Beni-Hassan we touched at Deir en-Naki, and paid a visit to the tomb of the Twelfth Dynasty, in which a colossus is represented as drawn upon a sledge. The paintings do not appear to have suffered in any way since they were seen by Sir G. Wilkinson. Mr. Petrie photographed some of them, as well as the tablet of Thothmes III. in the quarries beyond. I copied all the inscriptions visible in the ruined tomb adjoining that in which the colossus is represented; and below this we found a group of three tombs, the first of which has an inscription in three lines over the door, but is otherwise bare, while the other two are profusely adorned with hieroglyphs, which were partially copied by Mr. Petrie. The hieroglyphs in one of these two tombs are painted blue, and the colouring is still brilliant. The whole group of tombs, including that which contains the picture of the colossus, belongs to the family of a nobleman named Kherunekht. Tel el-Amarna was our next stopping-

place. Here I found a Phœnician *graffito* among the Greek scrawls in one of the tombs in the cliff.

Our voyage forced two facts very strongly upon my mind. In the first place, Egypt is still full of tombs and other monuments, some of which have not been visited since the time of the older travellers, Wilkinson and Champollion, while others are quite unknown. The monuments, however, are fast perishing, and unless the hieroglyphic records they contain are soon copied, they will be lost to science for ever. But, in the second place, it is impossible, I am convinced, to explore Egypt properly from the river. The explorer must travel by land with tent and donkeys. Only in this way can he discover or hear of monuments hitherto unknown, or remain as long as he wishes in a place where inscriptions must be copied. Moreover, for monuments which lie at all inland the river is too distant a base of operations. The *dahabiah* is no doubt a luxurious means of conveyance, but it is almost useless for the traveller who desires to explore and discover.

M. Maspero has just arrived here in his steamer from Assuan. He intends to remain for some little time, partly to conclude negotiations for removing the houses under which the temple of Luxor is buried, partly in order to clear out the small temple at Medinet Abu. He has found that the small Ptolemaic temple at Tuot, opposite Erment, described by Champollion and Wilkinson, is not only still in existence, but in a good state of preservation.

A. H. SAYCE.

In the above letter, Ast-m-kheb is the Iai-em-kheb of Prof. Maspero and the Ast-em-af of Brugsch; Pinotsem being also read as Pinotem, and even as Penetsem. The signs read either way. According to the hieroglyphed inscriptions upon the cut leather canopy of Queen Iai-em-kheb, she was daughter of Prince Masahirti, and wife to her uncle, King Menkheperra. She would therefore be daughter-in-law as well as grand-daughter to Pinotem II.

## OBITUARY.

### WILLIAM MILLER.

THE great line-engraver and admirable artist who died a fortnight since, in his eighty-sixth year, was not only an interesting link between our own times and the best period of English engraving; he was in himself a profoundly notable person, an artist of quite peculiar skill. William Miller—known greatly as an interpreter of Turner, but likewise the interpreter of inferior work—began the active practice of his art almost before Turner had arrested the publication of his *Liber Studiorum*, and while he (or the brothers Cooke, who were prime movers in it) was yet hardly more than planning that series of *The Southern Coast* which was next to engage his attention. The public must needs have known but little of Miller when, about the year 1820—we have not the plate by us to enable us to speak quite precisely as to this date—the young engraver was engaged to execute what we believe was his first plate after Turner—the exquisite “Clovelly” of *The Southern Coast*. Some years before 1820, at all events, *The Southern Coast* had been planned and begun—its introductory plate being dated 1814; and the larger number of the engravings, which were all engravings in line at once masculine and delicate, were to be undertaken by the brothers Cooke, George and William B. They came, however, to be assisted by other engravers, such as Horsburgh and Miller; and Miller, as we have seen, quickly stepped to the front with his rare and beautiful contributions.

A little later we find him engaged in rendering the Turner illustrations to the *Prose Works of Sir Walter Scott* and to the *Poetical Works of Sir Walter Scott*. It was natural that, being a Scotsman, and for the greater part of his life resident in Edinburgh, he should be engaged a good deal in recording in line Turner's vision in colour of Scottish scenery and Scottish edifice, and the fact is that a very large proportion of his work is concerned with Scottish themes. Thus we find him with the “Dunstaffnage,” the “Killiorankie,” the “Dryburgh,” the “Stirling,” of the Scott publication, and with the enchanting “Loch Lomond” of the great edition of Rogers's *Poems* which appeared in 1834. In some of these small plates—nay, it is safe to say in nearly all of these small plates—he reached perfection. He became more and more delicate, in sympathy with Turner's exquisite designs, but in becoming so he never ceased to be rightly masculine and straightforward. Simplicity and subtlety have indeed rarely, if ever, been so well combined in the work of a single engraver; the “Portsmouth” of *The Southern Coast* is a high instance of the one, and the few dainty little illustrations to the Rogers are instances of the other. The variety of touch which he employed in rendering various planes of the landscape is perhaps equalled only in the work of some of those gifted men who worked with him, and were in a true sense his contemporaries—the fellow-workers in the best period of his art—George Cooke among the more masculine, Goodall and Le Keux among the more refined.

As time passed, William Miller embarked upon some of the larger of his undertakings, and addressed himself, with a success equal to that which he had attained already, to the grappling with the letter art of Turner, when that art was concerned with Venice, or when it was concerned not so much with any definite place as with the vision which Italy had suggested. Thus, in 1838 Miller engraved “The Grand Canal,” and in 1856, “Modern Italy”—we speak of the dates when the engravings were published: some were necessarily in hand during a lengthened time. Whether in these, his later works, or in those, his earlier, which have been spoken of above, Miller, while busy now and again on the interpretation of lesser artists, showed himself, above all things, the interpreter of Turner. If he excelled in one particular feature of his work, it must be said to have been in his skies. Colour apart, these have all the qualities of Turner's own—movement, spaciousness, light.

The honours of the Royal Academy of Scotland were, we believe, bestowed on the deceased artist; those of our own Royal Academy were withheld, or, as is more probable, were never sought. For years before his death, William Miller had abandoned the practice of engraving; but even quite lately he was wont to be occupied in making sketches in colour, and these confess the influence that was still upon him of Turner's way of seeing Nature, and of his way of treating her. Miller was a member of the Society of Friends; the funeral notice informing those who were personally interested in him of his death informed them also of the intended place of his interment—Friends burial-ground, adjoining the meeting-house at Pleasance, Edinburgh. He bore his part, during a long life, in the social and philanthropic business of the members of his society, and was on all accounts esteemed by those who came into contact with him. As an artist we have already pointed out that he was of extraordinary skill. His reputation is one with that of the greatest school of English line-engravers—men whose work the connoisseur of fifty years hence will appreciate even more highly than the connoisseur of to-day.

## CORRESPONDENCE.

### THE SCHIAVONE AT BURLINGTON HOUSE.

London: Jan. 19, 1882.

In the exhibition of Old Masters at the Burlington House is a picture by Andrea Schiavone which is entitled “Charity.” In the foreground is a naked woman reclining and suckling a child, and in the background a wood with three men blowing horns. I cannot see what huntmen have to do with “Charity.” But a strange legend arose in the Middle Ages, of which there were Italian, German, and French versions, and which seems to have been specially popular in the early part of the sixteenth century. It is called “The Penitence of St. John Chrysostom.” The engravings of this subject by Lucas Cranach, B. Beham, and Albert Dürer are at once recalled to mind by Schiavone's picture. The legend itself is given at length in Mrs. Jameson's *Sacred and Legendary Art*. In brief, it runs thus. During a tempest a fair young princess seeks refuge in a hermit's cave. The hermit first violates her, and then murders her by throwing her down a precipice. But subsequently, overcome with remorse, he vowed that he would never rise from the earth nor look up, but crawl on his hands and knees, till he was forgiven. After fifteen years spent in this way, it is not surprising that the hermit should have been mistaken for some wild animal, and, as such, pursued and captured by the king's huntmen. Taken to the palace, he tells his story after a time, and messengers, being sent to the forest, find the princess alive and suckling her child.

Surely this legend is the subject of Schiavone's picture, and “The Penitence of St. John Chrysostom” should be its title instead of “Charity.”

G. W. FISHER.

### EARLY ITALIAN CASTING.

Rome: Jan. 24, 1882.

Fully agreeing with Mr. Middleton in his able and justly appreciative review of the “Guide Books to the Italian and English Medals in the British Museum,” by Messrs. Keary and Grueber (*ACADEMY*, No. 505, January 7), I may perhaps be permitted to express a doubt as to the correctness of Mr. Keary's statement in a passage quoted in the first column—viz., that the surface of the medal, after casting, was so “rough” that “the whole piece was worked over with sandpaper,” &c. Nor can I agree with Mr. Middleton in respect to the medals of the best period, in their pristine state, that “no doubt the graving tool was used.” The most carefully executed bronzes of the *quattro cento*, when examined by the magnifying, betray no trace of sandpaper nor of the graving tool. Even little faults in the casting are generally left untouched. Witness many *plaques*, the *Soulages* candlesticks in the South Kensington Museum, and one of even more elaborate detail in my own collection: on this even the stippling of parts of the surface appears to have been done upon the wax model, not tooled upon the cast. On medals in low relief finishing would be even less necessary for casts so accurately “run in.” So it is with the finer Japanese castings, unrivalled in their perfection.

If any surfacing were requisite, only the powder of the cuttle-fish shell used upon cork, or some equally fine polishing powder, could have been applied without detracting from the original sharpness of the artist's touch.

By what precise methods replicas were produced from one and the same model, and of what mixed material the moulds were made from which such perfect casts came forth, are yet unknown to us; but Mr. Middleton has written somewhat unadvisedly when he says

that "ashes" were intended by the word *carbone*, "instead of charcoal, which could hardly stand the heat of molten metal." If exposed to the action of the atmosphere, charcoal would burn away; but, as is well known to all chemists, it will bear an intense heat unchanged, if kept away from oxygen; and, in the state of fine powder, would be a most important ingredient in the *terra sottile*—not so "ashes."  
C. DRURY E. FORTNUM.

THE "FIND" AT PARKHILL, ABERDEENSHIRE.  
Combe Vicarage, near Woodstock: Jan. 21, 1882.

In the ACADEMY of to-day (No. 507) there is a summary of a paper on "a cist" that, framed of "four large slabs of stone," has been "discovered in a gravel-mound at Parkhill, in Aberdeenshire." It is said, "The peculiarities of the 'find' are, first, that bones of a hog were mixed with those of a man; second, that charcoal was found with buried bones."

In illustration of this I may mention a part of what was found at Mr. Carrington's opening of the "twin-barrow," called Long Lon, near Walton, in the moorlands of Staffordshire:—

"A large cist was discovered near the centre of the large mound. It was formed by four immense stones. . . . On the cist being cleared, [there] was discovered a regular paved floor of limestone, entirely covered over with human bones. . . . On the floor were found . . . bones of the ox, hog, deer, and dog. Not far from the cist, and near the surface, was found a skeleton, minus the head, embedded in the gravel . . . and charcoal" (Jewitt's *Gravemounds*; see also Davis's *Crania Britannica*).

I would add that the plan given by Mr. Jewitt (*ibid.*) of the interments uncovered by Mr. Bateman in the Swinscoe barrow shows, interred with ten skeletons, "the bones of a young hog enclosed in a stone cist," "remains of a cinerary urn and burnt bones," a skeleton lying "upon a thin layer of charred wood," and "a deposit of burnt bones."

J. HOSKYNs-ABRAHAM.

#### NOTES ON ART AND ARCHAEOLOGY.

At a meeting of the Royal Scottish Academy held on the 30th ult., Mr. William Fettes Douglas was elected president, in room of the late Sir Daniel Macnee. Mr. Douglas was born in Edinburgh in 1823, and studied in the "Trustees' Academy" under Sir William Allan. Since 1844 he has been a regular contributor to the exhibitions of the Scottish Academy, of which he was elected an associate in 1851, and a full member three years later. He is a learned and enthusiastic antiquary as well as a painter, and his figure-pictures are commonly cabinet pieces dealing with antiquarian or historical subjects. They are characterised by much exquisiteness of texture and beauty of colour. Mr. Douglas has also proved, especially by his small works in water-colour, that he is an accomplished landscapist.

We hear that there will be opened in the course of a week or so, at the rooms of the Society of British Artists, an exhibition of the works of Henry Dawson, the brilliant painter who died about ten years ago, never having been deemed worthy of Academic honours. A certain number of the pictures will be exhibited at the Graphic Meeting on Wednesday next.

We also hear that the exhibition of the Society of Painter-Etchers will be held this year in the gallery of the Fine Arts Society.

MR. W. GRIGGS, whom we have hitherto known best for his invaluable facsimiles of the Shakspeare Quarto, has now taken in hand a series of reproductions of the various kinds of national art exhibited in the South Kensington Museum. Though these are issued "under

the patronage" of the Committee of Council on Education, we understand that the venture is made by Mr. Griggs at his own risk. But they have only to be known to ensure a wide popularity. Those that we have received divide into two classes. First, a set of twenty-two photo-lithographs, reproducing selections from the well-known collection of sepia drawings, formerly in the India Museum, which represent the native handicraftsmen of India engaged at their work. This set is called the "Portfolio of Indian Art," and bears on its cover the Sanchi gateway. Secondly, several series of examples of the art of other countries, reproduced in colour by chromo-lithography. Of these, Persian, Spanish, and Italian portfolios have already appeared, forming an additional twenty-two plates. We shall take another opportunity to speak of the value of Mr. Griggs's work from the points of view of its own beauty and of its service to art-education. Each part contains two plates imperial quarto, and is issued at the marvellously cheap price of one shilling. *Quid plura?*

STUDENTS of Oriental numismatics will learn with pleasure that the fine series of Japanese coins, numbering nearly ten thousand specimens, collected by the Japanese princes of Tamba during the last century, has just been acquired by the well-known English collector, Mr. Howel Wills, and consequently will remain in this country. This collection, which contains a great number of unique coins, is composed not only of the Japanese copper, iron, lead, silver, and gold coins, but also of the coins of other countries which have traded with Japan since the Christian era. The coins are placed in eighteen beautiful old lacquered boxes or cabinets, and five hundred of them have each a separate ivory box carved or inlaid with silver, the interior being lined with satin of various colours. This wonderful collection was at the eve of being sent back to Japan via Germany had the consignee failed to find an amateur disposed to invest a large sum of money in it. It has a great historical interest; and its catalogue, made by a Tamba prince, has been one of the chief authorities used by the Baron de Chaudoin in compiling his great catalogue of the Chinese and Japanese coins of St. Petersburg. Besides, it possesses this important characteristic, that the genuineness of the coins cannot be so often doubted as in modern collections, because they were brought together before the habit had become common of counterfeiting old coins to defraud collectors. We understand that a portion of Mr. Wills' purchase may eventually be transferred to the British Museum in order to supplement the national collection.

THE report of the eleventh autumn exhibition of pictures at Liverpool, under the auspices of the corporation, is very satisfactory. Nearly 80,000 persons visited the exhibition during the three months it was open; and 314 works were sold for the aggregate sum of £12,202. Besides Mr. D. G. Rossetti's great work of "Dante's Dream" (to which we have before referred), Mr. John O'Connor's "Market Place at Verona," painted in *tempera*, and a landscape in water-colours by Mr. John McDougal, were purchased by the City Council for the permanent gallery, the total expenditure on this account being £1,860. Mr. P. H. Rathbone has also presented to the corporation Mr. Naish's "Boulders at Rest." We are glad to hear that extensions to the Walker Art Gallery have been approved which will double its present capacity.

THE twenty-first annual exhibition of the Glasgow Institute of the Fine Arts opens next Tuesday, February 7, and closes on May 1. On Monday is the private view, and a *conversazione* in the evening.

We regret to learn from the *Manchester*

*Guardian* that the publication of Mr. W. Thompson Watkin's work on Roman Lancashire, announced in these columns for the close of 1881, has been delayed by a severe attack of illness, from which Mr. Watkin is now happily nearly recovered.

MR. B. A. PROCTOR's papers on "The Great Pyramid," now in course of publication in *Knowledge*, are of extraordinary interest and importance. They conclusively, and most simply and clearly, solve all the mysteries and difficulties of the ascending and descending passages, about which so much learned nonsense has been written. We shall take occasion to return to this subject when the series of articles is completed.

AMONG the first of the important art sales of the season in Paris will be those of the works of art which were in the possession of M. E. Fould and of M. Benjamin Fillon.

THE first meeting of the British and American Archaeological Society at Rome was held at the room of the society on January 23. After a brief allusion by Mr. Conolly to the loss the society sustained by the death of Mr. Tighe, who was one of the principal promoters of the society, Mr. Hodder M. Westropp gave the first of a course of lectures on the archaeology of Rome—"The Beginnings of Rome." In the first part of the lecture he described the palaeolithic implements, found in connexion with the bones of extinct animals, which were discovered at Ponte Molle, Ponte Mammolo, and other sites, affording evidence of a rude and barbarous age in prehistoric times in Italy, contrary to the opinion expressed by Mommmsen. He then pointed out that the original walls of Rome built by Romulus were earthen ramparts with a foss, encircling the foot of the hill, according to the testimony of Tacitus and Varro; and that the so-called "Wall of Romulus" on the Palatine was, in reality, of the time of the Tarquins, and in a style of masonry introduced by Tarquinius Priscus from Etruria.

GOOD news for the preservation of ancient monuments reaches us from the most distant quarters. A decree has recently been issued in Egypt, appointing a commission (which includes Rogers Bey and M. Baudry) to investigate and preserve the monuments of Arab art; and a sum of £7,000 will be granted for pressing needs during the current year. In Japan, too, a society has been formed by the Prime Minister and other high officials for the protection of old temples and other monuments; and in this case it is said that two million yen (£400,000) has already been subscribed for the purposes of the society.

A CORRESPONDENT of the *Times* writes that a society has been formed at Aintab, in Northern Syria, to be called "The Central Turkey Archaeological Society," for the encouragement and prosecution of archaeological studies. At the inaugural meeting, the president, the Rev. Henry Marsh, described a Hittite inscription which he had discovered on two colossal lions in the wall of the citadel at Marsh.

A CORRESPONDENT at Rome writes:—

"The last few days' digging, in the formation of one of the projected roadways proceeding from opposite the northern wing of the Finance Offices in the Via Venti Settembre, in the direction of the so-called Circus of Sallust, has brought to light another portion of what seems to be the Servian agger, composed of two walls of the usual huge blocks laid as 'headers and stretchers,' filled in between with earth and rubble."

THE project has already taken shape to celebrate the bi-centenary of the death of Murillo, which took place at Seville in 1685. It is proposed to have a collection not only of the works of Murillo himself, but also of his contem-

poraries of the Spanish school, and of living Spanish artists as well.

AN article by Prof. Sidney Colvin in the *Art Journal* for January, on the "Donna Velata" of the Pitti Gallery at Florence, which he believes to be a genuine portrait by Raphael of the Fornarina, and one by Henry Wallis in the February number, on the "Drawings of Leonardo da Vinci," are the most important of the literary contributions to this periodical which have appeared this year. "On the Lochside" is the title of a very pleasant etching by McWhirter in the current number, which also contains some good wood-cuts of the shipping at Hull, though we do not admire the American affectation of cutting two or more scenes on the same block so that one appears to hide part of another.

*L'Art*, among other good works this year, has endeavoured to do justice to the great impassioned art of Delacroix in two large etchings and an article. The former are by Gustave Creux, and represent the frescoes of "Jacob and the Angel" and "Heliodorus driven from the Temple" in the Chapelle des Saints-Anges at Saint-Sulpice. Another of Lucien Gautier's fine etchings of Paris—"Le Pont des Saints-Pères"—has appeared, and a beautiful rendering, by the needle, of a landscape by the Alsatian Camille Bernier, by Gaucherel, called "La Lande de Kerrenic." The last "silhouette" is of the landscape artist F. L. Français, by J. G. Prat, illustrated by excellent wood-engravings of numerous compositions of this delightful painter.

## THE STAGE.

### THE ACTING IN "THE SQUIRE."

CAUSES which could have no interest for the readers of dramatic criticism prevented me from seeing the performance of "The Squire" at the St. James's Theatre until last Monday. The contest about the origin of the play had a little subsided; the piece had been running about a month—a good time, generally, for seeing a piece at its best, for then the actors understand their parts thoroughly, and have not begun to weary of them. Let me say, briefly, that the acting was distinctly good, though not, as far as most of the performers were concerned, in any way exceptional; and that the piece—quite apart from the question of its sources—was in some respects disappointing. Having read and heard everywhere that it was founded, whether consciously or unconsciously, upon *Far from the Madding Crowd*, I expected it to retain something of the flavour of that admirable fiction—something of its humanity and humour, its unconventionality and its penetration—and not merely the dull suggestion of its characters and their intrigue, its mechanism and not its genius. Whether Mr. Pinero has borrowed, or whether he has not borrowed, I find myself constrained to remark that "The Squire" is the work of a playwright, though of a playwright with literary skill; that it is in no true sense a poetical or an intimate study of country life; and that, if this had been Mr. Hardy's own adaptation of *Far from the Madding Crowd*, one would have had no alternative but to exclaim, "See how a novelist of the first order has become a dramatist of the second!"

There are excellent things in the piece; and, when I say that it is the work of a playwright, I mean exactly that they are such as are cal-

culated for immediate stage effect. Mr. Hardy and Mr. Pinero have observed two different worlds; and it is very doubtful whether Mr. Hardy would have been able to fill his piece, as Mr. Pinero has done, with neat little bits of dramatic construction and explanation, and with matter directed to the dress circle and matter directed to the pit. Without going into particulars, we may give Mr. Pinero credit for the shrewdness and judgment that have enabled him to take the measure of an audience and the measure of the stage requirements of a scene. And, furthermore, it may be granted that the telling of his story within three acts, which comprise but two *tableaux*, is an evidence of skill; and that certain of the speeches—notably a pathetic speech which Kate Verity makes to her jealous servant when her jealous servant is minded to betray her—show a literary power, and some power of imagination besides, which may yet carry Mr. Pinero far on the road to an unquestioned success. But real study of character I do not find; still less real study of country character. That Lieutenant Thorn-dyke, the lover of "the Squire," should be a quite commonplace person—without the abominable fascinations of Sergeant Troy—may be permitted; but then, alas! "the Squire" is without the charm of "Farmer Bathsheba." Gilbert Hythe, the bailiff, is an effective stage instrument, and little else. The Reverend Paul Dormer is a more marked character, but in his mixture of cynicism and soft-heartedness he presents the contrasts which novelists and dramatists have perceived and found effective long before to-day. The "representative of the *Pagley Mercury*" is an opportunity lost. The lower class of provincial press man is a type quite worthy of study. He would yield much entertainment. And we anticipate entertainment when the gentleman "connected with" the *Mercury* presents himself within the homestead of Prior's Meane, but we do not get it. He appears to be not so much a study from life as an unconscious study from Mr. Robertson's excellent but seedy journalist—Tom Stylus, is it not?—in "Society;" Stylus, it will be remembered, was always on the point of making a speech, at the Owl's Roost, but he refrained from making it, or the curtain fell on him. The "representative" of the *Pagley Mercury* does not refrain. He makes a speech; Stylus would have made a better one. Then, the country characters. Mr. Pinero wrote a pretty letter to the newspapers, saying he was glad to get the scent of hay across the footlights. I went expecting to smell it. But the peasantry is a theatrical peasantry; it does not babble of green fields. And I recognise no local touches; there is no study of one particular country-side. The Squire makes some mention of Yorkshire—says she was married, if I remember rightly, somewhere in Yorkshire, sixty miles away—then talks about "the key of the oast house." An oast house is where hops are dried. I suppose there is hardly an oast house within two hundred miles of Yorkshire. Still, these deductions made—and made, I say, without reference to the question of the fable's origin—there remains a drama which abounds in evidence of the playwright's skill, and in which the dialogue, though not often brilliant, not often characteristic, is yet

able to carry on a healthy story of no very remarkable kind. I cannot believe that the play, being such as it is, can, in the long run, seriously prejudice the public acceptance of a piece which is avowedly a dramatic version of almost the greatest of contemporary novels.

Mr. Kendal, long known as one of our most serviceable and agreeable comedians, in the present play neither strengthens nor weakens his claim to be an exponent of passionate emotion. He is seen to most advantage in the earlier and lighter scenes; but then the touch of the dramatist is truer in these scenes, and gives him his best chance here. The Reverend Paul Dormer, who in his youth suffered a trouble which, we are informed, left him, even twenty years afterwards, without the capacity to eat his breakfast, fits Mr. John Hare, inasmuch as the emotion of which he still complains is of necessity restrained, and Mr. Hare is a better exponent of emotion restrained than of emotion indulged in. Mr. Hare gives to the middle-aged bachelor parson an air of semi-military precision which to many characters he is wont to impart, and which is, perhaps, less widely diffused than he would seem to believe; but it is by minute touches that he gradually obtains those effects of truthfulness and of complete finish for which, in what we may call subjects of *genre*, he is justly renowned. In Mrs. Kendal's long and varied performance of Kate Verity there is much to delight in, though she hardly reaches at any point the height touched by her in the closing moments of "The Cape Mail." To me, her acting is distinctly more affecting in the third act than in the second; in it there is seen more purely her qualities of delicacy and quiet intensity. But her reception of the news brought by the parson in the second act is as remarkably executed as it is conceived; what is almost a momentary paralysis of the mind is seen to come over the woman sitting motionless in her chair. The great dramatic effect with which this act closes—the intervention of Kate Verity as the bailiff would seem to be about to shoot her lover—her intervention with the cry to him to "spare the father of my child"—would yet gain something, I think, if the actress here more closely remembered the maxim of the Frenchman, that "the gesture must invariably precede the word." With the gun raised to the shoulder, time, of course, is not to be trifled with. But a gesture of authority arrests as much as a word. Mrs. Kendal is an actress who can give authority to a gesture; and, having stopped the man with the gesture, the confession and the plea would come with a still greater effect—"he is the father of my child."

The country characters get what colour they have chiefly from the actors. If Mr. Pinero had prolonged his excursion into Kent, it is conceivable he would have brought more local colour away with him. In Mr. Hardy's drama we shall look for this, and shall get it. The point is one in which Mr. Pinero's "note-book" is presumably deficient. As it is, much depends upon the actors, and one or two of them exaggerate—Mr. Mackintosh, for instance, as Old Gunnion, in spite of a performance generally excellent and quaint. Of the rustic men, Mr. Brandon, as Robjohns junior—a young, silly, simpering

\* 150 miles

blonde—is the most satisfactory; but the quaintest picture is that presented by the naïve, open, tender, yet almost empty, face of Miss Brereton, who was destined by Nature, or has been prepared by Art, for a representative of a rural character less idyllic than Kate Greenaway's, and less obtuse than Charles Keene's.

FREDERICK WEDMORE.

### STAGE NOTES.

THE revival of "The School for Scandal" at the Vaudeville Theatre will take place to-night. A very strong cast has been secured for these representations, that excellent character actor, Mr. Thomas Thorne, contenting himself, as before, with the part of Crabtree.

THE single morning performance of "Two Roses" at the Lyceum Theatre is fixed for to-day, and it may be inferred that the production of "Romeo and Juliet" will not be long delayed. The rehearsals are, we believe, proceeding.

"OLIVETTE," after a run of not far from five hundred nights, is now removed from the bills at the Strand, and its place is to be taken this evening by Lecocq's latest comic opera, "Manola; or, Le Jour et la Nuit." This has had a decided success on the Continent. It is well known that two of the principal supporters of the Strand entertainments—M. Marius and Miss Florence St. John—have left this theatre, and will appear together very shortly at the new playhouse in Northumberland Avenue. This will open during next month.

### MUSIC.

#### BALFE'S OPERA "MORO."

BALFE's "Pittore e Duca," performed for the first time in England by the Carl Rosa company last Saturday evening, was originally produced at the Trieste opera-house in the autumn of 1834, but was so badly given that, after a few performances, the composer withdrew it, declaring that, unless done properly, it should not be represented again. The Italian *libretto* has been translated and adapted for the English stage by Mr. W. A. Barrett; and the work now bears the title of "Moro; or, the Painter of Antwerp." All the chief characters bear the names of actual historical personages; and it may be of interest to mention that pictures by Moro, the Flemish artist—called in England Sir Anthony More—are to be found not only abroad, but also in the National Gallery and in the collection at Hampton Court. The plot of the opera runs as follows:—Peace has just been concluded between Spain and the Netherlands, and we witness in the Prologue the laying of the foundation-stone of the citadel of Antwerp in presence of the Duke of Alva. Moro, painter to the Duke, has been ordered to transcribe the scene on canvas. While thus occupied, a veiled lady hands to him a mysterious document containing an inscription supposed to be on the tomb of Olivia Campaña. This lady loved Moro, who had once, when in Madrid, saved her life. She had been forced against her wish to marry Count Aramberg, one of Alva's most ardent supporters. She sought refuge in a convent, from whence she spread abroad the news of her death. At the opening of the play the Count is no longer living. In the first act, the Duke of Alva pays a sudden visit to the House of Refuge, in which Olivia is supposed to have died, in order to enquire into the conduct of the Mother Superior and the nuns, accused of treason and rebellion. The Duke falls in love with Olivia, who refuses to give her name or any account of herself. In the second act, the

Sisterhood, summoned before the judges, receive a general pardon; but Olivia, who has rejected the Duke's overtures, is condemned to death, and Moro is commanded to paint her portrait before her execution. Her veil is removed, he recognises Olivia, and pleads for her pardon. They are given permission to leave Antwerp, but at the last moment the Duke resumes his offer of love to Olivia. Moro challenges the Duke to mortal combat, but "important despatches" stop the duel, re-unite the lovers, and bring the piece to a happy conclusion. These things are easily managed on the stage; one document contains the recital of the Duke, and the other an invitation from Queen Elizabeth to Moro. Balfe's music lacks intensity, strength, and character; he has great facility of production, and his thoughts are clear and flowing, but in aiming at simplicity he often falls into the commonplace, and his melodies may be described as sentimental rather than romantic. His orchestration is thin and monotonous, and his Italian and undramatic style of writing is often painfully at variance with the purposes and productions of the present day. The composer of "The Bohemian Girl" must, however, be judged on his own merits; he adopted a certain style, achieved success in it, and the popularity of many of his songs and ballads can neither be ignored nor denied. "Moro" was received with great enthusiasm at Her Majesty's, and several of the songs were encored. An apology was made for Mme. Valleria on the score of hoarseness, but she nevertheless sang the heroine's part in admirable style. Mr. Barton McGuckin (Moro) sang with taste and expression, and acted with becoming calm and dignity. Mr. Crotty as the Duke displayed skill and judgment, and Miss G. Warwick was very good as Ines, the Superior of the Nunnery. The piece was well put on the stage. Mr. Carl Rosa was the conductor; his re-appearance after an absence of two years was the signal for long and continued applause. It is gratifying to find that the public give such a cordial welcome to the enterprising director; he has laboured long and arduously in the cause of art, and thoroughly deserves the encouragement and support of the public.

At the last Monday Popular Concert Brahms' sextett in G major was given for the third time. The opening *allegro* is a remarkable movement: the themes are dreamy and poetical, and the workmanship throughout is of great and varied interest. The influence of Schubert is strongly marked in the constant change from minor to major chords. The *scherzo* is very quaint and original. The *adagio*, peculiar in form, is at the outset somewhat dry; but the latter part, in the major key (a metamorphosis of the opening theme), is full of charm and beauty. The *finale*, of a pastoral character, contains many features of interest. We consider the work quite as fine as, if not finer than, the earlier one in B flat. The sextett was admirably performed by Mme. Norman-Néruda and Messrs. Ries, Hollander, Zerbini, Pezza, and Piatti. It was listened to with the greatest attention, and was received at the close with much applause. Miss Agnes Zimmermann gave a very finished rendering of two solos by Chopin, and took part with Mme. Néruda in three movements of a *suite* by Franz Ries (a nephew of Ferdinand Ries, Beethoven's pupil). The two first show considerable ability; the themes are not strikingly original, but they are well developed. The last movement (No. 3) gave Mme. Néruda a fine opportunity of displaying her brilliant *technique*, but, as a composition, it is decidedly inferior to the other two. Herr Ries has written another very interesting *suite* for piano and violin (op. 26), and has published an overture, two quartetts, a quintett, and a large number of songs. The programme concluded with Mr. Davenport's trio in B flat.

- A MODERN SOLITARY.
- "LET NOBODY PASS": a Guardsman's Story.
- AN EPILOGUE on VIVISECTION. By EDWARD GURNEY.
- THE SOCIAL STATE of the HEBRIDS TWO CENTURIES AGO.
- ODDITIES of PERSONAL NOBILITY.
- SENIOR WRANGLERS.
- LINE4 to a LADY who was ROBBED of her JEWELS. By Sir FRANCIS HASTINGS JOTLE.
- LOVE the DEBT. (With an Illustration.) Chap. XLII.—Bob as a Reformer. XLIII.—Bob as an Orator. XLIV.—Two More Proposals.

London: SMITH, ELDER, & CO., 15, Waterloo-place.

REMINISCENCES of a LONG  
and BUSY LIFE. By W. CHAMBERS.  
See Chambers's Journal for FEBRUARY. 7d.

SATURDAY, FEBRUARY 11, 1882.

No. 510, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Lusiads*. Vols. III. and IV. ("Life of Camoens and Commentaries.") By R. F. Burton. (Quaritch.)

CAPT. BURTON recalls the Englishmen of past times who could be at once poets, learned scholars, and daring soldiers or explorers; but I think it must be said that he has excelled his predecessors. The splendid version of the great Portuguese poem—*The Lusiads* of Camoens (reviewed in the ACADEMY of June 28, 1881)—has marked him as a poet. He now once more, but in a different way to his former learned works, has written a book of vast and solid erudition, and has thus shown decisively that he is historian, philologist, and bibliographer. His unrivalled feats as a traveller have given him the insight necessary to explain what Camoens drew from his experiences in the Far East. These two volumes exhaust the great epic of India for all who read English, and conclude a final edition which may possibly be added to by future discoveries, but can never be surpassed.

One of the first requisites for the understanding and due appreciation of Camoens' poem is a Life of the poet. But this is a task of unusual difficulty. As little is known about him as is known about Shakspeare; hardly a fact is certain, not even the date of his birth or death. There can, unhappily, be little doubt that the great poet's life was a miserable one. The Life given here occupies 115 pages of the third volume. Not a single source of information, however small and obscure, has been neglected; and all that is known is for the first time presented in a most attractive form—thanks to Capt. Burton's intimate acquaintance with the scenes where the chief events of the poet's life occurred. Nearly 100 pages of a most complete bibliography follow, and this includes much new information respecting former English translations of the poem, and a genial appreciation of them. This part is the more valuable as ignorant fanaticism has meddled with the poem and persecuted such a worthy editor as Faria y Sousa. Capt. Burton has most accurately defined the difficulties that thus arise. The rest of the third volume contains a fresh and striking sketch of the history of Portugal, which illustrates fully the poet's times, as well as explains the perpetual historical allusions in the poem. The first part of the next (fourth) volume contains a most complete essay on the geography of the poem and on the travels of Camoens. The rest is occupied by ex-

planatory notes on the many difficult passages in the poem. It will thus be clear that Capt. Burton's great work contains much that few could venture even to appreciate, and I certainly am not one of those few. It is a monument of erudition, as well as of his unrivalled knowledge of all parts of the world. Mrs. Burton has added to the last volume a brilliant and conclusive reply to some silly remarks made lately on the translation. It might have, as motto, the words of the old Italian Carnival song which Scioppiettieri (fusiliers) address to the ladies:—

"Rari usar trassinar già gli Scoppietti,  
Oggi ognun vuole usargli;  
Ma presto appajon, donne, i lor difetti,  
Che son pericolosi."

I will, however, venture to notice a few points and some possible misprints in the hope that I may thus save the author some little trouble in his next edition. That he wrote in Trieste is sufficient to account for any misprints; that, without books, and having to rely on his memory, he could be so accurate is surprising. The book is beautifully printed.

Several books are cited as "Hakluyt's": this must be a misprint for "Hakluyt S."—i.e., the Hakluyt Society edition or translation, as these are not to be found, so far as my memory serves me (for I also write in a small Italian town where such books are not to be found), in Hakluyt's folios.

In the bibliographical part I do not find mention of Reinhardtstoettner's recent critical edition of the poem (Strassburg: K. J. Trübner, 1875). This learned editor is also the author of the best scientific grammar of Portuguese, in which he has made much use of the *Lusiads*. His edition is a very careful and good one; but, if the explanatory Index at the end be scrutinised, Capt. Burton's merits in this way will appear the greater, as it contains many errors and deficiencies. In fact, anyone unacquainted with Africa and the East could not possibly do such work.

On p. 211 of the third volume Capt. Burton explains the -ez or -es of Portuguese names (e.g., Henriquez, Lopez, &c.—i.e., son of Henry, of Lope) as Basque; but, if so, it is, apart from admittedly Basque words, the only trace of the kind in Spanish and Portuguese, and therefore seems unlikely. May it not be compared with such Latin forms as "Medices," which occur in old Italian texts? If so, it cannot be Basque. Reinhardtstoettner (*Grammar*, pp. 161, 162, and note) explains it by the Gothic genitive—is, as Diez suggested; and this seems more likely.

On p. 273 of the same volume the author explains the original name of Brazil ("Sancta Cruz") as being given from the "Day of the Exaltation of the Holy Cross (May 3)." But, though this is Correa's account, and is supported by the fact that there are many instances of newly discovered lands being named by the Portuguese from the day on which they were first seen—e.g., Natal and San Lourenço (or Madagascar)—there is some reason to believe that this was not done on this occasion; but that Cabral's fleet had already left on May 2, 1500, and that the

name was taken from a cross of wood or stone—authorities differ—which Cabral caused to be set up. At least, this is what King Emanuel wrote in 1505; he says that the land was called S. Croce (his letter exists only in an Italian version) because "he [Cabral] had caused a very high cross to be erected on the shore." Correa is the most careless and imaginative of the Portuguese historians, and evidently listened to any idle story he heard without asking for proof.

P. 275. The name of "Cochin" is properly "Köcchi," not "Káccchi." The Portuguese (as in countless other words they adopted) added, eventually, the final nasal n. In the "Obedientia" (of King Emanuel to Pope Julius II. in 1505) the name appears as "Coxi," which (giving "x" its Portuguese pronunciation) exactly represents the Malayalam name. Capt. Burton (vol. iii., p. 313) mentions the old cathedral of Cochin. The English destroyed all but a tower, which last relic was barbarously pulled down in 1874.

P. 276. The author explains the name of Mount Delli (i.e., D'elli, the well-known and conspicuous hill on the Malabar coast) by "cardamoms." But the name in Malayalam is Ēli-mala (or "High hill"), which Indian pedants corrupted into Ēla-mala (or "Seven hills") and Ēli-mala (or "Rat-hill"), and invented silly legends to account for such names. There are no cardamoms to be found there, or even near it; and, if it were called after that spice, the name would have had a very different form.

P. 306. Have not Egyptologists traced "coco" (nut) as an Egyptian word under the form "kuku"?

To fairly notice these volumes, it would now be necessary to mention some of the new facts of importance, and the results at which Capt. Burton has arrived; but to do so would be to make extracts from every page. As might be expected, all the geographical questions are fully explained. To the many who still believe in the myth of the visit of St. Thomas the Apostle to South India, the note on canto x. 108-18 will supply much new information. Capt. Burton asks what became of the supposed body of St. Thomas, which was believed to have been found in 1524. Maffei (in his *Historia Indica*, original edition of 1588, p. 160) says it was hidden in a place only known to two Portuguese, and that (? in 1552) it was taken by a Franciscan to Goa. If this be compared with the account given by the Jesuit Sousa (*Oriente Conquistado*, i., § 137), there can be little doubt that the supposed relics were stolen, and, probably, lost.

In a note to canto vii. 12, there is a very valuable brief history of fire-arms, in which the silly idea that they were invented in India is decisively negatived. The literature of this question (chiefly by Reinaud and Favé) is not very extensive, and is easily accessible; the least acquaintance with it would preclude such errors. It is obvious that the words which now mean guns, &c., have formerly had totally different meanings, and that it is highly uncritical to hold the contrary view.

The whole of these volumes is marked by an admirably patriotic tone, which forms a

refreshing contrast to the sentimental nonsense which it is the fashion to write about the East. It is to be hoped that imitators will spring up who will try to ascertain the truth about India, and will also duly praise the great deeds done there by the Portuguese, Dutch, French, and even English.

Capt. Burton has occasionally touched on political questions here, and many will hope that he will, in another edition, expand these remarks. Camoens (x. 119) mentions the missionaries of his time; and an estimate of the Indian missions of the present day by Capt. Burton, and especially of their so-called translations of the Bible, would not be altogether out of place in the notes on this canto. Such a master of the art of translating could, in a few lines, appreciate justly these pretended versions. In the Indian languages, the representatives of European theological terms are mostly due to the Catholic missionaries of the sixteenth century, who took them from the Indian metaphysico-religious systems, which they could not then have fully understood, if it be ever possible to understand them. However, they wisely did not pretend to translate their books. A Brahman to whom I once showed one of these versions said: "I know the words, but cannot make any sense of them as put together here." But the difficulty is not only with the technical words; there is much besides that cannot be translated. An eminent philologist told me a story he heard from the greatest master of the Malayan and Javanese languages which will make this plain. In one of the Dutch islands sheep were unknown till the Dutch introduced some; the people had goats already, and termed the importations "Dutch goats." A missionary then translated "Lamb of God" by "Son of the Dutch goat of God"! That the converts pay little attention to these versions is certain, or heresies would arise in the same way as Manichæism did.

Again, a comparison of the excellent system of the Dutch with that of the English in India would be of the greatest value if by Capt. Burton. He gives so much that every reader of his works will not hesitate to demand more.

A. BURNELL.

*Through Siberia.* By Henry Lansdell. In 2 vols. (Sampson Low.)

Few realise the extent and usefulness of our missionary work; and yet there is perhaps hardly a feature of modern religious history more striking than the enormous progress which has been made within the last century in those particular departments of labour, intellectual and physical, which properly belong to the profession of the missionary. England has accomplished many great things, but of all the good she has done there is no institution she has more reason to be proud of than the British and Foreign Bible Society. One of the most enterprising of the workers of this society is the author of *Through Siberia*. His object was, as he himself says, to

"go right across Asia, and leave so many copies of Scripture as would suffice for putting at least a New Testament or a copy of the Gospels in every room of every prison, and in every

ward of every hospital throughout the whole of Siberia! As I look back upon it now," he continues, "as an accomplished fact, the matter seems ordinary enough; but when the thought came into my mind it looked like a consummation far beyond anything I had hoped to accomplish, and a result which, if it might be compassed, would be a cause of thankfulness for the rest of my life."

Mr. Lansdell started from London in the April of 1879, and returned via San Francisco to Liverpool, having compassed the world in nearly a straight line of 25,500 miles, and having, moreover, distributed upwards of one hundred thousand tracts. One of the results of his journey is the work, in two handsome volumes, now before us, which cannot be too highly praised. The pictures, though effective, are not always in keeping with the excellence of the text; those of Moscow, for instance, are libels on that city.

Means of locomotion are still in a primitive state in Siberia, and the roads are nearly all in the condition in which Gen. Wade is said to have found those of Scotland. Of travelling under such circumstances we give the following extract:—

"When you propose to travel 'post' in Russia, your first business is to get a *podorojna*, or permit, of which there are three kinds. The first is a 'courier's' *podorojna*, which is used by passengers travelling in hot haste upon important—generally Government—business. East postmaster reserves three horses in case a courier should arrive, in which event only a certain number of minutes is allowed for changing the horses, and away goes the courier at breathless speed. Not long before my visit, an exile, condemned to the east, had reached the city of Tomsk, a distance of nearly 3,000 miles from the capital, when for some reason his presence was required by the authorities in Petersburg. They telegraphed, therefore, that he was to be brought back *couriersky*; whereupon, he was placed between two *gend'armes*, and then over the stones they rattled the bones of that unfortunate man, till in eleven days they brought him to his destination. This sort of *podorojna* is reserved for special messengers and persons of importance; but, after hearing the foregoing story, I came to the conclusion that it is not everyone who would appreciate the privilege of travelling *couriersky*. Number 2 is a 'crown' *podorojna*, recognised by those post-boys who cannot read by its having two seals. This is not paid for. . . . *Podorojna* number 3 is that used by ordinary travellers, for which, at the outset, you have to pay, by way of tax, a trifling amount per verst, according to the distance you intend to travel. And now, having secured your *podorojna*, your next concern is for a vehicle. If you simply take that to which your *podorojna* entitles you, it will be a roofless, seatless, springless, semi-cylindrical tumbrel, mounted on poles, which connect two wooden axle-trees, and out of this at every station you will have to shift yourself and your baggage. This is called travelling *percladnoi*. From such a fate, gentle reader, may you be delivered! No, better buy a conveyance of your own. The vehicle I have alluded to is called by the general name of *tarantass*. The one you will purchase, though in many respects similar, and by some called also a *tarantass*, will be dignified by the post-boys with the appellation of an 'equipage.' Like the other, it will be mounted on poles for springs, but the axles and body of the carriage will be of iron, and it will have a seat for the driver, and a hood, with a curtain and apron, under which you may sit by day and wherein you can sleep by night. . . .

The packing of the vehicle requires nothing short of a Siberian education. Avoid boxes as you would the plague! The edges and corners will cruelly bruise your back and legs. Choose rather flat portmanteaus and soft bags, and spread them on a layer of hay at the bottom of the *tarantass*. Then put over them a thin mattress, and next a hearth-rug. . . . Next, put at the back of the carriage two or more pillows of the softest down, for which please send on your order in advance, because these must be bought as opportunity offers."

Mr. Lansdell is discreetly silent as to the entomological resources of Russian village inns, of which we ourselves cherish a vivid remembrance after nights spent in Russian villages.

The author arrived at Irkoutsk just at the time of the great fire there, and he gives a graphic description of the state of affairs. By a remarkable coincidence, he entered the town the very day on which the fire burst out, and was thus enabled to leave it before the conflagration had become general. When the flames had subsided, he came back to look at the ruins they had left.

"We now saw something of the condition of the people who had fled to the bank of the river on the previous day, with such effects as they could save. Here were gentle-folks 'camped out' under chests of drawers, tables, and boxes arranged in the best manner possible in the open air—sheets being used for walls, and curtains for coverings. Ikons from churches were lying about; likewise tables heaped with philosophical instruments from the High School; and carts filled with moveables. The instruments from the telegraph stations were standing by a post, to which paper streamers were fastened to intimate that this was the temporary telegraph office. The people's demeanour, however, was in strange contrast with their pitiable condition, for many, having saved their samovars, were drinking afternoon tea, and on all sides were joking and laughing at their comical situation. . . . Great credit was due to the officials for the prompt manner in which they attempted the relief of distress. The fire was scarcely extinguished before a committee was formed, and some of the merchants laid down large sums."

Naturally, Mr. Lansdell took a great interest in the administration of the prisons which he visited in Siberia. He had read of thrilling horrors practised in those Northern climes—of men flogged to death with whips to which hooks had been attached, of Cossacks urging on their prisoners with long lances, &c., &c., &c. Thanks to letters of introduction to high officials, and thanks to the kind reception he invariably met with in high quarters, he was enabled to investigate the subject thoroughly; and the result of these investigations he sums up thus:—

"On the whole, my conviction is that if a Russian exile behaves himself decently well he may in Siberia be more comfortable than in many, and as comfortable as in most, of the prisons of the world."

It appears that political prisoners form a very small minority.

"As to the crimes of the exiles, they are not all political, nor even chiefly so. A large proportion—4,000 out of 18,000, or say twenty per cent.—of them are charged with no particular offence, except that they have rendered themselves obnoxious to the community among which they lived. If a man in Russia be idle and drunken, and will not pay

his taxes nor support his wife and family, but leaves these things to be done by his neighbours, his commune—which may consist of one or more villages—meet in their *mir*, or village parliament, vote the man a nuisance, and adjudge that he be sent, at their expense, to Siberia. This judgment is submitted to higher authorities, and, unless just cause be shown to the contrary, is confirmed. The man is then taken to Siberia, not to be imprisoned, but to get his living as a colonist. Those sent thus by villages, I was told, are chiefly drunkards. . . . A stranger, however, who believes every exile who calls himself a 'political' may easily be misled. To be a 'political' prisoner in Siberia is to be more or less of a gentleman, and many try thus to pass themselves off. Mr. Ashton Dilke, M.P., who travelled some years ago in Southern Siberia and spoke Russian, has told me that, on asking gangs of convicts if they had any political or 'gentlemen' prisoners among them, they usually said 'No,' and that in the case of one man who imposed upon him, and tried to palm himself off as a 'political,' the governor showed Mr. Dilke the man's papers, which described him as a criminal, a thief, &c."

Here is an interesting account of Siberian prison diet and discipline:—

"At Tiumen each man was said to receive daily 2½ lb. (Russian) of bread, ½ lb. of meat on ordinary days, and ¾ lb. on holidays, with salt, pepper, &c.; also a daily allowance of quass for drink. . . . I am not aware that the authorities permit the prisoners any amusements, though it has been already intimated that they find them themselves—sometimes in the shape of cards, with which, if report be true, having nothing else to play for, they gamble away their food."

Fabulous numbers are supposed in England to be annually deported to Siberia, and it is generally believed that the greater part of the population of Poland has been transplanted thither. Such errors are best corrected by figures; and Mr. Lansdell is able to tell us that the number of Polish criminal prisoners sent to Siberia in 1879 was 898, and in 1880, 270. Besides, he affirms that there is no accommodation for the enormous numbers of exiles, as many as 40,000, estimated by some writers, and that it would be next to impossible to convey such numbers thither for want of means of transport.

Most people who take an interest in Siberia have heard of the mines of Nertchinsk—those terrible quicksilver mines to which refined young ladies, hardened ruffians, and sickly youths are all sent alike to rot among the vapours of the poisonous mercury! Harrowing tales are told of the tragedies enacted there. When announcements are seen in our newspapers to the effect that a fresh batch of Nihilists has been sent to Siberia, those mines of Nertchinsk present themselves to the imagination of a sympathetic public, and the righteous indignation of a liberty- and justice-loving nation are prepared to rise up in judgment against a Government that can practise such cruelties. Mr. Lansdell was therefore particularly anxious to visit these iniquitous mines. He went to Nertchinsk, and thoroughly investigated the place—but he shall speak for himself.

"Now it is somewhat remarkable that I have been unable to learn that there is a quicksilver mine in Siberia at all, or to get satisfactory proof that one ever existed. This may surprise my

readers, but I proceed to explain myself thus:—The *English Cyclopaedia*, under the article 'Mercury,' mentions various places where this mineral is found, but says nothing of Siberia. Yet surely if mines exist there, affording employment for numerous labourers, we ought to hear something of their output. Again, in *Ure's Dictionary of Arts, Manufactures, and Mines*, a standard book on mining, (p. 120) we find a good deal concerning the mines of Siberia, of those of the Urals, the Altai, and Daouria (which last comprise those about Nertchinsk), but nothing is said of quicksilver mines in any one of these regions. Again, Mr. Atkinson, who spent several years in Asiatic Russia, went to the district of Nertchinsk, and had friends among the mining engineers, says: 'Tin and zinc ores are found, but neither have as yet been worked, and I am not aware of the existence of quicksilver, though it is said to be found in these regions.' . . . To these testimonies I may add my own, that neither in the town of Nertchinsk, through which we passed, nor in the neighbourhood, nor indeed throughout Siberia, did we anywhere hear of a quicksilver mine."

The author might have further stated that in the *Appendix to Ure's Dictionary* statistics are given of the exports of Californian mercury into Asiatic Russia. Surely Asiatic Russia, with its scanty population, would have no need to import this mineral if it already possessed it in large quantities. Before such a host of evidence, those quicksilver mines of Nertchinsk, so cherished by the sensationalist, must now be regarded as purely mythical. Silver mines there are, but that is a very different matter; and though working in mines of any kind can hardly be recommended as a salubrious occupation, still silver mines have nothing especially objectionable about them—they do not involve the rotting of those who work in them.

Mr. Lansdell, though giving an accurate description of Siberian prison and convict life, has not restricted himself to this subject. He is a good observer, and has kept his eyes open. His book is full of interesting, valuable, and amusing information. When needful, he brings in statistics to bear out his statements; and these volumes show evidence throughout of painstaking work and careful research. Yet Mr. Lansdell is never tedious; and we are of opinion that *Through Siberia* is much more entertaining, and certainly more readable, than many novels.

E. A. BRAYLEY HODGETTS.

*Representative Government in England: its Faults and Failures.* By David Syme. (Kegan Paul, Trench and Co.)

THIS is an interesting book, and its readers will increase every day now that a new Reform Bill with a redistribution of electoral power is regarded as the goal of the present Parliament. Our only quarrel with Mr. Syme will be on the ground that his work is not more useful, as it might so easily have been made with a larger and more concentrated study of the subject. As a survey of the present foundations of representative government in England, it is too superficial for the historical student, and hardly so full of references and of facts and figures as the politicians of the next two or three years would desire. Mr. Syme is not an indiscriminating admirer of

our electoral system or of government by party. His work does, however, show us plainly that, with regard to the present case, the reform of the county franchise cannot yet be regarded as a Ministerial question. Just now it is, properly speaking, in the stage when a question is for Ministers deemed "an open question," because there has been no declaration by the Government, as a Government, on the subject. His pages will not lead to any blind confidence that a great measure of reform and redistribution can be carried almost as soon as it is introduced. Mr. Syme tells us, in his Introduction, that, "in the first place, any important scheme of reform must be adopted by the Government of the day, and there is always a great difficulty in getting any Government to commit themselves to any scheme, no matter how desirous they may be to secure popular favour. In the second place, a measure of this kind must have the unanimous approval of all the members of the Ministry. Government by party does not permit differences of opinion on the part of Ministers on any great questions; and the difficulty of finding unanimity on all the essential points of any important measure is enormous, has often proved insurmountable, and, even when it has been overcome, it has usually led to a break up and reconstruction of the Government."

The beginning of English Parliament, properly so-called, was in 1295, when for the first time representatives from the cities and boroughs, as well as from the counties, were summoned to Westminster by writs much in the form now adopted. The writs for this Parliament are still in existence, and show that the Commons had even then acquired some considerable powers. But their presence was tolerated rather than welcomed by the hereditary legislators. There are forms of Parliament, still held good, handed down from those times, which mark the very wide difference of authority then established between the two Houses. The judicial functions belonged exclusively to the Lords; but even in matters of legislation the powers of the Commons were not regarded, in the first instance, as co-extensive with those which belonged to the hereditary chamber. They were expected to assent to what the Lords proposed rather than to initiate legislation for themselves. There has been an almost complete transfer in this all-important respect. But it must not be supposed that in the earliest of English Parliaments, in what is historically called the present form, the claim of the Commons was the same as it is to-day. The members of nearly 600 years ago appeared at Westminster rather as witnesses than as representatives. They came from their boroughs and counties to inform the King of the state of the country and of the views and wants of certain classes and orders of society. So strictly was this character preserved that the writs directed the sheriffs and mayors to return residents only; no man was eligible who did not reside in the county, city, or borough which elected him. This condition was regarded for a long time as essential. In the reign of Henry VIII. relaxation commenced, and soon after the close of the Tudor dynasty non-resident representatives began to be common; but the law was not altered until the statute of

14 Geo. III. c. 58 formally repealed the restriction of residence both as to voters and members. All the representatives in the early Parliaments were paid their "wages" and expenses from the day they left for Parliament till the day they returned to their constituents. Some time before the middle of the sixteenth century, many representatives had ceased to accept payment; and from a debate in the Parliament of 27 Charles II. we learn that the practice of paying representatives had been generally abandoned. But no Act was ever passed for its abolition. Perhaps it was some lingering survival of this practice which Mr. Disraeli mistook for open bribery of members when he said, in 1848, in the House of Commons:

"Why, before the American War—a period not yet very remote—the Secretary of the Treasury used to sit at the gangway, and, at a stated period of the session, the end or the beginning, gave in the House to the members who supported Government a routine *douceur* of a £500 note; which was as little looked upon as bribery as head-money by a freeman. [A voice: Walpole!] No, no; much later than Walpole, and quite distinct from secret bribery. It was a practice which the manners of the age and the low tone of public feeling permitted."

There can be no doubt that women voted as freeholders in the election of the early Parliaments, nor that there was maintained a distinct separation of classes within the walls of Parliament. It will, however, be well that we should break off from the interesting threads of history which are interwoven with Mr. Syme's text, and hasten to an examination, which must be very brief, of his striking conclusions, involving an abrupt departure from the present lines of parliamentary government. Mr. Syme traces the development of the power of the electors, and desires to make it more complete. He appears to think, and many will agree with him, that the popular control was seriously affected by the Septennial Act. He argues that popular government can only exist where the people control their representatives at all times and under any circumstances; and therefore he would recognise to the fullest extent the right of the constituent body, not only to elect, but to instruct and, if necessary, to dismiss their representatives at any time they may think proper. He maintains that "a representative cannot reasonably complain if he is treated no worse than a Minister of the Crown, or no better than the assembly to which he considers it an honour to belong." Mr. Syme maintains that, if this "true principle of representation" were adopted, "Parliament would become a living organism, in which the process of secretion and accretion would be continually going on, an organism in which there could be no decay, as all its parts would be in a perpetual state of renewal." His system would involve very tremendous changes; and he does not give us in detail any sketch of the machinery by which a member would be called on to submit to a test vote as to whether he was or was not a representative. Yet it is, of course, essential to know by what number of electors a poll could at any time be demanded, and how often and with what intervals the process might be repeated. But this change (which, we may predict, will not be adopted by any Parliament) is by no

means the greatest novelty which Mr. Syme has to suggest. His largest proposition is the nomination of the Executive by Parliament, which includes the abolition of government. Mr. Syme contends that this would

"bring about a vast and beneficial change in the government of the country. It would put an end to the dominating influence of the Premier, and destroy the unity of the Cabinet. Parliament could then remove at pleasure any Minister whose conduct it disapproved of. It would have the selection of Ministers in its own hands, and the best men from both sides of the House would be eligible for office in the same way as the Speaker is now. The selection would not be from one section of Parliament, but from all sections, and the Ministry would represent all shades of opinion."

It would have been better, perhaps, if Mr. Syme had given us a useful and handy history of representative government in England, free from wild suggestions of this sort. He concludes his work with recommending a fluctuating Parliament—a Cabinet which could not deliberate, an Executive which must be always more or less in confusion, and he deprives the Sovereignty of the Crown of almost every plea for continued existence. We may be wrong, but it seems to us the wiser conclusion from Mr. Syme's interesting historical premisses would have been that, to secure parliamentary authority and to give a definite object to public opinion, it is expedient that a term should be assigned for the duration of Parliament; and that, if only to obtain the reasonable and efficient co-operation of Ministers in executive administration, it is absolutely necessary that they should have the largest possible political sympathy with each other, and should be liable to the censure of Parliament, but should not be the creatures of its direct appointment. At present, however, any suggestions for parliamentary reform, however wide of the true mark, may have utility in leading to consideration and discussion upon a theme which is destined to occupy with no great delay, and it may be to engross, the public mind. Yet we must confess that within the limits of Mr. Syme's work there is not too much space for a chronicle of the leading facts of our representative government which at present could not be regarded as other than most opportune.

ARTHUR ARNOLD.

*Dante's Inferno.* Translated into Greek Verse by Musurus Pasha, D.C.L. [*Δάντου ὁ Ἄδης, μετάφρασις Κωνσταντίνου Μουσούρου.*] (Williams & Norgate.)

THIS book forms a remarkable addition to the collection of translations of the "Divine Comedy" which have appeared in different languages. The number and variety of the renderings of the poem which we already possess is, indeed, astonishing, including, among others, versions in Russian, Danish, Polish, Hungarian, and Hebrew; and now the *Inferno* is presented to us, translated—and, we may at once add, faithfully and felicitously translate!—into Greek. An additional element of interest attaches to the present work from the position of the translator, who, we believe, is descended from an ancient Cretan family, and has long been

the representative of the Ottoman Porte in England. In one part of his book a startling result arises from this, for which it may be as well to prepare the reader. Among the schismatics, in the ninth *bolgia*, Dante has placed Mahomet. With astonishment we find that Musurus Pasha, in translating this passage, has delivered the prophet from the place of punishment, and has substituted Arius for him, so that the line

"Vedi come storpiato è Maometto" \*

is rendered in Greek by

"Ὡς κατὰ πῶρος ἐστὶν Ἀρειὸς βλάτω."

The following explanation is appended in a note:—

"Out of respect for the numerous Mussulman peoples, many millions of whom dwell peacefully under the Ottoman rule along with their Christian fellow-subjects, I have thought it hardly unsuitable, in the place of Mahomet, whom the poet has quite unreasonably subjected to degrading torments in the *bolgia* of the schismatics, to substitute Arius, the great heresiarch, who, being a Christian and a priest, introduced into Christendom, by means of his doctrine contradicting the consubstantial divinity of Christ, that pernicious schism which rent the Church for many years, though it has long since died out."

He then proceeds, on just grounds, to defend Mahomet from the charge of schism, and apologises for Dante on account of the age in which he lived. There is a droll side to this whole proceeding which prevents us from wishing to examine it too closely. We must leave it to our readers to decide whether the delicacy of the position of the translator, as the Christian representative of a Mahometan Power, justifies him in taking so daring a liberty with his author.

Before we proceed to notice the translation itself, there are two points relating to it which must be discussed—points about which a critic, in speaking of a language other than his own, is bound to be very diffident—the diction and the metre. The idiom employed is not Romaic, nor Neo-Hellenic; nor yet is it classical Greek, such as modern Greek writers use in translations and in imitations of the classical authors—for instance, Mr. Philippos Ioannou in his versions of Ovid's *Metamorphoses*, and of selected pieces from other Latin poets. The vocabulary, accidence, and syntax, though not always strictly classical, are ancient; but the particles are almost wholly absent, and the order of words and not a few of the expressions are modern. Thus to a classical scholar the language seems strange, though intelligible; how it will appear to a modern Greek it is difficult for a foreigner to say; but, with the various phases and modifications through which the Greek language has passed and is passing, an idiom such as this seems hardly unjustifiable. At all events, it is excellently fitted for the purpose for which the translator has employed it; for, in translating so pregnant a writer as Dante, the modern analytic forms would present great difficulty, and the long "political" verse which is their natural accompaniment would be almost intolerable.

The question of the metre which has been employed is still more difficult. M. Musurus describes it as a twelve-syllabled paroxystone metre, resembling the iambic metre, though

the rhythm is not marked by quantity. In other words, every other syllable is accented, and there is a fixed accent on the eleventh syllable. It necessarily results from this that before the eleventh syllable is reached there is one superfluous syllable in the verse; and this constitutes the difference between the metre of the translation and that of the original, for Dante uses eleven syllables, with a fixed accent on the tenth. This extra syllable is sometimes found in one part of the line and sometimes in another. An example will best illustrate this; the following passage is taken from the speech of Master Adam in *Inf. xxx.* 64-67:—

“Τοὺς ῥύακας, ὅστινες ἐκ χλωρῶν λόφων  
τοῦ Κασσεντίνου καταβαίνουσ’ εἰς Ἄρνον,  
Ψυχροὺς χυπαλοὺς ὁδραγωγοὺς ποιοῦντες,  
Αἰεὶ πρὸ τῶν ὀφθαλμῶν ἔχω καὶ πάσχω.”

In these lines the position of the extra syllable is constantly changed. It seems to wander up and down over the verses, reminding us of the old theory of “animal spirits”—that they were an essence which flew from one part of the body to another, restoring the equilibrium of any organ that was below par. Whether the translator’s object was merely to keep to a twelve-syllabled verse, as being the established iambic metre, or whether he thought in this way to counteract a possible monotony in the recurring lines, we cannot say. His own description, already quoted, points rather to the former supposition; but, from the taste shown in his work generally, we should be disposed to ascribe it to the latter. For ourselves, as we read him, we are continually desiderating Dante’s own metre. A further peculiarity which calls for notice is the degree to which M. Musurus has introduced into Modern-Greek verse the practice of substituting one foot for another, and of shifting the regular accent, by which the strictness of metre is allowed to be modified in modern poetry. The feeling with regard to this varies greatly in different languages, and our space forbids us from discussing the question further. But the present translator appears to have gone considerably beyond the practice of Greek writers in this respect, and we often find it difficult to reconcile ourselves to his rhythm.

We turn now to the translation itself. It is unrhymed, following the original line for line, and is literal, and, as far as we have been able to examine it, accurate. It possesses, also, the simplicity and vigour which we look for in a good translation of Dante, and is well sustained throughout. Let us take as a specimen the address of Ulysses to his comrades in *canto xxvi.*:—

“Ἄνδρες, εἶπον, ὅστινες διὰ μυρίων  
Κινδύνων εἰς τὴν δύσιν ἤλθετε σῶοι,  
Μὴ νῦν, ἐφ’ ὅσον τοῦ λοιποῦ βραχὺν χρόνον  
Ἐγρηγορούσας ἔχετε τὰς αἰσθήσεις  
Ἀποκινήσῃτε γυνῶναι σαφῶς τὸν ὄντα  
Ἥλιον πέραν ἀκατοίκητον κόσμον.  
Ἀναμνησθόμεν ὅλας ἐσμὲν γενέθλης·  
Οὐ γὰρ ἴδιον ἡμῶν τὸ ζῆν ὡς κτήνη,  
Ἀλλὰ θηρεῦναι ἀρετὴν καπιστήμην.”

Here we do not think that ἡλίου πέραν is the right rendering of “*diretto al Sol*” of the original, which rather means “following the course of the sun”—i.e., “proceeding westwards;” but no doubt the passage has been taken the other way. Still, these are forcible

lines—some of them, at least, sufficiently so to prove that the language used is suitable for expressing Dante’s ideas. The same may be said of verses such as these, which we place side by side with the Italian:—

Che fuma come man bagnata il verno—  
Οἱ καπνίζοντες ὡς χεῖρ βρεκτὴ χειμῶνος—  
Che va piangendo i suoi eterni danni—  
Ἰοδυρομένη κολάσεις αἰώνιους—  
Ogni primo aspetto ivi era casso—  
Ἐξηφανίσθη πᾶν τὰρχέτυπον σχῆμα—  
Folgore pare, se la via attraversa—  
Ἀστραπηδὼν τὴν ὁδὸν ἐκδιαβαίνει.

The notes appended at the end of the volume, which, the writer tells us, he has for the most part borrowed from Mr. Pollock’s English translation, are simple and sensible, explaining historical references and similar points about which the ordinary reader requires information. In this way the work will serve to introduce the *Divina Commedia* to many Greeks who are not acquainted with the original, while at the same time it presents an interesting problem to classical students. We are glad to congratulate M. Musurus on the successful accomplishment of a difficult task.

H. F. TOZER.

*The Life of Napoleon III.* Vol. IV. By Blanchard Jerrold. (Longmans.)

THIS volume concludes a work protracted to a length quite unjustified by its merit. The private life of Louis Napoleon, as of other celebrities, cannot as yet be fully narrated without wounding the feelings or interests of his survivors; nor can his public and political career be judiciously written or profitably read until the lies of his dastardly enemies and friends have worn themselves out, and the lessons of time have contrasted more clearly than they have yet done the Imperial and Republican policies. This much at least may be fairly conceded, that no man of equal importance—certainly not Napoleon I.—was ever so persistently, venomously, basely, ungratefully, and undeservedly libelled; and that, granted the very worst which has been said against that corruption which Napoleon III. failed to reform, or actually encouraged, it cannot even now, and most assuredly in the pages of history it never will, arouse the same moral repulsion and disgust as that hypocritical conspiracy of moral assassins of all parties and opinions the most utterly opposed, from Ultramontane Legitimist to Atheist Sans-culotte, severed by the deadliest hatreds and greediest selfishnesses, uniting in the name of patriotism to traduce and then betray the man to whom they had sworn fidelity. History may possibly with justice darken the shades of the Emperor’s portrait; his rivals it can never whitewash. On the other hand, so far from palliating or defending with Mr. Jerrold the Emperor’s indifference to the commercial and social immorality of his *entourage*, we are strongly persuaded that no plea of tolerant good nature, or embarrassing ties of gratitude, can evade his moral responsibility. It was a crime, because his sole claim to reign was that he meant to rule well and honestly; it was a folly, because, if the governors were rogues, what could he expect from the governed?

But be it remembered that it is in view of our English Court, and in the light of modern ideas, that we blame him, however justly. St. Louis, it is true, stands apart, and Henri IV. and Louis XII. owe much to the kindly perspective of time; but what other French ruler, we would ask, has been blessed with virtuous and strictly honest supporters? The fact is simply this, and it lies on the face of all French history—that, as wealth has grown and political and commercial intrigues become more and more intertwined, the ring of *parvenus* and stock-jobbers has closed ever tighter round the Court. Weakened, or perhaps only obscured, during wars and revolutions, it has visibly encroached during the longer intervals of peace. Not to trace its earlier phases, we may simply point to the steady growth during the July monarchy of that cynical fraud and profligacy which re-appears under the familiar name of the “corruptions of the Second Empire,” and of which the end, alas! is not yet.

Of this volume, which occupies the long period from 1854 to 1872, the earlier part contains too many quotations from the *Life of the Prince Consort*, though Mr. Jerrold is aware how little, even before the critical Cherbourg visit of 1857, the Prince’s experience and sympathies enabled him to take in the French situation. The quotations from Mr. Senior are more to the purpose, though all this gossip of the *frondeurs* casts a flood of light confusing rather than instructive. That Mr. Jerrold seems to hold a Bonapartist brief can hardly be denied; but we must admit that his ground is impregnable in contrasting the fidelity and perseverance with which the Emperor clung to his *idée fixe* of the English alliance, with the vacillating insincerity and suspicions of the English Cabinet. Of the social and commercial progress of France, and of the many internal reforms, good or untimely, projected or actually carried out under the Second Empire, we hoped for a much fuller account, though what we have is interesting in its way. This is not the place to discuss Mr. Jerrold’s brief reviews of Napoleon’s foreign policy, but we may mention that unintentionally he leaves a distinct impression that the Emperor was throughout the tool, and at last the victim, of Cavour. This may be fairly argued; but it is simply monstrous to pretend, as Mr. Jerrold so constantly does, that the death of his brother in the affair at Forlì inspired the Emperor with a life-long love of Italy and hate of Austria. The chapter on the commercial treaty of 1860 is useful, but the previous attempts, beginning with Vergennes in 1786, might have been more fully traced. We are, of course, reminded how M. Thiers implored the Emperor “to pause before selling France to the English,” and how he at the same time assured Mr. Senior that “no event in modern times had done England so much harm;” as also how he felt inclined to pardon everything to the usurper in return for the seizing of Savoy. The underhand diplomacy of the same year between the Cabinets of St. James and Berlin is perhaps the darkest, as well as the most critical, point in the story; but it may have been impossible to go more deeply into this without giving unnecessary offence. By

far the best chapters are those which trace the hapless attempt at constitutional reform, and the progress of the Opposition. Here there is abundant scope for humour—with young Cavaignac virtuously spurning to receive his school-prize from the hands of the Prince Imperial, with M. Berton the “candidate of humanity,” with M. Gagne and his substitute for government in the shape of a “universal bank, the capital to be supplied by philanthropists who would require no interest,” with M. Arago triumphantly repelling the charge of lukewarm socialism by proving that he “tutoyait Felix Pyat,” and with Rochefort, less lucky, convicted of having attended Queen Amélie’s funeral, and of having “accepted a pencil-case from an Orleanist prince.” Mr. Jerrold, whose facts are here numerous and well arrayed, divides the responsibility of the war between Prince Bismarck and his French dupes, both of the Government and the Opposition. His contribution to this delicate controversy may be regarded as considerable, but by no means final.

While owning that we have gleaned much that was worth the trouble from this volume, we must still repeat, in conclusion, that we should have preferred a short systematic arrangement of facts, events, and dates, with, perhaps, in a brief essay, the compiler’s general conclusions from them, until the time is ripe, and the historian has appeared, for a searching and unprejudiced survey of a career which has left such marked imprints upon France and the world. E. PURCELL.

#### SOME BOOKS OF HISTORY.

*The Records of St. Michael’s Parish Church, Bishop’s Stortford.* Edited by J. L. Glasscock, Jun (Elliot Stock.) In the year 1871, Mr. A. J. Waterlow printed, for private distribution only, the Accounts of the Churchwardens of the Parish of St. Michael, Cornhill, London, extending from 1456 to 1608; and those who are fortunate enough to possess this now rare volume understand well its extreme value. What Mr. Waterlow did for an old City parish Mr. Glasscock has now done for a rural one, and it may as well be said at once that he has done his work admirably. The churchwardens’ accounts begin so early as 1431, and the first portion of them is printed verbatim. Afterwards Mr. Glasscock has judiciously confined himself to such entries as are not mere repetitions, and are of direct interest and importance. It is unnecessary to suggest the value of these extracts to antiquaries and philologists, and even to ordinary readers, as illustrating the customs and social life of a country parish more than four centuries ago. Besides these accounts, there are various other important transcripts from the parish records, including the inventories of the church goods, the accounts of the collectors of the Chantry and Guild of St. John the Baptist, the church rentals, complete lists of the vicars and churchwardens, the names and accounts of the collectors and overseers of the poor; and finally, though not exactly in keeping with the rest of the volume, Mr. Glasscock has given a summarised list of all the monumental inscriptions in the church and churchyard, so far as hitherto known, besides a considerable number in full which have heretofore escaped all the historians of the parish. Having done this, we are somewhat surprised to find this language in his Preface:—“The parish register is not included,

because I consider that extracts *only* are worse than useless, and a verbatim copy would be quite beyond the scope of a work like this.” We should have supposed that the parish register would have been far more within the scope of the work than the monumental inscriptions, though we would not have withheld the latter. The register and the accounts would have mutually illustrated each other, and the personal history of the parish thus have been rendered complete. Let us hope that he may yet think it well to print the parish register as a supplemental volume, and thus rescue from possible destruction its important details. It is only a few months ago that the register of a neighbouring parish, Northaw, perished in the flames, and its valuable contents were lost for ever. Mr. Glasscock’s modest apology for his copious annotations was quite unnecessary, and we assure him that they add greatly to the value of the volume. He is also to be commended for his excellent Index. We trust that his book will be the pioneer of numerous similar ones, and that every parish will be as fortunate in its editor.

*The History of Maidstone.* By J. M. Russell. (Maidstone: Vivish; London: Simpkin, Marshall and Co.) It is a little singular that, since the publication of the Rev. William Newton’s small volume in 1741, this interesting and important old Kentish town has found no historian. Mr. Newton’s book is still valuable, by reason of the precise information it contains relating to the various churches and their incumbents, the full monumental inscriptions, &c.; but it never was in any sense a popular history, such as Mr. Russell has evidently aimed to make his more pretentious work, and in which aim it may be said that he has not altogether failed. While his volume shows little evidence of original research, he has made good use of such materials as were readily at command, and has produced a very interesting narrative, embodying not only matters of purely local interest, but also those of greater historical importance. The numerous illustrations of the old houses are full of vigour, and add greatly to the interest of the descriptive accounts in the text. We detect, however, occasional statements set forth as facts which it would be difficult for the author to substantiate. For example, on p. 138, writing of one Lawrence Washington, a resident of Maidstone in the seventeenth century, Mr. Russell says, unhesitatingly, that “he was an ancestor of the great American general.” There are some thirty millions of people on the other side of the Atlantic, and not a few in this country, who would be very grateful to Mr. Russell if he could give, which he cannot, any satisfactory authority for this statement. Such random assertions go a great way to impair confidence in other portions of the work, which probably are strictly accurate. On the whole, the author has compiled a very pleasant volume which will at least commend itself to natives and residents of Maidstone; and this is, perhaps, all that he intended.

*History of the Chapel Royal of Scotland.* By the Rev. Charles Rogers, D.D., LL.D. (Edinburgh: Printed for the Grampian Club.) This work is well enough so far as it goes; but that anything like an adequate history of the interesting Scottish Chapel Royal could be comprised within the small space allotted to it in this volume is simply impossible. It answers very well as a general outline, but is sadly deficient in details. Possibly it does not come within the scope of the designs of the Grampian Club, but it would have been gratifying to know something of the various persons connected, in different capacities, with the chapel. A few of them are mentioned, it is true, but even for lists of the deans and sub-deans, &c., we are referred to the *Fusti Ecclesiae Scotticae*,

a ponderous and expensive work in six volumes far beyond the reach of the ordinary reader. It was not in this manner that the late Dr. Rimbault dealt with the Royal Chapel at Whitehall, nor Mr. Doyno C. Bell with that in the Tower of London, both of whom produced works of sterling and permanent value, and of the greatest interest by reason of the personal details with which they abound. The register of the Chapel Royal of Stirling and other original documents printed in this volume are of importance; but we are compelled to say that the best use does not appear to have been made of the materials at command, and that a satisfactory history of the Chapel Royal of Scotland has yet to be written.

*A Compendium of Italian History.* Translated from the Italian of Giovanni Bosco by J. D. Morrell. (Longmans.) We must confess that this book has caused us considerable surprise. First, its shape is somewhat amazing: it is a thin quarto of 160 pages, adorned with poor wood-cuts of some of the chief Italian cities; this pretentious form is out of place in a little compendium which can only be meant for beginners or as a handy-book for travellers. In the next place, we were surprised that an Englishman should translate a text-book compiled by an Italian priest for the use of Italian school-boys; it seemed pretty obvious that such a book would not surply the view of Italian history which an English reader requires. We were not, however, prepared for the number of blunders about facts made by Padre Bosco and endorsed by Mr. Morrell. Thus he says, “Boccaccio was born in Paris.” Certaldo and Florence contend for the honour of Boccaccio’s birth, but Boccaccio himself calls Florence his native place. We are baffled by “one Humbert, called Bianca mano, who was a Duke of Switzerland, near the lake of Geneva;” nor do we gain much information by reading that “Asti was an independent city, and Turin was also governed in the same manner, although subject to the dukes of Savoy.” The remark that “Braccio, taking occasion of an insurrection in his own country, left it,” would lead anyone to imagine that egress from an Italian city must have been ordinarily attended with great difficulty. But Braccio’s subsequent operations, though clearly wrong, are certainly obscure: “he had even the wickedness to come back and fight against his own country, which he subdued, and then made capital out of his success.” After this it is a small matter that the raid of the Turks on Otranto in 1480 is magnified into a “determination, at whatever cost, to become master of Italy.” A brief History is not expected to give details, but when it does they might as well be accurate. Father Bosco’s imagination leads him to describe Lorenzo de Medici at the time of his attempted assassination in the Pazzi plot as “drawing his sword, which he used with so great courage and intrepidity that he cut himself a way amongst his assailants.” Father Bosco, however, seems to have got into his head the notion that Lorenzo was a mighty warrior, for he says about Charles VIII.’s Italian campaign: “if the valorous Lorenzo di Medici had still been living, Charles would probably have been worsted.” These are but samples of the errors which enliven a book totally deficient in any connected conception of the movement of Italian history. We have, however, a final cause of surprise in the grammatical errors with which the translation abounds. Mr. Morrell calls himself on his title-page “late H.M. Inspector of Schools.” We think sadly of the children whose English composition was judged by a man who writes, “He had just succeeded in overcoming them all, when, re-entering simultaneously into their possessions, the new government was dissolved;” “Boccaccio

followed this advice, and studied for the rest of his life to repair the scandal he had created by works of a high character." Mr. Morrell has views of his own about the spelling of Italian names, which are perplexing. He calls Caesar Borgia "Duke Valentine;" and mixes up English, Latin, and Italian forms in a curious jumble. But here, too, he makes many mistakes, such as Sansavino, Lorenzo Corta, and the like.

*From Crécy to Assaye: being Five Centuries of the Military History of England.* With original Plans and Maps. By H. B. Clinton. (Frederick Warne and Co.) We fear that the writer of this solid volume has addressed himself to deaf ears. Except to the professional student of the art of war, the minute description of battles, and, indeed, military history in general, has become distasteful. With the explanation we need not trouble ourselves; the fact remains certain. And yet Mr. Clinton here shows a capacity for research sufficient to establish a reputation in any other department of history. He is no mere book maker, who has found a taking title to set off his second-hand compilations. In every case he has gone, if not to the original sources, at least to the most trustworthy authorities; and he has woven together his disconnected stories into a continuous narrative. For our own part, we have been most interested in his account of Plassey, here for the first time published from Clive's own despatch written three days after the battle. Indeed, the affair hardly seems to deserve the name of battle, if such mighty results had not followed from it. It was the decisive battle of India only in the sense that British troops, and Sepoys under British command, then first learned to conquer regardless of the numbers of the enemy. As a military event, Wandewash or Assaye, or even Buxar, possesses far more significance. The utility of this book to the student is greatly enhanced by more than twenty plans and maps, and by a copious Index.

*Epochs of the Papacy.* By the Rev. A. R. Pennington. (George Bell and Sons.) These five hundred pages are neatly printed on toned paper and well got up. Considerable pains must perforce have been expended in compiling an epitome which covers such a vast field—for, in spite of the fashionable title of *Epochs*, it is really a continuous history of the Papacy. So wide a range hardly admits of thorough research, so we have not taken the trouble to test whether Mr. Pennington's references are at second hand. It is, on the whole, a meritorious, but hardly a useful, performance, since for advanced readers it presents neither new facts nor new lights, while, as an epitome or school-book, it is too long and too argumentative. Dedicated to the Bishop of Lincoln, it adopts as its main principle that prelate's well-known and, as we think, forced interpretation of the *dei vultu* *et* *scriptis*. As might be expected, there is a compromise between Catholic Churchmanship and vituperative anti-Popery. Mr. Pennington's declamation is florid; but, with all its apocalyptic glosses, it fails to show up the Holy See as anything worse than a public nuisance. His stalwart refusal to endorse Romish canonisation produces some ambiguity as to names with which he is apparently unfamiliar. Thus he tells us that "François founded an order of nuns." One might as well say that John wrote "Paradise Lost" and founded the order of Methodists.

*William Ewart Gladstone and his Contemporaries.* Vols. I. and II. By Thomas Archer, F.R.H.S. (Blackie and Son.) Instead of being another example of that mania for vivisectioning contemporaries which has somewhat displaced the older fashion of *post-mortem* biographies, this work more fitly fulfils the promise of its

sub-title, and is a record of the last "Fifty Years of Social and Political Progress." With the exception of the opening chapter, it can scarcely be claimed that the words and deeds of the Premier receive more space than do those of several of his political contemporaries; indeed, as far as the second out of the four volumes of which this work is to consist extends, Mr. Gladstone plays a very subordinate part. Of course, in the latter portion of this record, Mr. Archer's hero will occupy a more prominent position; but, if the author wishes to preserve an historical value for his labour, he will continue to suppress the biographical element. Vol. II. deals with a most important and interesting period of British history. It begins with the commencement of the "Free Trade" agitation, and, after including in its progress the revolutionary period of 1848-50, terminates with the declaration of war against Russia by the Allies in 1854. Mr. Archer appears to resort to original authorities for information, and by so doing is creating a work of real utility and permanent value. He has evidently discovered many sources unknown, or little known, to the general student, and which none but one who has lived in the times to which they refer could have unearthed. Unless the publishers wish to cripple the utility of Mr. Archer's work, they will provide it with a copious index.

*The Brave Men of Eyam; or, a Tale of the Great Plague Year.* By Edward N. Hoare. (S. P. C. K.) The historical novel which is intended not to amuse only, but to instruct, is commonly a failure. We cannot remember, indeed, a single instance of true success. Sir Walter Scott, of course, teaches us many things, and very many of the current opinions on important matters are indirectly due to him; but we do not believe that instruction was ever his object, except when he wrote history proper. We cannot say that we think that Mr. Hoare's book will prove an exception to the rule; but it is carefully written, there is nothing silly in it, and some parts are really touching. It is intended, we conjecture, mainly for boys and girls. The great society for which it has been written has of late issued more than one book which is a real addition to our literature. If it came within the plan of the publishing committee to give us a history of pestilences in England, they would be doing a service. It might be made a book of terrible interest. At present most of us pick up what little we know on the subject from the Sydenham Society translation of Hecker's *Epidemics of the Middle Ages*, an accurate, but dull and, as far as England is concerned, very imperfect, book.

THE work of Mr. Lewis Sergeant on *England's Policy, its Traditions and Problems* (Edinburgh: Macniven and Wallace), provokes a comparison with Prof. Montagu Burrows' brochure on *Imperial England*, and does not suffer by the contrast. The least satisfactory part of Mr. Sergeant's history is that which relates to the foreign policy of the Whigs and Tories in the last century; it is laboured, and wanting in animation. Not until he comes to describe the views of Lord Castlereagh and Mr. Canning, and the differences in the sympathies of these rival politicians, does he move with freedom. Mr. Canning, indeed, is the hero of the volume; and, fortunately for Mr. Sergeant's peace of mind, he has to deal with Canning's career when the dross had been purified from the gold. To understand the hatred with which that brilliant statesman was regarded by many of his Whig opponents, and the coldness with which he was greeted by the Winchileases and Ellenboroughs, it is necessary to study the pages of Hansard before the date when Canning held the seals of the Foreign Office. Mr. Sergeant pays a well-

deserved tribute to the "moral courage" of Lord Russell, and to his perception of the changes which had come over the foreign policy of England through the extension of the franchise. Many of the pages of this volume deserve careful perusal, and we wish for it a success which we are afraid it will fail to obtain.

*Hide and Seek: a Story of the New Forest in 1647.* By Mrs. Frank Cooper. (S. P. C. K.) We have seldom read a less satisfactory book than this. As a tale, it is as little life-like as possible; and, as a history of the times, as inaccurate as anything we have ever examined. The S. P. C. K. has within the last decade issued a by no means small library of good books; we are therefore not a little surprised to find such a falling off. All Mrs. Cooper's Puritans are bad, or very foolish; all her Royalists patterns of what men and women should be. This is, perhaps, fair enough, but hardly historical. It is, however, not fair to represent Gen. Ireton as a vulgar and cowardly ruffian. The cause for which Ireton fought may have been bad or good, but there is no man of the time who comes before us with a more unspotted character and purer fame. If there be any limits whatever to the liberties which a novelist may take with history, it is surely an offence to represent well-known men as being almost exactly what they were not. We have neither space nor inclination to dwell on this book further, but we must say that her picture of 1647 is in almost every point unlike the original as genuine history shows it. Oliver Cromwell was not at that time "the head of the army;" and neither he nor Ireton were ever converted to the principles of the levellers, or entertained any idea of the extermination of the nobility.

#### NOTES AND NEWS.

MR. E. B. NICHOLSON, of the London Institution, has been selected by the curators for the office of Bodley's librarian, vacant by the death of Mr. Cope. We understand that the curators were influenced by the desire to get a man of strong practical tendencies, and used to plenty of hard work. That Mr. Nicholson has it in him to justify their choice in other respects also will be least doubted by those who have known him best and longest. There are men who rise with the increased weight of their responsibilities, and prove themselves worthy of the highest office by their conduct in it.

MR. WILLIAM BOWMAN has been elected to succeed Mr. De La Rue as hon. secretary of the Royal Institution.

PROF. STOKES, of Cambridge, has accepted the appointment of Burnett Lecturer in connexion with Aberdeen. In accordance with the new regulations of the Burnett trust, he will hold the appointment for three years, on condition of delivering a course of lectures at Aberdeen upon "recent researches in physical science, with special reference to natural religion." These lectures are in substitution for the Burnett prizes, awarded every forty years, of which the second prize was won in 1815 by Archbishop Sumner, and in 1855 by Principal Tulloch.

WE hear that a new edition may shortly be expected of Mr. Griffin W. Vyse's book on Egypt, which only appeared about a fortnight ago. It will recognise with more explicitness the extent of the obligation which the author owes to Mr. Stanley Lane Poole's *Egypt*, published last year by Messrs. Sampson Low.

THE following list of honours recently gained in this country by natives of India seems worthy of record:—In the Cambridge mathematical tripos, Devendra Nath Das, of Clara, was classed 26 among the senior optimes, and

S. Saththiandan, of Corpus, was bracketed 66 among the junior optimes; at the examination of the Council of Legal Education, M. D. Dadysett won the second prize (£25) for common law, and C. Alikandaiya a prize of £15 in Roman law, &c.; R. D. Sethna had been awarded the first scholarship in equity (fifty guineas) at the Inner Temple; at Cirencester College, Syed Sakhawat Hosein took the first place in agricultural law, and would have been entitled to one of the two scholarships open to the whole college if he had not already been a scholar of the Bengal Government.

A FRESH edition of 2,000 copies of the early "Poetical Works" of Mr. Browning, in six volumes, has been printed.

MR. ROBERT BUCHANAN has two new works nearly ready for publication. First, a volume of poems; and, secondly, a romance in three volumes, the *Martyrdom of Madeline*, which has for its theme "the social conspiracy against womankind," and was planned with, and written in close sequence to, Mr. Buchanan's powerful *God and the Man: a Study of the Vanity and Folly of Individual Hate*. The *Martyrdom of Madeline* has been running its course through some provincial papers, and is likely to attract attention in certain circles in London, as some of the literary and "society" journals are dealt with in it, and the editors of two of them are characters in the novel.

WE hear that Mr. Herbert Giles, British vice-consul, Pagoda Anchorage, has in the press a work entitled *Historical China*. One of the objects he has in view is to show what portions of the Chinese annals are historical and what portions legendary or mythological. A considerable part of the work will treat of the Chinese legal system, and many leading cases will be cited. Mr. Giles is already known by his *Chinese Sketches* and translations of some Chinese fairy tales; but the forthcoming work will be of a more ambitious nature.

THE Clarendon Press will shortly publish the third and fourth volumes of the *History of Agriculture and Prices in England*, by Mr. Thorold Rogers, M.P. The first two, published sixteen years ago, dealt with the period 1259-1400 inclusive. The next two will contain the period 1401-1582. The principal topics in the survey are the prices of provisions and labour, but there is hardly any article in mediæval use the price of which is not recorded. The third volume (775 pages) contains the evidence, generally printed in four columns to the page, with three Indexes of places, articles, and weights and measures. The fourth is the comment on the evidence (779 pages), with Index, and contains numerous statistical averages, annual and decennial, derived from the facts of the third volume.

THE Clarendon Press will also publish immediately a volume of *Notes on the Canons of the First Four General Councils*, by Prof. Bright. These are, in the main, an expansion of lectures delivered to students of the Theological School, and are intended to make the enactments of the most important ancient ecclesiastical synods more intelligible to such students, and to others of similar attainments outside Oxford.

WE hear that Messrs. W. H. Allen have in the press a work entitled *Guzerat and the Guzerathis, Sketched from Life*, by Behramji M. Malabari, a native of the province and an accomplished writer of English.

MESSRS. WILLIAMS AND NORGATE will shortly publish *The Development from Kant to Hegel*, with chapters on the Philosophy of Religion, by Andrew Seth, Assistant to the Professor of Logic and Metaphysics in the University of Edinburgh. The first part of the work traces

the development of Kant's metaphysical thought through Fichte and Schelling to Hegel. The second part embraces a critical account of Kant's *Religion innerhalb der Grenzen der blossen Vernunft* and a sketch of Hegel's Philosophy of Religion. This is one of the prize essays of the Hibbert Trust.

*Historic Notices of the Borough of Flint*, by Mr. Henry Taylor, deputy-constable of Flint Castle, is in the press, and will be published shortly by Mr. Elliot Stock. The work will contain much curious information concerning local usages, drawn from charters and official documents, and will be illustrated by facsimiles and wood-cuts.

MESSRS. CHATTO AND WINDUS have in the press *Ireland under the Land Act*, being a reprint of the letters contributed recently to the *Standard* by the special commissioner of that paper in Ireland. There will be an Appendix, giving the leading cases under the Act, with the evidence in full; and a collection of judicial dicta, &c.

WE understand that the work on which Dr. Samuel Kinns has been long engaged, entitled *Moses and Geology*; or, the Harmony of the Bible with Science, is now in a forward state of preparation, and will be published next week by Messrs. Cassell, Petter, Galpin and Co.

MR. CHARLES PEBODY is writing a work on *English Journalism and the Men who have made it*, which will form the forthcoming volume of Cassell's "Popular Shilling Library."

WE are glad to see from the annual Report of the Harleian Society that its funds are in a very flourishing condition. The volumes in the press for the current year are *The Visitation of London in 1633*, edited by Dr. Howard and Col. Chester; *The Visitation of Cheshire in 1580*, edited by Mr. J. Paul Ryland; and *The Registers of St. Michael, Cornhill*.

MESSRS. PALMER AND HOWE, of Manchester, propose to issue by subscription a new volume by Mr. Leo H. Grindon, consisting mainly of his *Manchester Walks and Wild Flowers*, and of his *Summer Rambles* (both of which have long been out of print), together with much new matter. It is hoped that the book will thus form a complete guide to the rural beauties of such portions of Lancashire, Cheshire, Derbyshire, and Yorkshire as lie within easy reach of Manchester.

THE performances of the "Alcestis" of Euripides in the original Greek at St. Andrew's College, Bradfield, to which we have before referred, will take place on Saturday, February 18, at 4 p.m., and on Tuesday, February 21, at 6 p.m.

THE Oxford Browning Society will meet this term on February 14 and March 7. At the first meeting, Mr. R. F. Horton, Fellow of New College, will read a paper, "Is Browning a Poet?" and, at the second, the paper of Mr. Arthur Sidgwick, Fellow of Corpus, will be on "Browning's Love Poetry."

AT the meeting of the Clifton Shakspeare Society held on January 28, reports in connexion with "As You Like It" were presented from the following departments:—Tradition and folk-lore, by Miss Benson; plants and animals, by Mr. T. W. Jacques and Dr. J. E. Shaw respectively; instrumental music, by Mr. C. H. Saunders; rare words and phrases, by Mr. L. M. Griffiths; and satire and irony, by Mr. J. W. Mills. Mr. Francis F. Fox read a paper on "Touch-tone." Papers on "Jacques" by Miss Florence O'Brien and Mr. E. Thelwall were read. The Rev. H. P. Stokes made a communication on "The Songs in 'As You Like It,'" and on "Shakspeare's References to Marlowe."

ON Thursday next, February 16, Dr. P. L. Slater, secretary of the Zoological Society, will give the first of a course of four lectures on "The Geographical Distribution of Animals" at the Royal Institution; and on Saturday, February 18, Mr. W. Watkiss Lloyd will give the first of a course of four lectures on "The Iliad and Odyssey."

THE heritors (*Anglice*, freeholders) of the little border town of Dunse, in Berwickshire, have solemnly resolved to revert to the ancient spelling of the name—Duns, without the final e—which is said to have prevailed down to the year 1746.

A NEW monthly periodical, entitled the *Irish Economist*, will be issued at Dublin on the 15th of this month. It will deal with agriculture and domestic economy, finance and social topics.

To those who make a collection of "amusing extracts" we commend the following:—The *Revue critique* of January 30—a most serious journal—thus summarises a review that has appeared in a contemporary of Prof. Gardiner's new volumes of history:—"L'ouvrage est le fruit d'un labeur de plusieurs années; de juin 1637 à août 1642." The *Leisure Hour* for February—a magazine of which we would likewise speak with all respect—has an article on "The Kings of Laughter," by the Rev. E. Paxton Hood, which is a storehouse of solecisms, grammatical and other. The time of Defoe, we are told, "was the age of Queen Anne, King William, and his descendants." . . . "Cowper had the power to knit the thong of satire, it sometimes seems, in quite equal strength to Pope. Take him all in all, we prefer him far before Pope."

WE learn from the *New York Tribune* that Mr. G. W. Williams, the coloured member of the Ohio House of Representatives, has nearly completed a History of the negro race in America. The first part is devoted to the kingdoms, language, and religions of the race in Africa. The second part deals with the history of slavery from 1618 to 1880.

MESSRS. ROBERT CLARK AND Co., of Cincinnati, announce for immediate publication *The St. Clair Papers*, in two volumes, being a Life of Arthur St. Clair, of the Revolution period, from original materials; and, as the third volume of their *Mississippi Series*, "The Expedition of Don Diego Dionisio De Peñalosa, Governor of New Mexico, from Santa Fe to the River Mischipi and Grand Quivira in 1682." The latter will be issued in an edition of only 250 copies.

PROF. GEORGE STEPHENS will shortly begin courses of lectures on Old English and on Shakspeare at the University of Copenhagen.

M. BUSLAEV has written, and will shortly publish, a work on "The Development of Religious Beliefs in Russia." A general view of Russian religious beliefs is first given, from which all that forms the common inheritance of other European nations is then eliminated, the remaining elements being those which strictly characterise Russia. M. Buslaev's conclusion is that the Russian mind is more strongly attracted to, and takes a profounder interest in, the problems of religion than that of any other people.

THE Società romana di Storia patria has just issued the first of four volumes containing the Diary of Card. G. A. Sala during the existence of the Roman Republic of 1798-1801. It contains a number of diplomatic documents never before published.

AN exhibition is now open at Paris, in the Conservatoire national des Arts et Métiers, of models and objects connected with bookmaking,

The processes of the manufacture of ink and paper are represented; there are models of printing-presses, from that of Gutenberg to that of the *Daily Telegraph*; and many interesting experiments of the early stages of illustration by lithography and photogravure.

UNDER the title of *Louis XV et Elizabeth de Russie*, M. Albert Vandal has just issued an interesting study of the diplomatic relations between France and Russia in the eighteenth century, drawn mainly from the archives of the French Foreign Office. It forms a supplement to the "*Secret du Roi*" which the Duc de Broglie is publishing in the *Revue des Deux Mondes*.

AN important sale of MSS. and early printed books, being the library of the late chevalier J. Camberlyn, will take place at Brussels on February 14. Among the lots are several Flemish chronicles, &c., of the fifteenth to the eighteenth century that have never yet been edited.

THE last volume of Miss Laffan's works, which Messrs. Macmillan are republishing, contains a collection of her minor—and by no means least successful—pieces. These are "Flinders, Tatters, and the Counsellor" and "The Game Hen," in both of which the scene is laid among the gutter-children of Dublin; "Baubie Clark," giving a somewhat similar experience of the writer's residence in Edinburgh; and "Weeds," where we are brought back to Ireland, this time to a market town and to the Land Question. The first of these is by itself sufficient to found a reputation upon; and of "Baubie Clark" we can only say that a second reading confirms our recollection of it when first published in a fugitive form by Messrs. Blackwood. Much as we value this edition of Miss Laffan, we cannot extend our good-will to the binding. It may be national, but it is not pretty; and we doubt whether the colour will wear.

THE review of Miss Metcalfe's *Blackfriars Bridge* in the last number of the ACADEMY contained a passage which might be understood as reflecting upon the publishers of that novel, Messrs. Remington. It is our duty to state that no such reflection was intended. As a matter of fact, we understand that in this case, as with all other books published by Messrs. Remington, the proofs were duly sent to the author and returned by her revised. An unfortunate misprint in the head-lines of all the pages escaped her attention; that is all.

#### GERMAN JOTTINGS.

WE learn from the *National Zeitung* that the Baroness Ulrike von Lewetsoff, whose friendship with Goethe is mentioned by all the biographers, is still living in perfect retirement at the castle of Tribnitz, near Lobositz, at the ripe age of eighty-four. The baroness, in her youth a celebrated beauty, maintained a constant correspondence with Goethe for many years, and often met him at Carlsbad and Marienbad. She is consequently the owner of an extensive Goethe literature; and a well-known specialist has recently been commissioned to sift and prepare for eventual publication the correspondence with Goethe in the Baroness von Lewetsoff's possession.

THE prize of one thousand marks, offered on the occasion of the centenary of the first representation of Schiller's *Robbers*, has been awarded, out of 156 works sent in for competition, to the tragedy of *Lucia San Felice*, by Richard Boss, a poet of four-and-twenty, now residing at Frascati, near Rome.

EUGEN ZABEL has just published a biography of Berthold Auerbach (Berlin: A. B. Auerbach)

in commemoration of the seventieth birthday of the great novelist, which falls on the last day of the present month. Any profits that may accrue from the sale of this work will be given to the fund now being raised for the purpose of erecting an almshouse in Nordstetten, the birthplace of Auerbach.

PROF. WILHELM SCHERER, of Berlin, has commenced the publication of a series of scarce German books of the late Middle Ages, reproduced in facsimile by photography. The first, which has just appeared (Burchard: Berlin), is *Das Schelmen Zunft* of Thomas Murner, after the first edition of 1512. This is to be followed by the *Passionale Christi und Antechristi*. The full title of the series is "Deutsche Drucke älterer Zeit in photolithographischer Nachbildung ausgewählt."

THE *Börsenblatt* gives the total number of publications in Germany for the year 1881 as 15,191, as against 14,941 in 1880. The items are as follows:—Bibliography, &c., 411; theology, 1,472; jurisprudence, politics, statistics, &c., 1,469; medical and veterinary science, 817; natural science, &c., 924; philosophy, 148; educational, &c., 1,924; books for the young, 490; classical and Oriental languages, &c., 574; modern languages and Old-German literature, 461; history, biography, &c., 779; geography, travel, 352; mathematics and astronomy, 186; military science, &c., 367; trade and commerce, 626; building, machinery, railways, &c., 463; forestry, &c., 99; domestic and rural economy, &c., 417; *belles-lettres*, 1,226; fine arts, 581; popular works, calendars, &c., 639; masonic literature, 23; miscellaneous, 402; maps, 341. Under the majority of headings the number is in excess of the previous year, the chief items in which there is a falling off being modern languages and the fine arts. It is noteworthy that there is a large increase in the number of theological publications.

#### OBITUARY.

Two Oxfordshire antiquaries died in the last days of January. Mr. John Marriott Davenport was for many years the official secretary of Bishop Wilberforce; and, by his labours in connexion with the management of the property of the see of Oxford and the appointment of the various incumbents, became known throughout that extensive diocese. The offices which he held afforded him unusual opportunities for acquiring information relating to Oxfordshire; and his list of the *Lords Lieutenant and High Sheriffs from 1086 to 1868* and his collections on the *Annals of Oxfordshire* are of the highest value to the students of its history. He died at 62 St. Giles, Oxford, on January 31, aged seventy-two. Six days previously, Mr. William Wing died at Steeple Aston, aged seventy-one. For many years he had taken a considerable interest in the history of the parishes around the country town in which he lived, and the result of his investigations was shown in a series of small pamphlets on their annals. Among the parishes which he had thus described were Bletchington, North Aston, Steeple and Middle Aston, and Steeple and Westcot Barton. Two or three years ago he compiled a short account of the famous election of 1754, which divided the gentry of the county and their tenants into two opposing camps.

THE death is also announced, at Edinburgh, on February 5, at the age of fifty-seven, of the Rev. James Stormonth, compiler of several manuals and dictionaries; at Darmstadt, of Herr Karl Brandt, who provided the machinery for all Wagner's operas at Bayreuth; and at Paris, of M. d'Arcq, chief of the historical department in the national archives, and an indefatigable editor of original records.

#### MAGAZINES AND REVIEWS.

THE *Cornhill* for February begins a new novel, "Damocles," by the author of "For Percival." The opening promises well; the descriptive touches are finely drawn, and the characters well conceived, but the conversations tend to drop into wearisome trivialities. A short story, "Let Nobody Pass," is excellent as a sample of what a short story ought to be, and its interest is increased by the fact that the plot is laid in the Russian Court. An article on "A Modern Solitary" deals rather frigidly with Senancourt's *Obermann*, about which Mr. Matthew Arnold said what was worth saying in the first number of the ACADEMY. Mr. Edmund Gurney, in an "Epilogue on Vivisection," attempts to mediate between the heat of one-sided disputants. An article on "Oddities of Personal Nomenclature" will furnish materials for those who want statistics of eccentricities as a basis of a new psychology.

THE *Antiquary* improves month by month. This is in some respects the best number we have seen. Mr. Hall contributes a most useful paper on St. Valentine's Day, which contains much of the learning and nearly all the folklore that can now be gathered up on what is really a curious subject. He has evidently examined many books which ordinary readers never think of looking into. In one or two instances, he has, we think, been content with late authorities where earlier ones would have been more to the purpose. The second paper is by Mr. C. Roach Smith, on the Roman villa at Morton, in the Isle of Wight. Mr. Smith is probably the greatest authority we have on Roman Britain south of the Wash; and it would be mere impertinence in us to praise his work, which is always thoughtful and carefully worked out. We wish we could say the same of the paper on the Roman remains at Malta. The subject is a large one, and worthy of most careful and elaborate treatment. We wonder how many of the people who have occasion to speak of the various Dukes of Clarence have ever considered how the bearers of this title came by it, and what is its exact meaning. In our own school-boy days we well remember that we were much exercised in mind as to where Clarence could be, and came pretty confidently to the conclusion that it was some place in Normandy. Had Mr. Parkinson's paper been before us we should have found a most pleasant solution of our difficulties. Mr. Theodore Bent's paper on the tombs at Chilton is an interesting contribution to local history. It is worthy of attention as showing that the age of wanton barbarism is by no means passed away. Some of the fingers have recently been broken off one of the effigies in this church, and the dog on which the feet of another rests has been injured. If a person wantonly damaged a sculpture in the British Museum or a cast at South Kensington he would be severely punished, and no one would ever think of pitying him. The treasures in our country churches are as much national property as those in museums, and they should be as jealously guarded from injury.

THE second number of *Hibernia* contains an interesting notice (being the second instalment) of speeches by Edmund Burke on "Painting, Philosophy, and Poetry," on "Piracy in Printing," and on "Capital Punishment," delivered, while Burke was a Trinity College student, before a Dublin debating club. The same number gives the original version of Father Prout's "Inaugural Ode to the Author of *Vanity Fair*" (which appeared in the first number of the *Cornhill Magazine*), from a hitherto unpublished MS., with the alterations proposed by Thackeray, and those made by Mahony himself. It is a curious example of the inevitable wane of the minor lights of literature that so careful a writer as Prof.

Morley should have forgotten the existence of the Rev. Francis Mahony, and have stated in his recent *English Literature in the Reign of Victoria* that the author of *The Reliques of Father Prout* was William Maginn.

THE sixth and concluding number of the *Revue de Droit international et de la Législation comparée* for 1881 has recently appeared. It contains an article by Prof. Charles Brocher, of Geneva, upon the fundamental principles of private international law, more especially with reference to the important work, in six volumes, on civil international law recently completed by Prof. Laurent, of Ghent. Prof. Laurent is deservedly regarded as the master-mind of the philosophical school of law on the Continent, while Prof. Brocher is a disciple of Savigny, who, in his day, was the master-spirit of the historical school. A fifth and concluding article, translated by M. Ernest Nys, of Brussels, completes the late Prof. Bluntschli's review of the work of the Berlin Congress in its bearing upon the Danubian principalities. He first discusses the international status of the principality of Bulgaria, which has been in substance withdrawn from the dominion of the Sultan, although it is in form still subject to him. He next examines the political condition of the province of Eastern Roumelia, having a special status intermediate between military dependence on the Porte and civil independence; and, lastly, the situation of Bosnia and the Herzegovina, occupied and administered by Austria-Hungary under the provisions of the Treaty of Berlin, the Sultan continuing in theory in possession of the sovereignty, but having, in fact, nothing but the *nudum jus*. Prof. Ullmann, of Innsbruck, contributes a paper on Austrian legislation in 1879 and 1880, in the course of which he treats of the new juridical relations between Austria-Hungary on one side and Bosnia and the Herzegovina on the other. Advocate Martin, of Geneva, reviews the Federal law of Switzerland on the subjects of divorce and of the separation of married parties, more particularly where the parties are strangers resident in Switzerland. The article on necrology is of more than ordinary interest, and is from the pen of Prof. Rivier, of Brussels. It is a very full notice of the distinguished career of the late Prof. Bluntschli, of Heidelberg. It is proposed to raise a subscription for the purpose of founding a prize in honour of his memory and for the encouragement of the study of comparative public general law, and of the law of nations. Prof. Holtzendorf, of Munich; Prof. Orelli, of Zürich; Prof. Schulze, of Heidelberg; and Prof. Rivier, of Brussels, have undertaken to act as a provisional committee.

THE most valuable article in the *Revista Contemporanea* of January 30 is by D. José Barzanallana, a former Minister of Finance, on "The Imposts on the Salaries paid by the Treasury during the Nineteenth Century." The vices of this system of discounts, which amounted to twenty-five and even to thirty-seven per cent. from the salaries, often in arrear, of officials not too highly paid, are ably pointed out and justly condemned. Some classes, indeed, were always exempted, and among these, in 1818, appear the "toreros"! An unpublished diary by the Conde de Toreno, of travels in Italy in 1839, commences in this number; at present it has too much the air of a guide-book. Gen. Fernandez de Cordova and Señor Becerro de Bengoa continue their respective publications; and Rodriguez Ferrer terminates his agreeable narrative of a "Scientific Expedition to the Mines of Almaden."

## LETTER FROM VENICE.

Venice: Feb. 2, 1882.

THE Venetians have always been held to be most critical judges of music and musicians. They have, indeed, enjoyed a notoriety for special skill in hissing. It was they who hissed Verdi's "Trovatore;" and for that reason the composer will never set foot in their city. It was they who jeered at Donizetti's operas, which Europe has afterwards accepted as excellent. The saying is, that if you can sing in Venice you can sing anywhere. This may have been true in the past; not so now. The Fenice Theatre is at present filled with audiences who vociferously applaud operas, in themselves beautiful, but which are certainly most indifferently—nay, most shamefully—performed.

First, we have had "Lohengrin"—a novelty for Venice. There was a talk of Wagner's assisting at its production. It is fortunate that he was spared such a burlesque of his great work. During the rehearsals, the *impresario* discovered that the tenor had no voice whatever. When a substitute had been found in Signor de Sanctis, the opera, after much heralding, was at length produced. What a first night! Elsa was inaudible; Ortruda shrieked on provocation; while the tenor did not know his music. The chorus wore quaint beards and quaint petticoats, like Assyrian bowmen. The scenery was contemptible. There was zealous braying in the orchestra; and their leader, from his frequent smirks to the audience, seemed convinced that it was all Wagner's fault. His rule seemed to be: When in doubt, whip the big drum. After "Lohengrin" had been given in this melancholy fashion for some nights, another treat was promised and duly foretold by the journals. It was the hackneyed "Favorita." A rich American, a pupil of Lamperti's, called in the bills Signor Scovello, was ambitious, it seems, to shine as Fernando. But, in spite of his paying a handsome sum for the privilege, his total incompetency was plain even to the management; and thus the Venetians lost a chance of applauding him. On the opening night of "La Favorita," everyone was most critical. When Leonora came on, the first compliment volleyed from many throats was: "O che brutta! O che brutta!" Perhaps this was needlessly candid; but, alas! it was true. And her voice was no whit less distressing than her face; while the poor little tenor was hissed out of sight and hearing. Hoots, jeers, and shrill whistling continued until the curtain fell; the whole performance was a parody. As to repeat the opera with such artists was evidently impossible, the *impresario* hastened to find better ones. He has now succeeded in engaging a Signora Galletti-Gianoli, an elderly lady from Bologna, who may once have played Leonora's part with credit, but who has no single qualification for it now. Fernando's music is sung by a promising young tenor—Signor Valero—who is a great favourite with the Venetians. His voice is at least agreeable, and he also makes every effort to look affectionately upon his "angiol di Dio," the veteran Leonora. Both singers have been received with enthusiasm, with an applause such as in England we would only give to a Patti or a Mario. Is this Venice, critical Venice, we seem tempted to ask, where music and musicians have ever been so sharply dealt with? What has come to the *soi-disant* connoisseurs, who can find pleasure in such trumpery operatic performances, where the singers cannot sing and the players cannot play?

A far more pleasant impression upon music-lovers must have been made by Signor Coccon's new Mass, performed on Christmas Eve, and again at Epiphany, in the Basilica of St. Mark's. Signor Niccolò Coccon is the *maestro primario* of the cathedral, a post once filled by Lotti,

Marcello, and many another illustrious Venetian composer. He is a sound musician; and this, his latest Mass, is full of beautiful passages. His music is at times dramatic rather than religious, but it has a gravity of style and a refinement of orchestration which make one wonder that it is not more widely known. Yet the Masses for orchestra and organ written by Signor Coccon for performance in St. Mark's are all preserved in the archives of the cathedral, and he is unable to let them be printed and published. They exist only in MS. For Italians this is a great loss; and I feel sure that his works would find admirers in France, as also in England.

At the Malibran Theatre, here, Suppé's melodious opera "Boccaccio" draws large audiences. The airs in it are most catching; and the waltz-tune, with kissing accompaniment, has a close resemblance to Strauss' "Blue Danube." The pit is filled with *barcaruoli* and fishermen, who know every note of the music, and clamorously thump for a repetition of their favourite numbers. The management should produce "Les Cloches de Corneville" without delay, for that is the style of music which takes the public taste here. In such cases we should hear every gondolier humming, "Just look at this;" and the Grand Canal would ring with amateur renderings of the "Chime Chorus" between the incessant shrieks of the penny steamboats. Musical Venice, forsooth!

To-night the stone-pelted Sarah Bernhardt is to appear in "La Dame aux Camélias." It will be interesting to compare her in the part with Signora Marini, who has just finished a very successful engagement here. She was extremely fine in this character; and for passion and sincerity of expression the French actress will hardly come beyond her. In another letter I shall hope to give some account of the way in which Mlle. Bernhardt is received by—critical Venice.

Liszt, the composer, is here; he attended the performance last night of "Lohengrin." It is not said whether he enjoyed it as much as those about him. Let us devoutly hope not.

PERCY E. PINKERTON.

## CORRESPONDENCE.

## LITERARY IDENTITY.

Westbury-on-Trym, Gloucestershire: Feb. 6, 1882.

In the exquisite little work which commemorates the two-thousandth volume of "The Tauchnitz Series" I observe a passage wherein the author, speaking in his own person, doubts "whether the general reader will ever distinguish clearly between Miss Amelia Blandford Edwards and Miss Matilda Barbara Betham-Edwards." I am exceedingly sorry that such should be the opinion of one whose knowledge of English culture is doubtless commensurate with his knowledge of English literature. And I am still more sorry that Prof. Morley, instead of merely noting the confusion which is supposed still to prevail in regard to this point of identity, did not use his opportunity to say something which might have aided the public in distinguishing between two writers whose opinions, convictions, and lines of study have literally nothing in common. Indeed, I could have even thought that the little I have done of late years to popularise Egyptology in the columns of the ACADEMY might have helped to make the distinction of persons somewhat clearer.

To achieve an honourable name in the literature of his country is the one reward which every earnest author must desire above all others; and Prof. Morley will, I am sure, admit that any writer who had been content, in this hope, to produce slowly, to forego rapid gains, and conscientiously to endeavour at all times to do his best was hardly used by Fate if the name—the mere name—for which he had worked was pronounced to be inextricably entangled with that of another. For my own part, I feel that if I am not known for myself I have lost the labour of my life; and I do not doubt that Miss Betham-Edwards would say the same.

AMELIA B. (Blandford) EDWARDS.

## THE BASQUE SUFFIX -K.

6 Norfolk Terrace, Bayswater, W.: Jan. 28, 1882.

My hypothesis does not consist, as M. Vinson supposes, in considering the active singular nominative *k* as an instrumental suffix. I consider *k* as an active suffix, which in some instances is usually rendered by "by," and in

other instances by the subject of a transitive verb; but I think, at the same time, that the rendering of this *k* always by "by" is the only way to explain to non-Basques the Basque usage of *nik* in *nik egiña*, "done by me," and *nik egin daut*, "I have made it." As to the instrumental suffix, I never dreamed of it, M. Vinson knowing, I suppose, as every Basque must know, that the instrumental suffix *z*, *zaz* (*taz*), has nothing whatever to do with the active suffix *k*. In fact, *nik* and *nizaz* (*nitaz* in the Labourdin dialect) have very different significations, the last being "by means of me," or "through me." In this phrase: *Nola au Jaungoikoa-k Profetaren aza-z* (or *nizaz*) *esana izan dan* (in Labourdin, *Nola hau Jaungoikoa-k Profetaren ahoa-z* (or *nitaz*) *errana izan baita*), "as this has been said by God through the Prophet's mouth" (or "through me"), "I" and "the Prophet's mouth" receive the instrumental suffix *z*, *zaz*, or *taz*, while "God," being the agent, is followed by the active suffix *k*.

"Where an Englishman says," M. Vinson continues, "*made by me*, a Basque says *I thing-made*, *ego factum* (and not *a me factum*); just as, in the same manner, the Dravidian says," &c.

Now (without paying the least attention to Dravidian, a language, although agglutinative, *toto coelo* distant from Basque) M. Vinson is aware, as I think, that *nik* in *nik egiña*, "made by me," and *nik* in *nik egiña da*, "it is made by me," are one and the same thing. Will he not hesitate to translate *nik egiña da* by "I is thing-made," or "ego est factum" ("is" and "est" being the Basque *da*), as he does not hesitate to translate *nik egiña* by "I thing-made," or "ego factum"? I hope he will, for his own sake. If this does not convince him of the unjustifiableness of his translation I am very sorry, but I cannot help it.

My verbal theory, fully developed in my *Verbe basque*, has already received the approbation of competent judges, among whom are the first Basque grammarians and philologists. I think that I have justified my views in my writings, and will abide by my hypothesis until I may be compelled to abandon it by the establishment of a better one, proved by the observation of material facts and phonetical laws of permutation, as mine undoubtedly is in spite of M. Vinson's bold assertions to the contrary.

I conclude my reply, which will be my last communication on this subject, by referring the readers of the ACADEMY to my *Verbe basque*, and bringing to M. Vinson's recollection these two very important facts upon which is based what it suits him to call "my imaginative theory unsupported by facts":—(1) The demonstrative *au* is used in the translation of the New Testament printed at La Rochelle in 1571 (one of the most ancient documents of the Basque language) with the verbal sense of the imperative "have," in such a manner that *au* means not only "this," but also "have it" or "this" without a material expression of the verb, when this demonstrative intimately unites with the pronominal suffixes *c* (pron. *k*), "thou, man;" "n," "thou, woman;" "cuc," "you," as in the following examples:—(a) Acts xxiii. 11, *Paul, au-c bihotz on*, "Be of good cheer, Paul," or literally, "Paul, this-thou heart good," without expressing "have;" (b) Luke viii. 48, *Alabá au-n bihotz on*, "Daughter, this-thou heart good;" (c) Acts xxvii. 25, *Bihotz on au-cuc*, "Heart good this-you" ("have it good heart"). The permutations of *au*, according to the Basque phonetical laws, are easily deduced (after taking into due consideration the nature of the dialectal varieties) in all the numerous verbal terminatives which follow other words. (2) The same demonstrative *au* explains very well (contrary to M. Vinson's hypothesis and Mr. van Eys' absurd verbal theory) why all the Basque pure

terminatives belonging to the transitive voice always contain, in an obligatory manner, the direct regimen, which is expressed by the Latin accusative. The Basques, in fact, cannot express such phrases as "I have," "I hold," "I eat," "I drink," otherwise than by "I have it," "I hold it," "I eat it," "I drink it," &c.

L.-L. BONAPARTE.

San Remo: Jan. 30, 1882.

If Prince Bonaparte thinks that I want to disguise his words in order to attack his theory, he is wrong. His unscientific explanation of a very simple question is not an iota better for adding the "suppressed words" to the incriminated sentence.

As my criticism bears entirely (and I think with the weight of each word) on Prince Bonaparte's theory, I have not to add one word to what I said; others will judge. I only must say that the supposition which I simply proposed for the sake of clearing up the question was precisely meant for those who have extraordinary theories about Basque grammar; to my mind, the question is very plain, and wants no help from examples.

W. VAN EYS.

PS.—The following corrections should be made in my letter which appeared in the ACADEMY of January 21:—For *narak*, read *nazak*; for *n-erak*, read *n-erak*; for "me non so," read "mi non so."

## THE ORIGIN OF THE ARABIC NUMERALS.

London: Jan. 30, 1882.

As I have given some attention to the ciphers and numerals used among Semitic populations, will you allow me a few remarks on this interesting subject raised by the Rev. Isaac Taylor's paper?

The French scholar de Rougé communicated years ago to the Académie des Inscriptions a list of ciphers taken from Egyptian hieratic papyri, and remarked then that we could trace in them the process of decay which by means of ligatures generated conventional signs out of simple strokes. The signs in this list (republished in de Rougé's *Grammaire*) give such striking parallelism with the so-called Arabic ciphers that they are, I think, generally accepted by Egyptologists as their prototypes.

As the Phœnician alphabet was derived from the Egyptian hieratic signs, it is natural to believe that the ciphers came from the same source. The Phœnician ciphers are, in fact, clearly derived from the Egyptian hieratic signs. In the Sabæan inscriptions the ciphers 10 and 50 are derived from the Egyptian; but 5, 100, and 1,000 are expressed by the initial letters of each of those numerals.

In Egyptian the strokes used to express the units are straight or horizontal: the ligature of the two lines gave 2 (see S. Levi's *List of Hieratic Signs*, 532 and 576); the three strokes, 3 (577); the four strokes, two and two over one another, gave 4 (534 and 578); the five strokes gave 5 (535)—but this number was often expressed by a star, not only because it has five rays, but also on account of its name, *tau*, which is the word for "five" in Egyptian. After five, the system of ligatures shows that the second series of units was formed by combining the ciphers of the first: 5 + 1 = 6, 5 + 2 or 3 + 4 = 7, 4 + 4 = 8, 3 + 3 + 3 = 9; for 6 and 7 this is evident (536 and 537); for 8, the cipher for the days of the month proves it, because it is simply 4 twice repeated (533 and 582). The cipher 9 is written slanting, and recalls to mind the Babylonian cuneiform abbreviation for 9 (A. Sayce's *Grammar*, 393). The cipher for 10 was in Egyptian an inverted U, then by closing it the 0 was formed. It

may be objected that the ciphers are written in Egyptian from right to left and in Arabic from left to right, but the hieratic numerical signs again give us the explanation. For the tens, the ciphers were not written always one next to the other, but often one over the other; for instance, 20 was written by the cipher 2 with the sign for 10 under and a little to the right (S. Levi's *List*, 541), so that we see here the origin of the rigorous decimal system. This system was no doubt developed in India, whither the Egyptian ciphers were carried, I believe, by the early Kushite traders. It may be that the writers of the Bactro-Pali alphabet have altered the forms of some of the ciphers to make them correspond in shape with the initial letters of the numerals, as the Sabaeans did for 5, 100, and 1,000, and perhaps the Romans for 100 and 1,000.

G. BERTIN.

## THE MANUMISSIONS IN THE LEOFRIC MISSAL.

London: Feb. 7, 1882.

Mr. Bradley seems to admit the probability of Swuran tun of the Missal being Svrintone of Domesday; but he thinks the latter is Sourton. The question thus becomes one of Domesday interpretation, where there are certain data to go upon; and if Mr. Bradley will look at the dimensions and value of Svrintone, he will be convinced that they cannot apply to Sourton, which, though of considerable area, comprises a large extent of heath and moorland.

I agree that the modern form of Bræg would be Bray. This was suggested to me by Prof. Earle, and by me, as a query, in 1876. But I know of no manor called Bray nearer than High Bray, in North Devon, four miles north-west of North Molton, which is out of the question. Breage, near Helston, was dedicated, not to St. Breock, but to St. Breaca (Oliver, p. 437). Some particulars of her life are in Leland (*Itin.* iii., fol. 4). I admit that no properly instructed person would write Bræg for Bryeg; but the Exeter *scriptor* was probably no etymologist, and spelt names by sound only, as did the Domesday Commissioners.

JAMES B. DAVIDSON.

## APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Feb. 13, 5 p.m. London Institution: "The Border Line between Fære and Comedy," by Mr. H. J. Byron.  
8 p.m. Society of Arts: Cantor Lecture, "Recent Advances in Photography," III., by Capt. Abney.  
8.30 p.m. Geographical: "The Birthplace and Cradle of the Mahatma Power in Western India," by Sir Richard Temple.
- TUESDAY, Feb. 14, 3 p.m. Royal Institution: "The Mechanism of the Senses," V., by Prof. J. G. McKendrick.  
8 p.m. Colonial Institute: "The Progress of Canada and the Development of the Great North-West," by Col. T. Hunter Grant.  
8 p.m. Civil Engineers: "Air-Refrigerating Machinery and its Applications," by Mr. J. J. Coleman.  
8 p.m. Photographic.
- WEDNESDAY, Feb. 15, 8 p.m. Society of Arts: "The Art of Turning," by Mr. F. N. Haseluck.  
8 p.m. British Archaeological: "Recent Researches and Excavations in Scotland," by Dr. Fheol.
- THURSDAY, Feb. 16, 3 p.m. Royal Institution: "Geographical Distribution of Animals," by Dr. F. L. Sclater.  
5 p.m. Hellenic: "Notes on the Characters of Theophrastus," by the Rev. E. L. Hicks; "Hermes on a Patera from Bernay," by Dr. O. Waldstein; "Samotheace and the Cabiri," by Mr. J. Stuart Glennie.  
7 p.m. London Institution: "The Economical Use of Coal-gas for Lighting and Heating," by Prof. H. E. Armstrong.  
8 p.m. Linnean: "Potato Disease and the Theory of Fungoid Parasitism," by Mr. A. Stephen Wilson; "Shells of Aden," by Lieut. T. F. Cockburn.  
8 p.m. Historical.
- 8.0 p.m. Antiquaries.
- FRIDAY, Feb. 17, 8 p.m. Philological: "The Distribution of the Acent in Greek," by Mr. C. B. Cayley; "The Aesthetics of Translation, Illustrated from Different Versions of the Bible," by Mr. B. Dawson.  
8 p.m. Society of Arts: "The Depreciation of Silver as it affects India," by Mr. J. M. Maclean.  
9 p.m. Royal Institution: "The Breathing of Fishes," by Prof. J. G. McKendrick.
- SATURDAY, Feb. 18, 3 p.m. Royal Institution: "The Iliad and Odyssey," by Mr. W. Watkiss Lloyd.

## SCIENCE.

## THE TRANSACTIONS OF THE CAMBRIDGE PHILOSOPHICAL SOCIETY.

*Transactions of the Cambridge Philological Society.* Vol. I. From 1872-80. Edited by J. P. Postgate, M.A., Hon. Secretary. (Trübner.) Mr. Postgate, the indefatigable secretary of the Cambridge Philological Society, has in this volume presented England—I hope I may add America and the philologists of Europe generally—with a really interesting and valuable *précis* of some of the results of philological activity at Cambridge during the last eight years. Its contents are of the most multifarious kind, from restorations of desperate Lucilian passages by Munro; lexicographical articles and learned monographs by Mayor; discussions on Aeschylus, Sophocles, Euripides, by Dr. Kennedy, Mr. Paley, Prof. Jebb, Mr. Verrall; on Aristotle, by Mr. Henry Jackson; on Propertius, by Mr. Burn and Mr. Postgate—to remarks on Mr. Roby's predicative dative, by Mr. Allen; English etymologies, by Mr. Skeat; Scandinavian inflexions in English, by Mr. Magnusson; the wanderings of Io, by Mr. Birks; Greek army doctors, by Dr. Hager; Etruscan numerals, by Mr. Fennell; inscriptions, by Mr. S. Lewis, Canon Raine, and Mr. C. W. King. Appended to these are five articles on Homer, Plato, Aristotle, Propertius, Servius, in 1880, by Messrs. Leaf, B. D. Hicks, H. Jackson, J. P. Postgate, and Prof. H. Nettleship, of Oxford, respectively. These give a *résumé* of what has been written in England and abroad on these authors in that year. Mr. Nettleship's is of these perhaps the most learned, though somewhat heavy in style; Mr. Postgate's, as might be expected from the subject, is the lightest and most readable. His estimate of Palmer and Bährens is judicial and, on the whole, as fair as may be expected from a rival editor. Mr. Leaf's review of Homeric criticism in 1880 is modest, and just long enough to make one wish for a little more; Mr. H. Jackson's of Aristotle is disappointingly short. The volume is interesting to non-Cambridge, especially to Oxford, men, as showing who are the foremost scholars in the rising generation. The exalted positions which the classical tripos ideally confers do not always correspond to the subsequent eminence of their possessors; and there are many who will not take their opinion from a careful study of the class-lists, but prefer to judge men by what they write. Speaking from this point of view, and in total ignorance of actual position in any class-list, the present writer would venture to call attention to the excellent notes supplied by Mr. Ridgeway on Aristophanes, Sophocles, and Homer (pp. 210, 244), and on *Ξίππος ἀσθρῆς*, in Hes. *Op.* 415, by Mr. J. B. Pearson. Those who treasure up every opinion of the greatest Greek scholar Cambridge has produced since Dobree will read with pleasure some papers, unfortunately too little in compass, by the late Richard Shilleto. Such as are interested in the games of the ancients will find their curiosity repaid by Mr. H. Jackson's article on ἀζύγ and Mr. Maddock's on a marble tablet on which are engraved the divisions of a backgammon board. The former of these, as given in full in the *Journal of Philology*, is, if we mistake not, one of the most important contributions to a very obscure subject that has been made by a modern writer. Mr. Paley appears in his usual character in these *Transactions*, many-sided, ingenious, and not wholly convincing. His note on the Abu-Simbel inscription (p. 298) is worth consideration; and he has the merit of contributing a collation of a new MS. of Demosthenes' *de falsa Legatione*. It is perhaps a little disappointing to find that two writers so well known and so interesting as Mr. Munro and Prof. Jebb are only scantily represented in

the present volume. Dr. Hayman's lengthy articles on the connexion between the legends of Greek tragedy and heroic myth (pp. 213-38) and on Prof. Paley's post-epic or imitative words in Homer, though not without value, are heavy, and take up a disproportionate amount of space. But, speaking generally, the *Transactions* are lively enough, and prove the expansiveness of the examination system in force at Cambridge as contrasted with the deplorable tightness of that which exists in the sister university. It is well known that lectures to classmen on some subjects at Oxford are nearly an impossibility—e.g., Lucretius Euripides Pindar—and that, if they are given, it is under protest from the paymaster, who complains that such subjects are above the heads of most of the men lectured. The wide range of the classical tripos makes this impossible; and the present volume shows that the system inaugurated by Thirlwall and his contemporaries cannot be accused of narrowness either in selection of subjects or mode of treatment. But what lecturer at Oxford has not felt the cramping effects of *crambe repetita*? R. ELLIS.

## CORRESPONDENCE.

MR. PATRICK GEDDES ON THE NATURE AND FUNCTIONS OF THE YELLOW CELLS OF RADIOLARIANS AND COELENTERATES.

London: Feb. 6, 1882.

In a communication to the ACADEMY of last week "Justitia" charges me with, among other things, ascribing to Mr. Geddes' essay on the above subject "a novelty" which "would seem to have no foundation."

The first count is that I attribute to Mr. Geddes the discovery of chlorophyll in *Convoluta*, *Hydra*, or *Spongilla*, which Mr. Geddes, as "Justitia" says, "has certainly never attributed to himself." I am equally innocent with Mr. Geddes. My words were that "he proved that such animals as *Convoluta*, *Hydra*, and *Spongilla* vegetated by their own intrinsic chlorophyll;" and this "Justitia" confirms by describing his experiment on *Convoluta* itself.

"Mr. Geddes collected the oxygen given off in sunlight by a green-coloured Planarian, which led him to infer that the green colour was chlorophyll, and that the oxygen was given off through its agency, as in plants."

I did not refer to the discovery of chlorophyll in the bodies of these animals, but to the discovery of its function—that is, the fact that they vegetate by it. The mere presence of chlorophyll in an animal may be accounted for in another very different way: it may have been taken in as food; and there was no call on me to name the discoverers of its presence—whom "Justitia" is so anxious to bring forward—since abstracts of papers in the ACADEMY are not accompanied by a bibliography of the whole subject. In claiming for Mr. Sorby the statement that "chlorophyll-bearing animals must have a plant-like nutritive process," "Justitia" claims for him only the gift of prophecy. It was left to Mr. Geddes to prove it.

As to the second and main count of my ascribing to Mr. Geddes the discovery of the unicellular algae, I stated clearly that

"Cienkowski and others had contended that the yellow cells in question were algae, for this reason, among others, that they continued to live and multiply long after the death of the animal."

This sufficiently shows that others had worked with some success at this subject. To travel farther into the field of bibliography is, as I have said, beyond the scope of an abstract. Of the authorities quoted, K. Brandt has done the most; but his researches published in November last can hardly gain priority, since Mr. Geddes made his investigations in October,

As for Mereschowsky, whose authority "Justitia" cites, he quotes from Mr. Geddes! and Semper is in exactly the same position as Mr. Sorby. He justly remarks, in regard to his own speculations on this subject: "No decisive answer can be arrived at by this method, and only experiment can find one." Mr. Geddes has made the experiment.

Thirdly, "Justitia," in trying to make out that I claim for Mr. Geddes the discovery of symbiosis or consortium, points out (as if I had omitted reference to it) that this phenomenon "has been widely recognised since the demonstration of the nature of lichens by Schwendener." Now it will be apparent to any impartial mind that the main object of my abstracting Mr. Geddes' paper was to point out, as I do, the analogy of the present case to that of the lichens.

"Justitia" finishes by saying,

"It remains yet to be determined how far these minute chlorophyllaceous corpuscles present in the tissues of some of the lower animals are really symbiotic organisms like the gonidia of lichens—how far their presence is due to their having been incepted as food (intracellular digestion), and how far they are products of the tissues themselves in which they occur."

In regard to this, I can only recommend a perusal of Mr. Geddes' paper with greater care than my anonymous assailant has taken in bringing these charges against me.

In conclusion, I cannot pass by the short homily on scientific morality which "Justitia" preaches to me, with doubtless the praiseworthy desire that I should mend my practices. I have shown that it was not needed.

GEORGE MURRAY.

#### "MIMETISM" OR "MIMICRY."

London: Feb. 6, 1882.

Will you allow me to point out that, in his review of Dr. Cooke's *Freaks and Marvels of Plant Life*, Mr. Grant Allen appears entirely to have overlooked the difficulty in the way of Messrs. Bates and Wallace's explanation of the phenomena of so-called "mimicry"—viz., the absence of any utility to the "mimicking" species in the early stages of the change? Some utility in every step is essential to the hypothesis of natural selection; and to this objection no satisfactory reply has yet been given. In view of this difficulty, it is surely not altogether beside the question to point out that instances occur in the vegetable kingdom of equally close resemblances, the only apparent explanation of which, as Mr. Allen himself says, is that of "like conditions producing like results;" and to suggest that this may also possibly be to some extent the cause of so-called "mimetic" resemblances. That Mr. Allen does not carefully distinguish between two very different things would appear from his phrase "the doctrine of evolution and natural selection;" these are, in fact, two totally distinct hypotheses, many who entirely accept the first being unable to admit the adequacy of the second to produce the multifariousness of animal and vegetable life. Mr. Grant Allen is severe on Dr. Cooke for his use of the term "mimicry." Can the censor himself justify his own and Mr. Bates's use of it, if we are to recur to the strict meaning of words? In that case, surely "mimicry" implies a conscious imitation—an idea which Mr. Allen at all events would entirely disavow in the case of the South American butterflies.

ALFRED W. BENNETT.

#### NOTES OF TRAVEL.

A PAPER has been discovered in the archives of Venezuela, dated 1780, which gives an historical summary of early projects for piercing the Isthmus of Panama. The first goes back to the reign of Philip II. of Spain, who, at the instigation of the Viceroy of the Indies, sent certain Flemish engineers to investigate on the spot the feasibility of the undertaking. Their report was altogether adverse; and thereupon Philip II. threatened the penalty of death against whoever should again bring up the project.

MR. A. EASON AND MR. GEORGE ANDREW are about to proceed to Yunnan-fu for the China Inland Mission, after spending some time in learning Chinese at Kweiyang-fu. An Englishwoman, the first of her sex to venture the journey, has lately started from Shanghai for Juning-fu, in the Honan province, in the person of Mrs. Hunter, the wife of another member of the same society.

DURING his lengthened residence in Western China, Mr. E. Colborne Baber, we believe, was so fortunate as to avoid any collision with the natives, and would seem to have moved about the distant province of Szechuen pretty much as he liked. His successor, however, has not been equally fortunate, perhaps from lack of Mr. Baber's well-known *bonhomie*; at any rate, he has been attacked by a Chinese crowd, and the house in which his servant took refuge was destroyed.

A LETTER has been received from the French explorer Dr. Crevaux, dated December 21, in which he states that a steamer has been placed at his disposal by the Emperor of Brazil. In this he intends to proceed up the River Pilcomayo, with a view to investigate the practicability of a trade route between the interior of Bolivia and the Argentine Confederation.

M. MIZON, whose departure to join M. de Brazza on the Alima we have before alluded to, has sent to the French Committee of the International African Association a brief report on the Upper Ogowe country, dealing with its products and the trade which might be done there. Among other things he mentions caoutchouc and palm-oil; he also says that wild pines abound in the forests, and that the natives employ the fibre they get from them for various purposes, including nets for catching game and fish.

M. P. GAFFAREL discusses in the *Revue de Géographie* the question whether America was known to the Greeks and Romans. This he answers in the negative; but, on the other hand, he gives credence to the story that a canoe, with American Indians in it, was washed ashore on the coast of Germany shortly after the conquest of Gaul by the Romans.

IN the February number of the *Monthly Record of Geography* we find Mr. Joseph Thomson's interesting notes on the basin of the River Rovuma, which he explored last year in the vain hope of finding coal for the Sultan of Zanzibar. Mr. Chauncy Maples also contributes a paper on a neighbouring and previously unknown part of East Africa. In the *Geographical Notes* some interesting archaeological information has been got together respecting the Caroline Islands from Capt. Maxwell's official report on a recent cruise among the West Pacific groups, and a sketch is given of the Rev. S. H. Edgerley's exploring journey up the Old Calabar or Cross River. On the same side of the African continent, but south of the Portuguese possessions, Père Duparquet has for some time been studying the region between the Cunene and the Orange Rivers from both a missionary and a geographical standpoint; and we have here a digest given us of the information he has collected regarding the Ovampo

tribes, &c. The last note is a *résumé* of a contribution to a German serial on the Great Wall of China by Dr. von Mollendorf, who seems to have expended a good deal of time and pains in arriving at a conclusion which was well known to Europeans in North China more than twenty years ago. The remainder of this month's number is chiefly occupied with reports of proceedings of foreign societies. A map on an unusually large scale is given of the Kovuma River and the country to the south, illustrating the journeys of Messrs. Thomson and Maples.

#### SCIENCE NOTES.

*Electrical Resistance of a Vacuum.*—The opinion has long prevailed that vacuous space is a non-conductor of electricity. If the electrodes of a vacuum tube, which can be gradually exhausted, be connected with a Ruhmkorff coil or other source of electricity of high tension, it is observed that the discharge passes more and more readily as the rarefaction is increased. At a certain state of the rarefied air, however, a limit seems to be reached; and, if the exhaustion is continued beyond this point, the resistance in the tube increases, and finally becomes apparently so great that the discharge ceases to pass. The air pressure at which this last phenomenon occurs is different in different tubes, as it depends upon the width of the tube, the distance apart of the electrodes, their nature, and their size. The above result has been confirmed by numerous observers; and the conclusion has been drawn that air (and other gases) when reduced beyond a certain state of tenuity is incompetent to transmit electricity. Prof. Edlund (*Philosophical Magazine*, January 1882) combats this view, and shows that there is another way of explaining the apparent absence of conductivity in a highly exhausted vacuum tube. He cites and discusses numerous experiments by Gassiot, Plücker, Hittorf, Gauguain, Wiedemann, and others, and gives very strong reasons for the view that the high resistance of the tube is due to an obstruction to the discharge which is set up at the surface of the negative electrode. This obstruction acts like a large resistance, though it is more probably of the nature of a counter-electromotive force. The actual resistance of the tube may therefore be regarded as composed of two parts, of which one depends on the length of the tube, and the other only on the nature and size of the negative electrode. The latter part is of insignificant amount until the pressure is reduced to the fraction of a millimètre, when it rises rapidly in value, and, as the rarefaction is continued, becomes so great as to stop the passage of electricity altogether, no matter how high the acting electromotive force may be. Prof. Edlund arrives at the conclusion that vacuous space, so far from being a non-conductor, is a good conductor of electricity. If this be so, and if the space which separates us from the sun readily allow electrical action to be transmitted through it, we shall be better able to understand the direct electrical action which the sun appears to exercise on our globe, and the variations of this action during the prevalence of sun-spots. We shall be able also to admit the measurements of those who have observed the aurora borealis (which undoubtedly consists of electrical discharges) at a height above the surface of the earth at which the tenuity of the air must be far greater than anything we can produce in our laboratories.

*The Inter-crossing of Erratics.*—It is curious to note the way in which the erratics in the glacial drift have in many cases crossed each other's tracks. On the assumption that they have been transported by floating ice, such a distribution presents no difficulty; while, on the hypothesis that the transport has been

effected by land-ice, the inter-crossing appears at first sight well-nigh inexplicable. The upholders of the iceberg theory have accordingly appealed to this anomalous behaviour of the erratics as strong evidence in their favour. As an answer to their objections, Dr. James Geikie, the great advocate of the land-ice theory, has written an interesting paper, which he has just reprinted from the *Scottish Naturalist*. So far from being antagonistic to his views, he holds that the distribution of erratics lends additional strength to his position. He regards the commingling of northern and southern boulders as due to the meeting of opposite ice-flows—*mers de glace* from different quarters. The ice of the two currents would, on coalescence, become deflected by mutual pressure, and the junction between the two ice-sheets not remaining constant, would oscillate backwards and forwards. The paper is, in the main, an answer to the views of Mr. D. Mackintosh, a geologist who has done much good work in tracing the distribution of erratics, and who favours the iceberg theory.

Dr. D. J. CUNNINGHAM, of Edinburgh, has been appointed Professor of Anatomy at the Royal College of Surgeons of Ireland.

We understand that Mr. F. M. Balfour, of Cambridge, has refused the Chair of Natural History in Edinburgh University, vacant by the resignation of Sir C. Wyville Thomson. The candidates now most talked about are Prof. E. Ray Lankester, and Prof. Young, of Glasgow.

EXPERIMENTS are being made to establish permanent communication between the two islands of Mauritius and Réunion by means of heliographs stationed high up on the mountains in each. The intervening distance is about 100 miles. Besides commercial and other advantages, it is hoped that the approach of storms might be anticipated by this means.

"THE EARTH'S TREELESS REGIONS" is the title of an interesting article by Prof. J. D. Whitney, of Cambridge, Mass., which will appear in the March part of *Science for All*.

MESSRS. MACMILLAN have published as a pamphlet the lecture delivered at the Midland Institute, Birmingham, by Prof. Robert S. Ball, Royal Astronomer of Ireland, which attracted so much attention when printed in *Nature* under the title of "A Glimpse through the Corridors of Time."

#### PHILOLOGY NOTES.

MESSRS. TRÜBNER have ready a *Dictionary of the Asante and Fante language*, called Tshi (Chee Twi), by the Rev. J. G. Christaller, of the Basel German Evangelical Mission. The book has also a grammatical Introduction, with Appendices on the geography of the Gold Coast and other subjects.

M. LOUIS HAVET, maître de conférences de philologie latine à la Faculté des Lettres de Paris, will succeed the late Charles Graux as editor of the *Revue critique* in the department of classics.

The *Archivio glottologico*, edited by Prof. Arcoli, will shortly publish a monograph by Signor Flechia upon "Place-names in Italy, France, Spain, and Portugal."

In announcing the appearance of a new series of "Romanische Forschungen," to be issued by Deichert, of Erlangen, under the editorship of Herr Vollmöller, the *Revue critique* comments upon the tendency in Germany towards the excessive multiplication of learned serials. In this particular department there are already the *Zeitschrift für romanische Philologie* and the *Romanische Studien*.

#### MEETINGS OF SOCIETIES.

##### HARLEIAN SOCIETY.—(Friday, Jan. 27.)

GEORGE W. MARSHALL, Esq., in the Chair.—This being the annual meeting, the Report and balance-sheet were read by the Hon. Secretary. The number of members on the roll—namely, four hundred—had been maintained. "The Visitation of Yorkshire in 1564" had been published as the volume for 1881; and the Register section had published "The Registers of St. Thomas Apostle, London," for the same year. After paying all demands, the society has a balance of £504 with the bankers, in addition to an investment of £632 Consols. The publications in the press are the second volume of "The Visitation of London in 1633," under the editorship of Dr. Howard and Col. Chester; and "The Visitation of Cheshire in 1580," by J. Paul Rylands, Esq.; also "The Registers of St. Michael, Cornhill." The Earl of Arran was elected to fill the vacancy on the list of vice-presidents. Sir John Maclean and D. G. Cary-Elwes, Esq., who retired by rotation from the council, were re-elected; and J. Paul Rylands, Esq., was elected on the council in place of the late Mr. F. Barber. It was announced that any back volumes that were in print could be obtained by members only at the subscription price of one guinea.

##### ROYAL SOCIETY OF LITERATURE.—(Wednesday, Feb. 1.)

SIR PATRICK DE COLQUHOUN in the Chair.—Sir Collingwood Dickson read a paper on "Dr. Faustus and the Legends connected with him," contributed by Sir P. De Colquhoun. It was contended that Dr. Faustus was unquestionably an historical personage, as his death is mentioned by Gesner, who compares him to Paracelsus, and as he is referred to in Luther's "Table-Talk." The oldest account of Faustus, in which it is stated that he was born at Roda, near Weimar, goes back to the year 1587.

##### SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 2.)

EDWIN FRESHFIELD, Esq., V.P., in the Chair.—Mr. Middleton exhibited some bronze bracelets, two silver finger-rings, and a few other objects found in the Roman villa at Fifehead Neville, Dorset. Both the rings bear Christian devices—one, the *labarum*, and the other, the *labarum* with a dove and olive branch. The coins found were principally of the times of Constantine and Gratian. —Mr. Baigent exhibited a drawing of the arms of Milton, or Middleton, Abbey, Dorset, from a window in Ibberton church, Dorset, which differ from the engraving in Tanner's *Notitia Monastica*, the baskets having a handle across the top, and the leaves projecting considerably above the baskets. The tinctures also are different, the field being azure, the baskets *argent*, and the leaves *or*. The letters J. T. occur round the shield, and are perhaps the initials of John Towning, rector about 1470, in whose time the church was rebuilt.

##### ARCHAEOLOGICAL INSTITUTE.—(Thursday, Feb. 2.)

J. HILTON, Esq., in the Chair.—Mr. J. H. Middleton read some notes on Ashburnham House and the site it occupies. The paper described the various remains of the Abbey buildings of Westminster which form part of Ashburnham House—remains of all dates, from the eleventh to the eighteenth century; and the many changes of ownership which the house and its site had undergone were enumerated. It appears that the present house was built by Sir John Ashburnham, about 1630, and that there is distinct evidence to show that Inigo Jones was the architect.—Mr. F. C. J. Spurrell described the great collection of shallow pits on the north coast of Norfolk, and added accounts of similar large groups, such as the pen-pits and others, in various parts of this country and abroad. He pointed out that these great collections of pits, in contradistinction to minor collections, were all, as far as he knew at present, connected with the earliest traces of the use and manufacture of iron. Taken as a whole, he did not doubt that they were dwellings and true hut circles, and that they could be distinguished from iron or stone mines. The simplicity of their construction, and the comparatively

slight traces of permanent occupation in some instances, denoted their temporary use, and showed that they were the shelters and dwellings of tribes collected together for limited periods (probably in summer), and that the paucity of relics of utensils, &c., denoted poverty. It was possible that some of them might represent the huddling together of a population driven to extremity by an invading host, such as the Romans. In comparison with the largest groups of the true Stone age, they suggest a great increase in the population in general.—Mr. Spurrell exhibited a large collection of Palaeolithic flint implements from new situations, recently found in the gravels of the Thames, and the Darent and Medway in Kent.—Mr. Middleton laid before the meeting a large plan of Westminster Abbey, showing the site of Ashburnham House.—The Rev. H. Kempson exhibited a parcel-gilt silver pomander, late sixteenth century, of the utmost beauty, opening out into eight segments, each forming a box inscribed for different scents. When closed, this object presents a surface delicately ornamented with naked figures and foliage chased in silver.—Mr. H. S. Harland sent a roughly chipped flint "skinning" knife from Yorkshire.—Mr. G. M. Atkinson exhibited an early eighteenth-century repeater watch in pierced and engraved silver case.—From Mr. A. K. Griffiths came a first instalment of portions of British urns and bones lately found at Hampton Wick.—Mr. Spurrell exhibited a small pewter cup, in shape like a posset-pot, contained in an embossed and gilt leather case.

##### PHILOLOGICAL SOCIETY.—(Friday, Feb. 3.)

DR. J. A. H. MURRAY, V.P., in the Chair.—The papers read were: (1) "Observations on the Partial Corrections of English Spellings approved by the Philological Society," by Mr. H. Vogin, of Amsterdam. Mr. Vogin proposed to keep a difference of spelling where there was a difference of meaning. He would also spell "would," *would*; "could," *could*; "onion," *onyon*; "atomach," *stummach*; "of," *ov*.—Mr. Henry Sweet then proposed that the society should modify its corrections to meet the views of the American Philological Society, and give up the change of *ie* to *ee*, and of *oo* for *o*. He was asked to communicate with Prof. March on the subject.—(2) Mr. Sweet's "Notes on Points in English Grammar." The definition of a pronoun: it was a general noun one of general application. "Special and general adjectives": "green, big," &c., being special; and "this, that, some, all, few," &c., being general, or of general application. The province of grammar: it deals with the general facts and laws of language, while a dictionary deals with the special facts.

##### TOPOGRAPHICAL SOCIETY OF LONDON.—(Friday, Feb. 3.)

THE Right Hon. the Lord Mayor, President, in the Chair.—The Report of the committee was read. The preparation of the View of London, by van den Wyngaerde, the first part of which has already been issued, has required great care, and necessarily occupied much time; but the remaining portion is now in a very forward state, and will be ready for publication in a few months. It is proposed that, when several maps of a particular period have been produced, a volume descriptive of all of them shall be issued. By this means the repetition, which would be unavoidable in several descriptions, will be saved, and the further advantage of comparison of details will be obtained. Another branch of the society's work which is of paramount importance is that of registering the various changes that are continually taking place in London. For this Mr. Kinslie has prepared a view of the excavations at Leadenhall, showing the relics of the old buildings; and Mr. Miliken has made several drawings on wood of houses that have been pulled down within the last year or so. These will be engraved, and form an Appendix to the Report. Another Appendix will consist of a notice of the articles in newspapers and magazines on London published during the year 1881. By the publication of an annual volume with these features, and others which may subsequently be added, the committee hope that a series of the greatest value in elucidation of the history of London may gradually be formed. Extracts from the Calendars of State Papers are being proceeded with, and will probably

be printed soon after the completion of Wyngeard's View. In addition to these extracts, Mr. H. B. Wheatley has proposed to compile a handbook of London topography which should contain a rapid sketch of what has been done in the subject, and what is still left for a London Topographical Society to do. An account of the work done by other societies, such as the London and Middlesex Archaeological and the New Shakespeare, in advancement of the object all have at heart, will be added in an Appendix.

#### SHORTHAND SOCIETY.—(Monday, Feb. 6.)

CORNELIUS WALFORD, Esq., President, in the Chair.—The society have arranged to acquire the quarterly magazine, *Shorthand*, in which to publish their proceedings under the editorship of two members of the council.—Dr. Westby-Gibson exhibited a copy of the Letters of Junius published in 1771, containing a great number of brief notes in shorthand and cryptography hitherto undecipherable, but of which he (Dr. Westby-Gibson) had discovered the key. The book originally belonged to Horne Tooke.—Mr. J. R. Ruddle read a paper on the nine vowel-positions of the "Civil Service Shorthand" method; and a discussion followed.

#### FINE ART.

##### THE OLD MASTERS AT BURLINGTON HOUSE.

(Second Notice.)

It seems hard that, after a hundred years of oblivion, the two fine works of Hugh Robinson which have been sent to the "Old Masters" exhibitions by Mr. Teesdale (one last year and one this) should not have been hung on the line. It is true that they are large and simple in design, and do not require close inspection to reveal their merit; but it would have been interesting to examine more nearly the handling of an artist so little known who, as a youth, painted these remarkable works when Reynolds and Gainsborough were at the zenith of their fame—works which, if they recall somewhat of the feeling of the latter artist, are original in style and execution. "The Piping Boy" is a charming composition, sober but sweet in its colour, excellent in drawing, perfectly simple and natural, without a touch of the false rusticity which Gainsborough affected, or the forced expression which Sir Joshua so often gave to similar subjects. When we know that it was painted before the artist was twenty-four, and that all the pictures he painted after he arrived at that age were lost in the sea about the time of the artist's death, it is plain that opportunities of examining his work cannot frequently occur. For this reason alone it is to be regretted that this picture should have been hung above the large, uninteresting, badly preserved Turner which occupies so large a space below it, and might have been hung nearer the ceiling with great advantage to itself. Nor are the works of Franz Hals so common as to make us satisfied with the position assigned to two of them in the second room. Both of them seem to be fine works; and his portrait of himself (88), belonging to Mr. Mainwaring, is of particular interest, and brimming with life and humour. A third Hals, Mr. Walter's "Portrait of a Man" (123), is not so characteristic, and is, moreover, much damaged, especially in one eye. It must, however, be admitted that "the line" in this room is well occupied.

The present exhibition affords a good opportunity for comparing the works of the English Teniers (Wilkie) with his Dutch original. Here are three scenes of card-players—one by the former (34) and two by the latter (85 and 93). Teniers has the advantage in pearly brightness of colour and expressiveness of touch, producing a greater result with less work, and achieving a general luminousness of effect which his English successor never quite reaches; but

Wilkie surpasses him in humour and variety of character, in truth of gradation both of colour and light and shade, giving (that is to say, in this picture of the card-players) a more perfect picture of a more interesting scene. Nor do I think that there is any figure in any of Teniers' pictures here that can compare in the perfection of its expressive drawing with that red-jacketed rustic who, with his back to you, is scratching his head in the vain hope of stimulating his brain. But this picture of Mr. Walter's is the highest level of Wilkie, and he reached it in a few pictures only, whereas Teniers varies little, and his level as a painter is therefore on the average much higher than Wilkie's. The Earl of Kilmorey's "Card-players" (93) and Mr. Samuel Sandars' "Le Chapeau rouge" (85), the pictures to which I allude, are only two out of several very fine specimens of the Dutch master now to be seen at Burlington House. The Earl of Strafford sends "Le Bonnet rouge" (89) and Mr. Alfred Buckley a "Temptation of St. Anthony" (84), in which the demons, by their batrachian character, are fancies singularly suggestive of the land of dykes and ponds in which they were bred. Of outdoor scenes by this artist, the Queen sends a "Kermesse" (88) of singular vigour; but of all the Teniers here none has more beauty than Col. Leigh's "Skittle-players" (59)—beauty, such as Teniers knew, of clear Dutch air and silvery transparent sky—beauty also of composition (artfully accidental) of slanting post and tilted gable, of lines of straight dyke and curves of cloud and tree, of pleasantly disposed clusters of boors—composition, in fact, of one beauty out of many uglinesses.

Not the least interesting subject for study in this delightful room is the manner in which Scripture scenes were treated by Dutch artists in the seventeenth century. If any excuse were needed for their unlearned and untravelled fashion, it might be found in the fact that, to this day, ignorant peasants cannot realise scenes in which the characters have any other setting than their own, or have a foreign type of feature and unaccustomed clothes. What to us seems most incongruous in the Queen's picture of "Christ and Mary Magdalene at the Tomb" (117)—the broad-brimmed hat, the spade, the neatly trimmed box-edging—would seem natural enough to those who never dreamt of places where such things were not. That Rembrandt should, in this fine picture, have given us so majestic an effect of light, and such nobility to the angels—that he should, in spite of the commonplaces I have mentioned, have invested the scene with so much supernatural grandeur and mystery—argues the possession of a very strong imagination. The contrast between the rich warm light of the sun which floods the garden and the glory which emanates from the angels is singularly impressive; nor does the picture want much of that dignity of design which is so visible in his etching of "The Raising of Lazarus," his "Woman taken in Adultery" (in the National Gallery), and his "Simeon" at the Hague. Notwithstanding these fine qualities, it cannot be compared in its beauty as a picture to the well-known work belonging to Mr. Boughton Knight (101), which has nothing supernatural about it except the genius of the artist. It needs the Catalogue to tell us that this interior of a large room, with a child asleep in a cradle and the two seated women, is a "Holy Family;" but for arrangement of *chiaroscuro*, for transparency of dim light permeating through the whole large chamber, for subtle painting of the shadows on the wall, and the shades among the rafters, nothing finer has ever been done. That such a rich golden effect penetrating to obscure corners, and strongly illuminating woman and child, could be produced in reality by one poor candle is a question it would be ungrateful to discuss. If this

picture does not impress one with any special "holiness," it is at least not wanting in reverence—a quality which seems to me absolutely lacking in Jan Steen's "Marriage Feast at Oana" (54). What Rembrandt is to Raphael, Jan Steen is to Paul Veronese, and this picture of Mr. Walter's, if it has none of the dignity of the great Venetian, has much of his skill in composition. It is indeed admirably arranged and marvellously painted, and in the forward groups, especially, as fresh and sparkling as if painted yesterday. Full of invention, rich in human nature, unsurpassable in the easy rendering of every variety of substance and colour, a storehouse of human observation and artistic skill, it is an endless mine of harmless pleasure to all who can view it divested of any Scriptural significance. Reverence was not in the nature of Jan Steen, or, at least, it is not apparent in his art—except for burgomasters, perhaps. If not reverence, there is at least a sense of the dignity of both a burgomaster and his daughter in Lord Penrhyn's splendid example of this master (238). If we compare either of these figures with that of Christ in the "Marriage Feast," we see at once how difficult it was for the artist to imagine a dignity greater than that which he had seen. Such may have also been the case with Adrian van Ostade, but at least he had reverence for the unseen, and could paint it. Although the scene is a Dutch cottage, and the actors in the likeness of Dutch peasants, there is a spell as of true worship, a sanctity, homely but unmistakable, hushing the group surrounding the cradle of his "Nativity" (91). Mr. Walter may well be envied the possession of this precious picture. It is the real scene from the New Testament translated into Dutch. Of this, the most refined and tender in feeling of all the Dutch painters in small, there are several other choice examples here. Mr. Alfred Buckley's "Schoolmaster and Scholars" (120) is, perhaps, the finest of these, as it is the most interesting; but Mr. Walter's "Man looking out of Window" (116) and the Queen's "Boor and his Wife" (114) are so excellent that comparison is difficult.

Among the other Dutch pictures not previously alluded to in these pages, but very worthy of attention, are the Cuypes, Sir George Phillips' "Landscape" by Paul Potter (69), Mr. Walter's two perfect examples of Maas (98 and 103), and Rembrandt's magnificent sketch of his "Cook," which belongs to Mr. Boughton Knight (234). No reference to Sir David Wilkie's work as seen in this exhibition should close without notice of his unfinished picture of "School," lent by Mr. John Graham (235). What there is of it was painted in the year of his death, and could scarcely be finer. Masterly it is, and luminous enough to make Turner, if he had seen it, add yet more black to the funeral sail that droops above his "Burial of Wilkie."

COSMO MONKHOUSE.

##### THE EARLY CHRISTIAN CHURCH AT PHILAE.

ANNOUNCED: JAN. 4, 1882.

IN February last year an American, who modestly concealed his name in his written appeal to the public to preserve the result of his labours, partly excavated a very interesting early Christian church of basilican plan upon the Isle of Philae, and left a sum of money for the completion of the work, which has been well and effectively done.

The church is situate a little to the north of the Great Temple of Philae, and the apse seems to point somewhat to the east of north. It is a building of considerable size, and is mainly constructed of ancient hewn stones, many of which bear Egyptian sculptures in relief, hieroglyphic inscriptions, and royal cartouches. At the north-eastern angle, outside these, is a boldly

sculptured cross within a border. The walls of the apse and lateral chapels seem to have been entirely built of hewn stone; but, while the rest of the walls of the church were of the same massive construction, to the height of seven feet from the pavement, the fabric above that elevation was made of crude brick. The church was divided into four portions:—(1) the nave proper, with a narrow space extending at the same level as far as the steps leading up to the side chapels; (2) an area of considerable size raised one step above the nave, and probably originally separated from it by a screen with granite pillars, of which the bases still remain; (3) the altar platform, which projected forwards at the height of one steep step in front of the apse; and (4) the apse itself, with a lateral chapel at the same level upon either side. There are two doorways in the east and west walls, close to the south end of the nave, and four windows in the east and west walls respectively and one larger one in the south front. A small platform of stone in the floor of the nave near the eastern door may mark the site of the font; but there is another under the western side of the south window whereof the purpose is not obvious. A stone in the floor has one pair, and another two pairs, of incised footmarks, with Coptic inscriptions. In the west aisle, if such it may be called, is a truncated granite pillar, apparently *in situ*. The most interesting object, however, is found in the raised space immediately in front of the altar. Here a large slab of red granite is seen lying in the pavement; but excavations to the south have proved it to be the site of the monolithic *Naos*, chapel, or shrine of the great Temple of Philae, of which the only similar monument existing *in situ* is that in the Temple of Edfou. The Philae monolith is externally eight feet two inches in height by two feet ten inches in width, and internally three feet five inches by one foot seven inches. It is surmounted by a frieze of uraei, below which are two winged disks, one above the other, and has a hieroglyphic inscription running round the top and sides. The glare of the midday sun was so great that I could not distinguish upon it the cartouche of any king. In front of this monolith lies in the pavement another slab of blackish granite, of which the dimensions are seven feet three inches and a-half by three feet one inch. It may be hoped that, if these objects are removed, care will be taken to fill up the hole to the level of the platform, so as not to interfere with the plan of the church, for Egyptologists have hitherto showed far too little regard for the early Christian antiquities of Egypt. The apse and lateral *hekels* are about nine feet in depth. In the north wall of the apse was a niche carved in stone; it is sculptured with a sort of scallop design, with an elegant interlacing border, at the top of which is a cross. At the entrance of the apse stands a truncated granite pillar, which may, perhaps, have served to support the altar slab, although its height—three feet six inches and a-half—may seem excessive for that purpose. Of the side chapels, that on the west of the apse is entered by a door from the church, that on the east from the apse: in the latter is a stone altar. The internal dimensions of this basilica are as follows:—

	ft.	in.
South wall of nave to first step...	18	11
First step to apse ... ..	18	3
Depth of apse ... ..	9	0
	46	2
Platform in front of apse...	13	3
Width of church ... ..	35	6
Width of apse ... ..	9	9
Platform before the apse...	18	4

GREVILLE J. CHESTER.

Mr. Andrew McCallum partly cleared the

south end of this basilica in 1874, and discovered the font (a rude stone basin about two feet in diameter), which was then quite perfect.

AMELIA B. EDWARDS.

## CORRESPONDENCE.

### DISCOVERY OF A WALL-PAINTING AT WESTMINSTER ABBEY.

London: Feb. 8, 1882.

An interesting discovery has just been made in part of the monastic buildings of Westminster Abbey.

The large upper hall in the western range, once occupied by the cellarer, is now divided up into rooms for a canon's residence. In the course of some repairs now going on, the canvas lining in one of these rooms was stripped off; underneath, fine oak panelling—Jacobean in date—was discovered, and under the panelling the wall was found to be covered with a well-designed painting of the time of Henry VIII. This painting is in black and white, done in *tempera* on plaster; the design, which is drawn with great boldness and freedom of execution, is strongly Holbeinesque in character. There is an oval shield, charged with France and England quarterly, with the lion and dragon supporters; at the sides, human figures growing out of flowing arabesque scroll-work, which covers the wall in large sweeping curves. The design is white, with black outlines and shading on a black ground. The discovery is an interesting one, as English wall-paintings of this date are very rare. The preservation of these examples is due to the fact that oak panelling was fixed over them before they had time to suffer from age or exposure. It seems probable that this decoration was executed soon after the suppression of the Abbey and the seizure of the monastic buildings by the Crown; hence, possibly, the introduction of the royal arms in so conspicuous a way. The part of this painting which comes on the outside wall seems to have perished from damp soaking through the plaster. A large part of the probably well-preserved painting on the inner wall still remains hidden, as it is only in one of the subdivisions of the Great Hall that the wall-linings have been stripped off.

J. HENRY MIDDLETON.

### "RESTORATION IN ITALY."

London: Feb. 4, 1882.

I have read with interest the report of the meeting of the committee of the Society for the Preservation of Ancient Buildings, in the ACADEMY of January 28. To all who mean well we wish well, and well-meaning, assuredly, are the gentlemen of this society.

Yet, now and again, in some moment of haste, I feel that I could not be sorry to see that diligent body transported to another clime, and to see a new base chosen for its operations.

But that Italy should be chosen (our fair "Woman country" by "Earth's male lands" beloved) I had not hoped. Nevertheless, what must be must be. If the campaign is opened, I can wish it success. Let me only express a hope that the society will take pains to get very careful information as to what restorations are proposed, and as to the propriety of those already in progress.

The poverty of the Italian people is, perhaps, the best safeguard we can obtain that they will not too hastily destroy old work to make place for new. Indeed, there is wanted in Italy (more even than a society to force her to allow her neglected buildings to lapse and fall through sheer rottenness to the ground) a society furnished with money and taste that may help her to preserve some of her treasures from decay

while yet there is time. Such rottenness and danger of lapse had come already to the lovely *loggia* of the Bigallo. The Society for the Preservation of Ancient Buildings is possibly aware that this building has a "lean-to" roof which abuts upon the side wall of a certain orphan asylum. The venerable roof of the said asylum has been allowed from time immemorial to discharge its drippings upon the unprotected Bigallo. The result is easy to understand. The Bigallo rotted; its frescoes peeled. Fifteen years ago they were bright, and are well remembered by many. Incredibly quickly they disappeared. But for the timely energy of a citizen, Florence would have lost one of her most beautiful buildings. As to the manner in which the restorers' work may in this instance be done, I can form no present idea; but there is good reason, I think, to hope that the alarm so loudly expressed will prove to have been ill-founded. Pictorial art in Italy may have lost its ancient *motif*, but her craftsmen's traditions have at least not yet died out. I believe that the restoration of the Bigallo will be careful and reverent. From the window of the room I occupied in Florence the roof of the building could be seen. In mending that roof the restorers have placed new tiles only where it was absolutely necessary, which is to say that one-half perhaps will be new. The effect of this plan is not picturesque; that it is reverential none will deny.

In the case of the Bigallo, and in a hundred cases besides, the fault lies in the fact that they were not restored long ago. The builders have come too late, and not too soon.

I have seen it indignantly stated that the churches of Santa Felice and Santa Maria in Florence are to be restored. It may be remarked by the way that the last-named building has much stunted and unlovely herbage growing between the joints of the masonry on its *facade*. It is likely that these vegetables did not form part of the original design, and it is at least a tenable view that their removal would constitute a justifiable reparatory act. But be this as it may, and speaking now to the general question of church restoration, English or Italian, the Society for the Preservation of Ancient Buildings does not seem to have it constantly in mind that quite a considerable number of people are still church-goers in the old sense of the word, and are even known (as Swift on a like occasion has remarked) "to take a sort of pride in the appellation." And many church-goers may think, after all, that a ruinous pile is less precious a thing than a water-tight place of assembly.

The Italians habitually neglect their buildings and the treasures of art which they hold. For one building or one fresco that the restorers have injured, there are dozens that have been allowed to fall prematurely into decay. The already considered case of the Bigallo and the frescoes of Andrea del Sarto in the cloisters of the *Recollets* may be mentioned only as striking instances of neglect well-nigh universal.

ERNEST RADFORD.

### NOTES ON ART AND ARCHAEOLOGY.

At a general assembly of the Royal Academy, held on February 6, Mr. Joseph Edgar Boehm, sculptor, was elected an Academician.

THE Assyrian collection of the British Museum contains a bronze flat bowl or plate, which, being greatly damaged, had hitherto been overlooked. On a recent examination, this plate has been found to be covered with Egyptian hieroglyphs. So far as can now be ascertained, the signs do not give any sense, and appear to have been only drawn as ornaments. It has been conjectured that the Assyrians

borrowed the pattern of their bronze plates from Egypt, and this specimen seems to confirm the conjecture.

THE evacuation of the great temple of Luxor will begin to take place almost immediately, and will be completed next month. The work of demolition and excavation will be commenced in October next.

WE hear that Mr. Tuer's handsome book on *Bartolozzi and his Works*, published less than two months ago, is almost out of print. The large-paper copies can no longer be obtained, and the price of the quarto edition will be raised immediately.

A VIEW of Hawarden Castle, the residence of Mr. Gladstone, has been engraved on steel for issue with the forthcoming part of *Our Own Country*, published by Messrs. Cassell, Petter, Galpin and Co.

THE first general meeting of the Society for the Promotion of Hellenic Studies for the present year will be held at 22 Albemarle Street, on Thursday, February 16, at 5 p.m. The papers read will be "Some Notes on the Characters of Theophrastus," by Rev. E. L. Hicks; "Hermes on a Patera from Bernay," by Dr. C. Waldstein; and on "Samothrace and the Cabiri," by Mr. J. Stuart Glennie.

ON Monday, February 14, Messrs. Sotheby and Co. will begin the sale of the collection of engraved portraits formed by Dr. E. J. Waring in illustration of Granger's *Biographical History of England*, together with the MS. notes and additional portraits of the Rev. Mark Noble, author of the continuation of that work. The sale will also include a considerable number of etchings by the old masters, fancy subjects by Bartolozzi, proofs from the *Liber Studiorum*, &c.

THE seventh annual exhibition of paintings on china by lady amateurs and artists will be held in Messrs. Howell and James's galleries during the months of May, June, and July. All works will be submitted to the inspection of the judges, Mr. Frederick Goodall, R.A., and Mr. H. Stacy Marks, R.A.; and only such as are approved by them will be exhibited.

AT the meeting of the Archaeological Institute on February 3, a paper was read on "Ashburnham House" by Mr. J. Henry Middleton; and a resolution was passed unanimously condemning the transfer of this historic building from the Dean and Chapter of Westminster to Westminster School.

WITH the fall of M. Gambetta, both M. Antonin Proust and the Ministry of Fine Arts have disappeared. M. Paul Mantz takes his place, with the subordinate title of Director-general of Fine Arts, under M. Jules Ferry, Minister of Public Instruction. At the same time, M. Proust has been elected President of the Société de l'Union centrale des Arts décoratifs, which will hold an exhibition on May 1 in the Palais de l'Industrie. While giving all credit to M. Proust for the enlightened energy that he displayed during his short tenure of office, we cannot but regard the whole circumstances as proving the undesirability of making the administration of fine arts a branch of party politics.

THE literature and art of the *Magazine of Art* for February are almost equally good. It need scarcely be said that the article on "Bagster's *Pilgrim's Progress*," by Mr. Robert Louis Stevenson, is attractive for its style as well as its matter; and we hope that the excellent idea of "Byways of Book Illustration" will be well carried out. A lively sketch of "L'Atelier Bonnat," by Mr. Barclay Day; a clever anonymous note on Japanese art; and a very interesting account, by Mr. F. Cundall, of Hugh Robinson, the "unknown painter" of the "Boy flying a Kite" in last year's Winter Exhibition at Burlington

House and of the "Piping Boy" in this, fill up with remarkable vigour the spaces between the longer articles, such as the excellent and well-illustrated account of Alnwick Castle by the Rev. M. Creighton.

If the object of *English Etchings* be, as we suppose, to extend the popularity of this popular art, we may congratulate the publisher and editor on a deserved success. "The Cock Tavern," by Mr. A. W. Bayes, in a recent number, was valuable both for its subject and for the technical mastery displayed. In the current number is a view of "Stonehenge" by night, which also deserves notice. We understand that it was etched from sketches made on the spot. From the nature of the case, the plate itself could hardly have been etched on the spot. Speaking generally, we doubt whether the advantages of open-air etching, which can achieve with a few strokes effects of air and light forbidden even to water-colours, are sufficiently realised. Etching, it cannot be too often repeated, has different possibilities and different limits to line-engraving.

IN the last number of the *Zeitschrift für bildende Kunst* is given a very forcible etching of a Gipsy's head, by Prof. Willem Linnig the younger. The same number also contains an interesting article on the domestic architecture in the Moselle district, by F. Everbeck, well illustrated by wood-cuts, and one on some pictures by Cornelius and Overbeck, by Veit Valentin. Gustav Frizzoni brings to a conclusion his series of papers on the Poldi-Pezzoli Museum at Milan, and Fr. Schlie continues his studies of the Flemish and Dutch pictures in the Archducal Gallery at Schwerin.

THE current number of the *Gazette archéologique* contains an interesting notice of a large collection of pottery found at the village of Cabrera, not far from Barcelona. The "find" clearly proves a necropolis dating back to the third century—before the Roman conquest of Spain. Some of the objects are of Greek workmanship—one vase, indeed, bears the name of its maker, Nikias; but the larger number are referred by M. Lenormant to native manufacture, being analogous to a rude kind of pottery that has been found almost everywhere along the shores of the Mediterranean, but has never before been discovered in Spain.

THE little town of Dinant, in Belgium, the birthplace of Wiertz, has long been desirous of obtaining for itself a monument of its great citizen in the form of a reproduction of his masterpiece in sculpture, "The Triumph of Light." A subscription with this object has now been opened throughout the province of Namur, and at Brussels.

MESSRS. DETKEN AND BOCHOLL will shortly commence the publication, in twelve monthly parts, of an album containing specimens of the handwriting of the most famous Italian artists of the fourteenth—seventeenth century, reproduced by photography. Each part will contain twenty-five plates, and will be published at the price of twenty francs.

THE same firm have just commenced the publication of a fortnightly journal entitled *Archivio musicale*, which will deal with all branches of the subject. The annual subscription is twenty-four francs. Among the contributors we notice the names of Hanslick, Alsleben, F. Hiller, E. Naumann, Pougin, Gevaert, Reyer, Sir F. Gore Ouseley, Green, Duarte da Cruz Pinto, &c.

AN exhibition of industrial art will be held at Lille from March 15 to June 1 of the present year.

THE important work of the Scandinavian archaeologist, H. Undset, upon the first appearance of iron in Northern Europe, to which we

have before called attention, has been translated into German by Herr T. Mestorf, and published by Meissner, of Hamburg.

THE Swiss Kunstausstellung will visit this year five cities in turn. The exhibition will remain at Geneva until May 15; at Lausanne, from May 23 to June 15; at Aarau, from June 23 to August 15; at Solothurn, from August 23 to September 7; and at Bern, from September 15 to October 15.

THE section "Uto" of the Swiss Alpine Club has determined to purchase Herr Müller-Wegmann's splendid collection of mountain-profiles, panoramas, geological charts, and views. No less than 1,300 of these are the work of the proprietor's own skilful and diligent hand.

AMONG the "Vandalisms" to which *L'Art* has recently called attention are the proposal to "restore" by the "Pettenkoffer" process some of Franz Hals' matchless portrait compositions at Haarlem, and a brutal and destructive outrage in the studio of M. Ulysse Butin.

THE societies of the Union centrale des Beaux-Arts appliqués à l'Industrie and the Musée des Arts décoratifs are now fused in the Union centrale des Arts décoratifs. Its first exhibition will take place at the same time as the Salon, and will be called the Salon des Arts décoratifs. It will contain not only the works of decorative architecture, painting, and sculpture which are too large for the sister Salon, but works of all kinds of industrial art. It is much to be wished that some such exhibition, entirely free from trade influence, could be organised in London.

*Correction.*—In Mr. Hoskyns-Abrahall's letter on the "find" at Parkhill, Aberdeenshire, in the last number of the ACADEMY (p. 90), for "Lon" read "Lowe," and for "Walton" read "Wetton."

## THE STAGE.

### THE REVIVAL OF "THE SCHOOL FOR SCANDAL."

IT was not only in obedience to the sound theatrical maxim, "When in doubt, play 'The School for Scandal,'" that Mr. Thomas Thorne, now in sole command at the Vaudeville, revived that masterpiece of Sheridan on Saturday night. The revival of "The School for Scandal," now holding its place on the Vaudeville boards, is intended to be but the first—but certainly it will be one of the most brilliant—of a series of reproductions of our elder comedies. There is no piece which can be seen often with greater advantage or with more continuous delight; and the present performance is, on the whole, worthy, and in some respects remarkable. The history of "The School for Scandal" as an acting play is in many ways interesting. Produced originally at Drury Lane Theatre in 1777, and making a prompt success with a company whose individual fortunes have been traced in a recent book, it never fell into disuse or decay; its perpetual vitality being ensured, we must be well aware, not more by the uninterrupted brilliance of its literary execution than by the fact that even the most insignificant of its characters offers to the player the luxury of a good part. Even in the days which were almost the darkest for the English theatre—the days in which pure sensationalism was rampant, some twenty years ago—"The School for Scandal" was not wholly laid on the shelf, for comedians whose ambition was not satisfied by break-neck leaps

nor by plunges into real water were wont to have recourse to it on the occasion of a benefit, or when it was considered desirable that at any particular playhouse some tradition of stage dignity should be maintained. But neither in the time of its earlier success nor during the many periods of its occasional revival had it appeared capable of holding the stage for a long sequence of representations; and it was a perfect surprise when, at the Vaudeville, about ten years ago, a performance first organised for a benefit was continued for something like a twelvemonth. The fact was due in part to the vogue of the theatre, and in part to the presence of an admirable company which did much to justify that vogue. No representation of "The School for Scandal" at the Vaudeville can now be undertaken without provoking comparisons with that one, though a more recent revival—that which took place at the Prince of Wales's under the Bancroft management—is also necessarily borne in mind.

The present performance, we are safe in asserting, bears reminiscences of the two which we have just mentioned. It has taken—or retained—from the first Vaudeville performance not a little that is excellent in the way of the cast, and it has followed or surpassed the Prince of Wales's in the attention bestowed upon costume and scenic detail. The Prince of Wales's revival was made the occasion for the agreeable display of Mrs. Bancroft's blue china and of her rare marquetry. Among these treasures the most popular actors of the day in London tumbled about with some difficulty—a little impeded and a little effaced. It was shown us, too, how easy it is for even a successful actor to fail absolutely. Little better could be said of some of the most admired performers than that they proved themselves possessed of excellent intentions, and succumbed only after resolute endeavours. The Vaudeville stage—a small one, by-the-by; probably hardly larger than the Prince of Wales's—is occupied, though scarcely crowded, with quaint furniture and decoration. Lady Sneerwell's drawing-room is a fairly brilliant study for a painter of eighteenth-century life; and Joseph Surface's library, in which the most critical action of the play is conducted, is an apartment of rich sobriety, such as justifies Sir Peter Teazle's polite encomiums, and is in accordance with that breadth of good taste which led Joseph Surface to appreciate everything that was excellent—literature and society, ease and Lady Teazle.

Of the figures that remain to us from the first Vaudeville cast, Mr. Farren's Sir Peter is the principal. How far Mr. Farren's performance of Sir Peter falls below that of his father I am unable to indicate; it is the best performance of the part that is now to be got; for it is at once polished and serious, natural and generally refined. As a detail, it may be added that Mr. Farren's Sir Peter is fairly clear of senility. It is a too frequent mistake, as I chanced long ago to point out—when Mr. Farren himself did but just avoid it—to represent Sir Peter as an aged man. The internal evidence of the play discloses the fact that he was scarcely over fifty—an age at which he would be very likely to speak of himself to a young woman

as "an old fellow who would deny you nothing," and very sure to resent the remembrance of such an expression by his wife when both had lost their temper. With Mr. Farren, Sir Peter is a fair representative of Sheridan's notion of wisdom and honour: he is not altogether a study of an individual, but he is a type of sterling character in meretricious company. Miss Ada Cavendish plays Lady Teazle not for the first time, and of course her performance is not wholly independent of her marked personality. An actress's own personality is an enormous element in every representation she essays, but it counts for most of all in a part for which no exacting intellectual study is required—a part which lies, as Lady Teazle's does, pretty much upon the surface, and is that of a sayer of bright things rather than a doer of conspicuous deeds. The part was laboured on and polished by Sheridan continually, but it was always the witticisms of his heroine, and not her actions, that Sheridan cared about. Now just because of the real slightness of the character, taken in conjunction with the importance of the part, I cannot think Miss Ada Cavendish quite as well fitted for Lady Teazle as was Miss Amy Fawcett, who was wont to play it at the Vaudeville. The living comedian is of statelier presence, and of much more searching and studious intelligence, than was the young actress who died so untimely; but in her buoyancy there is less of spontaneity, in her vivacity less of the pure relish of youth. But Miss Cavendish knows her art; and into her present performance, as into her performance of the part at the Olympic some seven years ago, she brings many of the characteristics which belong to her less naturally. She learns to be ingenuous and learns to be gushing. Mr. F. Archer now appears as Joseph Surface; and if Joseph Surface's fascinations are less obvious than they have sometimes been, his subtlety of character receives justice, and every scene in which he appears is conducted with discretion. We do not prefer Mr. Archer's Joseph to the Joseph of Mr. Clayton (neither has the common fault of leaving his villainy too transparent); but we are glad to see again, on an important place on the stage, a conscientious actor too often in the background. Time cannot further be of any aid to Mr. Neville in the performance of Charles Surface; but he retains his great natural qualifications for a part that is gay and spirited, simple and sympathetic. Mr. Thorne is an excellent Crabtree. No one could bestow more of individuality on so small a part or on so crusty a character. Mr. Lin Rayne's Sir Benjamin Backbite remains the best I know. He is, of course, affected in manner; but how could affectations of manner be withheld from a verifier who was guilty of the supreme affectation of not publishing his pet lampoons and his least justifiable satires when the chance was offered him? Mrs. Arthur Stirling is as good a Mrs. Candour as we have seen since Miss Oliver. Maria, who at bottom is an *ingénue* more French than English, is represented with only too much intelligence by Miss Murray; but Mrs. Canninge is an insufficient exponent of Lady Sneerwell's engaging malice.

FREDERICK WEDMORE.

## STAGE NOTES.

It is announced in the theatrical column of the *Daily News* that Miss Marion Terry will play the part of Bathsheba Everdene in the forthcoming performance of "Far from the Madding Crowd" at Liverpool, and that Mr. Charles Kelly—who, we may observe, is but seldom seen in London—will appear as Gabriel Oak. Mr. Arthur Wood will be included in the cast.

"A BED OF ROSES" is the name of a comedietta, designed apparently in chief for a capable "character actor," now given with success every evening at the Globe Theatre. Its author is Mr. H. A. Jones, who wrote, we believe, a novel of some mark, and who, besides some unimportant dramatic work, adapted for the stage the piece in which the heroine of "Leah" last appeared at Sadler's Wells. Mr. Wood enacts the chief part in "A Bed of Roses," and confirms by his performance the high opinion of him which has long been entertained by many critical playgoers.

MR. BURNAND'S comedy "The Manager" will be the next novelty at the Court Theatre.

## MUSIC.

ON Monday evening, M<sup>me</sup>. Norman-Néruda appeared for the last time at the Popular Concerts; and many will regret that she has played so little this season, for she is undoubtedly one of the most accomplished of living violinists. The programme included Schubert's beautiful quartett in A minor (twentieth performance), Beethoven's sonata in F (op. 24) for pianoforte and violin, and the movements from the *suite* of Ries noticed last week. The novelty of the evening was a *larghetto* and *allegretto* (op. 10) for piano and violoncello (M<sup>lle</sup>. Krebs and Signor Piatti) by Mr. A. C. Mackenzie. The theme of the *larghetto* is graceful and flowing. The short *allegretto*, which appears as an episode in the slow movement, forms an agreeable contrast, but in itself is not particularly striking. With the exception of one passage just before the *allegretto*, the piano plays throughout a very subordinate part. M<sup>lle</sup>. Krebs gave as solo Bach's chromatic fantasia and fugue. She interpreted this difficult work with vigour and brilliancy. In the fantasia she played only single arpeggios, although Bach has indicated that each chord should be twice broken.

We are pleased to notice that Mr. Henry Holmes, our excellent English violinist, has resumed his Musical Evenings. He has announced a series of five concerts at the Royal Academy, with Mr. A. Gibson as second violin, Mr. A. Burnett as viola, and Mr. E. Howell as violoncello. All the programmes contain works of acknowledged merit, but which have been heard repeatedly at the Monday Popular Concerts and elsewhere. Why should not Mr. Holmes introduce a few novelties, or works rarely performed? It may not be wise to overdose the public with new works; but surely he might do something to encourage the composers, both native and foreign, of the present day. The first concert took place on Wednesday week. The two quartetts were Haydn in B flat (op. 55, No. 3) and Beethoven in A minor (op. 132). M<sup>me</sup>. Haas took part in Schumann's quintett with great taste and finish.

Now ready, in royal 4to, on fine paper, with Woodcuts and Seven Plates (four hand-coloured), £1 1s., PART I. of a

**MONOGRAPH OF THE INSECTIVORA:** Systematic and Anatomical. By G. E. DORRIS, M.A., M.B., Author of "A Monograph of the Asiatic Chiroptera." "Catalogue of the Chiroptera in the Collection of the British Museum," &c., &c.

This part, including the Families Erinaceidae, Centetidae, and Solenodontidae, contains full descriptions of all the known species of these families, with analytical tables, and, also, the osteology, myology, and visceral anatomy of most of the species among them the rare forms *Gymnura rufescens* and *Solenodon cubanus*, illustrated by nearly one hundred figures (many of them hand-coloured) from drawings by the Author.

[London: JOHN VAN VOORST, J. Paternoster-row.

SATURDAY, FEBRUARY 18, 1882.

No. 511, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Making of England.* By John Richard Green. With Maps. (Macmillan.)

MR. GREEN'S new book possesses all the well-known charms of his fascinating style, and combines with them a great many other excellences in a far higher degree than usual. The "Short History" was picturesque in the extreme, but its picturesqueness was almost cloying. Mr. Green aimed at effect in season and out of season, till the very uniformity of the success actually marred its total effectiveness. There were too many plums and too little sound digestible matter. In his new book he has avoided this rare fault without ever once growing dull or forgetting his exquisite literary skill. Where the subject demands it, his colours are as bright and as vivid as ever; but, where logical argument or grave philosophical reflection is needed, Mr. Green rises to the situation, and the weightier passages thus interspersed between his glowing word-pictures certainly whet the reader's appetite far better than the uninterrupted feast which he used to spread so much too lavishly before us. Moreover, his present book is a piece of real original research. We do not say that it probes very deep into the fundamental question. As far as scholarship goes, it cannot compare with Mr. Elton's profoundly learned and broadly scientific work just published, which deals with much the same period; but, looking at it as an essay written wholly within the narrow bounds of Mr. Freeman's Teutonic school, and based almost entirely upon the documentary evidence, it deserves high praise for its thoroughness and its general ability. It marks Mr. Green as a competent original historian, not a mere clever adapter and literary confectioner of other men's solid material.

Regarded from the ultimate critical standpoint, every history must stand or fall, not according as it is amusing or dull, but according as it is true or false. Now, Mr. Green's book contains a great deal of matter which, to a large and growing school of investigators, appears utterly mistaken and misleading; and it becomes the duty of criticism to point such matter out frankly and fearlessly. Before doing so, however, let us begin with what seems the strongest part of Mr. Green's work. His general sketch of the state of Britain at the date of the English invasion, and his mainly conjectural reconstruction of the course of the English conquest through the river-valleys and forests of the island, seem to us, on the whole, most admirably performed. He is, perhaps, inclined to accept a little too readily the earliest dubious entries in the English

Chronicle, and sometimes he even attaches an excessive importance to the mere fanciful amplifications of Henry of Huntingdon and William of Malmesbury; but, as a rule, his keen topographical instinct and his extraordinary power of restoring mentally the ancient condition of the country enable him to follow the English wave across the face of Britain with an almost visual realisation which is truly marvellous. Even his uncritical habit of taking such myths as those of Port and Wightgar, stripping them of their obviously unhistorical elements, and then quietly accepting the remainder, is so cleverly concealed by his admirable workmanship that one can hardly find it in one's heart to blame him for it. And, when he comes to the firmer ground of Bæda and the later Chronicle, his reconstructions are at once ingenious and highly probable. Indeed, two-thirds of the book may be accepted gratefully, without any reservation, by historians of every school as a valuable contribution to the clearing up of perhaps the darkest period in our whole annals.

There remains, however, the fundamental question of Teutonism, the ultra-English spectacles which colour all Mr. Green's conceptions of our early history. Not even Mr. Freeman himself is so savage an enemy of Welshmen as the Honorary Fellow of Jesus. The Britons, he will have it, were all absolutely driven out from the eastern half of modern England. And it is in estimating the evidence of this extermination that Mr. Green shows his characteristically weak side. He is not a man of the scientific temperament, and he cannot look at any but documentary evidence. Here the contrast with Mr. Elton's method is very marked. The question whether the population of eastern Britain is a Celtic or a Teutonic one is essentially an anthropological question, and all the anthropologists are absolutely agreed upon it. Time after time they have pointed out the markedly distinct Celtic or pre-Celtic physique in the very earliest conquered parts of England. But, strange to say, Mr. Green never even alludes to this side of the question. Gildas says nothing about it, therefore there were no Britons spared. "Ay, but Gildas himself does say that some Britons were enslaved." Oh, answers Mr. Green, with ready ingenuity, then they were probably all shipped off at once for sale at Rome. Could the force of preconception go further? Nay, Mr. Green even ventures beyond his teachers; for he suggests that London and York were laid low for half-a-century, though Canon Stubbs has distinctly declared the opposite; and he out-Freemans Mr. Freeman himself in the matter of the women who might presumably be spared by the conquerors. All this, too, he does with an air of positive certainty which may well deceive the unwary reader who does not know the slender nature of the evidence on which the assertions are based. Durovernum, he says, "was left in blackened and solitary ruin" by Hengest's army, just as though we had contemporary records of the event; and yet we know that in Æthelberht's time two Roman churches remained standing within the town. London was still "the mart of many nations" when the pall first rises again from England in the opening

of Bæda's story, as it was under the Roman power. "Deva," Mr. Green tells us—should it not be Diva?—"was still the 'waste chester' that Æthelfrith left it, when Æthel-flæd, 400 years after, made it her Chester on the Dee." But how do we know that Æthelfrith really destroyed it, and must it not have risen again in the Mercian days under Werburh? As a matter of fact, is it not most probably the Danes who made it into a "waste chester"? Perhaps, however, the best example of Mr. Green's method in this respect is to be found in his treatment of Rochester, which reappears in the days of Æthelberht "no longer under its old name, but under that of the Jutish Hrof, who had, at last, taken it for his home, as Hrofes-ceaster." Here Mr. Green has Bæda on his side, it is true; but even Bæda did not hint that the mythical Hrof was a Jute, and, indeed, he is as mere an eponym as Port or Wightgar, and we will even venture to add as Cissa himself. Bæda arrived at him by a simple piece of etymological guesswork. If Mr. Green will look into the Peutingian tables, he will find Durobrivæ given as Rotibis. Omit the prefix *Dur*, and the words are fairly identical. In a charter we get the intermediate form Hrofi-brævi (we leave oblique cases as they stand). Thus Hrofes-ceaster and Rochester stand to Rotibis much as the forms equivalent to Ritup-burh and Richborough stand to Ritupæ and Rhutupia. The easy way in which Mr. Green accepts this purely conjectural Hrof, and then turns him, without one jot of evidence, into a Jutish pirate, is very typical of his historical style.

In the matter of small inaccuracies, Mr. Green has certainly improved; but even now some industrious collector might gather together a goodly crop. His manner of dealing with proper names is most perplexing. We get Ethelward and Ethelburh by the side of Æthelfrith and Æthelstan. In another place, Æthelburh re-appears as Æthelberga, while, four lines above, we come across a mysterious Quænburh, elsewhere called Quænburg. Bæda's Latinised forms are correctly transliterated into Old English in such instances as Eadwine and Æthelfrith, where Mr. Green has Mr. Freeman to guide him; but in the case of minor personages, where this resource breaks down, we get false forms like Osfrid, Eadfrid, Eanfled, and Oswini. These, as well as the quotations from *Beowulf* and other Old English works—obviously taken from modern sources—raise a passing doubt whether Mr. Green really reads Old English at all. The place-names are equally confusing. Mr. Green knows of the local deity of Bath, Sul, yet he calls the Roman station Aquæ Solis instead of Sulis. Where did he find the name Wightgarburh? Why is Nottingham called Snotinga, a *genitivus pendens*, instead of either Snotingas or Snotinga-ham? Whence comes the oft-repeated form Saerobyrg for Searoburh? Why should the names on the maps be made independent of case or even of analogy, so that one gets on the same sheet Bernicians, East Engle, West Saxons, Lindiswara, Kent, and Wilsætān? And why is the last name once given as Wiltæstan, seeing that the *t* in the modern form Wiltshire comes wholly from the later alternative, Wiltunscir? Such

small points as these divert one's attention at every turn from the main subject, and disfigure an otherwise admirable book by their presence. But we have pointed out more than enough, and, indeed, it is an inevitable fault of brief criticism that it must seem to lay too much stress upon petty errors or differences of opinion, and too little upon general excellences. Taking it all in all, Mr. Green's new book is a most useful contribution to our knowledge of a very dark period, and it stamps his place as a far higher one than that secured by his more captivating, but far less original, *Short History of the English People*. It will probably long represent the last word of the Teutonists on the nature and extent of the primitive English settlement.

GRANT ALLEN.

*Belcaro*: being Essays on Sundry Aesthetical Questions. By Vernon Lee. (Satchell.)

THERE is much in this thoroughly original and delightful book which reminds us of the essays of the eighteenth century. The author has not been in a hurry to write it—it seems almost an accident that called it forth; it bears no trace of that strain to express thoughts half developed, to steer through intricate channels of doubt to a doubtful goal, which characterises so much of the writing, and especially the writing on art, of the present day. Having lived from childhood among works of art, and taken in the pleasures of painting and sculpture and music like air through the pores without analysis of delight, the writer's opinions appear to have formed themselves unconsciously, to have grown with him (or her) till they attained a ripeness which demanded expression—expression, if not careless, at least desultory, the fruit of many casual moods rather than a persistent plan, scattered in notes for personal relief and pleasure as in a diary. Later, the desire to compare disconnected impressions and in a loose way serry thoughts for the use of others, so that they may share the benefit of an unusual experience and be influenced by the writer's views, has grown also, and hence this book. It is rare indeed to find so much thought conveyed in so easy a style—to find a writer who not only has so much that is fresh to say, but has so fresh a way of saying it. Such thoughtful *abandon* cannot be attained by the greatest care in "reading up" a subject; and, though no doubt there is in the spontaneity of the style and the unstudied form of each essay much of that art which conceals itself, the book throughout has the flowing freshness of a natural spring.

Viewed from within, these essays are fragments of mental biography, showing how certain scenes or pictures or stories have fired trains of thought which have resulted in the formation of opinion. Viewed from without, the essays are the author's views of art illustrated by story and allegory. Of the "Child in the Vatican" the object is to show that the faculty of appreciating works of art is a gift denied to most, that the harmonies of form and colour and music are akin, and that the pleasure they give as harmonies cannot be taught, but is given by the works themselves. So the author tells us what is called in the book a "fairy tale." Of the

many children who wander through the galleries of the Vatican, the antique statues agree together to charm one and teach it their beauty. The education by the statuedaemons of their unconscious pupil is charmingly described. This is how, according to "Vernon Lee," she discovered her knowledge:

"And one day the child looked at itself and perceived it was a child no longer; knew all of a sudden that in those drowsy years of childish passion and day-dreams it had been learning something which others did not know. For it heard one day a few pages of a symphony of Mozart's—the first it had ever heard save much more modern music—and those bars of symphony were intelligible words, conveyed to the child a secret. And the secret was, 'We are the brethren, the sounding ones, of the statues; and all we who are brethren, whether in stone or sound or colour or written word, shall to thee speak in such a way that thou shalt recognise us, and distinguish us from others, and thou shalt love and believe only in us and those of our kin.'"

In "Cherubino," the author's theme is the natural limits of expression assigned to each art, especially music. This is illustrated by Mozart's song in the "Marriage of Figaro" sung by the page—the well-known "Voi che sapete." "Vernon Lee" had identified Cherubino with Mozart, forgetting Beaumarchais, and associated the song so exclusively with the character as to think that the one was the intentional expression by the artist of the other. The writer describes, however, how the song was once sung by a young Creole girl, who left out the page altogether, and gave only the "beautiful work of art," the "lovely pattern made out of sounds," "unconsciously carrying out the design of the composer," in which "there was and could be (inasmuch as it was purely beautiful) no page Cherubino."

This way of conveying ideas is very fascinating, and has an effect of creating activity in the reader's mind which no other mode can equal. From first to last there is a continuous and delightful stimulation of thought. The book will lead to conversation, dreaming, speculation, and all kinds of pleasant and healthy mental exercise; and it is interspersed with such perfect little sketches of scenery, and passages of so much eloquence, that it is a literary treat to read it. At the same time it is puzzling and inconclusive. Opinions based upon a personal experience like that of "Cherubino," or a "fairy tale" invented for the purpose of explaining one, need verification from the personal experience of the reader to obtain acceptance. So many have been "children in the Vatican" that the essential truth of this allegory will be frequently admitted; but even in this the closing words of our quotation will seem to many as excessive and unnecessary as the passage we have printed in italics is ill-expressed. As to "Cherubino," the difficulty of acceptance is much greater. There is so much to be taken for granted on the author's credit. We must believe that the girl had "an unswerving artistic instinct, a complete incapacity of conceiving the artistically wrong," that Mozart did not mean to give us Cherubino, and many other things about which we might possibly disagree with "Vernon Lee" even if we had heard that girl sing that song. As the

author has shown us in "Orpheus and Eurydice," the impressions made upon him (or her) by works of art are not infallible, and we may fairly hesitate to accept as argument a succession of fancies aroused by the singing of a song. But—and this is more important—it does not amount to much if we so accept them, for persons do not sing songs expressive of their characters, and a composer has quite enough to do to invent an air suitable to the sentiment to be expressed, without thinking who is to sing it. The question, "Could Mozart have given us Cherubino?" is not to be answered by the examination of a song.

In "Ruskinism" we have a very powerful exposure of the falseness of a system of criticism, which confuses the moral right and wrong with the artistic right and wrong, and also a very clever analysis of the great man's mind; but, in the effort to prove that beauty is only physical and art only innocent, the writer, both in this and in the "Dialogue on Poetic Morality," seems to us to forget that beauty is not the sole aim of the visible arts, and that the "arts" of painter, sculptor, poet, and the writer of essays like *Belcaro* are on the same level with regard to morality. The visible arts have two sources—the desire to make beauty, and the desire to make visible resemblances of things known, and the pleasure given by recognition is so great that it sometimes, as in the modern French realistic school, ousts beauty almost entirely. Art is simply a mode of expression, and there is no more virtue in tagging of rhymes than in ordering a group, no more evil in a clumsy phrase than in a bad piece of foreshortening. In other words, the subject, whether of painting or sermon, is no part of "art" as "Vernon Lee" narrows the meaning of that word. As artists, both painter and preacher are bound to do their best; but this does not affect their morality. There is no reason why "Vernon Lee" or his readers should, therefore, feel any depression of spirits when they realise the fact that such "art" has no moral value. But Art of any kind which is independent of expression—the beautiful arrangement of words in lyrics of little sense; the arrangement of lines and curves in purely decorative design; the arrangement of notes in ordinary dance-tunes—while it is the purest art, is not art as that word is generally applied to the works of men like Phidias, Michelangelo, and Beethoven. Such art to them is merely the means of expression of ideas and emotions; and their works are not only innocent and beautiful, but noble or ignoble, moral or immoral, according to the ideas or emotions expressed and the manner of expressing them. If "pure beauty" consists in the loveliness of the "pattern," a purely beautiful picture should look as well one way up as the other, and a barrel organ might be the most perfect of instruments. COSMO MONKHOUSE.

*Tunis, the Land and the People.* By the Chevalier von Hesse-Wartegg. (Chatto & Windus.)

THE author of this work is right in supposing that at the present juncture an account of several months' residence in Tunis might be

very acceptable. He under-estimates, however, considerably the amount of information already available. His notice of Kairoan, for instance, has been more than anticipated by—to mention only English writers—Col. Playfair and Mr. Rae. It is inconsistent, too, to assert as his reason for writing that “no work has appeared descriptive of the present most interesting state of affairs in the Regency,” and then to pass over the entire question of the French occupation on the plea that so much has been said about it already! His work will for many readers be divested of another attraction by the almost entire omission of any reference to the archaeological treasures of the country. But within the limits to which the author expressly confines himself—viz., “the present condition of the country, its towns, districts, and people”—he gives some curious and interesting details. With ancient history he is less happy, as, e.g., when, forgetting the long episode of Vandal rule, he states that Tunis “received its autonomy only with Islam.” Not that he can be said quite to ignore the Vandals, for he classes them, along with Jews, Arabs, and Berbers, as among the races at present inhabiting the Regency. He finds it “incomprehensible why the Arabs could call this [Tunis] the ‘green town.’” We fancy that epithet might have been well applied in the early Arab times both to the town and to the now treeless country around. The author, indeed, alludes, like other travellers, to this contrast, but he hardly explains the change adequately when he says the “forests were sacrificed to the fanaticism of Islamic hands.” It was the native Berber rulers who, for the purpose of diverting the Arab invasion, committed such havoc that the people welcomed the invaders in hope of arresting it; but a good deal of forest remained in Bruce’s days, and the destruction of later centuries has been the result of mere recklessness and ignorance.

The author has no doubt that the French occupation will be a gain to the people. The great resources of the country will be developed. Harbours will be opened, especially that of Biserta, the importance of which, as a counterpoise to our position at Malta, was urged upon the British Government some years ago by Admiral Spratt. Archaeological investigation will be stimulated, and ancient monuments will, perhaps for the first time in 2,000 years, cease to be used as quarries.

The official class, he tells us, are, as a rule, not Tunisians, but of “Mameluke”—i.e., mongrel Greek and Levantine—origin. There is no spirit of caste; all offices are bought; the Vizier of to-day was a barber yesterday, and fills the new situation, as these people do, with perfect dignity and self-possession. But this democratic equality is no safeguard against tyranny; the people, we are told, are ground down by extortion and injustice. The apparent listlessness of the trader in the bazaar, and the small amount of business done, are explained by the fact that, though many have amassed enough to live upon, they are obliged to appear to practise some means of livelihood, for fear of provoking suspicion, and plunder. Our author’s picture is only relieved by the very interesting account he gives of the patriarchal justice admin-

istered, with full popular approval, by the Bey. He seems unaware of the steady progress of justice and order under the late administration of Khair-ed-din Pasha; and he considers the general distress to be such that a foreign occupation would be welcome. He mentions, however, a circumstance which rather militates against this view—viz., the popular opposition to a recent attempt to reform the judiciary on the European system; and he further states that the Bey’s unpopularity is due rather to his concessions to Europeans than to any hatred of oppression. The advantage to a Mohammedan people of a transfer from native to European rule is to many a self-evident proposition. Unluckily, Mohammedans are apt to be obtuse on this point, and their especial lack of appreciation of such blessings when administered by our friends across the Channel may suggest possible inconvenience from French co-operation in such enterprises. The capital, with its Oriental contrasts—here more marked than usual—of crowded and picturesque native squalor with European space and comfort, and of the exquisite architecture and ornamentation of the palaces with their tawdry and tasteless French furniture, are well described. In spite of depraved taste, there are signs that the art of building has not been altogether lost, and other recent travellers testify that this is the case also in Morocco.

The stupid and ruinous apathy of the Government as regards its own property is almost incredible. Not only will no Bey inhabit a palace where a predecessor has died, but even those which are occupied periodically are deserted in the interval, and

“from the day of his departure until the following year it serves cattle for stabling, and gangs of strolling Bedouins for night quarters. The costly ornamented sleeping-chambers are then full of incredible dirt; in the broad corridors and up in the garret-floors heaps of rotten straw lie about. Doors and windows are broken, the walls dirty, the beautiful marble slabs on the floor torn up. And all this notwithstanding that many people are paid to keep the palace in order. Before the Bey arrives the palace is renovated all through; everything gets whitewashed or painted; windows are provided with new shutters, doors with new locks—in one word a stable is turned into a palace, of course at an enormous cost. How much simpler it would be to lock the doors and to put sentries before it!”

The author confirms all that has been said as to the gross abuses of the system of consular protection here and in Morocco, especially when administered by unscrupulous hands, as he affirms is too often the case in Tunis. The Jews have been the chief gainers by the system. They are, the author considers, physically the finest race in the Regency; but the picture he draws of their domestic ways and institutions is more curious than attractive.

The mistakes in Arabic names and words are numerous; and even when correct in their German transliteration these are out of keeping with their English surrounding, in which the four letters *sch* are, happily, not needed to represent the sound of *j*. The translator’s English, too, is occasionally far from idiomatic.

COURTIS TROTTER.

*Scotland in Early Christian Times.* Second Series. The Rhind Lectures in Archaeology for 1880. By Joseph Anderson, Keeper of the National Museum of the Antiquaries of Scotland. (Edinburgh: David Douglas.)

(Second Notice.)

THE object of the third lecture is to compare the art-characteristics on the monuments among themselves, and in relation to early Celtic art exhibited in MSS. and metal work. The prevailing characteristic of their decoration is that it consists of spaces separated by borders or by the limbs of the cross, and ornamented, “as integral surfaces,” with varieties of ornament, chiefly interlaced work, but consisting also of figures, spirals, and “fret-work.” The cross is often divided into panels, and ornamented in like manner. This term “fret-work” is used to include varieties of pattern produced by straight instead of curved lines, and not interlacing. The ornament on the large slab at Nigg, one of the best examples, is shown to resemble that on the illuminated pages of Celtic MSS. On this slab it is remarkable that the panels, with bosses and serpents, resemble panels on the free-standing cross at Iona, which has on the other face Scriptural figure groups.

“The earlier Irish monuments are comparatively plain and unadorned; among the earlier MSS., on the contrary, there are many that are profusely decorated. It thus appears that it was only when the art had been brought to a high degree of excellence that it began to be generally applied to stone and metal work in Ireland. There is no reason to suppose that the course of its development was different in Scotland.”

P. 118: “The earliest monuments of Christian time in Ireland are usually inscribed.” No Irish stone slab has a central cross surrounded with a border of panels filled with decoration. The decorative art did not extend in the direction of stone, but of metal work.

The lecturer then describes the figure subjects on the Scotch monuments, which he divides into three classes—conventional symbols, representations of ideal objects, and representations of living creatures. Some of the elements of this art are common to a much wider area than that of Celtic Britain, or even of Europe. Other nations have used interlaced work, but not in the Celtic style; and it was nowhere “applied alike to MSS., metal-work, and stone-work, unless in this country and in Ireland.” So of some other varieties of ornament. But of all the patterns in use on Celtic remains the most localised and peculiar is the “trumpet pattern” and its modifications. In the best plait work the bands are not flat, but semi-elliptical; and they do not pass over or under each other with their *whole* thickness, but are embedded in each other as to *half* their thickness, somewhat as mouldings penetrate each other. In some unskilful examples the band which is supposed to pass under another is cut off abruptly on each side of it. The carvings of these slabs and crosses exhibit the dresses, weapons, chariots, ships, horses, and other articles of the time, and are the only evidence of many customs and of many implements and tools. None of the riders have

stirrups. Norman horsemen had them. From this type Mr. Anderson shows, by comparison, earlier and later groups to exist. The earlier is shown by its having the only ornamentation exclusively Celtic; the later, by its having ornamentation appearing more fully in monuments of known date. The reader is warned that simplicity alone is no test of early date. Rudeness of execution may arise from remoteness of position and unskilfulness of workmen. "The type [first described] is specially Celtic in character, and it possesses the further speciality that it is restricted in its range to that portion of the Celtic area lying along the east side of Scotland north of the Forth." Another and ruder class of monuments is described occupying nearly the same area as the first class, which Mr. Anderson supposes to be the precursors of the first, bearing the symbols, but no crosses. The third class noticed is that of the free-standing crosses—such as the great cross at Iona—which are the successors of the first series. The sequence of the free-standing crosses is arrived at by the evidence of the decoration and the form. The later crosses have the spandrils of the glory solid so as to obscure the junction of the arms and stem, as in the Oransay cross. Upwards of 300 examples of erect stone monuments remain in Scotland.

The fourth lecture is on the symbolism of the monuments. "It is admitted on all hands that Rome was the cradle of the Christian art and symbolism that spread gradually over Europe." Pagan symbols were not altogether discontinued; and these, as well as Christian symbols, were copied till they are not to be recognised without the examination of the steps of the degradation.

The Scottish monuments combine indigenous symbols with those imported and with Scriptural subjects treated in a conventional mode. Various representations, for instance, of Daniel in the lion's den are described and illustrated. The Middle-Age Bestiaries supply us with the interpretation of many of these quaint carvings. The stag chased by hounds is often found. It represents the soul pursued by evil spirits. On Merovingian dishes now in the museum at Nantes is a stag, pursued by a hound, running towards an olive branch and a cross. The soul pursued by evil flies to Christ for peace. It is noticeable that no instance of a unicorn is mentioned by Mr. Anderson. It does not appear that this symbolism was formally sanctioned by the Church, and now and then objectors raised their voice against the quaint animals and monsters. In the collection of the late Sir Thomas Phillipps is a MS. of about 1200, in which the writer laments the presence in churches of pictures of double-headed eagles, four lions with one and the same head, quivered centaurs, &c., and suggests instead scenes from the Bible, and under them rubrics and quatrains, of which he gives a collection. Mr. Anderson then proceeds to describe the forms of the unknown symbols. "They are plainly products of a highly conventional phase of art which follows arbitrary rules unknown to us." Our materials are, he thinks, insufficient; but, if we knew the meanings of these symbols, they "might not be less truly representative than many varieties

of the symbol of the cross which bear no resemblance to the actual object." We should not conclude that the significance of a symbol must be suggested by its conventional form. These symbols are found not only on erect slabs, but on metal objects and in certain caves. They are found on slabs which do not bear the cross and on those which do. The lecturer does not attempt to explain them, probably from having heard so many explanations none of which has obtained general acceptance. Mr. Carr-Ellison supposes them to be conventional symbols for initial letters of words or Christian monograms.

For what purpose were the sculptured stones *without* the cross erected, and for what purpose were those *with* the cross erected? No reference to this is made in the Lectures. Before this point could be fairly argued it would be necessary to know several matters connected with these stones which it was not within Mr. Anderson's limits to state, and on some of which he had probably no information. Of each stone—Is it in or near a churchyard? If not in or near a churchyard, in what position is it as to hills and valleys? Is it erect, and, if so, in what position as to north and south? In which direction is the principal face—the face adorned with the cross, when there is one, being reckoned the principal face? When this information was gained we should learn whether any special positions as to hills and as to the north and as to the principal face appertained to either of the classes of stones. As in England, so in Scotland, many of the sculptured stones come to us as re-used stones found in alterations of churches. A few are, or lately have been, standing in churchyards, or lying there loose. None of the observers seems to have recorded the position as to the north, even if they ascertained it, which probably they did not. It ought to be stated whether the direction ascertained is magnetic or true north. Some stones possibly have been moved from their original standing-place, and some may have been re-erected in the same cavity, but not in the same position, as before. The position of burials and burial-places and probably of standing stones was seldom or never fixed without purpose. The dolmens of Brittany have their entrances to the south-east. The hunnebeds of Dreuthe have their entrances facing in the same direction. In the province of Otranto, Italy, are numerous erect slabs, which have their long sides about N. b E. and S. b W.—that is, facing about east. Not all Christian burials were east and west, with heads to the latter. The skeletons in the Anglo-Saxon burial-ground at Hartlepool lay north and south; but the record does not state in which direction the heads were. In a large supposed Anglo-Saxon burial-ground in Northamptonshire the skeletons lay N.E. b N. and S.E. b S., with heads to the latter. The great cross at Iona has its principal face to the west. It does not appear that burials were connected with any of the stones described.

Mr. Anderson confesses that his country is almost destitute of monuments which are in a precise sense historic. No tombs of kings or great nobles remain, and few inscriptions as early as the twelfth century. He divides

the early inscribed stones into six classes, here tabulated for brevity.

No.	Language.	Letters.
1	Celtic	Celtic
2	Celtic	Ogham
3	Celtic	Ogham
4	Latin	Roman
5	Northern	Runic
6	Northern	Roman
	Latin	Roman

Of the first class only five are mentioned, and these are the only ones earlier than the twelfth century. Mr. Anderson instances the stone of Mael Fataric, formerly at Iona, and now at Inverary Castle, and writes of this as if it had *not* a cross as a principal object. The cross on this is rudely incised, of *one* line only, with short cross bars at the *ends* of the upper limb and of the two arms—a cross *potent*. The Eogain stone has a cross of the usual form, except that the foot ends in a circle—heraldically *pommee*. The inscription at Vigeans (p. 197) is classed as Celtic, but Mr. Carr-Ellison makes it Saxon (see *Proceedings* of the Society of Antiquaries of Scotland, vol. vii., p. 19). Of the second class, it appears that only eleven exist in Scotland. The area of these inscriptions is co-extensive with the sculptured stones described in these Lectures; but only four of them are on the mainland. Others exist in England, Wales, and Ireland, but none outside of the Celtic area. The third class consists of one—that at Newton—and this has not been so deciphered as to obtain general consent to any one solution. Like the Punic passage in Plautus, it has been taken to be in various languages. The letters have even been declared to be Phœnician! The inscription classed by Mr. Anderson as Latin is by Mr. Carr-Ellison made Saxon (see *Proceedings*, xiv. 292). Of the fourth class there are but few in Scotland, and those in the Norse possessions. The largest collection is in the Isle of Man. They are accompanied by interlaced work. The fifth class is exemplified by the Ruthwell cross. To show the uncertainty which attends many old inscriptions, the reader should study the amusing contrast between Mr. Repp's and Mr. Kemble's translations of this inscription. Of the sixth class five examples are noticed, which are supposed to be the only Scotch examples. Three of them bear the cross of Constantine, here called *chrisma*, in its later form.

Concerning the stone monuments, Mr. Anderson says:

"It does not seem as if we yet realised the fact that, as a nation, we are the sole possessors of a series of sculptured monuments unique in their character and possessed of singular merit as works of art,"

and yet

"its scattered materials lie here and there in fields, in hedges and ditches, by lonely roadsides, or in nettle-grown corners of country churchyards . . . a wealth of material which no other nation possesses or can ever hope to possess. . . . We grudge no expense to obtain fragments of similarly sculptured representations of the ancient art of other countries wherewith to enrich our museums; but the wealth of unique materials which exists in our own land for the illustration of Celtic art and national history is still left, scattered and unprotected, to decay and perish."

Many of our readers will share Mr. Anderson's sentiments; and they will learn with indignation that the authorities who could send an expedition to India to make casts of a gateway could not, or would not, pay the carriage of a set of casts of the sculptured stones in the Isle of Man!

HENRY DRYDEN.

#### NEW NOVELS.

*Phyllida*. By Florence Marryat (Mrs. Francis Lean). In 3 vols. (F. V. White.)

*Thistledown Lodge*. By M. A. Paull. In 3 vols. (Hurst & Blackett.)

*A Mere Chance*. By Ada Cambridge. In 3 vols. (Bentley.)

*Ewart Conroy*. By Harcourt Powell. (Dublin: Gill.)

*Les Victimes du Tzar*. Par Mikhaïl Achkinasi. (Paris: E. Dentu.)

THE audacious plot of *Phyllida* will, in the eyes of most readers, atone to some extent for vulgarity of sentiment, hasty writing, and character-daubing. Even the ingenious authors of *Ready-money Mortiboy* have not yet conceived the idea of bringing about a happy marriage between a manly and sensible Anglican clergyman and a burlesque actress who loses her engagement in a Chicago theatre for intoxication. Yet, the heroine who figures under such names as Nessie Macpherson, Phyllida Moss, and Stephanie Harcourt emerges from American Bohemianism as Miss Cole, and is seen at the close of the third volume entering on a life of English respectability as the twice-married Mrs. Bernard Freshfield, is the best of the portraits in this novel. She is from first to last a simple child, who overcomes all her difficulties by her innocence. Still, Mrs. Lean spoils, not perhaps the nature of her heroine, but certainly her conversation, by making her indulge in such Minerva Press ejaculations as "A true marriage is such a holy thing"! There is force, too, in Nelson Cole, who is originally the persecutor, but turns out to be the father, of Phyllida, and in Charles Anderson, the Roman Catholic friend of her lover. But the picture given of the "religious" circle of the Freshfields is a sad caricature. Mrs. Lean surely draws upon her imagination for her Scotch characters, and still more for her Scotch dialect. The villain of the story bears the impossible and offensive title of "The Laird of Muckheep." Where in Scotland are to be heard such barbarisms as "cairstle" for "castle," or "varry seight" for "very sight"? As for Miss Janet Muckheep, with her odious allusions every minute to "cainal" (sometimes it is "cainail") "procleevities," and her grotesque invocation of "the fear o' the Laird," all that can be said is that Mrs. Lean had better go through a course of Miss Ferrier before she tries to present us again with a portrait of a Scotch lady of the old school.

*Thistledown Lodge* is such a delightful labyrinth of plots and love-affairs, and such a wonderful collection of characters of all nationalities, and, above all, is written with such gusto, that it is hardly possible to be

severe upon its faults. In its pages Scotch students, English merchants, Cornish "simple souls," and Italian adventurers jostle each other; and there is a perpetual shifting of the characters from Ober-Ammergau to Glasgow, from the centre of Italy to Paddington. All the girls, too, who find themselves in "Thistledown Lodge," particularly Helen Cameron and Jeannie Cairns, are so truly as well as conventionally "good" that the hardest-hearted or most cynical of novel-writers could not have failed to give them happiness and husbands. Miss Paull has no capacity for drawing a villain. Her attempt to present one in the shape of an Italian adventurer is a miserable failure; and as for Francis Fielding, the London merchant, with his disappearances and attempts at suicide in consequence of being confronted with the ghost of an old intrigue, it is evident, from the first, that he is weak rather than criminal. Miss Paull has, however, much to acquire as an artist. She must learn not to intrude pious reflections on her readers, and must weed out from her style such provincial crudities of description as "a grandeur of soul looks out from the piercing dark eyes that search you as he speaks to you." It may be well, also, that she should know that the daughters of a high-class London merchant are not in the habit of describing him as "the dearest old pa in the world."

There is both power and promise, though not perhaps of the highest order, in *A Mere Chance*, which is a story of middle-class life in Melbourne. The interest centres absolutely—here the skill of the author is admirably shown—in the troubles of an impressionable girl of eighteen, Rachel Fetherstonhaugh, with "the snare of her beauty and her sensuous love of luxurious surroundings," who, after promising her hand to an elderly admirer with both the capacity and the desire to gratify this "sensuous love," loses her heart to another and younger man, with a "record" of romance that satisfies and dominates her whole being. The process by which Rachel's character is developed and strengthened is detailed with patience and success. The plot, though not very elaborate, is well worked out. The death of Rachel's first husband, Mr. Kingston, is, however, marred as an episode by the element of "comic horror" introduced into it. It is credible that, when dying, Mr. Kingston should express his willingness that Rachel should marry Mr. Dalrymple, whom he had "cut out" by deceit; and perhaps even that he should be anxious for that mysterious personage not to "lead his little Alfie into bad courses." But for Rachel to spend much time and great eloquence in persuading the dying Kingston that Dalrymple, who is to succeed him as husband, is one of the noblest and most misrepresented of men recalls nothing so readily as the grotesque anxiety of the practical Scotch housewife in Dean Ramsay's *Reminiscences*, who implored her husband, "while he had a breath in his body, to say whether he would like his burial-baps to be round or square." The characters in *A Mere Chance* are, without exception, carefully drawn. Especially good are Mrs. Hardy, the energetic and by no means bad-hearted Mel-

bourne mamma, with her victorious match-making Roman nose, who, having "got off" her daughters, determines to do the same with her niece, Rachel; and Mrs. Reade, her thoroughly practical, yet excellent, little daughter.

Whether the author of *Ewart Conroy* is a practical joker or ludicrously in earnest, he has presented the public with a marvellous "Irish stew" of dogmatic theology, club slang, very decided views upon "boycotting" and aestheticism, and match-making intrigues of the most shameless and mercenary character. From one point of view this novel may be said to be a satire upon present-day society, though sadly lacking in finish. Some of the characters are mere caricatures, such as Mrs. Legush, the Rev. Ewart Conroy's landlady, and her daughter, Miss Laura Legush. Others are absolutely revolting, like the Marquis Dhu Chicass and his unfortunate wife, Sybil, who has sold herself to him for a "settlement." It is hardly credible that, no matter what her provocation may have been, Sybil could tell her husband that she had "regarded him as a dead body to whom she had inevitably been joined." The same tendency to daubing instead of painting appears in Mr. Powell's attempts to convey meaning by the names of persons and places. "Miss Snorter" and "Falsjewelham," for instance, are neither elegant nor adequate. But Mr. Powell always writes with vigour; and the care with which he details the difficulties of Ewart Conroy and Constance Merdriss before they are married shows that he has considerable capacity for plot-construction. But he must discipline his style and leave fads and "questions" alone.

*Les Victimes du Tzar* is, as the name implies, a political novel, and has little of the plot-interest of the ordinary work of fiction. It is an attempt to realise the social aspirations and propagandism of the Nihilists in Russia during the life of Alexander II., and between the years 1876 and 1879. As such, it is by no means devoid of power; and the development of the character of the susceptible young visionary, Mikhaïl Jadof, who is the hero of the book, is well traced. Some of the more tragic episodes, particularly the violent death of poor Olga, who unites her destinies and her dreams with those of Jadof, are realistic almost to a repulsive extent; and at least one of the few love-passages which partially relieve the gloom of the whole is told with Parisian minuteness, though without cynicism or coarseness. M. Achkinasi has considerable descriptive power, and, when not weighed down by a gloomy plot and a too earnest purpose, could produce historical fiction of more than average quality.

WILLIAM WALLACE.

#### CURRENT LITERATURE.

*Selected Speeches of the Late Earl of Beaconsfield*. Arranged and Edited, with Introduction and Explanatory Notes, by T. E. Kebbel. With a Portrait. In 2 vols. (Longmans.) There is much matter for thought in these two large and closely printed volumes, though this is not the place for giving expression to it. We must content ourselves with some comments

upon the manner in which Mr. Keibel has performed his duties as editor. The first feeling will probably be one of disappointment that Mr. Keibel has so rigidly suppressed his own personality. He has presumed too much on the historical knowledge of the present generation, and has not given those connected links of description which alone make speeches live to the ordinary reader. We nowhere have an estimate of Lord Beaconsfield's characteristics as an orator, nor of his peculiar influence in the two Houses of Parliament and at public meeting. But on second thoughts we are disposed ourselves to incline to the opinion that Mr. Keibel has chosen the wiser course in allowing his subject to speak for himself. He has at least avoided controversy, and probably given his book a more permanent value. He has acted with the modesty of the student who publishes "sources," confident that, when the public have these before them, history, in the common acceptance of the word, may be suffered to write its own pages. Especially is this true of contemporary history. With regard to his selection, we think that Mr. Keibel has been eminently judicious both in what he has selected and in his arrangement. Yet we should have liked one of the Mansion House speeches, and the address as Lord Rector to the Glasgow students. Mr. Keibel does not comment upon the fact that the celebrated words—*imperium et libertas*—were first used by Mr. Disraeli in the peroration of a speech in the House of Commons on agricultural distress in 1851 (vol. i., p. 323). In vol. ii., p. 626, "that citadel fame of ineffable beauty" should certainly be "fane."

*Galenus Pergamensis de Temperamentis, et de inaequali Imperio Libri tres Thoma Linacre Anglo Interprete.* With an Introduction by Joseph Frank Payne, M.D. (Cambridge: Macmillan and Bowes.) Messrs. Macmillan and Bowes deserve the thanks alike of scholars and bibliophiles for their enterprise in undertaking to publish a set of facsimile reproductions of a series of little volumes which originally issued from the first Cambridge press. That press was started by a German, one John Sibirch by name, respecting whom the publishers would be glad to find out more than they have been able to discover. It was an humble, struggling little institution, the surroundings of which must have presented the greatest possible contrast to the stately edifice from whence the present volume has issued, and after a few modest but commendable efforts it died out altogether. The jealousy of the Stationers' Company hindered its revival; and no more books were printed at Cambridge for sixty-two years, scholars who wanted to bring their works before the public being for a long time compelled to resort to the press at Basel or that at Louvain. The volume before us is the translation by Linacre of *Galen de Temperamentis*, and was printed in 1521. This is shortly to be followed by three others—viz., a Latin oration by Henry Bullock (1521), a Latin tract or discourse, addressed *ad Christianos omnes* (1521), and the *Hermathena* of Papyrus Geminus (1522). The interest of the series, it is obvious, is mainly associated with the history of printing—a subject which, at the present time, gives promise of almost rivalling that of numismatics in relation to earlier times, from the remarkable manner in which it aids literary researches. A series of notes by Mr. Bradshaw will be appended to each volume, and will point out the internal evidence which serves to determine the order of issue and other points of special interest. We must not dismiss the present volume without noticing the excellent Life of Linacre supplied by Dr. J. F. Payne. Linacre is undoubtedly the most notable example that Oxford can boast of a race—now, in Dr. Payne's opinion, altogether extinct—the

philosophical and scholarly physician. He had his counterpart in the same century at Cambridge in Dr. Caius; and for two centuries after such *rarae aves* appeared at intervals in this country, Heberden, Dr. Johnson's physician, being perhaps the last. The absorbing demands of science in the present day, and even those of a single subdivision of a single branch, scarcely, indeed, permit any profound attention to other provinces of knowledge. There is but one point which, as it seems to us, Dr. Payne has failed to bring out with adequate emphasis; and that is the large share which Galen's example, his encyclopaedic knowledge, and his philosophical method of discussing every detail had in contributing to form the class of which his translator was so notable an example.

DR. GREENHILL'S edition of Sir Thomas Browne's *Religio Medici*, *Letter to a Friend*, and *Christian Morals*, which forms the latest addition to Messrs. Macmillan's "Golden Treasury Series," is no mere light and readable introduction to a strange and original genius. It is a serious contribution to the bibliography of the subject, and is worthy to take rank with Mr. Aldis Wright's and Mr. Arber's work at Bacon. The editor—on whose qualifications for his present task it would be impertinent to dwell—has set himself to form a critical text of the above-mentioned works of Sir Thomas Browne, which will certainly be the standard one for the future. No reader of Wilkin's edition can fail to have been struck by the curiously abundant opportunities presented by this difficult author for textual criticism, and it is fortunate that the preparation of a definitive text has fallen into so competent hands. Dr. Greenhill's notes contain all that is necessary for the student of these works from the literary and scientific point of view; and a very full Index is appended which has a distinct value in itself. Sir Thomas Browne is fortunate in his editor, and Dr. Greenhill in his author.

MESSRS. SAMPSON LOW have issued in this country the two-thousandth volume of Baron Tauchnitz' well-known "Collection of British Authors." It consists of a review of English Literature, with special reference to the reign of Victoria, by Prof. Henry Morley. To this is prefixed a number of pages containing the photographed facsimiles of no less than 173 authors whose works appear in the Tauchnitz edition. So far as his task lay within the strength of any one man, Prof. Morley may be said to have achieved it. In giving a survey of books and the writers of them, as opposed to literature in the stricter sense of the term, he has shown an industry that can only be called marvellous. But we cannot think that he has been equally successful in the not less important duty of discrimination. He has compiled a book of reference, and not a critical study. For a book of reference an index is essential, and that is missing here. We had thought of making one or two other criticisms, but we should not like to scrutinise a memorial volume of this kind too closely. Its interest is greater than its value; and, when all is said, its actual value is great. We understand that Prof. Morley will be glad of any corrections in matters of fact to be communicated to him, for a new edition that will shortly be put into the press at Leipzig.

Two more volumes of the "English Citizen" series (Macmillan) have reached us, and they more than confirm our opinion of the usefulness of the undertaking. A history of the *Electoral and Legislative*, condensed, as it must be, in a handbook of less than two hundred pages, abounds in detail; but Mr. Walpole has arranged his facts with considerable skill, and has contrived to retain the interest of the reader unabated to the end

of his labours. In some parts of his work—such, for instance, as those which relate to the successive additions to the peerage, and to the condition of the constituencies and the members before 1832—Mr. Walpole has overcome the difficulties of his task with conspicuous success. If he could but bring himself to omit all references to Ulysses, Hipparchus, Harmodius, and the rest of the Grecians whose names are so familiar to the readers of the *Daily Telegraph*, no other words than those of praise could be used of his labours. We doubt whether, in his remarks on the House of Lords in the reign of George III., he has done sufficient justice to the liberality of sentiment which marked its views on many subjects. We are sure that, in speaking of the "great majority of the electors" before the first Reform Bill as unbribed, he is expressing an erroneous opinion. The voters at Gattton and Harwich were, no doubt, so few in number, and so dependent, that it was unnecessary to bribe them; but in places like Penryn, Stafford, Honiton, and Canterbury, where the electors were more numerous, enormous sums of money passed from the candidates to their supporters. Mr. Fowle's little treatise on *The Poor Law* is a valuable summary of the various attempts which have been made, with increasing success, in the last forty years to grapple with the dangers of destitution. As a clergyman in one of the poorest districts of London, and a rector in a large rural parish of Oxfordshire, he has enjoyed unusual opportunities for seeing the Poor Law Acts in operation. The subject is necessarily less attractive to the general public than that which has been assigned to Mr. Walpole; but, as a history of remedial legislation in all countries against the dangers of extreme poverty, Mr. Fowle's volume is worthy of a wide circulation, especially among those who are charged with the duty of supervising the "workhouses" in the country. It is gratifying to find that the proportion of paupers in England has declined from seven per cent. in 1841 to three per cent. in 1880. Mr. Fowle believes, and probably with truth, that the system of outdoor relief, although seemingly economical, really tends to increase the number of paupers and to augment the national expenditure on pauperism.

*James T. Fields: Biographical Notes and Personal Sketches.* (Sampson Low.) The late Mr. Fields, of Boston, was known to a small circle of English men of letters as an amiable and accomplished publisher. During the sixty-five years of his active life he was brought into personal contact with many of the most eminent authors of his time; reasonable expectations might, therefore, be entertained that his reminiscences of them, and the promised "unpublished fragments" of their correspondence, would be both valuable and attractive. The reader will be disappointed. Beyond portions of Fields' own correspondence, and extracts from conventional epistles of condolence on his death from a few personal friends, the only correspondence furnished is by American authors of no European reputation. The cause of this dearth of interest is not difficult to discover. To the business of publisher Mr. Fields united the less lucrative occupation of authorship, and wrote a work styled *Yesterdays with Authors*. That book appears to have so thoroughly exhausted his material that the compiler of the present volume has had nothing of real importance left to transcribe. Nevertheless, even out of Mr. Fields' well-winnowed corn some few grains remain; and, although the editor of these hastily combined "fragments" has not arranged his unindexed book very artistically, the persevering reader will find a few interesting paragraphs about Walter Savage Landor, Dickens, Hawthorne, Joseph Severn (the friend of Keats), and others of less note.

*A Son of Belial.* By "Nitram Tradleg." (Trübner.) This entertaining book is a sketch of the religious development of "Nitram Tradleg," formerly scholar of "Belial" College, "Bosphorus." It relates how he was born and bred a Baptist, reared in the strictest Calvinistic orthodoxy, and with many struggles passed from the creed of his childhood through the Established Church, in which, for a few months, he held a curacy, to the left wing of Unitarianism. The autobiography leaves Mr. Tradleg a Unitarian minister of advanced views, conscious of still unexhausted possibilities of rebellion in his soul, and wondering where he will ultimately arrive. He writes with obvious sincerity, and with reverence for the views he has felt compelled to abandon; while his volume is the more interesting as it treats the well-worn questions not controversially, but in their personal relation to the author. It must be said that, while several well-known "Bosphorus" men figure in the book under disguises which no one can fail to penetrate, at least one living person is thus introduced somewhat irrelevantly, and treated with an ill-nature which is the more to be regretted as it jars with the general tone of a genial and amusing volume.

*Irresponsible Philanthropists:* being Some Chapters on the Employment of Gentlemen. By E. Genna. (Kegan Paul, Trench and Co.) We know nothing of the authoress of this little book, nor of the Telegon School with which she is connected, beyond what she herself has made public. But her object is so thoroughly practical, and her style so simple and direct, that we should augur favourably of any work which she might undertake. She regards philanthropy as work, and sets about it in a thorough business-like way. The gentlemen whom she desires to assist are made partners in trade, and not recipients of charity. They are taught how to turn their industry to the best account, and to expect for it the full market value—neither more nor less. On this—the only sound basis—her scheme of a Work Society is founded. Its after-management must, if it is to gain success, be marked by patience and shrewdness, as well as by sympathy and warmth of heart. We commend this outspoken brochure to the many who, with the best intentions, have failed in their efforts to do good because they were only "philanthropists in a parenthesis."

*Convalescent Cookery.* By Catherine Ryan. (Chatto and Windus.) This little volume, with its cheerful cover, clear type, and convenient form, may be safely commended to the attention of those who, with limited means, and still more limited experience in the culinary art, find themselves in charge of the sick or convalescent. It contains many good, and even appetising, receipts, with minute directions for their preparation. But in our opinion the chief merit of the book lies in the fact that the authoress has probed to their depths the ignorance and inexperience of the class for whom she writes, and has then conscientiously begun at the beginning and adapted her hints to the needs of such persons. The earlier chapters are, from this point of view, specially instructive.

*Poetry for the Young.* A Graduated Collection in Four Parts. Complete in 1 vol. (Griffith and Farran.) We always welcome these "poetical readers," and turn over their pages in a friendly spirit, looking for our old favourites. The present collection seems to us the best of its kind that we have come across. It errs, as they all do, by giving too much space to the contemporary poets of America, in whom even an English child will find echoes of his own countrymen. But it is unusually rich in long pieces, such as those from Shakspeare and Milton; and we are specially glad to notice

some selections from Mr. Browning. It is excellently printed, both as regards type and accuracy. The worst misprint we have noticed is "Heracleidon" (p. 307), which is perversely reproduced in the notes. Of the notes generally we are not able to say anything good. To state that the incident described in Mr. Whittier's well-known poem of "Barbara Fritchie" took place "during the American War of Independence" is a blunder that suggests even more than it expresses. The Index, also, of first lines is awkwardly arranged according to the four parts of the book.

*Birchington-on-Sea and its Bungalows.* By Athol Mayhew. (Batsford.) The main object of this little book being apparently an advertisement of houses built at Birchington, it scarcely comes within the province of the ACADEMY to review, though one cannot help expressing admiration both of the elevations and plans of the bungalows. "If you live in the country, live in a cottage," says one of Miss Austen's characters; and, if you live at Birchington, live in a bungalow, say we, especially if it is true that they are "easy as to price." The value of the book really consists in an Appendix by Mr. Kershaw, of Lambeth Library, which visitors to Thanet of antiquarian or artistic tastes will find very useful. Indeed, they could have no better guide than one whose acquaintance both with the history and the architecture of the county is so extensive. Mr. Kershaw has, however, missed the point of the explanation of the saying about Tenterden steeple being the cause of the Goodwin Sands, which is that the "scotts," for the defence of the Sands when they were dry land, were diverted to the building of the steeple, and consequently the sea-walls were left to get out of repair. It is not, perhaps, generally known that Mr. Kershaw is making a collection of books and drawings illustrative of the history and topography of Kent, at Lambeth, for the use of the public, where he is always ready to welcome anyone who wishes to see the collection, and, still more, any contributions to it.

*Four-handed Chess.* By Capt. George Hope Verney. (Routledge.) The game described by Capt. Verney is probably an amusing adaptation for society of the scientific game from which it takes its moves. It is clear, from the description and rules given by the author, that it cannot in itself be a scientific game; and, if played scientifically by all the opponents, must in its nature end in perpetual drawn games—a fact which would restrict its sphere to enjoyment only by players prepared to give and take amusement from the perpetration and punishment of palpable blunders. The fact that Pawns can only Queen by a triple capture of the opponents' pieces takes such promotion out of the category of results to be played for, and, as a consequence, prevents the possibility of winning by that minute advantage of force and position which turns the scale of victory in real chess. This fact must be an essential drawback to the beauty of the four-handed game; but it may afford amusement as a sociable pursuit, and may easily be practised by any four players, acquainted with the moves of chess, from the description given in Capt. Verney's little book.

#### NOTES AND NEWS.

PROF. A. H. SAYCE has returned to Oxford from his winter's tour in Egypt; but we regret extremely to announce that his health has not been benefited thereby.

MR. J. A. SYMONDS is engaged in printing a collection of 150 original sonnets. Of these, five only have been previously published—three in Mr. Hall Caine's *Sonnets of Three*

*Centuries*, and two in the *Cornhill Magazine*. The volume will be similar to Mr. Waddington's two books of English Sonnets, and will be called *Vagabunduli Libellus*.

WE understand that Messrs. Macmillan and Co. have in preparation a reprint of the *Essays of Elia*, edited, with Introduction and notes, by the Rev. Alfred Ainger, whose volume on Lamb in the "English Men of Letters" series will appear next week.

MR. QUARITCH is about to publish a Catalogue of unusual character, but singularly interesting by reason of its contents. It comprises the literature of fiction—not including any of the countless novels and romances which have flooded the reading world during the last century—from its earliest appearance in the form of apoloques and fables down to the sentimental absurdities of the seventeenth century. The collection is especially rich in romances of chivalry, classified under the headings of "Arthur," "Charlemagne," "Spanish," and "Unaffiliated." Some new and daring etymologies are proposed in the notes relating to the Brito-Norman romances, among which we may mention the suggestion that "Arthur" is not the Welsh *Arth* or Latin *Arcturus*, but a Pictish or Gaelic *Ard-tur*, meaning Captain, Archidux, or Imperator; the assertion that "Lancelot" is simply a corruption of the Welsh *Lancelloc* (thirteenth-century form of *Llanc y llwch*), and means "the Childe of the Lake;" that "Perceval" is to be identified with *Pyr-cy-fuel* = "Foremost Companion." There are two Arthurian MSS. described in the Catalogue, the famous Perkins MS. of Lydgate's *Steye of Troy*, several unique printed books, the first edition of *Don Quixote* (Louis XIII.'s copy), a copy of the St. Albans Chronicle (among the prolegomena of the Arthurian section), Robert Redborne's edition of *Arthur of Little Britain*, the first edition of the Chronicle of the Cid, and a surprising number of other books no less remarkable for their rarity or intrinsic value—not the least of which is the Valdarfer Boecaccio recently acquired by Mr. Quaritch at the sale of the Sunderland Library.

MESSRS. HURST AND BLACKETT will shortly publish a collection of sketches by the author of *John Halifax*, called *Plain Speaking*. Miss Hay's new novel, *Dorothy's Venture*, will be published during the coming month, by the same firm, in three volumes.

MESSRS. A. H. GOOSE, of Norwich, will shortly publish by subscription a "History of the Parishes of West and East Bradenham, with those of Necton and Holme Hale, in the County of Norfolk," by Mr. G. A. Carthew, author of the *History of the Hundred of Lounditch*. The work will comprise details of topography, archaeology, genealogy, and biography; and it will be based upon original research in public records, court rolls, wills, and parish registers, as well as upon private sources of information. Additional value will be given to the book by an introductory essay from the pen of the Rev. Dr. Jessopp. The edition is limited to one hundred and thirty copies, at a subscription price of one guinea.

MR. DAVID SINCLAIR, one of the masters of the Wigan Grammar School, has written a History of Wigan, which will be published in two quarto volumes early this year. It covers the period from the Roman settlement to nearly the close of the eighteenth century, with special reference to the earlier portion.

MISS BETHAM-EDWARDS' novel "Fore-stalled" is being translated into French by M. Henri Tripard. The same translator has just published in the *Revue britannique*, "A

Japanese Bride," also by Miss Betham-Edwards, and is busy on translating for that periodical her "Exchange no Robbery," now appearing in *Fraser's Magazine*.

WE understand that a serial issue of Cassell's *Book of Sports and Pastimes* is to be published in sixpenny monthly parts. The first number will be issued on March 27, and the work will be completed in fifteen parts.

MR. KARL BLIND'S "New Finds in Shetlandic and Welsh Folk-Lore" (Nix, Mermaid, Water-horse, Fish, and Cat Stories) will appear in the forthcoming number of the *Gentleman's Magazine*, containing many tales living in oral tradition, recently discovered through his enquiries among the people, which will be shown to be survivals from an old Teutonic creed.

MR. WILLIAM ANDREWS, the hon. secretary of the Hull Literary Club, has in the press a new work entitled *Typographical Curiosities*, which will include an historical account of printing in the past and present time.

SOME curious facts about "Serpent Worship," past and present, including the practices of our early British ancestors, will be related in a paper on that subject which we understand is to appear in the *Quiver* for March.

MR. THOMAS BURT, M.P., will contribute a paper on the "Tyneside Collier at Work and at Home" to the forthcoming number of *Cassell's Magazine*.

MR. W. G. FRETTON will contribute to Mr. Walford's new monthly—the *Antiquarian Magazine and Bibliographer*—a paper on "The Old Cross at Coventry;" and in the same publication, at an early date, will appear an important paper on "Jocular Tenures" by Mr. T. Broadbent Trowsdale.

MR. J. WILTON JONES is writing, for simultaneous publication in a limited number of provincial papers, a series of tales under the title of *Stage Stories*. Mr. Jones is the author of several successful dramatic pieces, and is a well-known contributor to the magazines.

MR. ISAAC BINNS, the borough accountant of Batley, compiler of *Annuity Tables*, has issued in booklet form an important letter on *Sinking Funds under the Local Loans Act of 1875*.

WE understand that Mr. Joseph Hughes will publish, on the 25th inst., a new illustrated school magazine, entitled *The Scholar*.

MR. ERNEST RADFORD has remarked another instance of Mr. Browning's subtle sympathy with Art—this time with the architect, not the painter as in the case of his "Andrea del Sarto." In his fine tragedy of "Luria," Mr. Browning, led, doubtless, by some unconscious feeling that the lines of the Duomo at Florence would lend themselves to orientalising, made Luria, the noble Moorish general who led the army of ungrateful Florence, symbolise his commandship by a sketch of the unfinished Duomo, and "how a Moorish front might join to, and complete, the body." And Braccio, the Florentine spy on Luria, says:

"I see—

A Moorish front, nor of such ill design."

Now Mr. Radford, when in Florence, found in the little visited museum called Opera del Duomo—which contains models and plans relating to the cathedral of all times, from Arnolfo till now—an actual elevation of the Duomo completed by a Moorish front. It is needless to say that Mr. Browning had never heard or dreamt of his Moorish drawing. But an Eastern tradition survived in Arnolfo when, late in the thirteenth century, he made

his first plan of the Duomo; and the later architect who planned the Moorish front to it was but consciously guided by the same feeling that was working unconsciously in Mr. Browning when he, by instinct, symbolised the leadership of the Moorish general by his imagined sketch of the Moorish front to the Florence cathedral.

OUR note last week about the successes gained in recent examinations by natives of India failed to do complete justice. Mr. S. Sathianadham, besides being a junior optime, also took second class honours in the moral science tripos, being the first Indian student who has obtained double honours at either Oxford or Cambridge. Mr. Pieres, of St. John's, who is a native of Ceylon, came out first class in the law tripos. Also, as regards the Royal Agricultural College, Cirencester, we are informed that Mr. Hossein, besides standing first for the second scholarship at the last December examination, was first in his class in agriculture at the August examination; and that Mr. Sen, another Indian student, was first in his class for inorganic chemistry in August, and at December obtained the full marks for chemistry.

WE are asked to state that the University College School "Old Boys" dinner will take place on Tuesday next, February 21, at the St. James's Hall Restaurant. Arthur Charles, Esq., Q.C., will preside.

THE Clifton Shakspeare Society is devoting both its meetings this month to criticism of the Poems and Sonnets. At the meeting on the 11th the following communications were given:—"The Poems," by the Rev. H. P. Stokes; "Venus and Adonis," by Mr. C. P. Harris; and "Lucrece," by Mr. J. H. Tucker. The Sonnets will be more particularly considered at the meeting on the 25th.

MESSRS. SOTHEYBY will sell a very important collection of autographs and other literary documents on February 27-28. Among the autographs are a letter from Garrick, repudiating any intention of mimicking George III.; two letters, each of three pages, from Nelson to Lady Hamilton; a letter of Burns to Mrs. Dunlop; a letter of Poe, specimens of which are very rare in this country; and a promissory note of John Locke. There are also rough draughts in the handwriting of Moore of *Lalla Rookh*, the *Life of Byron*, the *Epicurean*, &c., two of Moore's MS. Commonplace Books; and a volume of memoranda for future comedies by Sheridan. A series of sixteen Scottish documents on vellum, dated from 1195 to 1762, will be included in the first day's sale.

HERR MOHR, of Freiburg and Tübingen, has just published a reprint, in form and type closely resembling the original, of the fragment of Goethe's *Faust* published in 1790. Some critical remarks are appended by Prof. W. L. Holland, of Tübingen.

THE German association of spelling reformers has taken the practical step of publishing the first of a series of classical native authors in the new orthography.

THE court of the Landgericht of Posen, in Prussia, has issued a decree confiscating all the copies of a German translation of M. Zola's *Nana*; the *Faute du pasteur Mouret* is included in the same condemnation.

THREE years ago the Pestalozzi-Stübchen was founded at Zürich. This institution has as its aim the collection of MSS., books, pictures, and other memorials relating to Pestalozzi and the band of disciples and helpers connected with the great pioneer of pedagogy. The first number of the *Pestalozzi-Blätter*, issued last month, contains a report of the progress of

the institute during the year. It has received two legacies in money, and numerous gifts in kind, including autographs, portraits, views, and editions of Pestalozzi's writings. It is in possession already of 200 portraits of famous pedagogues, Swiss and foreign.

WE take from the *Enria* the following statistics of the University of Athens for the year 1880:—The total number of students was 2,030, being in law, 908; medicine, 728; arts, 315; theology, 49. Of these, 1,449 were natives of Greece, and 581 came from Turkey and other foreign countries. The income of the university was 287,000 drachmas (£11,000); the expenditure, only 174,000 drachmas (£7,000); the endowments amounted to a capital sum of five million drachmas (£200,000).

AT a recent meeting of the Historische Verein of St. Gallen, Herr Goldli gave a lecture upon the "Nikodemites of Schwyz," a group of persons who were the object of some interest to Oliver Cromwell, and are frequently mentioned in the letters of his agents in Switzerland to Secretary Thurlow. The title "Nikodemiten" was used in the Protestant cantons to describe certain organised bands of fellow-sympathisers in the Catholic cantons, who conformed outwardly to the public worship of their parish churches, but held Protestant meetings in secret. From the date of Zwingli's death until the middle of the seventeenth century, the Nikodemites handed down their traditions without being discovered. Their head-quarters was in Arth, on the Lake of Zug, at the foot of the Rigi. While Dr. John Pell and John Dury were in Zürich, and Sir Samuel Morland in Geneva, the government of Schwyz proceeded against these Crypto-Protestants, executed four of them, and imprisoned others. The remainder fled to Zürich, which canton demanded that Schwyz should restore the confiscated property of the fugitive heretics. The refusal of Schwyz to comply with this demand was the cause of the outbreak of the first Villmergen War. Herr Goldli's lecture was illustrated by many original documents from the archives of Luzern, Zürich, and Schwyz, collected by Herr Denier, of Arth. The lecture, with Herr Denier's notes, will appear in this year's *Geschichtsfreund*.

THE first part has been published (Brussels: Weissenbruch) of the *Bibliographie nationale de Belgique*, which will be one of the permanent results of the jubilee of Belgian independence. It is intended to be a list of all the works published by Belgians—whether at home or abroad, whether in separate volumes or in periodicals, whether original or translations and editions—between the years 1830 and 1880. The editors are a committee of three, among whom is M. Charles Ruelens, Keeper of the Bibliothèque royale.

PROF. J. J. THONISSEN has published an important work (Bruxelles: Hayez) upon the Salic Law, with special reference to its code of criminal procedure. He has prefixed an Introduction upon the classes of the population mentioned in the text.

THE *Rassegna Settimanale*, a weekly journal published at Rome, and founded in 1878, to which we have been indebted for many notes on Italian literature, has been merged in a daily paper—*La Rassegna*.

OUR learned contributor Dr. Buddensieg, of Dresden, writes that he has been fortunate enough to discover in the Studien Bibliothek at Olmütz a Wiclif MS., hitherto unknown, containing no less than six Wiclif tracts, none of which is preserved in any English library. He also noticed a *Chronica Britannica*, which, from the character of its splendid ornamentation, appeared to belong to the middle of the thirteenth century.

MESSRS. SAMPSON LOW have sent us the last addition to their series of "Standard Six-Shilling Novels"—Mr. Thomas Hardy's *Far from the Madding Crowd*; and Messrs. Longmans a popular edition of Whyte Melville's *Kate Coven-try* in their "Sunbeam" series. As to the latter book, we should have been quite content if it had never got cheaper than the more appropriate yellow cover.

#### FRENCH JOTTINGS.

THE first volume has appeared (Paris: Morgand et Fatout) of the work entitled *Continuateurs de Loret*, which Baron James de Rothschild was preparing for the press at the time of his lamented death. It contains 138 "news-letters," if we may so call them, arranged in chronological order, covering the period from May 1665 to June 1668. In one of these an interesting account is given of the four days' battle between the English fleet under Albemarle and the Dutch under Ruyter, in June 1666, off the North Foreland. Five more volumes of the series are to be brought out, under the editorship of M. Emile Picot.

M. CALMANN LEVY has ready, in two volumes, the journal of Dr. P. Mérière, the physician appointed by the French Government to attend on the Duchesse de Berry, giving many particulars of her captivity at Blaye in 1833. The journal is edited by the son of the writer, and contains two unpublished letters of Balzac and Marshal Bugeaud.

M. ERNEST DAUDET, brother of the celebrated novelist, Alphonse, and himself a writer of repute in all that relates to the recent history of Southern France, has just published (Paris: Hachette) a little work on the Restoration, which is to be followed by another entitled *La Réaction thermidorienne dans le Midi*.

M. ALPHONSE BERTRAND, secrétaire-rédacteur to the Senate, has published (Paris: Quantin) a little book on the organisation of the French system of government which would, we venture to think, bear translation into English. It gives a succinct account not only of the two chambers, their procedure, and their electors, but also of the local administration by prefects, councils-general, and municipalities.

THE first volume has appeared (Paris: Plon) of the *Discours parlementaires* of M. Ernest Picard, with a Preface written by the late Jules Favre in May 1877. It covers the period from February 1861 to May 1863; and it bears for its sub-title "Les Cinq," in memory of the five members of the Opposition at that time—MM. Darimon, J. Favre, Emile Ollivier, Hénon, and Picard himself.

THE committee of historical studies in France, which includes the names of MM. Q. Quicherat, Georges Picot, A. de Barthélemy, Darmesteter, and Fustel de Coulanges, has issued the first number of a *Répertoire des Travaux historiques*, which it is proposed to continue quarterly. It contains an analysis of all the publications that have appeared at home or abroad concerning the history, monuments, or language of France. First come the proceedings of the Institute and of provincial societies; then articles in French and foreign Reviews; lastly, books and pamphlets.

THE second part has appeared (Paris: Picard), after an interval of nearly three years, of the important Catalogue of the MSS. in those libraries of France which have never yet printed their catalogues. This part deals with the Bibliothèque de l' Arsenal and a great many provincial libraries. It is hoped that by this means the existence may be discovered of some valuable MSS. which have disappeared.

WE learn from *Le Livre* that M. Michel

Cohendry, archivist of the Puy-de-Dôme, has discovered an important series of letters of Catherine and Mary de Medicis, of Louis XIII. and Louis XIV., and sixteen autograph letters of Margaret of Valois.

M. JOUAST, the enterprising conductor of the Librairie des Bibliophiles, has started a new series under the title of "Bibliothèque des Dames," by which is meant a collection of classical works, by writers of either sex, for lady readers. The first two of the series were M. Legouvé's poem, *Le Mérite des Femmes*, and *La Princesse de Clèves*, by Mme. de La Fayette, with a Preface by M. de Lescure. These have been followed by Mme. d'Aulnoy's *Contes des Fées*, in two volumes, each containing an etching by M. Lalauze. The edition is limited in number, printed on Dutch paper, and elegantly bound in colours.

THE last addition to the "Petite Bibliothèque artistique" of the same publisher is an edition of Rousseau's *Confessions*, in four volumes, with a Preface by M. Marc-Monnier, and illustrations by M. Hédouin. The price is fifty francs.

THE new volumes (ii.-v.) of the "Collection of Popular Literatures" published by Messrs. Maisonneuve are *Christian Legends of Lower Brittany*, by M. G. F. M. Luzel; *Popular Tales of Ancient Egypt*, by Prof. Maspero; and the first portion of *Popular Poems of Gascony*, by M. F. Bladé.

M. ALBÉRIC ROLEN, of Ghent, secretary to the Institut de Droit international, has just published (Paris: Pedone-Lauriel) a French translation of Mr. David Dudley Field's *Proposed Code of International Law*.

TAKING advantage of the Concours régional of Agriculture being held there, the Société Borda of Dax has put forth an invitation to a Congrès scientifique on May 1, 1882, and the following days. The programme embraces researches in the neighbourhood, and invites papers on the meteorology, geology, natural history, anthropology, archaeology, and history of South-western France. On the last-named subject we may cite question 51: "Du parti que l'on pourrait tirer pour l'histoire du pays des textes originaux qui se trouvent à la Tour de Londres et notamment de ceux qui ont été déjà publiés."

#### ORIGINAL VERSE.

BY THE SEA.

I.

THERE is a busy stillness in the air,  
As in a Poet's brain—silent and dark,  
Albeit it drinks the rain notes of the lark,  
And reads God's pictured gospel everywhere;  
The breeze faints like a breath of silent prayer;  
Without a sound the clouds move to their mark,  
Demure, white-hooded nuns; and one white bark  
The patient seas doth with its image share.

'Tis with me too, this reverie of power  
As of divinity within me furled:—  
If, for a Man, his manliest thought sufficed!  
If but, for Life, the living of one hour  
As purely great as this—Yea! weary world,  
Lives would be pure then as the Dreams of Christ!

II.

The Dreams of Christ! When Lazarus was dead,  
Did these betray the Tear that still would spring?  
Was Mary's sister-love too poor a thing  
To make a sleep-crown for that Sovereign Head?—  
Once! Once—so let me think—'twas hallowed  
In vision of the last lone suffering,  
And 'twas her arms that round His Feet did cling,  
To make the Shame seem almost less to dread.

So might He glorify her earthly love,  
A smile like moonlight on his pale, pure lip,  
Till in the dark He woke to Fellowship  
With the Eternal Questioner above,  
And awful waking dreams divinely trod  
Far footsteps of the Imagination of God.

ERIC S. ROBERTSON.

Meatone,

#### OBITUARY.

BERTHOLD AUERBACH.

IN Berthold Auerbach, who died at Cannes on February 8, Germany lost the greatest master of fiction she has yet produced. Auerbach was born at Nordstetten, a village in the Black Forest, in the kingdom of Württemberg, on February 28, 1812. He was of Jewish parentage, and received his earlier education at the Rabbinical school of Hechingen. He seems to have been intended for a legal career, for we find him, after his school-days were over, studying law at the University of Tübingen. Acting, it is said, under the influence of David Strauss, the young Auerbach soon gave up all idea of following the law, and devoted his energies to philosophy and theology, which he studied first at München under Schelling, and afterwards at Heidelberg under Daub. His literary career may be said to have commenced in 1836, when he gave to the world an essay on the relation of Judaism to modern literature. The following year saw the first novel published by Auerbach—*Spinoza* (Stuttgart)—a book full of pregnant reflections on philosophy and of interesting sketches of Jewish life. This informal treatise on the system of Spinoza was followed by a German translation of that philosopher's works, published at Stuttgart in 1841. But although these contributions by Auerbach to speculative philosophy possess a distinct value, it cannot be said that he has made by them an immortal name in literature. It is by his singularly graceful, and yet profoundly true, pictures of German peasant-life that he has earned the gratitude of readers of every civilised country in the world. As far back as 1841, Auerbach had begun to publish in different periodicals various tales descriptive of village life in the Black Forest; but it was not until these were collected into two volumes, published at Mannheim in 1843 under the title *Schwarzwälder Dorfgeschichten*, that Germany discovered itself the possessor of a writer who could invest the story of the life of common people with as much interest as ever attached to the fortunes of kings and princes. A second series of village stories appeared at Mannheim in 1848, but met with a cooler reception. To some extent this may have been due to the fact that this second instalment showed, if not any diminution of power, yet a certain want of the freshness which is one of the great charms of the earlier series. In 1865 Auerbach gave to literature a work of fiction of a more ambitious character than he had yet essayed. This book—*Auf der Höhe*, in which the philosophy of Spinoza once again plays a prominent part—is beyond doubt the best novel in the German language, but as a work of art it perceptibly suffers from the very fact of being a novel with a purpose. Two other novels followed in due course—*Das Landhaus am Rhein* (Stuttgart, 1869), a by no means happy work, in which the march of the story is hampered by dialogue upon social and philosophical topics; and *Waldfried*, a story of family life, less discursive than its predecessor, but sadly deficient in coherency of plot. It is pleasant to relate that Auerbach published in 1880 a tale of peasant-life, entitled *Brigitta*, in which he returned to his best manner, producing an idyll that may rank, in our opinion, beside the best of his earlier tales from the Black Forest. As a delineator of rustic life and manners, Auerbach displayed a genius which has no parallel in any other age or country—with the exception of William Carleton. The broad humour of the Irishman is replaced in the pages of Auerbach by a humour equally keen, but more subtle; perhaps for a sense of real pathos the palm must be awarded to the German. As a delineator of character in all its endless shades, no writer of fiction can pretend to surpass the author, of the *Schwarzwälder Dorfgeschichten*.

And while Auerbach could paint men and women with an accuracy which can never be excelled, his genial nature and poetic gift enabled him so to soften and harmonise the lines in his portraits as to avoid the harshness and crudity which must ever distinguish the work of the best photographer from that of the artist.

By a curious coincidence, an English translation of Auerbach's *Spinoza* reached us on the same day as the news of his death. It forms volumes xlii. and xliii. of Baron Tauchnitz' "Collection of German Authors," and is published in this country by Messrs. Sampson Low. The translation is by E. Nicholson. Some convenience would have been gained by binding the two volumes as one, for the book is really very short.

#### MAGAZINES AND REVIEWS.

IN *Macmillan's* for this month, Mr. Thomas Hughes gives an interesting account of Sir Simon Harcourt, who was owner of Nuneham in the seventeenth century. The account is compiled from a printed, but unpublished, selection from the documents at Nuneham; the samples quoted by Mr. Hughes show that the documents are of considerable historical value. Mr. Loftie has a paper on M. Maspero's discoveries at Thebes, which he judges to possess greater interest for the archaeologist than for the historian. Mr. Laing Meason records his own experience of "The French Detective Police;" and it must be admitted that the experience was very satisfactory, and contrasts very favourably with the inadequacy of our own provisions for the detection of crime. An article on Mr. Irving's lecture, "The Stage as It Is," administers a just rebuke to the exaggerated claims which Mr. Irving put forth on behalf of his own profession, and the roseate view which he took of his own performances. Mr. J. A. Symonds writes a paper containing much delicate criticism on "Mr. D. G. Rossetti's New Poems." His remarks on the requisites of the sonnet as a form of poetical composition are worth quoting:—

"To animate the whole microcosm of fourteen bars with a single thought, sufficient for its hemisphere, neither too vague in meaning nor too slight in substance; and so to organise this planet that the quatrains, with the sun upon them, shall present it from one point of view; the tercets, with the moon upon them, from another; that is the real difficulty of the sonnet-writer's art."

THE current number of *Brain* has a very ingenious article by Dr. Lauder Brunton on "The Position of the Motor Centres in the Brain in Regard to the Nutritive and Social Functions." Proceeding on the results of Prof. Ferrier's researches, he seeks to show that the motor centres in the monkey are arranged "in a definite order corresponding to that which would be necessary for the animal to obtain food." Thus, if they are successively irritated, the order of movements is—first, movements of the eyes and head as if the animal were looking for food, then the extension of the arm and hand as if to take it, and so on. Dr. Brunton also seeks to show that this order of centres answers to the priority of the individual or nutritive to the social functions. An article of more general interest is that on Dean Swift's disease, by Dr. Bucknill. The writer seeks to identify Swift's earlier disorder—recurring fits of giddiness, or vertigo, together with deafness—with what is known as Ménière's disease, or labyrinthine vertigo. It is now supposed that the sense of equilibrium is dependent on the labyrinthine cavity (semi-circular canals) of the ear, and that the derangement of the organ is one of the main causes of vertigo. The co-existence of deafness with vertigo in Swift's case supports the view that his complaint had its seat

in the auditory organ. The writer carefully distinguishes the later malady of Swift's life as insanity proper, which was favoured by the miseries of the earlier complaint, though not the direct result of this, through the extension of the local disease to the brain. The whole paper is well worth reading as showing how, notwithstanding Sir Walter Scott's protest, the diagnosis of a disease may be carried out much more completely years after the patient's death by aid of subsequent researches on contemporary cases. Dr. Bucknill is to be congratulated on showing, along with his exact professional knowledge, a fine sympathetic appreciation of Swift's genius, in the utterances of which he sees no trace of insanity.

THE *Deutsche Rundschau* for February is chiefly remarkable for a Russian story of Ivan Tourgenieff, "Der Verzweifelte," a pathetic picture of the aimless and wasted life of one endowed with great natural gifts. Herr Karl Hillebrand publishes an instalment of his French History, "The Beginnings of the French Republic, 1848." Herr Haackel describes "A Week in Bombay," but has nothing new to tell English readers. An article by Herr Preyer on "The Prolongation of Life" shows that sanitary science is beginning to make way in Germany, where it is even more needed than in England.

#### MR. THOMAS HARDY'S NOVELS.

WE quote, without comment, the following from two American newspapers—the *Nation* for January 19, and the *Critic* for January 28. It is only necessary to add that the passage from the *Quarterly* occurs in one of the well-known articles contributed by Mr. Charles Apperley, otherwise "Nimrod;" and that "Georgia Scenes: Characters, Incidents, &c., in the First Half-Century of the Republic," by a Native Georgian, is the full title of a book published by Messrs. Harper and Bros., of New York, in 1840. Except in this last case, we have verified the quotations.

##### "THE LAODICEAN," cap. v.

"He was the star, as I may say, of fashion forty years ago. . . . I can seem to see now the exact style of his clothes; it was always of a very light colour—a neat white hat, white trousers, white silk handkerchief; ay, and his handsome face, as white as his clothes with keeping late hours. There was nothing black about him but his hair and his eyes—he wore no beard at that time—and they were black indeed. The like of his style of coming on the race-course was never seen there before nor since. He drove his barouche himself; and it was always drawn by four beautiful white horses, and two outriders on matches to 'em, rode in harnesses bridles. In his rear was a saddle-horse groom leading a thoroughbred hack, and at the rubbing-post was another groom—all in splendid liveries—waiting with another hack. What a 'establishment' he kept up at that time!

##### "THE QUARTERLY REVIEW," vol. xlix., pp. 381, 382.

"The star of the race-course of modern times was the late Colonel Mellish, certainly the cleverest man of his day, as regards the science and practice of the turf. . . . We remember even the style of his dress, peculiar for its lightness of hue—his neat white hat, white trousers, white silk stockings aye, and we may add his white but handsome face. There was nothing black about him but his hair and his moustachios, which he wore by virtue of his commission, and which to him were an ornament. [The like of his style of coming on the race-course at Newmarket was never witnessed there before him, nor since. He drove his barouche himself, drawn by four beautiful white horses, with two outriders on matches to them, ridden in harness bridles. In his rear was a saddle-horse groom, leading a thoroughbred hack, and at the rubbing-post on

I can mind him, sir, with thirty race-horses in training at once, seventeen coach-horses, twelve hunters at his box t' other side of London, four chargers at Budmouth, and ever so many hacks. . . . So 'twas no surprise that the castle that bears his name passed into other hands. . . . 'Tis quite recently, since his illness, that he came to that little place, within sight of the buildings that once were the pride of his ancestors and himself."

##### "THE TRUMPET MAJOR," cap. xxiii.

"Men, I dismissed ye too soon—parade, parade again, I say," he cried. "My watch is fast, I find. Ther's another twenty minutes afore the worship of God commences. Now, all of you that ha'n't got fawlocks, fall in at the lower end. Eyes right, and dress!"

As every man was anxious to see how the rest stood, those at the end of the line pressed forward for that purpose, till the line assumed the form of a horse-shoe.

"Look at ye now! Why you are all a crooking in. Dress, dress!"

They dressed forthwith; but impelled by the same motive they soon resumed their former figure, and so they were despairingly permitted to remain.

"Now, I hope you'll have a little patience," said the sergeant, as he stood in the centre of the arc, "and pay particular attention to the word of command, just exactly as I give it out to ye: and if I should go wrong, I shall be much obliged to any gentleman who'll put me right again, for I have only been in the army three weeks myself, and we are all liable to mistakes."

"So we be—so we be," said the line, heartily.

"Tention the whole, then. Poise fawlocks! Very well done!"

"Please, what must we do that haven't got no firelocks?" said the lower end of the line in a helpless voice.

"Now, was ever such a question! Why, you must do nothing at all, but think how you'd poise 'em if you had 'em. You middle men, that are armed with hurdle-

the heath was another groom—all in crimson liveries—waiting with a second hack. But we marvel when we think of his establishment. We remember him with thirty-eight race-horses in training; seventeen coach-horses, twelve hunters in Leicester-shire, four chargers at Brighton, and not a few hacks! . . . We are not surprised that the domain of Blythe passed into other hands. . . . Colonel Mellish ended his days, not in poverty, for he acquired a competency with his lady, but in a small house within sight of the mansion which had been the pride of his ancestors and himself."

##### "GEORGIA SCENES."

"Look to the right, and dress!" They were soon, by the help of the non-commissioned officers, placed in a straight line; but as every man was anxious to see how the rest stood, those on the wings pressed forward for that purpose till the whole line assumed nearly the form of a crescent.

"Why look at 'em," says the captain; "why, gentlemen, you are all a crooking in at both ends, so that you will get on to me by and by! Come, gentlemen, dress! dress!"

This was accordingly done; but impelled by the same motives as before, they soon resumed their former figure, and so they were permitted to remain.

"Now, gentlemen," says the captain, "I am going to carry you through the *revolutions* of the manual exercise; and I want you, gentlemen, if you please, to pay particular attention to the word of command, just exactly as I give it out to you. I hope you will have a little patience, gentlemen, if you please: and if I should be a going wrong, I will be much obliged to any of you, gentlemen, to put me right again, for I mean all for the best, and I hope you will excuse me if you please. Come, boys, come to a shoulder. . . . Poise fawlocks! [A note appended here says: "A contraction and corruption of 'firelock.' Thus, 'firelock,' 'flock,' 'foolk.']] Cock fawlock! Very handsomely done. . . . Tention the whole! Please observe, gentlemen, that at the word fire, you must fire; that

sticks and cabbage stamps, just to make believe, must of course use 'em as if they were the real thing. Now then, cock fawlocks! Present! Fire! (Not shoot in earnest, you know.) Very good—very good, indeed; except that some of you were a little too soon, and the rest a little too late."

[Here the church bell began to ring for service, when the whole line drew a breath of relief, threw down their arms, and began running off.] "Well, then, I must dismiss ye," said the sergeant. . . . "Tention! To the right—left wheel, I mean—no, no—right wheel. Mar-r-r-oh!"

Some wheeled to the right and some to the left, and some obliging man, including Cripplestraw, tried to wheel both ways.

"Stop, stop; try again. Gentlemen, unfortunately when I'm in a hurry, I can never remember my right hand from my left, and never could as a boy. You must excuse me, please. Practice makes perfect, as the saying is; and, much as I've learnt since I listed, we always find something new. Now then, right wheel! march! halt! stand at ease! dismiss! I think that's the order o't, but I'll look in the Government book afore Tuesday."

is, if any of your guns are loaded, you must not shoot in earnest, but only make pretence like, and you, gentlemen fellow-soldiers, who's armed with nothing but sticks, riding-switches, and corn-stalks, needn't go through the firings, but stand as you are, and keep yourselves to yourselves. *Half cock foolk!* Very well done.

. . . Draw rammer! Those who have no rammers to their guns need not draw, but only make the motion; it will do just as well, and save a great deal of time. . . . *Order foolk!* Handsomely done, gentlemen! Very handsomely done! And all together, too, except that one half of you were a little too soon, and the other half a little too late. . . . *Tention the whole!* To the left—left, no—right, that is, the left—I mean the right—left wheel, march!"

In this he was strictly obeyed; some wheeling to the right, some to the left, and some to the right-left, or both ways.

"Stop! Halt! Let us try it again! I could not just then tell my right hand from my left! You must excuse me, if you please. Experience makes perfect, as the saying is. Long as I have served, I find something new to learn every day; but all's one for that. Now, gentlemen, do that motion once more."

## CORRESPONDENCE.

### THE PYRAMID OF MEYDOOM.

Westbury-on-Trym: Feb. 11, 1882.

Readers of the ACADEMY will, I think, receive with pleasure some further information regarding the Pyramid of Meydoom. I therefore hasten to communicate the following extract from a letter just received, the writer being the Hon. J. Villiers Stuart, author of *Nile Gleanings*:

"The other day I visited Meydoom. The pyramid has now been cleared down to the level of the desert, to which it descends in a series of great steps of beautifully fitted masonry of fine white limestone. The joints are so close that it is often difficult to trace them. It is, in fact, more like cabinet-maker's work than mason's work. It must have been covered up from the remotest times, as it looks quite new towards the base. You would say it was but just finished. It comes next in size to the Pyramids of Ghizeh. The central chamber is tent-shaped. That is to say, the walls incline inward toward the roof, so as to reduce the span, and better enable it (the roof) to bear the enormous superincumbent weight. There were found in this chamber some pieces of timber, which seem to have been used to remove some heavy weight, perhaps the sarcophagus. It is, however, possible that, as in the case of the Pyramids of Ghizeh, there may be another chamber in which the sarcophagus still exists.

"When I last saw Prof. Maspero, he seemed to doubt whether this was really Seneferoo's pyramid; but within five minutes' walk of the pyramid I discovered an inscription which conclusively proves that it is indeed the pyramid of that Pharaoh. The inscription occurs on the right-hand top corner of the tomb of Nofre-Maat. It reads SENEFEROO MEN-TE, i.e., 'the resting-place,' 'abiding-place,' or 'cemetery,' of Seneferoo. There is no context, and never has been any. The stone is quite uninjured; and the purpose of the inscription is to designate the locality in which the tomb is situated. It might be translated 'monument,' or 'pyramid,' of Seneferoo, the name of which would attach itself to the adjoining cemetery. The hieroglyphic spelling of Men-te (being the sign *Men* without the supplementary *n*) is very archaic. The inscription was probably cut during Seneferoo's lifetime. The reason why I failed to observe this important and interesting inscription on previous visits is that it is very high up; but the tomb of Nofre-Maat is now nearly filled with rubbish, which enabled me to mount close up to the hieroglyphs, and to examine them thoroughly. I saw the oval before, and figured it in *Nile Gleanings* (p. 33), but, not having an opera-glass with me, I overlooked the context. I have written to Prof. Maspero to tell him about it."

The inscription, copied in hieroglyphs by Mr. Villiers Stuart, consists of Seneferoo's name in a royal oval, under which, placed vertically, occur the ideographic sign *Men*, a battlemented wall, and the phonetic sign *t*, an inverted basket. But in order to complete the word as given by Birch, Brugsch, and Pierret, not merely the supplementary *n* (a zigzag) is wanting, but also the determinative hieroglyph, a funeral couch, or bier.

I regret to have to add that, at the time of writing the foregoing letter, Mr. Villiers Stuart informs me that he was suffering severely from a fall down a shaft twenty feet in depth. He has, however, escaped without serious injury.

AMELIA B. EDWARDS.

### SPANISH AND PORTUGUESE "-EZ," "-ES."

6 Norfolk Terrace, Bayswater, W.: Feb. 11, 1882.

The Basque casual suffix *-ez* (*-es*), existing in a great number of Spanish and Portuguese patronymic names, as *Henriquez*, *Lopez*, *Martinez*, &c., is not, as Mr. Burnell supposes, the only trace of the kind in these two languages (see ACADEMY of February 11, 1882). Although Basque and Spanish belong to different classes of languages, the first being agglutinative and the second inflectional, yet a certain amount of Basque influence over the Spanish language is undeniable. So, for instance, the Basque diminutive terminations *-ito* and *-ito* (this last in the dialect of Roncal means "little, small," even in its isolated state) correspond in meaning and very nearly in form to the Spanish diminutive termination *-ito*, to the Galician *-iño*, to the Portuguese *-inho* (pronounced *iño*); and yet such diminutive terminations do not occur in Latin. Instances are—Spanish, *perro*; Galician, *can* (*cá*); Portuguese, *cão*; Basque, *chakur*, "dog," the diminutives of which are *perrito*, *cancinho*, *cãozinho*, *chakurchito*, and, according to other Basque dialects, *chakurtito*, and even *chakur iño* in Roncal, while in Latin *canis* gives *catellus* and *catulus*. Basque and Spanish pleonasm, in such phrases as *nik esan nion Pedrori*, "yo le dije á Pedro," or literally "ego dixi ei Petro," instead of the correct Latin "dixi Petro," shows a Basque or at least a non-Latin origin of the Spanish example. Again, the so-called compound tenses of the transitive Spanish verb, which do not exist in ordinary pure Latin (I don't mean Latin influenced by non-Aryan grammar), but are so frequent in Basque, Spanish, and Portuguese, as well as the Basque postpositions, ordinary suffixes, and casual suffixes, corresponding to the Spanish and Portuguese prepositions, and very different from the true inflectional Latin cases, indicate rather a Basque or non-Latin than a Latin influence. Such an influence, after all, is nothing to be wondered at in two languages belonging, it is true, to the Latin branch, but which, at the same time, are spoken in a country where Basque has been used from time immemorial; and, when this influence shows itself in proper names (which resist foreign or modern intrusive forms more than common names generally do), or, as a general rule, when a grammatical fact cannot be well and naturally explained in Spanish by the ordinary laws of the Latin grammar, then, in such exceptional cases, Basque may be, or rather ought to be, preferred to Latin for the explanation of Spanish derivations.

Now, the suffix *-ez* (*-es*), with the meaning of Spanish and Portuguese "de," does not belong certainly either to Latin or to the Neo-Latin dialects of Italy, France, Belgium, Switzerland, and Wallachia, but only to Spanish and Portuguese, two Neo-Latin dialects of the Spanish peninsula where Basque is still spoken, and was spoken before their existence. It seems, then, to me very clear that Capt. Burton is

right in following the opinion of the learned Jesuit, Father Manuel de Larramendi, who, not only in his celebrated *Diccionario Trilingue del Castellano, Bascuense, y Latin* (a work in comparison of which all subsequently printed lexical performances are, without any exception, nothing more than despicably abortive attempts), but also previously in his *El Imposible Vencido: Arte de la Lengua Bascongada*, printed at Salamanca in 1729, expresses himself in these terms at p. 10:

"De aqui se puede conocer facilmente, que no tienen otro origen los patronimicos castellanos acabados en *ez*, v.g. Rodriguez, Martinez, Perez, Sanchez, etc., que el que se toma del articulo *ez* del Bascuense. La razon es, por que esos patronimicos significan el *de*, que traen comunmente los demás apellidos, Rodriguez de Rodrigo, Martinez de Martin, Perez de Pero, o Pedro, Sanchez de Sancho y assi de los demás. Pues es claro, que el *ez* en essa significacion no puede ser sino el articulo pospuesto *ez* del Bascuense, que en Romanze se construye con el *de*."

With regard to the explanation, followed by Reinhardtstötner, of *-ez* (*-es*) by the Gothic genitive *-is*, it does not seem to me preferable to that of Larramendi. In fact, why is this Gothic genitive *-is* not to be found in the dialects of Italy, where the Gothic language has not been less in use than in Spain? Because there Basque is not known, while it is known in this last country.

L.-L. BONAPARTE.

PS.—I cannot agree with Mr. Burnell in his appreciation of Reinhardtstötner's Portuguese grammar. The qualification of "best scientific" cannot belong, in my opinion, to a work which has been so well criticised by Prof. d' Ovidio at p. 118 of the third volume of the "*Giornale di Filologia Romanza*," diretto da Ernesto Monaci (Roma, 1880)."

#### THE ARABIC FOR "TELEGRAPH."

London: Feb. 8, 1882.

I see from a notice in one of the London journals that Mr. H. Rassam enlightened the audience at the last meeting of the Victoria Institute by giving them some novel information on the above subject. The Arabs, it appears, fully appreciate the value of the electric telegraph—so much so, indeed, that, unlike the rest of the world, they dispense with the Greek derivation of the word, and substitute a native equivalent, equally, if not more, expressive. Although the combined name is not given, its component parts are. *Tel*, we are told, means "wire," and *Araph*, "to know or expound;" hence, "to know by wire," or "to obtain knowledge by wire," is the Arab's explanation of the telegraph recently laid down in the East.

Those who are unacquainted with Arabic may readily be excused for considering the foregoing as a most remarkable and ingenious specimen of etymology. But, unless the lecturer was playfully practising on the credulity of his audience, it discloses an amount of ignorance which would disgrace the most raw and illiterate Arab. Admitting that *Tél* (the classical word for "hemp" of which ropes are made—a word probably Arabicised from the Persian *Tîlâ*, "a rope") has in the vernacular changed its form into *Tél* or *Tail*, and in vulgar parlance is used to signify "wire;" admitting, further, that *arafa* means "to know," or rather "he knew" (albeit never "to expound")—by what rule of grammar, or even of vulgar usage, does Mr. Rassam make the two isolated words "wire" and "to know" convey the idea either of "to know by wire" or "to obtain knowledge by wire"? *Tél 'arráf*, or *at-Tél-al-'arráf*, might fairly be rendered "the wire which gives information." In reality, however, the Arabs are not chargeable with the absurdity attributed to them. Formerly they called the telegraph

*Silku-'l-Ishdrâh*, "the wire of indication." That term, however, has been superseded for years past by the word *at-Tilighrâf*, which is a simple transliteration of the Greek word common throughout Europe. The word is so vocalised in the *Muhîtu-'l-Muhîr*, and used in every Arabic newspaper now published. It is to be regretted that slipshod essays in etymology like that above pointed out should be foisted upon an intelligent English audience.

GEORGE PERCY BADGER.

#### IDENTICAL NAMES IN LITERATURE.

München: Feb. 13, 1882.

Will you allow me to suggest to your correspondent Miss Amelia B. Edwards, that if she were to alter her signature to "A. Blandford Edwards," when attaching it to her publications, she would effectually prevent any obtuse general reader from confounding her with Miss M. B. Betham-Edwards? It is the ambiguity of her initial B. which is the real cause of this error; for, as the uninitiated reader does not know how to read it, he adopts the first name familiar to him, which, in this case, seems to be Betham.

Her perplexity, however, is slight in comparison with that of a gallant major in the Bombay Army and myself, whose names are identically the same, a circumstance that has puzzled more than one post-office clerk in former times; and, as we have both written occasional articles on Indian antiquities, it may yet perplex some future indexer of the contents of scientific periodicals.

E. W. WEST.

#### "RESTORATION" IN ITALY.

9 Buckingham Street, Adelphi: Feb. 13, 1882.

The committee of the Society for the Preservation of Ancient Buildings wish to correct a serious misconception in Mr. Radford's letter in your last number with regard to their proposed action in Italy. Mr. Radford is mistaken in assuming that they are likely to encourage the Italians to neglect their ancient buildings. The object of the society is to protest against buildings and other works of art being allowed to fall into decay from want of necessary repair and care, no less than to deprecate the wholesale destruction that is often perpetrated under the name of "restoration."

THE HON. SECRETARY.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 20, 4 p.m. Royal Asiatic: "The Hausa Language of Central Africa," by the Rev. Dr. Schon; "African Scholars," by Mr. Robert N. Cust.  
5 p.m. London Institution: "Mythical and Magical Beliefs," by Dr. E. B. Tylor.  
7.30 p.m. Aristotelian: "Aristotle's Ethic and Politics," by Mr. G. Whate.  
8 p.m. Society of Arts: Cantor Lecture, "Recent Advances in Photography," IV., by Capt. Abney.  
8 p.m. Victoria Institute: "The Theory of Evolution taught by Haeckel, and held by his Followers, examined," by Mr. J. Hassell.  
TUESDAY, Feb. 21, 3 p.m. Royal Institution: "The Mechanism of the Senses," VI., by Prof. J. G. McKendrick.  
7.45 p.m. Statistical: "The Tonnage Statistics of the Decade 1870-80," by Mr. J. Glover.  
8 p.m. Anthropological Institute: "Aggr. Beads," by Mr. J. E. Price; "Analysis of Relationships of Consanguinity and Affinity," by Mr. A. Macfarlane; "From Mother-right to Father-right," by Mr. A. W. Howitt and the Rev. Lorimer Fison.  
8 p.m. Civil Engineers: Discussion, "Air-Refrigerating Machinery and its Applications," by Mr. J. J. Coleman.  
8.30 p.m. Zoological: "List of the Lepidoptera collected by the Rev. J. H. Hooking in the N.W. Himalaya, with Descriptions of New Genera and Species," by Mr. F. Moore; "A Specimen of *Phyllomedusa hypochondrialis* lately living in the Society's Garden," by Mr. G. A. Boulenger; "The Anatomy of *Erithizon dorsatus*," by Prof. St. George Mivart.  
WEDNESDAY, Feb. 22, 8 p.m. Geological: "Additional Discoveries of High-level Marine Drifts in North Wales, with Remarks on Driftless Areas," by Mr. D. Mackintosh; "The Geology of the Cheviot Hills, English Side," by Mr. C. T. Clough; "Some Sections of Lincolnshire Neocomian," by Mr. H. Keeping.  
8 p.m. Society of Arts.  
8 p.m. Zetetical: "Metecconomics," by Mr. J. H. Levy.

THURSDAY, Feb. 23, 3 p.m. Royal Institution: "Geographical Distribution of Animals," II., by Dr. P. L. Solater.  
7 p.m. London Institution: "The Organist-Composers of St. Paul's Cathedral," by the Rev. Dr. W. Sparrow Simpson.  
8 p.m. Society of Arts.  
8 p.m. Telegraph Engineers.  
8.30 p.m. Antiquaries.

FRIDAY, Feb. 24, 8 p.m. Browning Society: "Fifine at the Fair," by Mr. J. T. Nettleship.  
8 p.m. Quakers: "The Histological Development of the Larva of *Corethra plumicornis*," by Mr. T. Charters White.

9 p.m. Royal Institution: "Sir B. C. Brodie's Researches on Chemical Allotropy," by Prof. Odling.  
SATURDAY, Feb. 25, 3 p.m. Royal Institution: "The Iliad and Odyssey," II., by Mr. W. Watkiss Lloyd.  
3 p.m. Physical: "The Influence of the Form of Conductors on Electric Conduction Resistance," by Mr. G. Gore; "Faure's Accumulator, and a Simplified Form of Dispersion Photometer," by Profs. Ayrton and Perry.

#### SCIENCE.

*Yusuf and Zulaikha*: a Poem by Jami. Translated from the Persian into English Verse by Ralph T. H. Griffith. "Oriental Series." (Trübner.)

THIS is a very charming addition to Messrs. Trübner's "Oriental Series." Jami, whose life covered the greater part of the fifteenth century, was a Persian poet of the first rank, though not the foremost in that rank. We cannot place him quite by the side of Ferdausi or Hafiz; but his verse is exceedingly beautiful, and, perhaps, it was rather the diversity of his genius than any inherent weakness that withheld him from the highest place. He was at any rate the last great poet of Persia, and the procession of the classics closes with no unworthy name. It is curious that he should have waited so long for an English translator. His "*Yusuf and Zulaikha*" is, as Mr. Griffith says, the Ovid of the East, but it has never yet been fully reproduced in this country. A very accurate and useful analysis of it, with numerous extracts in prose, appeared in the series which Mr. Robinson edited for Messrs. Williams & Norgate; and it is strange that so few are aware of the existence of this tasteful little library of Persian poetry, wherein the unlearned may gain a very fair knowledge of the characteristics of Ferdausi, Hafiz, Sadi, Jelal-ed-din, and Jami in a convenient compass and at an insignificant cost. These, however, are but selections, and they are, we believe, mainly based upon previous German versions. Mr. Griffith is the first to translate Jami's most famous poem almost in its entirety, and at first hand from the original, and his rendering ought to secure a wide popularity. It is not as close a version as it is now the fashion to demand; but in our opinion a free translation in fair English verse is more calculated to win an audience for Oriental poetry than a too scholarlike and perhaps crabbed literal version. Mr. Griffith is certainly free in his treatment of Jami, but we believe it is a judicious freedom. His easy flowing four-beat lines, better than the heroics with which he begins, are especially well fitted to the style of the poem. If the metre is a little too Moore-ish, there are many to whom the association will seem appropriate; and, though we cannot expect a very high level of poetry to be sustained through a long narrative poem of this nature, Mr. Griffith's verse is always pleasant, and sometimes really fine. He appears to us to have discovered precisely the right way to translate Jami; and what can be said of very few renderings of Oriental classics may be said of his, that it is never wearisome.

The story of Yusuf and Zulaikha, or, to put it into scriptural English, of Joseph and Potiphar's wife, has always been a favourite theme in the East, but Jami invests it with a dignity and an inner meaning which raises it to a different level from that we might naturally expect. After the usual introductory cantos which Mohammedan cautions of style prescribe—concerning the Creator and the Prophet—Jami tells the power of beauty and of love, and announces the purpose of his poem.

"Love stood beside me when my life was new,  
And from my mother's breast Love's milk I drew.  
White as that milk are now my hairs, but still  
Sweet thoughts of Love my aged bosom thrill.  
Still in my heart the youthful warmth I feel,  
While in mine ear re-echoes Love's appeal:—  
'In love, O Jami, have thy days been passed;  
Die in that love gay-hearted to the last.  
Some tale of love's adventure that may win  
Thy name remembrance in the world, begin:  
Some picture with thy finest pen assay  
Which still may live when thou art gone away.'"

Then follow cantos on "Speech" and "The Vision of Adam," wherein Yusuf is foreseen, and then the beautiful Canaanite youth is described in befitting terms. The next fourteen cantos are devoted to Zulaikha, a daughter of the "King of the West," a peerless maiden of the true Oriental type, but purified and ennobled by the poet's fine instinct. Three times she sees in her sleep a vision of a beautiful youth, who tells her he is Vizir of the King of Egypt. She pines and sickens, and her nurse finds out the cause. Suitors come from all parts of the world to seek her hand, but all are rejected.

"The soft wind blowing from Egypt's sand  
Bringing dust to mine eyes from that happy land  
Sweeter a hundredfold would be  
Than the musk-laden breezes of Tartary."

So the King, her father, sends to the Vizir of Egypt, and the marriage is arranged. The damsel journeys in state to Memphis, and is met by the Vizir, and then she discovers that he is not Yusuf, the beautiful youth of her dreams. Her despair is frantic, but an angel tells her that the only way to Yusuf is through wedding the Vizir; and in that hope she consents. How she pines and droops in a false magnificence, and longs for the promised love, is told in some of the best cantos in the work. She invokes the wandering wind—

"Wind of the morning, whose soft touch floods  
With musky odour the jasmine buds,  
That makes the cypress and lily so fair,  
And decks the rose-leaf and the spikenard's hair;  
Each leaf is a bell when the branches sway,  
And the trees are dancing, though rooted in clay;  
The heart has rest when thy light wings stir,  
For thou art the lover's fleet messenger.  
From the distant beloved thou bringest news  
That bids the sad spirit forget its bruise."

Pity me—visit each distant place  
Where thy breath may fall on my loved one's face;  
Visit each palace where dwells a king,  
Each prince's home on thy balmy wing;  
Seek my moon in each city, repair  
To each throne and see if my king be there.  
Steal through the garden where spring is gay,  
On the lip of the streamlet a moment stay.  
Peradventure thine eye on the search may discover  
By the rill the cypress form of my lover;

Speed to the deserts of far Cathay,  
And the picture-houses of China survey;  
Here look around for his likeness; snare  
A wild gazelle with his fragrance there.  
When thou turnest back from those distant scenes,  
Over mountain tops and through deep ravines,  
If a partridge gracefully move from the brake,  
Lay thy hand on the bird for my dear love's sake.  
Shouldst thou meet on thy journey a caravan  
Led by a gallant heart-ravishing man,  
Look with mine eyes on that prince that he  
May travel hither and come to me;  
One glance of his eye will assuage my woes,  
And I from Hope's garden shall gather a rose"  
(pp. 100, 101).

The story of Joseph is then related, much as in the Biblical narrative, with certain transpositions and amplifications. He arrives in Memphis, and is bought by Zulaikha in the slave-market. Then come a series of twelve cantos in which the wooing love of the woman and the passionless purity of the man are finely treated. Yusuf is released from the false accusation on the testimony of a sucking child, and eventually comes to be, what he foretold in the vision, Grand Vizir of Egypt. Meanwhile, Zulaikha has become a widow, her beauty is gone for sorrow, and she is old and blind with grief. She leads a hermit life, and comes from her hut only to hear the sound of Yusuf riding by. At last she comes before him and tells her story; and he prays, and her sight and beauty are restored as of old; and, when Yusuf still hesitates, the voice of Gabriel the Archangel is heard:

"From the Lord Almighty a message I bring.  
'Mine eyes have seen her in humble mood,  
I heard her prayer when to thee she sued;  
At the sight of her labours, her prayers, and sighs  
The waves of the sea of My pity rise.  
Her soul from the sword of despair I free  
And here from My throne I betroth her to thee."

The real meaning of the poem is seen in the canto which tells of the other damsel who fell in love with Yusuf, and to whom the youth preached a mystical Sufi sermon, whereby her love was diverted to the true channel; "She folded love's carpet and laid it aside," and devoted herself in austerity to good works and the building of mosques. The moral is, in fact, the great philosophic doctrine of the Neoplatonists: the universal unity towards which all yearns, and into which all is resolved.

"—Form is manifold, truth is one.  
In number trouble and error lie:  
To unity then for sure refuge fly.  
If the might of the foeman oppress thee sore,  
Fly to the fortress, and fear no more."

STANLEY LANE-POOLE.

#### NOTES OF TRAVEL.

A TELEGRAM has been received from Lieut. Dauenhauer, at Irkutsk, giving interesting details respecting the voyage of the *Jeannette* after she entered the Arctic Sea. A small, rocky island, named after the vessel, was discovered on May 6, 1881, in 76° 47' N. lat., 158° 56' E. long., and Henrietta Island eighteen days afterwards, in 77° 8' N. lat., 157° 43' E. long. The latter was visited, and found to be an extensive island, with many glaciers, but animals were scarce. A very large island, in 76° 38' N. lat., 148° 20' E. long., was named Bennett Island; on it were found many birds, old horn, driftwood, and coal,

but no seal or walrus. This island was bold and rocky, and off its shore there was a strong tidal action. Observations were carefully made during the drift, which began on October 1, 1879, the result showing a north-westerly course. During the first five months the *Jeannette* drifted forty miles by the tidal movement of the ice, and during the last six months she drifted very rapidly. With regard to the soundings taken, the greatest depth obtained was eighty fathoms, and the average thirty-five fathoms, with bottom of blue mud, from which meteoric specimens were obtained. The surface-water temperature was 20° F. The extremes of the temperature of the air were -58° F. and 40° F.; during the first winter the mean temperature was -33° F., and during the second -39° F.; while the mean temperature of the summer of 1880 was 40° F. Barometric and thermometric fluctuations, however, were not great. The winter's growth of ice was eight feet, and the heaviest ice seen was twenty-three feet thick. During the first week of the retreat from the *Jeannette* the boats drifted back a considerable distance; and they parted from Lieut. Chipp, who was in the missing cutter, in a north-east gale. The naturalist's notes are stated to have been saved, but among the losses are the photographic collection and 2,000 auroral observations taken by Lieut. Chipp. Lieut. De Long, the commander, is believed to be now in a narrow wilderness some eighty miles long, devoid of game and habitations. Three search expeditions have left Yakutsk, and will be at work by March 1; it is intended that they should build huts and examine the wilderness most thoroughly. Mr. Jackson, of the *New York Herald*, with a companion, is already well on his way to Irkutsk, and intends to proceed thence to Yakutsk, with the view of joining the search parties. Two naval officers, out of a large number of volunteers, have also been despatched by the United States Government to search the Siberian coast east of the Lena (near the delta of which a strong easterly current was observed) for Lieut. Chipp and his party, of whom alone nothing has yet been heard.

In one of his recent journeys in Mozambique, Consul O'Neill has heard of snow-capped peaks, but has not been able, as we hoped, to solve this interesting mystery. His journey took him in the direction of the Arab caravan road from Kisanga, on the coast, to Lake Nyassa, which he believes to be shorter than that by the Rovuma. This road forks at Mwaliya's, and Mr. O'Neill took the southerly branch. He visited the beautiful Shalawe plain, extending for miles to the west and south, and there heard of snow-clad peaks some days' journey to the west. Afterwards, he actually came within sight of Namuli, presumably the same as Mr. Chauncy Maples' Irati mountain, but unfortunately its crest was hidden by clouds during his brief stay.

A SWEDISH missionary expedition has recently started from Massowah for the Galla country. Among the party is a Galla youth, who has been educated for four years at Stockholm.

A SECTION of the Lisbon Geographical Society which has been established in the Island of Fayal, one of the Azores, has taken steps for the formation of a station for the relief of shipwrecked mariners.

A GEOGRAPHICAL society for Thuringia has just been established at Jena; and from the notification which it has issued we gather that one of its chief functions will be to make known the labours of missionary geographers in all parts of the world. The first part of its quarterly journal is to be published in March.

## SCIENCE NOTES.

*Geology of the Diamond.*—To the February number of the *American Journal of Science* Mr. O. A. Derby contributes an interesting paper on this subject, giving the results of his personal researches in Brazil. It is generally said that the Brazilian diamond has its matrix in itacolumite, which is a granular quartzose rock sometimes flexible. But Mr. Derby shows that, under the name of itacolumite rocks, two distinct geological series have hitherto been confounded. The diamond-bearing rock of the famous locality of Grão Mogol probably belongs to the newer of the two series; but the gems have not been formed in these rocks, and occur there only as derivative bodies like the associated pebbles. At São João da Chapada the diamond is worked in a deposit of clay; and its original matrix appears to be a vein of quartz accompanying a rock of unknown nature, but containing iron and crystals of tourmaline, traversing a series of schists and itacolumites. Mr. Derby concludes that the original diamond formation in Brazil is probably of Cambrian age.

At the annual general meeting of the Physical Society held on February 11, Prof. R. B. Clifton, of Oxford, was elected president for the current year.

THE thirty-first annual meeting of the American Association for the Advancement of Science will be held this year across the frontier, at Montreal, beginning on August 23. The president will be Dr. J. W. Dawson, F.R.S., and it is hoped that not a few visitors may be present from the British Islands and Continental Europe.

THE Clarendon Press will publish very shortly a *Treatise on Rivers and Canals, relating to the Control and Improvement of Rivers, and the Design, Construction, and Development of Canals*, by Mr. L. F. Vernon-Harcourt. The author discusses the physical characteristics of rivers; the methods and formulae for measuring their discharge; and the various works, structures, &c., for improving rivers and for forming canals. The past and present conditions of several of the most important rivers at home and abroad are described, together with the successive works of improvement carried out on them, and the results achieved. The book is copiously illustrated with wood-cuts and twenty-one large lithographed plates showing most of the works, &c., described.

THE fine collection of eggs belonging to the Laplace family, which numbers about eight hundred specimens, has been bequeathed to the Museum of Natural History at Lausanne.

THERE is to be a German exhibition of objects connected with hygiene and the saving of life at Berlin during the ensuing summer. It opens on May 15, and closes, according to present arrangements, on October 1. Medical literature is to be represented.

A NEW edition of the complete works of Niels Henrik Abel, the distinguished mathematician, has recently been published at Christiania at the cost of the Norwegian Government.

## PHILOLOGY NOTES.

MR. H. SWEET has finished his shorter Anglo-Saxon Reader, which will be published as part of the Clarendon Press series. The want of such a work, as an introduction to the longer Reader, has long been felt. The forthcoming work aims at supplying the deficiency, by giving a few prose texts of the simplest character, in a uniform Early West-Saxon orthography, preceded by some easy sentences to supplement the texts, together with a glossary, notes, and grammar, which

latter treats fully all the inflections and syntactical peculiarities that occur in the texts, but gives only the most indispensable elements of the phonology of the language.

AN important discovery has been made in Etruria. Prof. Koerte, of Rostock, while travelling in Italy last autumn, noticed at Volterra an exact copy of the *templum* of Placentia held in the hand of an alabaster figure of a man seated on an urn. The object had previously been supposed to represent the human liver. The discovery not only shows that Dr. Deecke was right in maintaining the genuineness of the *templum* of Placentia, but also, as he now points out, explains its peculiar form. The augur's instrument was a model of the liver, which was the microcosm answering to the *templum* or celestial macrocosm. Etruscan divination all rested on the same basis, and the liver, like the sky, had its various regions. The newly found liver, or *templum*, is uninscribed.

DR. DEECKE is about to publish the fifth part of his *Etruskische Forschungen*. He has lately brought out a valuable paper on the Messapian inscriptions, in which he shows that the terminations *-as* and *-os* mark the genitive, and that the language is related to that of the Illyrians. The occurrence of stenographic signs and the reduplication of letters in the inscriptions makes him suggest that their introduction into Latin by Ennius was due to the fact that the poet was a native of the Messapian Rudiae. The Messapian system of names agrees with that of the Latins and Etruscans. The patronymic *-ides* seems to explain the Greek *-ίδης*, which Dr. Deecke would accordingly connect with the adjectival suffix *-idos*.

PROF. SIEVERS, of Jena, is about to bring out a short Anglo-Saxon grammar, for the series of Germanic grammars published by Niemeyer, of Halle, in which the Gothic and Middle-High-German grammars, by Braune and Paul respectively, have already appeared.

THE friends of the late Charles Graux, whose premature death was such a loss to Greek scholarship in France, propose to publish in honour of his memory a volume of "melanges," consisting of essays, &c., upon points of classical scholarship and archaeology. A committee has been formed with this object, having for its secretary M. Louis Havet, the successor of Graux on the editorial staff of the *Revue critique*.

AT a recent meeting of the Académie des Inscriptions, a paper was read from M. Esmein, making suggestions towards a new interpretation of the Oscan law in the well-known bronze table of Bantia. The third paragraph of this table begins: "suas pis pru meddixud altrei castrous auti situas zicolom diouat izic comono ni hipid . . ." The whole paragraph has been thus translated by M. Bréal in the *Mémoires de la Société de Linguistique de Paris*:—"si quis promagistratu alteri fundi aut pecuniae diem dixerit, is comitia ne habeat nisi cum apud populum quater oraverit sciens sine dolo malo et definitum diem populus acceperit quater neve magis quinque." The difficulty of this interpretation is that it supposes a civil suit to be tried before an assembly of the people. M. Bréal's translation of "castrous" by "fundi" is supported by the Eugubine tables, where "castruo" is manifestly equivalent to "fundos." M. Esmein suggested that if this word could only be translated by "capitis"—in the sense of "a capital charge"—the whole passage might be read as applying to a criminal prosecution, and thus brought into harmony with Roman law. M. Bréal, while admitting the improvement from a juristic sense, doubted whether it had justification in philology—at least with our present limited knowledge of the Italian dialects.

## MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, Feb. 7.)

SAMUEL BIRCH, D.C.L., President, in the Chair.—A paper on "The Birds of the Assyrian Records and Monuments" was read by the Rev. W. Houghton. A list of thirty-two birds was given, of which the names in either Assyrian or Accadian can be identified with some degree of probability. Not a few of them are onomatopoeic, such as *Kha-khar* for raven. The swallow of the Deluge tablet is "the insect bird that makes its nest on the beams;" the woodpecker is "the variegated tapping bird;" the pelican is "the she-ass bird of the rivers." The ostrich is figured on the monuments and also found in the lists.—A paper was read from Mr. Le Page Renouf on "Wrong Values commonly assigned to Certain Hieroglyphic Groups." Among others, the gods Ap-heru, Keb, and Khem were shown to be mere misreadings. Hasep, or Hashop, a famous queen of the Eighteenth Dynasty, ought to be Hatasu.—Prof. W. Wright, of Cambridge, sent a communication on the Siloam inscription.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Feb. 7.)

F. G. HILTON PRICE, Esq., Treasurer, in the Chair.—Mr. Edward C. Hore read a paper on the twelve tribes of Tanganyika. The author described the distribution of the tribes in East Central Africa—a narrow margin of a doubtful civilisation on the East Coast; one to two hundred miles of small native tribes fast losing their distinctive nationalities and tribal customs and arts, and mixed with semi-civilised half-castes; then a narrow interval, more or less desert, seems to be as well the refuge of robbers and renegades as a natural boundary between the first-mentioned tribes and the next tract of from two to four hundred miles, occupied by tribes of uneasy and apparently warlike aspect, and retaining to a more considerable extent their original arts and customs; another narrow border of debatable country again separates these from the more prosperous, peaceful, and civilised tribes of the Equatorial lake regions, a few of which the author described.—Mr. George W. Bloxam read a note on a Patagonian skull brought from Carmen, at the mouth of the Rio Negro (lat. 44°), and presented by Capt. Hairby.—A paper by Mr. Alfred Simson on the Napo Indians was also read.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 9.)

HENRY REEVE, Esq., V.-P., in the Chair.—Mr. Middleton gave an account of the wall-painting discovered in Canon Barry's house at Westminster, about which there was a letter from him in the ACADEMY of last week.—Mr. Wansey exhibited a roll of parchment with the emblems of the Passion and English verses, of the end of the fifteenth century.—Mr. Freshfield exhibited a Mohammedan roll, containing the Calendar, with extracts from the Koran.—Mr. Beck exhibited some fragments of carved alabaster found built into the walls of Ketibaston church, either forming part of a reredos, or being devotional tablets. One fragment was part of a Trinity; the subject of the others was not clear. The remains of painting and gilding were very apparent. The treatment of the drapery in some of the pieces was very good.

NEW SHAKSPEARE SOCIETY.—(Friday, Feb. 10.)

F. J. FURNIVALL, Esq., Director, in the Chair.—The Rev. W. Wynn-Mayow read a paper on Hamlet's "speech of a dozen or sixteen lines" in the sub-play. Mr. Mayow expanded these dozen or sixteen lines into the whole of the sub-play, which he urged that Shakspeare wrote in the character of Hamlet. This view was not approved in the discussion that followed.—Dr. F. Landmann then read his paper on "Shakspeare and Euphuism: Euphuism an Adaptation from Guevara." After noting Lyly's great influence on Shakspeare, and the rise of extravagances of style in all European countries after the revival of classical learning, Dr. Landmann showed that the styles ridiculed by Shakspeare in "Love's Labours Lost" were not Lyly's, but (1) Spanish hyperbole and inflated terms, in *Armado*; (2) Petrarchan love-sonnets, sighing, affectation, word-play, and conceits, in the King and his courtiers; (3) Latinism, what Put-

tenham called *Soraismus*; and (4) alliteration, both in Holofernes. None of these, except alliteration, when transverse, was an element of euphuism proper. That was distinguished by paraleonic antithesis, by clauses balanced against one another, by use of natural-history similes, and by transverse alliteration. It was used or parodied by Shakspeare only in the mock-trial scene of "1 Henry IV.," act ii., sc. 4, where Falstaff as King upbraided Prince Hal, and employed one of Lyly's own natural-history similes, "though the camomile, the more it is trodden on, the faster it grows," &c. Euphuism had begun to fade when Shakspeare began to write. Greene and others abandoned it about 1590. As Drayton said in his poem "Of Poets and Poetrie," Sidney dealt it its death-blow with his Arcadianism or shepherd-style, which he also got from Spain, from the "Diana" of Montemayor. Gongorism, the *estilo culto* of Gongora, succeeded that here; and then came the French conceits and epithets of Dubartas, introduced by Abraham Fraunce. The paramount influence of Spain on English style in Elizabeth's days had been too much overlooked by later English writers ignorant of Spanish. Lyly's euphuism was but an adaptation of the *alto estilo* of Guevara, from whose *Libro aureo* Lyly had arranged his *Euphuæ*. This was shown, not only by the general outline, subjects, and contents of the two books, but by Lyly's adaptation of Guevara's ideas, often the borrowing of the names of his ladies and characters, and by Lyly's suddenly introducing, at a point far on in the story, letters from the Court of an Emperor never before heard of, but quite well known in Guevara's text, as his story is laid at the Emperor's Court from the beginning. Dr. Landmann cited several instances of plain adaptations, though Lyly had used his original with great freedom. The paper was highly praised in the discussion that followed it. On the point—why was not Lyly's debt to Guevara discovered and pointed out in Elizabeth's day, when all this Spaniard's books were englished, Mr. Furnivall said that then purloining and adaptation were virtues. So that Lyly imported and naturalised a fresh *alto estilo* by adding to it the native alliteration, of which Spanish was not capable, no one cared where he got it from. All the more credit to him if he could "convey" it from the first nation on the Continent, and make it look like his own.

## FINE ART.

## A NEW FIND OF INSCRIBED POT-SHERDS IN UPPER EGYPT.

Naples: Feb. 5, 1882.

MOST visitors to the Nile are acquainted with the inscribed potsherds found in the Island of Elephantine—where, by-the-way, Mr. Wilbour has lately discovered fragments of papyrus which point to the former existence of a library. These potsherds were at one time sold to travellers in large numbers, but the supply seems now to be falling short. Meanwhile, however, other places in Upper Egypt have begun to yield similar documents. Last year Mr. Greville Chester procured some from Karnak; and during the present winter Dr. Wiedemann has succeeded in obtaining many more, not only from Karnak, but also from Deir el-Medineh, from Erment, and from Edfu. The latter are in Greek and Coptic, but the number of them that have turned up as yet is but small. It is quite otherwise with the inscribed tiles from Karnak. These, as Dr. Wiedemann discovered one day, were used to strengthen the bricks of the houses in the Coptic village which stood on the north side of the temple of Karnak. The bricks are now being reduced to their original dust for the sake of manure, and the fragments of tile embedded in them are consequently brought to light. Since the tiles found in the bricks of a particular house, or cluster of houses, generally appear to belong to the same class, it is probable that they all came from some public collection in which they were arranged in groups according to their character and date.

Some of the inscriptions are in demotic. In one of these Dr. Wiedemann has come across the broken name of a king, otherwise unknown, which seems to begin with the letters *Ark* . . . , while the prænomen contains the syllables *em-tef*. The larger part of them, however, are written in cursive Greek, which is frequently so bad as to be quite illegible; a very few only are in well-formed Greek characters. These Greek texts have been studied by Dr. Wiedemann and myself with the following results, which are at once unexpected and startling.

In the first place, the contents of the texts are by no means uniform. Some of them contain accounts of the payments made each month to certain persons, presumably belonging to the garrison, who are usually divided into groups of six. Others relate to the sale or purchase of property; others are letters, or answers to letters; while others, again, deal with such subjects as the purchase of corn.

In the second place, the age of the texts is equally various, ranging from the reign of Domitian to the obscure period when the Thebaid was occupied by Ethiopian kings. Three, at least, are dated in the reign of Antoneinos, while one belongs to "the second year of Hadrian Caesar the lord." But the most interesting, and perhaps the most numerous, are dated in the reigns of kings who were not Roman emperors at all, and whose names seem to indicate that they were the hitherto unknown chieftains of the Nubian conquerors of the Thebaid. Thus one belongs to the reign of the "Caesar αὐτοκράτορος . . . Ἀταπας;" another, obtained by Mr. Petrie, to that of "the Caesar αὐτοκράτορος τοῦ κυρίου Θεοδοῦ[?]ντος;" while one in my own possession is dated in "the tenth year of the Caesar Τυσνικὸς." One whole group bears the date of "the year 35," which excludes the reign of any Roman emperor. I may mention that while at Luxor I bought a scarab with the name of one of these Nubian princes, Ra-uats-sen, upon it. One other scarab bearing the same prince's name exists in the Louvre.

Thirdly, though written in Greek letters, many of the texts are not in the Greek language. This is a very interesting discovery, and opens up many possibilities. We know that the Thebaid was for some time under the rule of Nubians or Ethiopians, and it would therefore seem probable that the new language of the Karnak potsherds is the one spoken by them. If so, they may give us a clue to the decipherment of the numerous *graffiti* in the so-called Ethiopic or Meroitic demotic on the temple-walls of the Upper Nile. One of these I copied at Medamôt, not far from Karnak; and at Karnak itself Dr. Wiedemann discovered a bilingual inscription, partly in Greek, partly in a wholly new form of character. The Nubians, however, do not appear to have had any writing of their own when they entered Egypt, and they therefore adopted the two systems of writing they found in use there—that is to say, the demotic and the Greek. They also borrowed, it would seem, several Greek words, in order to express ideas or objects which were new to them. At all events, the Ethiopic texts of Karnak, as I may perhaps venture to call them, contain Greek words like *ἡμισυ* and *λόγος*; and, what is still more strange, many of the proper names are furnished with the terminations of the nominative and genitive of Greek nouns of the second declension. At the head of a list of payments, for example, made to certain persons during the month of Messori, we find the words: *λόγος σενπετυμενωφιο ἀλαματιοῦ* ἤ. Here, however, we may have a bilingual text. Two of the most interesting potsherds belonging to Dr. Wiedemann contain, the one of them a letter in Greek addressed by Ammonios to Herakleides and Peenkhômsis relating to the purchase of six

*artabas* of wheat, and the other a reply in "Ethiopic," which begins as follows:—Ὁρκοσυλὶ δειαμοσλὶ Ἡρακλῆτατην Ἐρμακλειους κλῆλι εχουστυλι. As might be expected, the Greek is not very good, and we have spellings like *χαλρι* for *χαλρεν*. The names of many of the months are Egyptian, but there are others, such as *Enèph*, for which we must seek an "Ethiopic" origin. A comparison of the texts shows that *εἰς* meant "son" in the new language; thus we have *Σαυισυηρος εἰς Ἡρατταίου*, where the Greek grammatical terminations must be noticed.

Fourthly, while in the Thebaid the Nubians seem to have invented a writing of their own. At all events there are a few tiles on which we find a system of writing which looks like a mixture of demotic and Greek characters. There are also two or three others inscribed with very peculiar characters such as I have never seen before. Whether these also belong to the Nubians I cannot say. I have already mentioned the puzzling bilingual *graffito* found by Dr. Wiedemann at Karnak.

Before concluding this notice of the Karnak potsherds, I must mention one given to me by Sir William Gregory, and written in Greek, which relates to the purchase of wine and vinegar by a certain Heraklianos. The liquor was brought from two districts, *ἀπὸ τοῦ Νεοῦτιου* and *ἀπὸ τοῦ χαλριου Πικεραίου*. As *πῖ* is the Coptic article, *Κεραῖ* must be the name from which the modern Arabic *Karnak* is derived.

M. Maspero left Luxor on January 30 in order to excavate the pyramid of El-Kula (near El-Kab) which may possibly belong to the Seventeenth Dynasty. He is thinking of clearing out the Ptolemaic temple at Tuot (or Selemiyeh, as the Arabs call it), which I visited while at Luxor, and found in a less perfect state of preservation than I had supposed it to be. I also visited the extensive mounds of Hermonthis or Erment, on the opposite side of the river, but found few remains left there either of the Egyptian temple or of the Coptic church, which were still standing only a few years ago. However, M. Naville, who accompanied me, discovered in a wall a fragment of stone with the uneffaced cartouches of Khu-en-Aten, the heretic king, upon it, as well as the tail and hind legs of a horse. It is clear, therefore, that Khu-en-Aten had once built upon the spot. We also came across the relics of a temple belonging to Amenophis III., though the chief part of the remains of it, consisting of an Osirid figure and a sphinx, now adorn the landing-place of the modern Erment, nearly two miles distant.

A. H. SAYCE.

## THE WATER-COLOUR DRAWINGS AT THE GROSVENOR GALLERY.

EVEN the best judges, as well as that large portion of the public which for its opinions upon Art relies wholly upon published criticism, have neglected to pay much attention this winter to the water-colours at the Grosvenor Gallery. Nor can the intelligent management of the Grosvenor be altogether acquitted of any share in the causes of this neglect; for the two great halls in which the public is accustomed to look for all that is considered of much account have this winter been devoted entirely to the display of the life work of one much-esteemed artist. The exhibition of water-colours by living painters is pretty much confined to the humbler chambers; and here, too, as is the custom at the Grosvenor—and, perhaps, an inevitable evil attending the system of private invitation—the finer works of studious men are in many cases side by side with the complacent efforts of smartish amateurs. In the little water-colour gallery of the Grosvenor, much tawdry and insignificant production encompasses a few brilliant and solid drawings which are well

worthy of attention. It is quite unnecessary to speak in detail of a superfluous company of infirm designs. We are glad, however, to ask attention to a few really admirable drawings which would hold their own in the best assemblage of water-colour art.

Conspicuous among the landscapes is a "View from Ludwell Farm, Sussex" (308), by one of the younger and more active members of the Society of Painters in Water-Colours—Mr. R. Thorne Waite, who has looked very closely at Nature, and perhaps more closely at Dewint. No mere copyist, however—no merely sensitive personality easily influenced by other men's labours—could have produced a drawing so dignified and fresh. The subject, which displays the clustered homestead in the foreground, and, in middle distance, a stretch of blue-and-orange Downs, is less important than the treatment, which has aimed to secure breadth of effect, and sobriety, yet splendour of hue. A little of a master's sobriety, with none of his splendour, is discoverable, or is indeed very evident, in Mr. W. P. Burton's "Harvest Field" (353)—a drawing of some dignity and of much repose, and done not at all for beauty of colour, but all for depth of tone. Mr. Mark Fisher sends a characteristic cattle piece. On the border-land between landscape and figure pieces is Mr. George Clausen's "Gathering Winter Fuel" (310). The exhibition hardly contains anything more striking in its studied quietude, or anything more complete in its deliberate abandonment of detail. It is lovely and engaging work, and it seeks, like so many of Mr. Clausen's drawings—notably like his interior at this moment at the Institute—to grapple with difficult problems, and to render unfamiliar or unaccustomed effects. The bright occasional leafage that seems to float on the gray undergrowth of this November woodland is even more interesting and beautiful than the solitary figure who has gathered her winter fuel. Mr. A. Parson's "The Youthful Thames" is a little too crude and cold and blue. Mrs. Savile Clarke sends a welcome sketch, a perfectly veracious study of a long flat land in a gray and equal light. This modest drawing is done in the best spirit, and is therefore worthier of notice than more ambitious work. Mr. Smallfield's tiny drawing of "Psyche entering Hades" deserves a better place than it obtains; it is in many respects preferable to those nudities of Mr. Spencer Stanhope which an artist who has given us much better work has a fancy to call "The Mill Stream." The background behind these comfortless figures is surely unnecessarily black.

Nowhere has more complete success been reached than in the drawings of Mr. Fulleylove and Mr. J. D. Linton. The examples of both these artists are indeed of the highest quality. Mr. Fulleylove's "Inner Court of a Palace at Genoa" (386) is an exquisitely picturesque rendering of latest Renaissance, almost of rococo, architecture, the perfect composition of the architect seen and presented in such a way that it makes likewise a perfect picture with the attendant beauties of Italian colour and light. The spirit of the place, as well as the letter of it, is rendered perfectly in work so skilled and sympathetic. Nor would there be anything but unmixed praise for Mr. J. D. Linton's single figure piece, "Waiting" (392), were it not that the atmosphere seems indicated inadequately—the distance from object to object and from point to point of the limited space seems at fault. But the drawing of the one beautiful figure, poised so exquisitely, with hand resting easily on the half-opened gate, would atone for more mischief than any we have suggested. Mr. Linton has portrayed a face of calm beauty and of quiet intelligence—a face of great possibilities—and the attractions of face and

figure are enhanced by draperies of studied line and splendid hue. The cultivated eye must find in such work a continual pleasure. Comparatively slight, albeit industrious and agreeable, is the labour of Mr. Poynter in "Capri Bianca" (273), a mass of white and yellow houses, with a yellow green foreground of vine and a blue-gray background of mountain. This is among that class of drawings which rely for their effect upon no careful selection of line in composition, but upon an accurate presentation of actual fact. They are views always, and sometimes they may be pictures.

FREDERICK WEDMORE.

#### GLASGOW INSTITUTE OF THE FINE ARTS.

As usual in former years, the directors of the Glasgow Institute of the Fine Arts have supplemented their present display of works by Scottish artists with a number of important pictures by London painters, most of which have recently figured at Burlington House. Among these may be mentioned Mr. Millais's portrait of "Principal Caird" and Mr. Holman Hunt's of "Professor Owen;" Mr. Pettie's "Trout Fishing" and his smaller rendering of the "Sword and Dagger Fight;" Mr. Orchardson's "Queen of the Swords;" Mr. F. W. Lawson's "Jesus in the House of the Pharisee;" Mr. MacWhirter's "Mountain-tops;" and Mr. Cecil Lawson's magnificent "Barden Moors, Yorkshire." As examples of the older landscape art of England, we have a small subject by Constable, which has suffered somewhat from time, and darkened in colour, but is still sufficiently representative of the manner of the artist; and "Boat taking off Anchor to Dutch Frigate," a most vigorous sea-piece by Turner—a rather early picture, showing none of the magic splendour of colour which characterises his later work, but full of force and power, excellently expressive of the form and motion of the waves, and with its shipping admirably drawn and skilfully placed on the water. Several smaller canvases illustrate our early Scottish art—a sparkling little subject of wood and sky by Patrick Nasmyth, two scenes by Horatio Macculloch, and a picture painted by Sam Bough in his youth, full of the most careful and minute handling and the most detailed rendering of tree-structure and foliage, interesting as showing the painstaking study upon which the swift decision of the painter's maturity was founded. Among the works of the Continental schools are pictures by Corot, Rousseau, Diaz, and Fortuny, and by Israels, Artz, Bodmar, Meadag, de Gravesande, and A. Mauve. Most of the members of the Scottish Academy contribute. Messrs. Smart, Waller, Paton, Beattie-Brown, and Perigal show landscapes. Mr. Alexander Fraser has a brilliant study of summer sea in "The Frith of Clyde, from Skelmorlie Heights;" Mr. David Murray's most important contribution is "West Loch, Tarbet," a vivid effect of sunlight on a foreground of dusty country road and a distance of blue water; and Mr. A. D. Reid, in "Moon-rise," has given, with much truth and quiet feeling, a pastoral with darkening landscape and a home-returning shepherd and flock. Mr. W. D. McKay sends two delicate subjects—"October," and "Summer" with its exquisite figures of rustic children at play beneath the hedge-rows.

Of the more ideal figure-pictures in the rooms the most important is "The Sea Nymph," by Mr. E. Burne Jones—a recent work, previously unexhibited. It is the first important picture by the artist that has been placed before the Scottish public. The subject is treated in a

frankly conventional and decorative fashion. The face has the wan, gray eyes and the saddened, fateful expression which the painter so often depicts; the body is most admirably modelled and fine in flesh-colour, and the green mermaid tail in which it ends cleaves the formal mounts of water beneath and crimps it into faint lines of white foam. Around the strange, fair, half-human being are sporting strange creatures of the sea—fish of uncouth shape and lovely, varying hues, one of them held in each of her hands. Mr. Albert Moore is represented by a single small picture—"The Beads," two girls reclining on a couch, with all the artist's accustomed grace of line, but with less than he commonly gives us of purity and brilliance of colour. Mr. C. F. Hallé shows in his "Dance of Shepherdesses" a lightly touched idyllic subject; and Mr. R. Blum has vigorous and decisive sketching in his picture of Greek damsels. In "Summer Breezes" Mr. M'Taggart treats what with him is a familiar subject—two children on the shore examining a shell. He has never attained greater beauty of tinting and sense of atmosphere than in the present picture, nor given with more immediate and masterly force a distance of green water, wind-driven and freshened into foam.

The portraits of the exhibition include several by the late Sir Daniel Maclise; Mr. Herdman's excellent likeness of Carlyle, painted in 1875; Mr. George Reid's vivacious head of "William Smith, Esq., City Architect, Aberdeen;" Mr. Norman Macbeth's "The late Robert Ross, Esq.;" and two full-lengths, "Mr. and Mrs. Laurence Robertson," by Mr. J. H. Lorimer.

Among the works of sculpture is Mr. George Lawson's recumbent statue of "Cleopatra," a subject finely reminiscent of the best Greek art.

J. M. GRAY.

#### RECENT DISCOVERIES AT POMPEI.

ON January 24, the skeleton of a woman with a child was discovered at Pompei in the narrow street which bounds on the north *Insula VII. of Regione VIII.*, about twelve feet above the level of the ancient pavement—that is to say, where the layers of lava end and those of ashes begin. It is well known that the catastrophe of 79 A.D. commenced with a thick shower of small pumice-stones, by which the streets and open squares of Pompei were covered up to the roofs of the houses. Stones were succeeded by ashes, which became solid owing to the action of successive showers of boiling water; and these ashes now form the top layer of the materials which cover the ruins of Pompei. Most of the unhappy beings who remained in the houses after the eruption first reached the town, and who found, when the shower of stones was over, that no deliverance was possible except in flight, made their escape through the windows, the doors having been blocked by the stones and lava. But, so far as we can judge from the excavations, the greater part of these fugitives could have taken but few steps, and must have been quickly suffocated by the poisonous fumes. The hot ashes and water covered their bodies in such a way as to make an exact cast; and, after the flesh had shrunk away, the impression made by the corpses still remains as they fell struck down by death. The Senatore Fiorelli conceived the happy idea of taking plaster casts of the impressions, and thus reproduced the figures to be seen in the Pompei Museum, which have been copied into most of the books that describe the antiquities of the buried city. It was not always found possible to obtain a perfect cast, because in many instances a portion of the body was rest-

ing on the stones, where, of course, it left no impression. Unfortunately, this is the case with the two skeletons lately discovered, the larger of which, that of the woman, is almost entirely embedded in the layer of stones. One arm only has left an impression on the ashes; and with this arm she was clasping the legs of the child, the greater portion of whose body has been modelled, showing considerable contraction in the arms and legs, and a general emaciation which lead us to suppose that the child must have been very ill. It is believed that it was a little boy about ten years of age. Doubtless, the woman was the mother of the child, and we can hardly suppose that she would have carried him had he not been unable to walk. Some jewels found on the female skeleton indicate a person of condition; two bracelets of gold encircled the arm which held the boy, and on the hand were two gold rings, the one set with an emerald on which is engraved a horn of plenty, and the other with an amethyst bearing a head of Mercury cut in *intaglio*.

F. BARNABEI.

### ART SALES.

MESSRS. SOTHEY'S first print sale of any importance held during the present season was that of an exceedingly miscellaneous collection dispersed during last week. It comprised a few of the mezzotints after Sir Joshua Reynolds which have been so much enquired for of recent years, a selection from the engraved works of Turner—*Liber Studiorum*, *Southern Coast*, and *England and Wales*—and some modern etchings by Méryon, Millet, Seymour Haden, and other masters. After Turner, the set of the *Rivers of France*—sixty artist's proofs of these agreeable little subjects—fetched £15; Millet's engraving of the "Straits of Dover," from the *England and Wales* series, £4 4s.; the "Blair Athol" of the *Liber Studiorum*, £10 10s.; the "Norham Castle," from the same series, £15 15s.; the "Dumbarton," though believed to be a modern impression, £8 5s. Mr. Seymour Haden's "By-road in Tipperary" fetched £8, and his "Agamemnon"—the state "before the dockyard"—£5 17s. The Méryon etchings were, generally speaking, of the less important subjects—such as the necessarily uncharacteristic little plates after Zeeman done in the artist's youth, and the mad plate known as the "Collège Henri Quatre" done in the time of his decay. Both these, however, and the one or two better ones, such as the "Rue Pirouette" and the "Tourelle dite de Marat," fetched high prices. The impressions were, for the most part, indifferent, though not actually bad. The single example of J. F. Millet—the beautiful "Going to Work," a man and a woman, peasants, passing across the ploughed land—fell for £5. The Whistlers obtained small prices.

THE prices realised by the water-colours of Samuel Cook at the recent sale of the late Mr. William Eastlake's collection were such as to justify our own high estimate of the artist. As much as 137 guineas was given for a drawing ("Early Morning at the Lizard") bought by the Rev. Henry Tozer. Others were sold for sums so considerable as seventy-seven, sixty-three, and forty-four and a-half guineas. High prices were paid, also, for sketches and studies for larger pictures by the same painter. Our suggestion of a "Samuel Cook" exhibition is one hardly likely to be realised. The whole amount of his work is not great; it is in private hands, and widely scattered. As an old friend of his own writes, "He was never a prolific painter, and during the last five years of his life his health failed him, though at that time he produced his finest pictures, and died just short of his reward."

### NOTES ON ART AND ARCHAEOLOGY.

MR. FRITH'S picture of "The Royal Academy on the Day of the Private View" will no doubt be one of the most popular pictures at Burlington House in May. The well-known plates after similar compositions by Zoffany and Ramberg, with their portraits and costumes and pictures *in situ*, have never lost their interest, and it is quite time that another should be added to the series. The subject is one peculiarly fitted to the powers of Mr. Frith, who will be sure to manage the difficulties of grouping with skill, and to preserve the life and character of the different artists and other distinguished personages introduced.

PROF. LEGROS has completed medals of Carlyle and Stuart Mill, with certain *études de têtes* besides. It is satisfactory to know that he has established a class for medallists among his pupils at the Slade School, and that he proposes to make it permanent. Prof. Legros is at present engaged upon a large bas-relief. It is called "La Source," and is designed for exhibition this year, together with the medals and the two groups in bronze of which we have already spoken.

PROF. SIDNEY COLVIN has finished an important article on Leonardo da Vinci for the *Encyclopædia Britannica*.

AT a meeting of the Royal Scottish Academy held on February 10, Mr. Robert Gibb, the painter of a vigorous battle-piece—"The Thin Red Line"—which figured in their last year's exhibition, was elected an Academician; and it was intimated that Mr. MacWhirter had resigned his Associateship.

A LOAN collection of works by the late John Linnell will be opened next Monday, February 20, in Messrs. Tooth and Sons' gallery, in the Haymarket. The proceeds of both admission and catalogues will be given to the Artists' General Benevolent Fund.

MR. WILD'S excavations at Cairo have resulted in the discovery of a monolith belonging to Apries, the Pharaoh Hophra of the Old Testament, and bearing the inscription: "The beloved of Ptah of Memphis, giving life for ever, the good god Ra-aa-ab, lord of the two lands, Apries."

It has been sometimes said that English artists are not appreciated in America. This may be true of our painters, but it is certainly not true of our etchers. We have before us the prospectus of a *Portfolio of Autograph Etchings*, projected and edited by Dr. J. W. Palmer, which will be published shortly by Messrs. Osgood, of Boston. It will contain fifteen original plates representative of the English and French schools; but of these, if we include denizens of foreign birth, no less than ten are by Englishmen. The peculiarity of the work is that each artist has been left not only entire freedom both in his choice of subject and in his manipulation, but also unfettered control over the plate during its passage through the press. In more than one instance the same hand that etched the plate has printed the proofs. Hence the justification for the word "autograph." Subscriptions for the work are received in this country by Messrs. Trübner.

THE Yorkshire Fine Art Society, of Leeds, proposes to open an exhibition early in March, of which the main feature will be a loan collection from South Kensington. The usual exhibition of pictures will follow later in the summer. We regret to hear that this society has not hitherto achieved the financial success it deserves.

A FINE-ART and Industrial Exhibition is now open in the county hall at Lewes, of which a really admirable description has appeared in the *Sussex Advertiser*. The old masters, both

Continental and English, are well represented, thanks to the generosity with which local connoisseurs have lent the treasures of their collections. We may specially mention a collection of water-colours and book-illustrations by Mr. Harrison Weir, a native of Lewes; Mr. E. Joseph's unrivalled collection of miniatures by Cosway; and interesting examples of old Sussex iron manufacture and of Sussex pottery. There is also a loan collection from South Kensington.

MR. F. SARGENT has completed an etching from his picture of "The House of Commons," painted in the Upper Committee Room at Westminster. It contains 350 portraits of members of the present House, taken from life. Both picture and proof-etching are now on view in Messrs. Gladwell Bros.' gallery in Gracechurch Street.

AT the meeting of the Society of Antiquaries of Scotland on February 13, a paper was read by Mr. J. Romilly Allen on "Undescribed Stones with Cup Markings in the Central Districts of Scotland." A large number of these stones had been visited by the writer, and measured; and drawings of them had been made specially. In an appendix was given a complete list of all the stones of this class known in Scotland, showing their topographical distribution, with a bibliography of all the literature on the subject.

WE hear from our correspondent at Rome that excavations were begun on February 6 on the level ground between the churches of San Lorenzo in Miranda and Santa Maria Liberatrice, with a view to extend our knowledge of the site of the Forum Romanum. It is hoped that the work will be finished in the course of a few months.

A CORRESPONDENT writes to us that Mr. Solomos, while on a visit to the Island of Kythera at the end of last year, had his attention drawn to a marble lion to be seen on the battlements of the chief town of the island. Local tradition alleges that this is a representation of the lion of St. Mark, and is of Venetian origin; but Mr. Solomos feels certain, after a close inspection, that it is not only a genuine relic of antiquity, but belongs to a very archaic period. A MS. shown to him, written by a Cretan in 1825, corroborates this opinion, for it states that this very lion was excavated by an Englishman among the ruins of Paleopoli. It has recently been used as a mark for target practice by the gendarmes of the island! Mr. Solomos has made careful drawings of it, which should at once settle the question.

THE proprietors of the *Etcher* (Sampson Low) issue numbers of very various excellence. What occasions, for instance, the flatness of G. W. Rhead's "Fisher Wife," in the February number? The face, if uncomely and rough of expression, has the aspect of truth in it, but the work must be imperfect. The etching of "Warkworth," a vigorous effect of darkened castle between the light of the water and the sky, is contributed by Mr. G. Aikman, an esteemed Scottish landscape painter. F. Marriott's "On Guard" displays character, but little adherence to the principles of original etching. In the January number, Mr. Heseltine was scarcely up to his usual mark with "Witley Churchyard;" but Mr. McWhirter, on the other hand, was seen at his best—was seen, that is, to be original and impressive without sensationalism—in his print of the tired ass stumbling patiently through a desolate landscape of gray-white snow. Now that there are two periodicals devoted exclusively to etching, it is agreeable to know that the *Portfolio* takes the broader platform of admitting etching, line-engraving, photographic reproduction, and wood-cuts. The last art should not be suffered to fall from its

well-established excellence by the passing fashion of the hybrid American processes.

THE *Portfolio* gives this month an etching by Mr. Thomas Riley, called "Roxana," remarkable for the delicacy of its workmanship and the character of the head, and an excellent reproduction of Albrecht Dürer's famous portrait of "Erasmus." The articles are mainly continuations.

THE second part of *American Etchings* contains a humorous and beautifully executed plate by J. A. Mitchell, called "A Poor Relation," representing the surprise of an old gentleman suddenly interrupted in the perusal of his newspaper by the apparition of a little dressed-up monkey, who has climbed up to his window-sill, and, erect on his hind legs, solicits a small contribution.

A PARIS firm has reprinted, from the third edition (that of 1617), the *Book of Luce*, attributed to Cesare Vecellio, the nephew of Titian, and originally published at Venice in 1591. The plates, 112 in number, are reproduced in facsimile. The original work is now extremely rare, the last copy sold fetching 1,260 frs. in 1869.

A FINE portrait of M. Edmond de Goncourt has been etched by Bracquemond, and published by M. Delorière, of Paris.

THE Brussels Museum has recently acquired a Rubens, which is said to have come from a private collection in England. The subject is a Virgin and Child, the latter holding a forget-me-not in his left hand. The picture is described as very fresh in colour, and entirely from the hand of the master.

By the death of Bakker-Korff at Leyden, on January 28, at the age of fifty-eight, Holland has lost one of her most celebrated painters. His small interiors, depicting scenes of domestic life, had gained for him the name of "the Dutch Meissonier."

AN exhibition of Belgian art, under the patronage of the Belgian Government, is to be held at Philadelphia, in the Pennsylvania Academy of Fine Arts, during the months of April and May.

### THE STAGE.

"FROU-FROU," in an abridged American version, has been performed every night lately at the Royalty Theatre, perhaps because it was decided necessary to strengthen the attractions of a play-bill in which Mr. Byron's "Pluto," somewhat inadequately played, was the main feature, but more probably because Miss Hilda Hilton, now the directress of the theatre, has won, in the provinces, such favour as a representative of serious heroines that it seemed fitting to her to measure herself again with Desclée and Bernhardt. The comparison is particularly "odious," because it must be wholly unfavourable. Not that Miss Hilda

Hilton is by any means an incapable actress. Like Madlle. Beatrice, and, to some extent, like Madlle. Modjeska, Miss Hilton shows herself equal to the ordinary stage requirements of great parts. She is, seemingly, not a novice in stage devices. She "knows the ropes." A sufficiently graceful presence enables her to be accepted, without immediate dissatisfaction, as the heroine of serious drama, and her stage craft is advanced enough for her to retain her position. But she no more moves us strongly than charms us greatly. She does not herself hold the secret of emotion. The electrical power granted to Desclée, to Sarah Bernhardt, and to Mrs. Kendal has been denied to Miss Hilton, as to most of her fellow-artists. We are sorry to have to chronicle this impression. It would

be far more comforting to the student of the theatre if he could occasionally discover in some little-known actress the possible successor or possible rival of the great artists who have been named. We cannot anywhere see them; and, if they exist, they are at present playing parts which allow their power no opportunity to reveal itself. Even Miss Eastlake—the most graceful, simple, and sympathetic of the younger artists now playing parts in the more serious drama—does not always add much to the reality of the situations she depicts, though she adds unquestionably to their beauty and to their poetical effect. Miss Hilda Hilton, the new Frou-frou, is not to be named with this actress, for if she has more learning she has less of individuality; and the art of the theatre is not apart from other arts, the art of literature especially, in demanding individuality above all things, because individuality implies a new way of taking experiences and of representing them. The Frou-frou of Miss Eastlake, if she represented the part, would inevitably be much more than the Frou-frou of Miss Hilton. But it is doubtful if any living actress possesses Desclée's qualifications for a character so subtly light, so impetuously wicked, and so thoughtlessly tender.

THE studio of the White House at Chelsea, lately occupied by Mr. Whistler, the artist, and now by Mr. Harry Quilter, the art critic, was the scene last week of some very successful private theatricals. The principal piece was "The Love of Hyppolita," a drama of Athenian life in the days of Pericles, founded on the French of Emile Augier. It was translated into English verse by the host, who also painted the scenery, and performed the part of Cinias. Hyppolita was gracefully represented by Miss Woodgate. In the after-piece, "Uncle's Will," Miss Florence Terry acted with her usual charm. The proceeds of the performances on Friday and Saturday will be handed over to the Chelsea committee of the Charity Organisation Society.

### MUSIC.

#### THE PHILHARMONIC SOCIETY AND THE CARL ROSA COMPANY.

THE first Philharmonic concert of the seventieth season took place last Tuesday at St. James's Hall. The only novelty of the evening was Liszt's Chorus of Reapers from Herder's "Entfesseltem Prometheus." The music is very graceful and pleasing; the vocal parts, which are not easy, were fairly well sung by the choir. Mr. J. T. Carrodus gave a very fine performance of Molique's concerto in A minor, and well deserved the enthusiastic applause which greeted him at the close. The slow movement was played with much feeling, and the showy, but difficult, passages in the first and last movements were overcome with ease. It is impossible to speak too highly of the player's quality of tone or of his accuracy of intonation. Weber's overture "Der Freischütz" and Wagner's "Meistersinger" were given in the first part of the programme, the second being devoted to Beethoven's choral symphony. The *soli* parts in the *finale* were sung by Miss Marriott, Miss Orridge, and Messrs. F. Boyle and F. Barrington Foote. The symphony must have been familiar to every member of the excellent band, and yet the performance, especially of the first three movements, was far from satisfactory. In some of the choral numbers the chorus did its best. The greatest and noblest symphony ever written, and dedicated, moreover, to the Philharmonic Society, decidedly deserves a better rendering than that given to it at this concert. The directors of the society, in announcing the arrangements

for the ensuing season, inform us that, though standard classical works will be largely introduced, modern music, nevertheless, will meet with due recognition. We are promised Liszt's "Hungaria;" "Nänie" (a choral ode) and a new pianoforte concerto, by Brahms; Rubinstein's "Paradise Lost;" and, for the last concert, a new pianoforte concerto by Signor Sgambati, a favourite pupil of Liszt's, who will on that occasion make his first appearance in England.

"Tannhäuser" was produced for the first time in English by the Carl Rosa Company last Tuesday at Her Majesty's Theatre. In 1876 the enterprising director commenced the representation of Wagner's musical dramas in English with "The Flying Dutchman;" this was followed by "Rienzi" in 1879 and "Lohengrin" in 1880. The earnest efforts of Mr. C. Rosa in the cause of high art have been always acknowledged, and we are pleased to be able to say that he has not only deserved, but has also commanded, success. Herr Schott has already displayed in Rienzi and Lohengrin his artistic and histrionic powers, and on Tuesday night he proved himself an admirable interpreter of Wagner's great stage hero; his acting was magnificent, and his singing, if not all that could be desired, was very effective. Madlle. Valleria (Elisabeth), by her sympathetic singing and dramatic acting, thoroughly won the sympathy of the auditors. The trying part of Venus was well rendered by Miss Georgina Burns. Mr. Ludwig deserves special commendation for his conscientious and artistic personation of Wolfram. Mr. Henry Pope, as Landgrave, acted with becoming dignity; but a more powerful voice than he possesses is required for the part. The new English version is by Mr. J. P. Jackson, who has well caught the spirit of the German text; the importance of the connexion between the music and the poem is well known, and the translator has been most happy in his choice and arrangement of words. It is impossible to speak in terms of too great praise of the gorgeous dresses, the fine scenery, and the excellent stage management. The scene representing the Hall of the Singers in the Wartburg Castle, with the entry of the Knights, Ladies, and Minstrels, was most impressive; and the same may be said of the final scene when Elisabeth's funeral procession reaches the valley. The Chant of the Pilgrims in the first act was spoiled; the chorus sang neither in time nor tune, but they afterwards made amends for this unfortunate commencement. We could easily mention other slight imperfections both in the orchestral and vocal departments, but one must be generous as well as just, and the difficulties of the music and dangers of a first performance must be remembered. The singing in the *finale* of the second act was very fine indeed; and, all things considered, the whole performance was extremely good. Mr. A. Standegger conducted in a careful and efficient manner. The house was well filled, and the applause at the end of each act most enthusiastic. J. S. SHEDLOCK.

Crown 8vo, cloth extra, 3s. 6d.  
ART HANDBOOK FOR PICTURE COLLECTORS, &c.  
SHEPHERD'S SHORT HISTORY OF THE  
BRITISH SCHOOL OF PAINTING: comprising Short Notices of 700  
Figure and Landscape Painters from Sir J. RYLANDS, P.R.A., to Sir F.  
LEIGHTON, P.R.A.  
London: SAMSON LOW, MARSTON, & Co., 189, Fleet-street.

Now ready, in royal 4to, on fine paper, with Woodcuts and Seven Plates  
(Four hand-coloured), £1 1s., PART I. of a

MONOGRAPH OF THE INSECTIVORA:  
Systematic and Anatomical. By G. E. DOBSON, M.A., M.B.,  
Author of "A Monograph of the Asiatic Chiroptera," "Catalogue of the  
Chiroptera in the Collection of the British Museum," &c., &c.  
This part, including the Families Erinaceidae, Costellidae, and Selenodontidae, contains full descriptions of all the known species of these  
families, with analytical tables, and, also, the osteology, myology, and  
visceral anatomy of most of the species (among them the rare forms  
*Gymnura rostrata* and *Selenodonta cubana*), illustrated by nearly one  
hundred figures (many of them hand-coloured) from drawings by the  
Author.  
London: JOHN VAN VOORST, 1, Paternoster row

SATURDAY, FEBRUARY 25, 1882.

No. 512, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Sonnets of Three Centuries.* A Selection including many Examples hitherto unpublished. Edited by T. Hall Caine. (Elliot Stock.)

A PERPLEXED Chancellor of the Exchequer might do worse nowadays than introduce a tax on sonnets; the consumption of them is large, and shows no tendency to decline; yet they cannot strictly be said to be necessities of life; a poetical item would add colour to the severe beauty of the Budget; it would educate a party if Tory members put questions as to whether the rules of octave and sestet had been observed; a staff of Inspectors of Sonnets, with ample salaries, would be required, and these might be selected from among the critics of our leading literary journals. Mr. Caine's is at least the tenth selection of English sonnets made within the present century. Henderson's *Petrarcha* (1803) was chiefly distinguished by the homage which it paid to mediocrity; two sonnets by Shakspeare and one by Milton were included, while Langhorne, Polwhele, Mary Robinson, and Charlotte Smith occupied some scores of pages. *Petrarcha* was followed by Capel Lofft's *Laura* (1813-14), a remarkable anthology in five volumes, and in six languages—English, Italian, Spanish, Portuguese, French, and German. After a considerable interval came Dyce's exquisite 16mo *Specimens of English Sonnets* (1833), in which Wordsworth was much interested, assisting the editor with his advice, and with a liberal contribution from his volumes of the preceding year. Mr. Housman quickly succeeded—his Preface is dated 1835—and for the first time the English sonnet is represented with some approach to adequacy in his "Collection." It is worth noting that the volume gives "The Polish Insurrection," by Alfred Tennyson, a "powerful and extraordinary writer," whose genius, we are told, has been elaborately and ably analysed in the *Westminster Review*. From "The Polish Insurrection" to "Montenegro" the interval of time is wide; but the same loyal passion for freedom characterises both poems. *The Book of the Sonnet* (1867)—two volumes—edited by Leigh Hunt and Samuel Adams Lee, is chiefly valuable because it includes a collection of American sonnets, and is prefaced by an elaborate essay from Leigh Hunt. All these collections may be looked on as preparatory to Mr. Main's great *Treasury of English Sonnets* (1880), a volume certainly not designed for what Americans call the

vest-pocket series, but which was rightly conceived and excellently executed so as to fill a place in the library of the student of English poetry which had never been adequately filled before; nor is it likely that Mr. Main's volume can be supplanted by any younger rival for half-a-century. Happy are the possessors of the beautiful quarto; but the octavo was of ungraceful bulk; and, since one likes to sip one's poetry in the open air, some daintier flagon is to be desired. This may be had in Mr. Dennis's delightful *English Sonnets*, the first edition of which preceded the great "Treasury," or in Mr. Waddington's *English Sonnets by Poets of the Past*, which bears the date of the present year. A new field was found by Mr. W. Davenport Adams when, in the second book of *Latter-Day Lyrics*, he gave a selection of fifty sonnets from contemporary makers of verse. Upon this field Mr. Waddington presently entered in *English Sonnets by Living Writers*, the earlier of his two volumes. Last comes Mr. Caine, whose object is to represent in a single volume the writers of both the present and the past.

Books serve "for delight, for ornament, and for ability." Mr. Caine's quarto of some 350 pages is attractive in shape and in raiment—a quarto of moderate bulk, reminding one more of your octavo grown luxurious than of your ancient folio in low estate. It would have been possible for persons so little robust as Cowper and Mrs. Unwin in elderly years to convey Mr. Caine's "Sonnets" from Olney to the colonnade at Weston—a whole mile—by taking it in turns, whereas they must have dropped in the market-place under the weight of Mr. Main's noble "Treasury." These are not insignificant particulars; a collection of poetry is either for study and the delight that comes through study, or for delight and the study which delight induces. Mr. Main's collection is of the former, Mr. Caine's of the latter, kind.

As to the contents, 267 sonnets represent the past and the present. The editor styles it a "quintessential selection," and he has done his difficult task of choosing and rejecting with good discretion. But necessarily the past is somewhat starved down. We know well enough what Milton is, and do not need to have him "represented;" what we want are certain indispensable sonnets, and we feel balked when we cannot find any particular one of these—e.g., "How soon hath time, the subtle thief of youth," or the sonnet "On the religious memory of Mrs. Catharine Thomson." So with other writers. We are grateful to Mr. Caine for having admitted no second-rate sonnet among those chosen from Wordsworth; but we are balked when we find neither "Two Voices are there; one is of the sea," nor "Surprised by joy—impatient as the wind." So we miss Keats's "When I have fears," &c., and Hartley Coleridge's "To a haughty Beauty," and Mrs. Browning's "I thought once how Theocritus had sung," and C. Tennyson Turner's sonnet on "Startling some Pigeons;" and we cannot quite be happy without its great concluding lines—

"While proud and sorrowing man  
An eagle, weary of his mighty wings,  
With anxious inquest fills his mortal span."

Each of these Mr. Caine would doubtless have wished to include, but his space, disposed as it is between the past and the present, seemed to forbid it.

Writers of the present have done some injury here to writers of the past. The special attraction for to-day in Mr. Caine's volume will doubtless be found in some fifty hitherto unpublished sonnets by living writers.

"Die Gegenwart von einem braven Knaben  
Ist, dünkt ich, immer auch schon was."

And we, to be sure, are gallant lads. But it may be doubted whether fifteen of Mr. Caine's fifty unpublished examples—graceful and interesting as they are—will wear as well as older sonnets which he would certainly have decided to include did we not push our betters from their places. Here, however, is a sonnet now first published, which, I think, the world will not easily let die.

"RENOUNCEMENT (by Alice Meynell).

"I must not think of thee; and, tired yet strong,  
I shun the love that lurks in all delight—  
The love of thee—and in the blue Heaven's  
height,  
And in the dearest passage of a song.  
Oh just beyond the sweetest thoughts that throng  
This breast, the thought of thee waits hidden  
yet bright;  
But it must never, never come in sight;  
I must stop short of thee the whole day long.  
But when sleep comes to close each difficult day,  
When night gives pause to the long watch I  
keep,  
And all my bonds I needs must loose apart,  
Must doff my will as raiment laid away,—  
With the first dream that comes with the first  
sleep  
I run, I run, I am gathered to thy heart."

The following, by Mr. Philip B. Marston, is representative of a contemporary fashion in diction, often dangerously approaching a refined form of rhetoric; none the less it interprets with truth and originality its high theme:—

"LOVE AND MUSIC.

"I listened to the music broad and deep,  
I heard the tenor in an ecstasy  
Touch the sweet distant goal, I heard the cry  
Of prayer and passion, and I heard the sweep  
Of mighty wings, that in their going keep  
The music that the spheres make endlessly;  
Then my cheeks shivered, tears made blind  
each eye,  
As flame to flame I felt the quick blood leap,  
And through the tides and moonlit winds of  
sound  
To me love's passionate voice grew audible:  
Again I felt your heart to my heart bound,  
Then silence on the viols and voices fell;  
But, like the still, small voice within a shell,  
I heard Love thrilling through the void pro-  
found."

"To-day's Burden," by Miss Rossetti, ranks also—one cannot doubt—among the enduring additions to sonnet-literature first made in this volume.

Nor among remarkable "examples" must one overlook two hitherto unpublished sonnets by Mr. Swinburne. The first of these conveys the interesting information that, considering how certain famous *Reminiscences* speak of Charles Lamb and others, Memory—apparently to Mr. Swinburne's satisfaction—"spits on that dead snake," Carlyle. In the second sonnet the poet apologises to Lamb for having chosen to do honour to his memory in this singular fashion of assisting at the ejection of saliva. I was disposed for a moment to take

matters seriously; to recal certain indecencies committed from time to time against our most venerable persons, dead and living; and to consider with myself whether a *crachement* of reviling may ever be less afflicting to its victim than a *vomisement* of love and praise. Of a sudden, a slender figure, clad in rusty black, stood at my elbow; it was the ex-clerk of the India House himself—a shade, now faintly gladdened by some thin potation of other-worldly gooseberry or raisin cordial; and, as I gazed with still angry lips and contracted brows, a premonitory smile shimmered across his mouth, while he pleaded for his defender in words which were irresistible, “Ne-ne-never mind Mr. Swinburne, he’s f-f-full of fun.”

Mr. Caine prefixes to his selection an interesting note on the sonnet. The Shaksperian and the Miltonic forms he maintains—and rightly—are not illegitimate derivatives from the Italian sonnet. They are essentially different in “intellectual plotting” and in emotional movement, and are indeed characteristically English. Mr. Caine seems to me to regard too slightly the attempt of Puttenham’s “courtly makers” to introduce the Italian model; but even Wyatt shows a tendency to close with a couplet; and at the same moment when Wyatt was following Petrarch, Surrey had invented the Shaksperian form. We English, who have not yet learnt to form a *queue* when crowding to a concert-room, love to reconcile freedom and order in ways of our own, which prove good ways in the end; and so here. We will keep all forms that have succeeded. The essential laws of the sonnet are the law of unity, the law of variety, and the law of symmetry; all other laws are vain. A sonnet must be a single whole, with differentiated parts, these parts corresponding one to another or being harmoniously interdependent. That its length should be fourteen lines is, perhaps, a mere matter of convenience; possibly fifteen or sixteen lines do not admit of internal varieties of structure equally happy; but at least we are certain that the poem must be seen round at a single view, and therefore it must be short. It is not a river, but a miniature lake—a lake visible in a single prospect, whether it have two reaches or not.

Or, let us say it is a game—call it lawn-tennis, since that is the fashion, and let the flying rhyme be the ball. Possibly the ground might be a few feet longer or shorter without disadvantage. Possibly the courts might be altered a little this way or that. But the game is a good game as it is, and, if we begin to play, let us play according to the rules. Poetry, however, is something more than a game of skill. And, when a poet has something to say, he must say it as best he can. He is magisterial, and may create new precedents. Let him only take care that his thought suffers no loss. The definition of the piece of verse thus written may be doubtful; perhaps it is not a sonnet; the essential thing is that it should say precisely what he meant it to say. And so, though an ill sonnet, or no sonnet, it may be an admirable poem.

It may be questioned whether these comparisons conduce to clearness of thought. For Mr. Caine the true Petrarchan sonnet is an acorn; the contemporary Petrarchan sonnet is a wave with the twofold movement

of ebb and flow; it resembles the hexameter and pentameter as explained by Coleridge.

“In the hexameter (octave) rises the fountain’s silvery column,  
In the pentameter (sestet) aye falling in melody back.”

Banville complains that the superstructure of the sonnet is too heavy for the base which supports it; hence the sestet must be amplified by a magnificent treatment. But the Italians more properly name the octave *base* and the tercets *volti*. For Mr. Rossetti a sonnet is a coin with two sides. “Instead of looking at this composition,” said Wordsworth, “as a piece of architecture, making a whole out of three parts, I have been much in the habit of preferring the image of an orbicular body—a sphere or a dew-drop.” “In its solemn mood,” writes Mr. De Vere, “the sonnet seems as if it should be graven on marble; yet it can be as buoyant as a flower and bright as a dewdrop.” All is discoverable from Goethe’s word of poetry generally:—

“Schöpft des Dichters reine Hand  
Wasser wird sich ballen.”

EDWARD DOWDEN.

#### METCALFE’S MIRACLES OF SAINT OLAF.

*Passio et Miracula Beati Olavi*. Edited from a Twelfth-Century Manuscript in the Library of Corpus Christi College, Oxford, with an Introduction and Notes, by F. Metcalfe, Fellow of Lincoln College, Oxford. (Oxford: At the Clarendon Press.)

MR. METCALFE’S last work, *The Englishman and the Scandinavian*, should be in many hands, for it is pleasant and instructive reading, telling Scandinavians a great deal about the old South-English literature, and the English not less about the old Scandinavian. The book now before us is of another kind: it is an historical document relating to a great Norwegian king. As half of it is in Latin, it cannot expect so many readers. But thousands of us read Latin, especially the easy Latin of this interesting legend-book; and even those who cannot will be satisfied; they have the long Introduction and the many notes. In these English sections they will find an outline of the whole, and much well-arranged information from various sources welcome to all friends of our elder Northern lore. I will only give one extract, in which the author answers the question, Why was King Olaf so hated compared with King Olaf Tryggvason, though he was not so harsh and cruel to the heathen chiefs? “It” (p. 23)

“had been the custom in Norway before Olaf’s time for the sons of great men to go marauding about, both in the country and out of the country, upon their own countrymen and on strangers—in short, to turn Vikings. This King Olaf resolved to put down, cost what it might. And if any of the aristocracy were proved to have committed such depredations, they must suffer in life or limb. No offer of money, no entreaties, could save them. As Sigvat sang—

‘He made the bravest lose his head  
Who robbed at sea and pirates led:  
And his just sword gave peace to all,  
Sparing no robber great or small.’

(Heimskr. vii. c. 192, 193.) ‘Hinc illae lacrimae.’ He had made foes of the aristocracy; and this rendered them only too ready to transfer their allegiance to another, to accept the great sums of English and Danish money offered by King Canute, and to jump at the idea of greater dignities which he dangled before their eyes. Such is the key to the whole transaction. He had caged and clipped the wings of the great birds of prey, and they turned and rent him with beak and claw. The masses were not implacable.”

Mr. Metcalfe draws the following parallel:—

“The words of James I. of Scotland, on returning from England to take the rule of his lawless kingdom, will recur to the reader: ‘Let God but grant me life, and there shall not be a spot in my realm where the key shall not keep the castle, and the bracken-bush the cow, though I should lead the life of a dog to accomplish it.’ This noble and uncompromising resolution to hold no terms with murder and robbery, and to enforce the laws on high and low alike, was an offence not to be pardoned by the Scotch aristocracy, and, like Olaf, James paid the penalty with his life.”

The subject is one with which even the general public should be reasonably familiar. There is no greater romance in our Northern annals than the rise, fall, and canonisation of that great and powerful character, Saint Olaf Haraldson. His birth and early wanderings (starting as he did on his first wiking-raid when he was only twelve years of age), his military exploits in England under King Ethelred, his striking and impetuous career in Norway which ended in a crown, his flight before Hacon, the nominee of King Knut, his adventures in Russia and last gallant march through Sweden, to find a bloody grave at Stiklestad in 1030, the field ringing with his war-cry: “Forward, forward, Christ-men, Crossmen, kingsmen!”—will always attract a wide circle of listeners. Add to this that he is the greatest representative of Scandinavian (especially Norse) as contrasted with English evangelisation. On the one side it was, as it were, Christ the Battle-god smiting and harrying Thor the Battle-god, the question among those warlike populations being which deity was strongest in sword and sinew and axe-play. On the other, the patient and self-denying and enthusiastic English or Kelto-English missionary with loving lips preached Christ the Merciful, the White Baldor; and his lore fell like heaven’s dew on the thirsty heathen desert. Therefore, in Norway, Olaf the Hallow, as folk-hero, rapidly became a Christian Thor, succeeded to his power and his myths, slaying Trolls and Giants with his mighty Axe, as the Thunder-god had done with his Hammer. And when in Norway men saw that their Christendom, though so dearly bought, was yet far better than the crushing licence of a savage paganism, and the reaction in favour of Olaf set in, how strange and violent was the revulsion! Not only at Tronjem and in all the Scandian lands, but from Greenland to the Thames, from Spain to Constantinople, churches rose by hundreds in his honour, hymns and litanies begged his intercession, tales were told of the wonders he wrought, thousands flocked to his shrine, old legends fastened on his name, and new “miracles” wove a web of glamour around him.

It is of these "miracles" that Mr. Metcalfe's book chiefly treats. He was fortunate to find at Oxford the oldest and most complete codex of that Latin text whence the Norse-Icelandic and other compilers drew their stores, one of its pages giving us the name of the author, Bishop Augustinus (Eystein), who became Archbishop of Nidaros (Tronjem) in 1151. The copy republished in the *Monumenta Historiae Norvegiae* of Prof. Dr. G. Storm was not perfect; but the ingenious argument of its editor, that it must have been produced in Tronjem, is here literally confirmed. These "miracula," whether bits of old lore in a new dress, or narratives at all events claiming human sympathy, are, of course, valuable treasures-trove to the student of comparative mythology. I will give one example. There is an ancient widespread folk-tale, in prose and in verse, which may be called "The Penance of the Chain." To atone for some great crime, usually a wholesale blood-feud murder, the criminal, suddenly horror-struck, locks chains on his hands or feet or waist, throws away the key, and wanders wide lands over till Heaven may show pity—announced by the wonderful finding of the key or falling away of the iron fetter at some holy spot. Now, we find this very thing in England, related of Egwin, Bishop of Worcester, about 700, in a MS. of the tenth century. Several Scandinavian ballads treat of a similar subject; and it even plays a famous part in the legend of a Pope, "St. Gregory on the Stone." Mr. Metcalfe quotes another parallel in England—twelfth century—a marvel attributed to St. John of Beverley. But here, at p. 96, the same story is gravely related by Archbishop Eystein as a wonder worked by St. Olaf at his splendid altar in the cathedral of Tronjem. Mr. Metcalfe might have added other curious details from the valuable work of Prof. L. Daae, *Norges Helgener*, or "The Saints of Norway" (Christiania, 1879). This charming book, which, of course, treats largely of Olaf the Hallow, contains three plates illustrating olden art-work connected with that saint, one of which is described at length in our author's Appendix IV.

Before concluding, I must find fault, else my occupation is gone. Why does our author always print viking, instead of the correct wiking? We might as well adopt vas for was, or veek for week, or vise for wise. Of old there was no v either in England or Scandinavia; by degrees in Scandinavia the ancient w either fell away or was hardened into v. But what has that to do with us in England? In modern Scandian is said and written var, veeka (Danish uge), vis, for was, week, wise, which does not concern us. We have always said and written wicing, wiking, till modern people, reading Scandinavian books, introduced this foreign viking. The English word wiking (pronounce week-ing) properly means—wik, a bay—bay-boy, from the pirates running in and out the bays, forths, inlets, where they had their stations. No one in England says Ber-vick for Berwick, or Green-vich for Greenwich, whose last link is smoothed quite differently. And the worst is, that I have heard educated people, misled by the eye (liking, viking), pronounce this wiking (= weeking) as vi-king (as in vie, lie),

which is enough to give any honest man the shudders.

After so impartial an outbreak, I may be allowed warmly to recommend this solid contribution to our national history. It has a good Index, as well as a facsimile of the MS.

GEORGE STEPHENS.

*Encyclopaedia Britannica*. Ninth Edition. Vol. XIII. "Israel," by Dr. Julius Wellhausen. (Edinburgh: A. & C. Black.)

It was a bold step when the editors of the *Encyclopaedia Britannica* resolved to entrust their article on "Israel" to Prof. Wellhausen, of Greifswald. Prof. Wellhausen is known to scholars as the most ambitious of those modern critics who have sought to analyse the documents, and reconstruct the history, of the Old Testament. His *Geschichte Israels*, published in 1878, created a great impression in Germany. It advocated, partly from a new standpoint, partly with arguments which, though old, had never before been realised in their full cogency, the theory, represented in England by Kuenen's *Religion of Israel*, of the late origin of the Levitical legislation of the Pentateuch. Criticism, conjecture, and fact were skilfully disposed in support of this opinion. The *Geschichte* abounds in striking and suggestive combinations, for which every sincere student of the Old Testament, however often he may be obliged to withhold his assent, will be grateful. For the work is marked also by serious defects. The author's criticism, whether historical or linguistic, is trenchant, but not seldom in the last degree arbitrary. Caution or reserve are quite unknown to him. His theological sympathies, in so far as he evinces them, are partial and one-sided. And he lacks, moreover, that reverence and submission which Ewald, imperious as he was in his attitude towards modern critics, invariably displays in his treatment of the Biblical writers. Does such an author seem designed by nature to be the ideal historian of Israel?

The article before us is able and brilliant; the style is incisive, the method philosophical, the generalisations often exceedingly just. The social and political changes through which the Israelites passed, the impetus given to their civilisation after the settlement in Canaan, the circumstances which determined gradually the growth of a national feeling, the political importance of a David or an Isaiah, the rise of new parties after the Captivity—could not be more forcibly or admirably sketched. Every line tells; nor is there a word too much. These, however, are points on which there is no serious divergence between historians of different schools. There is much, also, that is true in Prof. Wellhausen's estimate of the religion of Ancient Israel; for instance, in his view of the creative impulse to be attributed to Moses, and of the work of the prophets. But we cannot here award him the same unqualified praise. The theological phraseology sometimes perplexes us. Coming from the author of the *Geschichte Israels*, we are not always quite sure what it means. His view of the development of the unwritten "Torah," which alone he ascribes to Moses, into the code finally promulgated by Ezra obviously opens questions too wide

to be discussed here. It is sufficient to say that, in spite of the strong arguments to which the advocates of the Grafian view can appeal, it has not yet won general acceptance in Germany; notably, it has been combated at every point by the veteran theologian Dillmann in his new edition of Knobel's Commentary on the books of Exodus and Leviticus. Where opinions are thus divided, we think that both views should have been represented, and some account given of the main grounds upon which they respectively rest. It is possible, of course, that in the end some intermediate position may be found which will do justice alike to the theological instincts expressed in the old traditional view and to the elements of truth which are undeniably contained in Wellhausen's volume. But, naturally, no estimate of a rival opinion, and no suggestion of any such intermediate position, is to be found in the present article; the author's theory is an embodiment of the entire truth.

Independently, however, of the course adopted by him on this particular issue, Prof. Wellhausen is deficient in one of the primary qualifications of an historian. It is the first duty of an historian to draw the clearest line of demarcation between fact and conjecture, to leave his reader in no possible doubt as to what rests upon direct testimony and what is merely a matter of presumption or inference. This Wellhausen never does. No visible criterion distinguishes a conjecture of his own from the most unimpeachable statement of a contemporary. The word "probable" has no place in his vocabulary. The earlier part of section 2 will illustrate what we have said. The view presented by the Book of Joshua—that the conquest of Western Palestine was a common undertaking of all the tribes—"is," he remarks, "a 'systematic' generalisation, contradicted by the facts which we otherwise know. For we possess another account of the conquest of Palestine—that of Judges i., which runs parallel with the Book of Joshua." This is not correct. The account of Judges i. purports to relate what occurred subsequently to the death of Joshua; and it was so understood by Ewald (ii. 284, *E. T.*). Yet, on the strength of this and other assumptions, the details of the conquest are rewritten under an entirely new light. We have no objection to this or any other conjecture, as such, but it ought not to be described to the unlearned reader as a "fact." A similar instance is the account of the origin of "prophecy" (p. 402<sup>b</sup>), the source of which may be traced to a hypothesis of Land's. On p. 405<sup>a</sup> we are told that David was made a pious hymn-writer by the "later Jewish tradition." To be sure, the description given him in 2 Sam. xxiii. is dismissed by Wellhausen (*Einkl.*, p. 229) as devoid of all authority; but a different and much juster estimate will be found under the article "David" (p. 841). Other examples of the same fault might readily be found.

The article is marked, lastly, by a singular omission. That all the lines of Israel's religious history converge upon the Prophet of Nazareth is no mere postulate of traditionalism; it is asserted with the utmost frankness by Kuenen (*Religion of Israel*, vol. iii.,

p. 277). In Wellhausen's conception of the development of this religion, though he dwells at length upon the creed of the earlier prophets, the last and greatest of their order finds no place. Yet it was through him that the prophetic office of Israel (p. 417<sup>b</sup>) was realised; and Israel's religion became cosmopolitan (p. 428<sup>b</sup>) only in virtue of the new life imparted to it by him. The view that the last phase of that religion is to be sought in the Rabbinical schools is obviously perverse; the history of "Israel" ends with the fall of Jerusalem in A.D. 70. The cosmopolitanism, such as it is, of modern Jews is in no sense a development of their own principles; it is simply borrowed from the society in which they live—i.e., from Christianity. The ancient faith became cosmopolitan through the Founder of Christianity; and it is the duty of the historian of Israel to indicate, at least in outline, how this was accomplished.

On the whole, while there is much to commend in the article, it must be read with discrimination. Upon comparing it with other articles, such as those on "Ethics" or "Evolution," in which controverted subjects are discussed, we do not feel that, powerful as it is, it is quite in its right place in an encyclopædia. We fancy also that there must be many English readers who would have been glad if a subject raising such important issues could have been dealt with by some scholar with whose methods and opinions they were more familiar. We regret that it was not entrusted, for example, to the author of the article "Bible," who from first to last (see *British Quarterly Review*, April 1870, pp. 328, 341; *Old Testament in the Jewish Church*, p. 291, &c.) has struck a note which may be listened for in vain through all that Wellhausen has ever written. An article from him would have been not inferior in expository ability; if less dazzling, its light would have been softer and, possibly, more sincere.

S. R. DRIVER.

*The White Sea Peninsula.* By Edward Rae. (Murray.)

ALTHOUGH more than three centuries have elapsed since the gallant Sir Hugh Willoughby "took his last look of the descending sun" on the "desert coast of Lappia," the White Sea Peninsula is still very little known even to Russians, and Mr. Rae tells us that the inhabitants are apt to be suspicious of travellers who profess to go there for pleasure. It certainly is not an inviting part of the world, and even the lovely summer nights do not render travelling there a luxury. The north-eastern half of the peninsula consists of barren wastes called *tundras*; forests cover about three-eighths of the whole area; and the remainder is occupied by lakes, tarns, and swamps. A line drawn south and east from Kola, across Lovosero to Sosnovets on the White Sea, will not only divide the peninsula into two nearly equal parts, but will show approximately the boundary between the wooded country and the *tundras*. The soil is in many places extremely marshy, and there are several extensive tracts of boggy ground. As these are not frozen underneath, like the *tundras* of Siberia, "travellers, whatever may be their stature, must avoid swamps." At

Vardö, Mr. Rae was told that he would find wooden roads throughout the peninsula, but his informant "proved to be an enthusiast—that is, a person who believes about four times as much as he can prove." Mr. Rae does not profess to go very deeply into archaeological or ethnological questions; but he has a hobby in the matter of old silver, is fond of natural history, and imparts a great deal of information on various subjects which, to the majority of English readers, has hitherto been inaccessible. His descriptions of scenery have the freshness and vigour which is the peculiar charm of sketches from nature; and the story of his wanderings round and about the Lapland peninsula is told in such genial, pleasant fashion that those who follow him will probably turn over his pages in very good temper, and part with him on excellent terms.

The expedition, as Mr. Rae humorously calls it, consisted of two persons besides himself—"the Doctor," who is already familiar to readers of *The Land of the North Wind*; and the *perevodchik*, or interpreter, who "didn't speak a word of English," and was a "good, honest, well-meaning little man," with an amazing capacity for blundering. Proceeding eastward from Kola, after ascending the Tuloma River to Nuot Lake, they visited the principal fishing stations on the Murmanian coast, and ascended the Ponoï River until stopped by ice. Thence they followed the southern shore of the peninsula to Varsuga, struck across the White Sea to Solovetsk, and returned northwards along the Karelian coast, and by way of Lake Imandra to Kola. Mr. Rae makes light of the risks and impediments he encountered. But it is evident that they can only be overcome by the exercise of great tact, temper, and perseverance; and it is very clear that the journey is, as he says, "a hard one." The numerous delays, however, enabled him to pick up some interesting facts about the fisheries and those employed in them. The Murmanian coast is visited annually by about 3,000 fishermen—Norwegians, Finns, Russians, and Lapps. Some of these men come from Brönö, on the west coast of Norway, a distance of nearly 1,000 miles; for it is a maxim in the North that "he who would eat bread in winter must not stay at home in summer." There is ample scope for the further development of these valuable industries. At present the Russians are unskilful fishermen as compared with the Norwegians; their tackle is clumsy, and their method of preparing the fish when caught is primitive. The salmon fisheries were formerly very extensive, but the absence of control and proper supervision has had a very prejudicial effect. In the Tuloma River Mr. Rae saw one of the salmon traps hoisted up and opened. It contained three dozen magnificent salmon, some weighing six-and-thirty pounds, and glittering like polished silver. "A Lapp dropped down into the box, and with a club put the salmon to death: a sight very cruel and pitiful." Those who take an interest in Arctic history will regret that the expedition passed seaward of Arzina River, where Sir Hugh Willoughby perished. A description and photographs of the locality would have been very interesting. From a purely geographical point of view, the ascent of the

Ponoï River was perhaps the most important event of the journey; and Mr. Rae's description of the region is so good that many will share his disappointment at his being unable to explore it further. He, however, induced an intelligent peasant to travel overland to the Ponoï from Varsuga, follow the river to its mouth, and give a detailed description of the journey. The sequel was, as he observes, "satisfactory and interesting;" and the report, a literal translation of which was forwarded to him by the consul at Archangel, is remarkably well written, bearing an evident impress of truth. Mr. Rae also gives a capital description of the wealthy White Sea monastery of Solovetsk, but does not appear to have formed a high opinion of the monks, "their system being to take all they can get, and give nothing." This reminds us of Canning's famous rhyming despatch to Minister Falck:—

"In matters of commerce the fault of the Dutch  
Is giving too little and asking too much."

"Almost at their doors," he writes, "live the harmless Karelians, whose families starve in the summer, who travel to the Arctic coast to earn their bread, and suffer and die by the hundred for the want of some little medical help." The condition of the scanty population of Russian Lapland is indeed deplorable, and it is only with great difficulty that the poor Karelian maintains life at all. To him are unknown what the *moujik* in other parts of Russia considers bare necessities—grain for making *kaasha*, cabbages for stewing into *shchi*, gherkins for giving a savour to existence. No wonder that the poor facilities offered to colonists, the weakening religious fasts, combined with the cruel climate and the dreary winter nights, the difficulty of obtaining legal protection, and the wretched means of communication, have chilled what energy these poor people might have possessed. We can only hope that Mr. Rae's generous efforts in their behalf may be successful.

Finding a Samoyede family at Varsuga, Mr. Rae was enabled to make what he calls "Samoyede Studies," and gathered a surprising amount of information concerning their customs and folk-lore. He also gives some well-chosen selections from Prof. Friis's Lappish mythology, and appends a vocabulary in Samoyede, Russian Lappish, and Russian which must have cost him an infinity of patient labour, and will be a boon to any future travellers who may follow in his steps. The Appendices also include lists of the minerals, birds, and flowers observed; and the author's route is shown on a map of Russian Lapland from the *Proceedings* of the Royal Geographical Society. There is, however, no index, which is a rather serious fault in a work of this kind; and some few inaccuracies have crept in. For instance, Trifan's cave (p. 18) is not in the Peisen Fiord, but at the inner end of Bög Fiord, near the mouth of the Pasvig River; while the line of no variation, where the mariner's compass indicates true north (p. 51), now passes several degrees west of Kola Fiord. It is also doubtful whether the sources of the Voronje and Varsuga Rivers should have been connected on the map, on the strength of a statement (p. 62) that a stream leaves the southern extremity of the

Lovosero. The illustrations and etchings give an excellent idea of the country and people; and Mr. Rae's style is always lively and amusing. It would be doing him great injustice, however, not to mention that under his quaint humour runs a vein of deeper thought, which adds much to the value of his observations on men and things.

Mr. Rae treats the mosquito with comical deference, and appears to agree with Dr. Webster that its sting is "peculiarly painful and vexatious." But he also appears to have overlooked the only thing for which these pestilent little insects have any real respect. This is birch-bark oil, which gives Russian leather its much-prized scent, and may be procured from any chemist in Norway, where it is known as *naver-olje*. It will even keep Indian ants at bay. GEORGE T. TEMPLE.

*Memoirs of Count Miot de Melito.* Edited by Gen. Fleischmann. Translated by Mrs. Cashel Hoey and Mr. John Lillie. In 2 vols. (Sampson Low.)

THESE Memoirs were published in France about the year 1858. M. Duvergier de Hauranne, in a note at the end of the second volume of his Parliamentary History, remarked that their publication ought for ever to make an end of the notion that Bonaparte the First Consul was one kind of being, and Napoleon the Emperor another. M. Lanfrey turned the idea to good account in his celebrated work, of which these Memoirs form, after Napoleon's own correspondence, perhaps the most effective source.

The main interest of Miot de Melito lies in the fact that he was intimate with Bonaparte in his early career, and that the record which he has preserved of conversations with the General exhibits in a very striking and convincing form the real unity of Bonaparte's life—the unity resulting from a boundless ambition, as complete and as innate in Bonaparte's own nature from the beginning as it was impervious to any possible moral consideration. But the Memoirs are also a valuable authority on the general history of the Consulate, the early Empire, and the career of Joseph Bonaparte as King of Naples and King of Spain. Miot was in constant official employment and in intercourse with men at head-quarters, and he had the excellent habit of noting the exact source from which his information was derived. Thus, in speaking of the conspiracy against the First Consul in 1804, he tells us that he had himself examined the papers which were seized at Moreau's house; in describing the events of the 18th Brumaire he names his informant, M. Gallois, an eye-witness; and, in exhibiting the plans of Sieyès in 1799, he says that he learnt the details from Sieyès' friend, Regnault de St-Jean-d'Angely.

A brief outline of Miot's career will give the best idea of the character of the work. He entered the War Office shortly before the Revolution, witnessed the events of October 6 at Versailles, continued in the War Office under a succession of Ministries until, after August 10, 1792, the Jacobin Pache came in and disorganised everything. Miot then narrowly escaped pro-

scription; but he returned to his place on Pache's dismissal in February 1793, and changed into the Foreign Office at the beginning of the Reign of Terror. His narrative gives us curious glimpses into daily life at the public offices in those troubled times. The War Office was brutalised; the Foreign Office still preserved "politeness and elegance of manner, the result of a gentlemanly education and the habit of association with foreigners" (p. 48). At the house of the Foreign Minister, Deforgues, Miot met Danton and many other leading men of the Convention. His description of Camille Desmoulins is interesting:—"Gloomy and silent, his countenance wore an expression of profound melancholy," &c. (p. 54). Robespierre he met only once. On the fall of Danton, a new chief came to the Foreign Office. This was Buchot, a schoolmaster from a small town. "His ignorance, his bad manners, his stupidity, surpassed anything that can be imagined." His idleness, indeed, seems to have been quite aristocratic; for "when his signature was required for any document he had to be fetched from the billiard-table at the Café Hardy." Buchot ultimately took steps to get most of his subordinates guillotined; but on the day when he set about it Robespierre fell, and so the plan broke down. Miot himself was appointed to Buchot's post, and (if he is not romancing) the old Terrorist then applied to him for the place of office-boy (p. 63). Miot set to work with the Committee of Public Safety to restore the Foreign Office to efficiency, and endeavoured to renew the relations of France with foreign Powers. The treaties with Tuscany, Prussia, Holland, and Spain followed. Miot was made ambassador at the Court of Florence. "People expected to see a sort of savage, clothed in an extraordinary manner, using the coarsest language;" and they were agreeably surprised to find that Miot was a gentleman (p. 85). Alfieri, however, refused to speak to him. The Memoirs give valuable evidence of the hostility of the Italian people to France at this time; they exhibit, however, on the author's part, the old prejudices against Venice (p. 182). Miot first saw Bonaparte at Brescia on June 5, 1796; some months later he was transferred from Florence to Turin, and from this time he continued to see Bonaparte frequently. The conversation at Montebello on June 1, 1797 (p. 187), which was at once written down by the author, is one of the most interesting things in the book. "I found in Bonaparte a man thoroughly opposed to Republican forms and ideas; he treated everything of the sort as idle dreams." A little later comes an account of Bonaparte's relation to the *coup d'état* of Fructidor. Fear of the return of the Bourbons was his dominant motive in supporting the revolutionary party within the Directory, but "other motives contributed to inflame him. He would endure no military renown but his own: Carnot in the Directory was an offence" (p. 209). In 1798 Miot was superseded, and returned to Paris. "What a change had taken place during my three years' absence! . . . *Thee* and *Thou* were no longer used; Fashion had resumed her sway, and a passion

for the antique regulated her decrees, to the detriment of decency," &c. (p. 262). On the 18th Brumaire, Miot was absent on a mission to Amsterdam, and visiting the head-quarters of Gen. Brune, who had just defeated the Anglo-Russian army at Castricum. Under the Constitution of 1799 Miot received a place in the Tribunate, and, although he continued to see Bonaparte as First Consul, he became less intimate with him than formerly. Bonaparte was incensed with the opposition of the Tribunate. "My enemies," he repeated several times, "deserve nothing from me but steel" (p. 320). Miot became the familiar friend of Joseph Bonaparte, and heard from him the discussions which took place as to a successor for the First Consul in case he should be killed in the campaign of 1800, and also learnt the designs of Bonaparte himself for making his dignity hereditary—that is, making himself Emperor. From the Tribunate the author was promoted to the Council of State. He records a splendid speech of the First Consul's against the persecution of priests on the occasion of the Opera House Plot. "Am I once more to arouse terror and alarm in every breast? Am I to imitate the Merlins and the Robbells by striking indiscriminately on every side?" &c. A parallel in vigorous eloquence is the address to the merchants many years later (vol. ii., p. 500). Nothing can surpass the point and energy of some of these sentences. Contrast with them the atrocious justification of the murder of the Duke of Enghien: "He was young, bright, courageous, and, consequently, my most dangerous enemy. . . . I shall only be secure on my throne when not a single Bourbon is in existence, and now there is one less of them" (ii. 78). The interesting record of events at Paris continues till 1806, when Miot was sent to Naples with the new King, Napoleon's brother Joseph. From Naples both were removed to Spain, and the later part of the Memoirs describes only too well the wretched struggle in which Joseph found himself involved.

The Memoirs have already been translated into German; and, if English people prefer reading a translation in two enormously thick volumes borrowed from a library to purchasing the cheap and convenient French original, it is well that so good a book should also be translated into English. The names of the translators are a guarantee that the work has been well done. We may, however, point out a few slips which deserve correction in the next edition. "Council of former Members" (vol. i., p. 53) ought to be "Council of Ancients." They were not former members, but men over forty years old. "My countryman Berthier" (vol. i., p. 74) ought to be "My fellow-townsmen" (orig. *compatriotes*: both were born at Versailles). In vol. ii., p. 133, "Austria, whom I have twice driven from Vienna and all her States" ought to be "whom I might twice have driven." Napoleon had not been to Vienna at all when these words were said. There is an attempted emendation made in vol. i., p. 384. Luichisini, "Ministre de la Prusse," is translated into Russian Minister, apparently because he is called on the next page "organe de la Cabinet de St-Petersbourg." But the ori-

ginal is right, the emendation wrong. Russia had no representative in France; it sent its views through Lucchesini, who was just appointed Prussian ambassador. The printers have been unusually active in inventing new names for old friends. Châlons is Châtons, ii. 668; Gallo, the Neapolitan diplomatist, Gatto, i. 184; Savary, Duke of Rovigo, is Bovigo, ii. 677; Daunou is everywhere Dannou, ii. 235, &c.; the bay of Audierne is Andierne, i. 153; Liechtenstein is Lichstentein, ii. 150; Caulaincourt (against whom all compositors seem to have a grudge) is Canlaincourt. In the note on i. 40, the year 1880 ought to be 1800. Out of regard for people's wrists and the backs of the two volumes, we implore the translators to expunge in the next edition the thirteen unnecessary pages of Lord Hawkesbury's and Lord Whitworth's despatches, i. 538-51; the five pages of the Pope's Italian instructions to his subjects, ii. 233; and the six pages of Wellington's despatch describing the Battle of Salamanca. There was some reason for Count Miot to drag in the English despatches of 1803 *en masse*, because his countrymen had been hoodwinked and knew nothing about them; but a mere reference to the Parliamentary Papers or *Annual Register* would have been quite enough for the English reader. As to the Pope's instructions, it is not necessary to have them in two languages, and the present translators may be trusted not to play tricks with his Holiness. Wellington's despatch is unnecessarily inserted, because no one who wants to have a precise account of English military operations would think of demanding it from a work which, though abounding in political interest, does not pretend to be a military history. C. A. FYFFE.

#### CURRENT LITERATURE.

*Some Private Views.* By James Payn. (Chatto and Windus.) In this pleasant volume Mr. Payn has collected half-a-dozen articles which everybody has read in the *Nineteenth Century* under his name, and as many rather shorter papers which everybody has also read in the *Times*, but without identifying them, unless enabled to do so by private intelligence or the eagle eye of the critic. Here is the celebrated "Sham Admiration in Literature" which has since, and deservedly, brought down some noble strokes of the shillelah on Mr. Payn's recreant head; and that still more wonderful paper on "The Literary Calling and its Future," in which Mr. Payn first asked why boys were not educated for literature (as if, as has been very pertinently remarked, the University of Oxford in the first place, and the entire competitive examination system in the second, educated them for anything else), and then why everybody did not send their boys into this lucrative, easy-going, and understocked profession. He has duly "palinoded," however, and the palinode is printed here, though it is not quite so ingenuous as Mr. Payn ought to have made it, and as we suspect he does make it in private and to his friends. There are no such objections to "The Critic on the Hearth" or "The Pinch of Poverty" or "The Midway Inn;" and they may be read with the certainty of laughter, and not without a chance of some result not better than mere amusement (for there are few things better), but additional to it. The *Times* papers are not only shorter, but slighter and more

commonplace. However, some people may read them now who have not read them before, and it would be a very odd thing if Mr. Payn could succeed in writing what was not worth reading once. One thing we shall ask him with due submission. What is the meaning of a table of contents which has all its figures wrong? The "Pinch of Poverty" ought to begin at p. 57; it begins at p. 59. "The Literary Calling" ought to come after "Story Telling" and "Penny Fiction." It comes before them. Finally, "Travelling Companions" ought to begin at p. 230, and behold there is no p. 230 at all. We only trust that Mr. Payn, in one of his well-known and acknowledged fits of high spirits, has not meditated and carried out an unseemly joke upon his pensive public, whose gloom he so justly reproves in "The Midway Inn."

"Diocesan Histories." *Peterborough.* By George Ayliffe Poole. (S. P. O. K.) This last issue of a valuable series is quite equal to any of its predecessors, and very much better than some of them—the *Canterbury* volume, for example. Mr. Poole has devoted many years and untiring energy to archaeological and historical subjects. His *History of Ecclesiastical Architecture in England*, published some four-and-thirty years ago, was, we believe, not his first contribution to literature. It has been superseded now, but was for many years the best handbook on the subject. Mr. Poole is an ecclesiastic first and an historian afterwards; but his theological conclusions, though they colour the narrative, do not blind him to patent facts. We have read his little book carefully, and cannot call to mind a single instance in which party spirit has impelled him to state matters as other than they were; as to inferences, that is another matter. The remarks made as to mediæval miracles will, we imagine, entertain many of Mr. Poole's readers. He so clearly misses the true point of the case; either they are absolutely false—misconceptions, that is—or they are worthy of a far higher degree of credit than he seems inclined to give to them. The description of the Saxon and Early-Norman period is very well done. As we get farther down the stream, and come more and more in contact with modern ways of thought, we are bound to speak less favourably. *Peterborough* suffered horribly at the hands of the fanatical Presbyterians at the beginning of the great Civil War. Most of those things are true as to this noble church, which have been invented to cover later spoliations in other parts of the country. We can excuse a *Peterborough* historian treading in the footsteps of Gunton and speaking harshly; but we think, now that nearly two hundred and fifty years have passed away, it might have been pointed out that the tide of vandalism which swept over a portion of the Eastern counties was an exceptional phenomenon. Does Mr. Poole really feel convinced that the feeling of reverence for the dead had sunk so low in those times that a mayor of Northampton could really order a human body to be buried with no other form of words than these:—

"Ashes to ashes,  
Dust to dust,  
Here's the pit  
And in you must!"

We have heard the story before, but do not remember what its authority may be. It seems to us nothing more than a very stupid joke.

MESSRS. SAMPSON LOW are the publishers in this country of the series of "American Men of Letters" which is being brought out by Messrs. Houghton, Mifflin and Co., of Boston, under the editorship of Mr. Charles Dudley Warner. The two first of the series are now before us—*Washington Irving*, written by Mr. Warner himself; and *Noah Webster*, by Mr.

Horace E. Scudder. No better beginning could have been made. Washington Irving stands conspicuous not only as the founder of the profession of literature in America, but as the one American author down to the present time who has won the suffrages both of the public and of the critics. Mr. Warner's presentment of him is characterised by skilful arrangement, adequate appreciation, and a clear style. In his judgment—that Irving's imaginative works will survive his historical—we are entirely disposed to concur. The time has passed when history can be taken up as a department of *belles-lettres*. Our only criticism is that Mr. Warner has not resisted the temptation to display his well-trying faculty of saying smart things. From Irving to Webster—what a change! It is like passing from Charles Lamb to William Cobbett. And yet Webster has, in his way, exercised an influence over American readers far greater than that of Irving. If Irving has sold his thousands, Webster has sold his millions. The "Spelling Book" is representative of universal education throughout the States, as the "Dictionary" is representative of the American newspaper press. In one sense, the influences of Irving and Webster are antagonistic. If Webster's views had won complete success, there would have been no American literature in existence—at least none that an Englishman could read. We cannot congratulate Mr. Scudder on the way he has done his work. The subject is a dull one, but we think it might have been made more readable. It is a distinct offence not to have printed the long and tedious quotations in small type. We see from the announcements that the American edition of the book had a portrait, which this has not; but, *per contra*, that sold for five shillings, while this can be got for just one-half.

*Greek Wit.* Second Series. By F. A. Paley. (G. Bell and Sons.) *Bons Mots des Grecs et des Romains.* Par J. D. Lewis. (Paris: Charavay.) Although the second series of Mr. Paley's book coincides with the first and only series of Mr. Lewis' selection, the latter is no doubt justified in describing the coincidence as a coincidence merely. Indeed, the difference of the plan of the two books, as well as of their range and medium of expression, is sufficient to obviate the least charge of imitation. Mr. Lewis has written in French—a language which he seems to manage with ease, and which perhaps affords the opportunity of more pointed expression of verbal wit than English. He has been considerably more rigid in his admission and exclusion of witticism than his rival, and he has given a place to Latin as well as to Greek wit. Mr. Paley, in his second little book, has pursued much the same plan as in his first, hospitably entertaining the abundant apophthegms recorded by Diogenes Laertius, Plutarch, &c., without enquiring too minutely as to their power of surviving the rude experience of translation through two languages and 2,000 years. He is quite right in saying that Diogenes Laertius is less read than he should be. We can very well remember, in about the earliest days when Greek was currently legible to us, hitting upon a copy of the *Lives of the Philosophers* at a stall on Holborn Hill (long since abolished by improvements) and reading it till the stall-keeper appeared with the usual mild suggestion, with which the pocket of sixteen years was unfortunately unable to comply. But somehow the anecdotes read better in the Greek than in the English. As for Lucian, Mr. Paley is still more right when he speaks of his "abundance." No one who has on his shelves the three modest volumes which include the work of the Pantagruelist of Samosata would exchange them for any other three of a similar kind. But Lucian must be translated "by head," as Mr. Carlyle used to say; "the ordinary hand methods will not answer."

*Ralph Waldo Emerson.* By G. W. Cooke. (Sampson Low.) This volume contains a very useful study of the writings and life of Mr. Emerson. The author is an admiring, but not an indiscriminately adoring, disciple; and, in particular, it may be mentioned as evidence of his judgment that he does not imitate the preposterous folly of some of his countrymen, who have tried to trace in Emerson a relation of mastership instead of discipleship to Carlyle. Much of the matter contained in this volume is of more or less local interest, and the precise attitude of Mr. Emerson to his fellow-religionists or denominationists is in particular a subject on which not very much curiosity is likely to be felt in England. Nor is the book to be recommended as a critical study of the literary kind. But its deficiencies in that point are of the less importance as the time has fortunately not yet come to estimate very exactly the worth of the writer who divides with Jonathan Edwards the credit of having given to America a place in the history of philosophy. As a biographical essay of the sympathetic kind it must be allowed no small value, and this is not the least claim which a book can have to the gratitude and attention of posterity. It is evident that Mr. Cooke has had good authority for his facts, and it does not appear that in stating them his judgment has been warped by personal partiality; at least if any such warping has taken place it is "no more than reason."

*The Rival Heirs: being the Third and Last Chronicle of Escendune.* By the Rev. A. D. Crake. (Rivingtons.) There is a certain amount of dramatic power in this little book, and thus far it contrasts favourably with most historical tales written for a purpose. It would, of course, be absurd to compare it with *Ivanhoe*, or, indeed, with even the least popular of the Scott romances. It is worthy, however, to stand on the same shelf with the *Camp of Refuge*, a book which delighted our childhood. We feel, however, that it is inferior to the older story, inasmuch as it is intended to be more directly instructive. There are at the end a few notes, but the information furnished does not amount to much. The Battle Abbey Roll should not have been noticed without a caution that those who are best able to judge believe that it has been tampered with.

*The Queen's Speeches in Parliament.* From her Accession to the Present Time. Edited and compiled by F. Sidney Ensor. (W. H. Allen.) Mr. Ensor, whom hitherto we have known only as the author of a not unsuccessful book of travel in Nubia, has here undertaken an odd task. He has compiled (without, we trust, much editing) the entire series of speeches which have been delivered by her present Majesty (whom God preserve) at the opening, prorogation, or dissolution of Parliament. To these he has prefixed the date, a list of the Cabinet for the time, and the Lords Commissioners (if any), and has added the names of the movers and seconders of the address in both Houses. At the end is a fairly good Index. This may be "a compendium of the history of her Majesty's reign told from the throne," but it is not literature. Some comments, however, we may venture to make, though certainly we shall not follow Cobbett in criticising the Queen's English. It has astonished us to find that the total number of these speeches is no less than ninety-six. Is it to be wondered that they do not show much originality? In the early part of the reign, when the Queen was present herself, she used the first person; when Commissioners took her place, the third person. This seems, to one of the vulgar, natural enough. But of late years the practice has become established of using the first person in both cases alike. Whence this change? Will constitutional lawyers or courtiers kindly explain?

*Maria Wuz and Lorenz Stark: English Prints of Two German Originals.* By F. and E. Storr. (Longmans.) *A Trip to the Brocken.* By H. Heine. Translated by R. M'Lintock. (Macmillan.) He or she who endeavours to translate Richter assays an uncommonly tough adventure, as anyone who has tried it knows. Mr. and Mrs. Storr, in their version of *Maria Wuz*, have come out of the trial victoriously. Whether they were altogether wise in adding to this Engel's *Lorenz Stark* is a question which may be answered in different fashions—as, indeed, they themselves admit. But this also is very well done. As for the *Trip to the Brocken*, it is not ill done, but it does not weaken a conviction (which we hold as strongly as may be consistent with perfect readiness to have its unsoundness demonstrated) that Heine is absolutely untranslatable. The difficulty in his case is quite different from the difficulty in Richter's. It is not eccentricity which has to be followed—that can be done with care and brains—but the curious felicity of a comparatively simple style which has to be reproduced. If Heine himself could be born again—would to heaven he could!—and be born an Englishman, he might be able to translate the other Heine—him whom we know. But we are not quite certain even of that.

*A Counting-House Dictionary.* By Richard Bithell. (Routledge.) Dr. Bithell has conceived a novel and happy idea, and he has carried it out with success. He has here supplied a complete and trustworthy glossary for all those who want to understand the money market columns in the newspapers. Nay, more, he has furnished information, nine-tenths of which will, we venture to say, be new even to most of those who make up the money market. His etymology shows considerable research, though it is not always correct, nor correctly printed. But, taken altogether, this book represents one of the most honest and useful jobs of work that we have recently come across. If we may criticise one little part, while we find many old Indian coins recorded whose names we never heard, both the pagoda and the fanam (not to mention the dinar) are omitted; while the common blunder is repeated of confusing the "pie" with the "pice." The pie is only money of account; the pice is a coin = 3 pies, and worth about  $1\frac{1}{4}$  farthing.

*History of Medicine in Massachusetts.* By Samuel Abbott Green, M.D. (Trübner.) This is a Centennial Address delivered before the Massachusetts Medical Society at Cambridge on June 7, 1881, and is a model of what such addresses should be. Dr. Green, himself no undistinguished physician, and thoroughly familiar with his subject, has given, in a concise and intelligible manner, a comprehensive history of his profession in the oldest New England State, enlivened with graphic sketches of its principal professors, which becomes under his skilful hand not a dry discourse, but a most interesting narrative. While members of the profession will be delighted with the more technical portions of the address, the ordinary reader will be equally charmed by the author's fascinating style, and by the personal details with which the volume abounds. We cannot commend the work too strongly.

*Poetical Ingeniuties.* By William T. Dobson. (Chatto and Windus.) This is a sequel to the same compiler's *Literary Fivolities*, and not an unwelcome one. Mr. Dobson's handling of such subjects as "Macaronic Verses," "Anagrams," "Lipograms," "Parodies"—this, by-the-way, is far too large a heading—"Centos," and so forth is far from exhaustive, but it is agreeable enough, and the book is plentifully furnished with extracts. It will make one of the best of books for railway travelling and odd moments generally.

*Here and There. Quaint Quotations.* By H. S. Lear. (Rivingtons.) As this book is simply a collection of epigrams and short facetious passages from the English classics it need hardly be said that it is good reading. Beyond selecting its contents, we cannot say that Mr. Lear has done much for them. His attributions of authorship are frequently either erroneous or doubtful, and his dates occasionally quite wrong. However, the text is there.

*On the Platonism of Wordsworth: a Paper read to the Wordsworth Society.* By J. H. Shorthouse. (Birmingham: Cornish.) The singularly pure and dignified style of the author of *John Inglesant* shows to advantage in this paper. As to the matter of it, it is worth attention, but the thesis seems to us to want a good deal more working out. Mr. Shorthouse has, however, no doubt made a point in his comparison of the fondness of his two great writers for starting from the things of ordinary life, and idealising them, instead of beginning with abstractions and arguing downwards.

THE translation of M. Taine's new volume, *The Revolution*, Vol. II., by Mr. John Durand (Sampson Low), is, on the whole, readable, but is evidently done in a hurry, as work of this kind, which really requires the utmost thought and patience, usually is. In the Preface, for instance, when the author says of modern society that it is complicated, and that, "par suite, il est difficile de la connaître et de la comprendre. C'est pourquoi il est difficile de la bien manier," the translator gives us "Hence the difficulty in knowing and comprehending it. For the same reason it is not easy to handle the subject well." M. Taine tells us that it is hard to govern a modern people. Mr. Durand makes him say that it is difficult to write a book about it. The French edition was reviewed in the ACADEMY of August 27, 1881.

READERS of Mr. Andrews' former works will be glad to know that the volume entitled *The Book of Oddities*, announced some time since as being in preparation, has now been published by Messrs. Simpkin, Marshall and Co. The book is uniform with *Punishments in the Olden Time*, and, though it lacks illustrations, is almost more interesting than that work. People who are fond of light reading will find in the accounts of Revivals after Execution, Odd Showers, a Blind Road-maker, Female Jockeys, Singular Funerals, Whimsical Wills, and Curious Epitaphs, not to mention the numerous other subjects here treated, just the kind of matter for helping them to digest their dinner by creating laughter and mirth. But no one will rise from the perusal without feeling that he has gained information worth having, while he can do it at very small cost both to pocket and brain. Our space will not admit of a fuller notice, but we can give the work a most cordial recommendation.

#### NOTES AND NEWS.

WE may expect shortly a new work from Mr. Martin F. Tupper, the author of *Proverbial Philosophy*. This is a collection of plays and dramatic scenes for private theatricals; and it will be published by Messrs. W. H. Allen and Co.

MISS ELIZABETH STUART PHELPS, author of "The Gates Ajar," will contribute to the March number of *Harper's Magazine* a paper entitled "Last words of George Eliot." This consists of a number of extracts from George Eliot's letters, for the publication of which her literary executor, Mr. Charles Lee Lewes, has given permission.

THE original MS. of Charles Dickens's *Christmas Carol*, consisting of sixty-six pages quarto, with numerous interlineations, is on sale

by Mr. W. P. Bennett, of 3 Bull Street, Birmingham, for the sum of 250 guineas. All the other MSS. of Dickens's books—save that of the *Mutual Friend*, which was secured by Mr. Fields, of the United States—were in the Forster Room of the South Kensington Museum.

DR. E. B. TYLOR is collecting material for a book on the history of our social customs, but finds extreme difficulty in getting any trustworthy early documentary evidence on the subject.

MR. J. T. NETTLESHIP has undertaken to prepare a Browning Primer for the Browning Society; and the society's committee have called a special meeting to consider the two schemes of classification of Mr. Browning's poems proposed by Mr. NettleSHIP and by Mrs. Sutherland Orr, which differ widely both in principle and details.

MR. THEODORE CHILD, formerly a scholar of Trinity, Cambridge, who has been long in Paris, has written a little volume giving a history, literary, anecdotic, and bibliographic, of Shakspeare and his works in France from the end of the eighteenth century up to the present day. His volume contains much curious information about the companies of English actors who have played in Paris, their rejection by the early Anglophobists, their warm acceptance by the Anglomaniacs stimulated by the beautiful Miss Smithson, whom Berlioz married, and then the indifference that succeeded. Sketches of all the French Shaksperian critics and translators are also given; and justice is done to the much-abused Ducis, who, though he mauled Shakspeare horribly, yet did much to spread the influence of his "master" in France.

THE committee of the New Shakspeare Society have agreed to a reduced wood-cut being made for Scribner's *Century* magazine of their chromolithograph of Pepys's unique view of Old London Bridge as Shakspeare saw it about 1600 A.D.

WE hear that the *Hebrew Grammar, with Exercises*, published some little time ago by Messrs. Kegan Paul, Trench and Co. on the commendation of Prof. Marks, is the production of a brother and sister, both of whom are still in their teens. Miss Ada Ballin had already distinguished herself at University College as winner of the prize in the senior Hebrew class in 1879 and of the Hollier Scholarship in Hebrew in 1880, as also of the Fielding Scholarship; while her brother, Mr. Frank Ballin, took the Hollier in 1881.

A SECOND edition of Sir Erasmus Wilson's *Egypt of the Past* is in preparation.

MR. KARL PEARSON, Fellow of King's College, Cambridge, will deliver a course of ten lectures at the South Place Institute, Finsbury, on "German Social Life and Thought." He aims at tracing the rise and fall of successive German ideals from the earliest times up to 1500—a period embracing the growth and decay of the principle of Unity in Germany, as embodied in the Holy Roman Empire and the Holy Catholic Church. The introductory lecture, on "History: its Ideals and Heroes," will be given on Tuesday next, February 28, at 7.30 p.m., and will be free. The nine other lectures will be given on each following Tuesday, omitting Easter Tuesday.

THE Delegates of the Clarendon Press have nearly ready for publication, in three volumes octavo, the second edition of Mr. Maskell's *Monumenta Ritualia Ecclesiae Anglicanae*, originally published by Mr. Pickering in 1846. New matter has been added to the extent of more than two hundred pages, consisting of offices and prayers not included in the first edition and additional illustrations; while the whole work has been subjected to a careful revision. A third edition of *The Ancient Liturgy of the Church of England*, by the same author,

uniform with the above, will be issued simultaneously by the Clarendon Press.

WE understand that Prof. G. Ebers' *Egypt*, with notes by Dr. Samuel Birch, is being printed in advance of the serial issue, and that the second volume, completing the work, will be ready next month. The publishers are Messrs. Cassell, Petter, Galpin and Co.

MESSRS. BELL are about to publish a work entitled *Folk-Etymology: a Dictionary of Words corrupted in Form or Meaning by False Derivation or Mistaken Analogy*. The author is the Rev. A. Smythe Palmer, late scholar of Trinity, Dublin, author of *Leaves from a Word-hunter's Note-book*.

MR. KERSHAW, the librarian of Lambeth Palace Library, is engaged on *Studies in Lambeth Library: a Manual of its History, Contents, and Literary Annals*. The work will give an account of the building and its ancient surroundings, and describe its principal treasures, and will be illustrated with wood-cuts. Mr. Elliot Stock will be the publisher.

PROF. SILVAN EVANS has just brought out a new edition of his little volume of Welsh lyrics, entitled *Telynegion* (Aberystwyth: J. Morgan), with several pieces not included in the earlier edition, which appeared as long ago as 1846, and almost ever since has been out of print.

WHAT promises to be a really valuable History of Shorthand is announced for immediate publication by Messrs. W. H. Allen and Co. The author is Mr. Thomas Anderson, parliamentary reporter. The tachygraphy of the Greeks, and the *notae tironianae* of the Romans, will be explained and illustrated by wood-cuts. English systems, from the time of Elizabeth, will be compared with one another, and with the principal systems of France and Germany. Practical matters with reference to the needs of the present day will have full attention. An Appendix will contain a digest of information concerning official parliamentary reporting in every country of the world where it obtains; and a complete bibliography of shorthand literature will also be given.

THE report of the Edinburgh meeting of the Library Association has now been issued to members from the Chiswick Press. It is explained that this volume is included in the subscription paid for the year ending October 4, 1880.

A NEW novel by Mr. John Cordy Jeaffreson, entitled *The Rapiers of Regent's Park*, will shortly be published by Messrs. Hurst and Blackett in three volumes.

MR. DAVID BOGUE announces for early issue *A Handbook to the Industries of the British Isles and the United States*, by Mr. J. Phillips Bevan; *Claimants to Royalty*, by Mr. J. H. Ingram; *Sparks from the Philosopher's Stone*, by Mr. J. L. Busford; and *Dramatic Notes for 1881-82*.

AT an early date a special supplement of the *Graphic* will be devoted to the town of Hull. The illustrations will be from drawings made expressly for the journal; and the letterpress is from the pen of the Rev. J. E. Boyle, vice-president of the Hull Literary Club, well known by his writings on local historical and antiquarian subjects.

MESSRS. HEYWOOD, of Manchester, have begun the issue of a cheap uniform edition of Mrs. Banks' novels, illustrated by her son, Mr. George O. Banks, and other artists.

THE *Western Antiquary* will, at an early date, be issued monthly, instead of quarterly.

MR. D. H. EDWARDS, editor of the *Brechin Advertiser*, is engaged upon a History of Brechin and its neighbourhood.

THE new illustrated edition of *Recent and*

*Living Scottish Poets*, by Mr. Alex. G. Murdoch, of Glasgow, announced some time ago in the ACADEMY, will be ready at an early date.

IN the pages of the *Christian Leader*—a weekly journal recently established at Glasgow—a series of "Pen-Portraits of Eminent Divines" is appearing; and Mr. A. J. Symington is contributing a number of articles under the heading of "Our Native Hymn Writers."

WHEN the Mitchell Library was opened at Glasgow in 1877, it was proposed to constitute a special department of the works of Scottish poets, under the name of the "Poets' Corner." This proposal was warmly taken up by the Western Burns Club; and a fund was formed, with Mr. William Wilson as treasurer. At the close of last year, the collection consisted of 3,041 volumes, embracing the writings of 1,451 authors. In the course of the year, the Burns collection of Mr. J. Gibson, of Liverpool, was acquired, containing no less than 330 separate editions of the poet's works. But, though so much has been done, much yet remains to do; and subscriptions and donations are still invited. We are glad to observe that a subordinate object is to prepare a catalogue giving a complete bibliography of the various authors.

AT the annual dinner, in Edinburgh, of the Argyle, Bute, and Western Isles Association on February 17, the Duke of Argyll made a most characteristic and interesting speech. Among other things, he told how tradition associates the name of Rob Roy with a ruined cottage near Inverary. Quite recently the handle of a knife was accidentally found in the glen close by, on which are still to be deciphered the letters R. M. O. G. This relic of the great freebooter was handed round for the inspection of the company. The report in the *Scotman* makes the Duke say, "Except, perhaps, the view from the Neopolis [sic] of Athens, I have seen nothing so beautiful as the views of land and sea which are seen from the eminences near the harbour of Oban." Mrs. Malaprop never said anything better.

WE quote the following from the *Monthly Notes* of the Library Association:—The free library at Tokio, the capital of Japan, founded in 1873, contained, seven years later, 63,840 volumes of Chinese and Japanese works, 5,162 English books, 6,547 Dutch, and about 2,000 volumes in other European languages. There is a large reading-room, admission is wholly free, and books are sometimes permitted to be borrowed. Another library is said to contain 143,000 volumes, including many ancient books and MSS.; an entrance fee of about one halfpenny is charged here. Many of the leading towns throughout the country are also provided with free libraries. Lending libraries of native and Chinese literature have existed in Japan from very early times, but the Government now provides students with foreign books.

THE statistics of public instruction in Bengal continue to show the progressive improvement that has gone on during the past ten years. In 1871, there were only 4,750 schools under inspection, with 186,000 pupils. By last year (1881) the number of schools had increased to 47,500, and the number of pupils to 928,000. The former have multiplied just tenfold in the ten years, the latter nearly fivefold. Great part of this increase is due to the fact that village schools are being stimulated into existence, or at least into accepting Government inspection, by means of grants-in-aid.

M. AUGUSTE BARBIER, who has recently died at Nice, was the writer of a number of satirical verses, which originally appeared in the *Revue des Deux-Mondes*, and were collected into a volume under the title of "Iambes." But he is chiefly famous as having been elected to the Académie française in 1870 by a majority

of four votes over Théophile Gautier. His is the second *fauteuil* vacant. For that of Charles Blanc, M. Edouard Pailleron, author of *Le Monde où l'on s'ennuie*, has announced his candidature with a fair prospect of success.

M. ERNEST DAUDET, the historian, and brother of the celebrated novelist, Alphonse, has just published (Paris: Plon) a little volume telling the story of the youthful days of the two brothers. It is entitled *Mon frère et moi: Souvenirs d'Enfance et de Jeunesse*. The future biographer of M. Alphonse Daudet will find nothing left for him to do.

MM. EROKMANN-CHATRIAN's new novel (Paris: Hetzel) is entitled *Le Banni*; and its subject may easily be inferred from its name. It is substantially the continuation and conclusion of *Le Brigadier Frédéric*. The price, we may add, is only three francs.

THE "Persæ" of Aeschylus will be produced at Weimar during the course of next month, with music by the hereditary prince of Meiningen.

WE learn that, undeterred by the late abortive prosecution of Spielhagen's novel *Angela*, the public prosecutor of Berlin has determined to proceed against Herr Gensichen's *Felicia* on the score of immorality.

THE municipality of Lemberg has offered a prize of 5,000 gulden (£250) for the best essay on the part taken by Sobieski in the raising of the siege of Vienna in 1683.

M. L. SANDRET is to edit for the Société bibliographique a bi-monthly *Revue d'Histoire nobiliaire et d'Archéologie héraldique*, to replace the defunct *Revue historique et nobiliaire*.

A USEFUL book of reference will be *L'Hôtel Drouot en 1881*, by M. Paul Eudel, with a Preface by M. Jules Claretie.

THE third and last volume has just appeared, in the "Collection des grands Écrivains de la France," of an edition of the complete works of La Rochefoucauld, which is described as "définitif." The first volume, edited by M. Gilbert, the editor also of Vauvenargues, was issued in 1868. Since M. Gilbert's death, in 1870, the work has been continued by M. Gourdault, who yet promises to add a Glossary. Out of 116 letters in the last volume, covering a period of forty years in the life of La Rochefoucauld, no less than fifty-two are here printed for the first time.

IT is proposed to celebrate this year at Budapest the fiftieth anniversary of Kossuth's career as a journalist and a patriot, by presenting him with an album containing the signatures of his admirers. Kossuth is now in his seventy-seventh year.

AN exhibition was opened in December at Rio Janeiro of historical documents illustrating the history of Brazil, gathered from the public archives and from private libraries. The Brazilian Government have also announced their intention of demanding from the Chamber a credit for the foundation of a national university, which has long been only talked about.

THE sixth volume of *Yprianus* (Bruges: De Zuttere) is devoted to Jansen, Bishop of Ypres, from whom the theological system known as Jansenism took its name. It is edited by M. Alph. Vandenpeereboom, and is entitled "Cornelius Jansenius, septième évêque d'Ypres, sa Mort, son Testament, ses Épitaphes."

MR. FREDERICK MUELLU, the head of a publishing firm at Amsterdam, has issued a Catalogue, of 238 pages, which enumerates 3,480 works relating to the East Indies. About one-half of these treat of the Dutch possessions.

PROF. STROMER, of Ghent, is preparing an edition of the complete works of Jean Le Maide

—a Flemish poet who flourished in the beginning of the sixteenth century—which will be published by the Académie royale de Belgique.

#### AMERICAN JOTTINGS.

THE free library movement seems to be making more way in America than here. On January 20, an influential meeting with this object was held at New York, with the mayor in the chair. The meeting was called by the trustees of a small "free circulating library," founded only a year ago with 5,000 volumes. It appears that none of the existing libraries in New York meets the necessities of the case. The Astor and the Lenox are never open when the working-men are at leisure; while the reading-rooms of the Cooper's Institute and of the Young Men's Christian Association supply inadequate accommodation. An appeal was made to the citizens of New York for a sum of 200,000 dollars, to erect a model library building. The importance of opening on Sunday was specially insisted upon. The free library at Boston, founded just thirty years ago, has now nine branches, with a total of nearly 400,000 volumes and 250,000 pamphlets. Baltimore, however, which already boasts the Peabody Library, with its magnificent architecture and its 70,000 volumes, will probably have its free library first. Mr. Enoch Pratt, a wealthy banker of Baltimore, has offered to establish and endow "a free circulating library for the benefit of the whole city," at a total cost of one million dollars, provided that the city council will guarantee an additional grant of 20,000 dollars a-year towards its maintenance. Mr. Pratt has already contracted for the erection on his own land of a fire-proof building, capable of holding 200,000 volumes, to be completed by the summer of next year.

AN important contribution to the history of the War of Independence and of the foundation of the United States is announced by Messrs. Robert Clarke and Co., of Cincinnati. They will publish immediately the St. Clair Papers (which were recently purchased by the State of Ohio), together with other inedited documents, arranged by Mr. W. H. Smith. Gen. St. Clair took a prominent part in the campaigns of 1776-77, which resulted in the capitulation of Saratoga. He was afterwards President of the Continental Congress, and Governor of the North-Western Territory, in which latter capacity he came into collision with Thomas Jefferson. He was an intimate friend of Washington, and these papers will throw much light upon the secret history of the time. The work will be published in two volumes.

WE are informed that *Dorothy: a Country Story in Elegiac Verse*, which gained, as was announced in our columns, warm praise from Mr. Browning, is to be published in America by Messrs. Roberts Bros.

THE second volume of Mr. James Schouler's *History of the United States under the Constitution* is in the press, and will be published, probably in March, by Messrs. Morrison, of Washington.

THE Rev. Henry Hudson is writing a Life of Daniel Webster, of whom, it seems, no regular biography has yet appeared. It will be published by Messrs. Little, Brown and Co.

AT a recent meeting of the Shakspeare Club at Cambridge, Massachusetts, Mr. Higginson, Dr. Elihu Mulford, Mr. Hudson, Mr. Rolfe, and Dean Gray were among the readers. Mrs. Ole Bull was accidentally prevented from taking the leading female part.

MESSRS. PUTNAM'S SONS are bringing out a series, to be called "The Library of Political Education," which will include for the current

year *Mill On Liberty*, Jevons's *Money and the Mechanism of Exchange*, and Blanqui's *History of Political Economy in Europe*.

THE associated libraries of Harvard University, comprising the college library proper and nine others, now contain a total of 259,000 volumes and 216,000 pamphlets.

BEFORE now we have spoken highly of the *Critic*, nor have we seen any reason to change our opinion. But occasionally it perpetrates one of those curious blunders which probably we may also commit when talking of American writers. In a review of Mr. Symonds' *Renaissance in Italy*, after characterising the two (or rather three) volumes as "a large-sized primer," it proceeds to talk of "Mr. Symonds's intense British Protestantism"!

#### ACKNOWLEDGMENTS.

WE have on our table a lofty pile of "Annals," which we are unable to notice with the detail that some of them at least deserve:—The *Almanac de Gotha* (Gotha: Justus Perthes), now in its one hundred and nineteenth year; *The Educational Year-Book for 1882* (Cassell, Petter, Galpin and Co.), upon which we spoke our mind last year, ACADEMY, No. 483; *The British Almanac of the Society for the Diffusion of Useful Knowledge* (Stationers' Company); *The Garden Oracle, and Floricultural Year-Book*, by Shirley Hibberd ("Gardener's Magazine" Office); *Reeves' Musical Directory of Great Britain and Ireland* (William Reeves); *The Year-Book of Photography*, by H. Baden Pritchard (Piper and Carter); the *Almanac of the Artists' Annuity Fund*; *The Royal Almanac of England* (Clayton); C. H. May and Co.'s *Press Manual*; the *Calendar of the Incorporated Law Society*; the *Calendar of Ormond College*, Melbourne University; and last, but by far largest, *The Publishers' Trade List Annual* (New York: Leypoldt; London: Trübner).

#### ORIGINAL VERSE.

##### DIONEIO TO FIAMMETTA.

A rose with petals pale,  
Where ne'er a wind might sail,  
Deep in a gloomy glen, unsmitten of the sun,  
With all its tender, deep,  
Warm sympathies asleep,  
Unopen'd, uncross'd, and of no zephyr known—  
Madonna! lo, my heart,  
Like any rose apart  
From all the world around, deep hidden in its leaves,  
Lone in a dusky waste,  
By no warm winds embraced,  
Lay dreaming sweeter dreams than summer night  
e'er weaves.  
In the voluptuous night  
Of middest May moonlight  
A sudden nightingale outpour'd his passionate soul  
In rapturous love-love  
Until, to its red core,  
The pale and trembling rose its petals did unroll.  
That subtle music sweet  
Kindled delicious heat  
Within the heart o' the rose through Love's compelling might;  
With orient odours rare  
Made swoon the listening air,  
And stir'd the blushing dawn to palpitating light.  
Madonna! like a rose  
A-flush with crimson glows,  
My heart unfolds beneath thy singing evermore;  
Though now thy song be flown,  
It remembereth each tone,  
And blossometh asleep, and, dreaming, doth adore.  
Take, Lady, as a flower,  
Before the storm may lower,  
Take then this happy heart and hold it to thy breast;  
Ah, all too fainting-sweet  
That it should feel the beat  
Of thy music-making heart within that honeyed nest.  
J. ARTHUR BRAKER.

## OBITUARY.

EVERYONE who has read the recently published journals of Miss Caroline Fox will remember the frequent mention that is made therein of Mrs. Charles Fox. This accomplished lady, who had passed much of her early life in the Lake country, enjoyed the privilege of being acquainted with Wordsworth and the other distinguished writers who dwelt among the Lakes. She was born at Bradford, in Yorkshire, in 1800, and was the daughter of Mr. William Hustler. In 1825 she was married, at Swarthmore, near Ulverston, to Mr. Charles Fox, and after that date her home was at Trebah, near Falmouth. Two volumes of poems came from her pen; and, long before the fashionable world began to take pleasure in the entrancing amusement of double acrostics, she published a volume of those ingenious puzzles under the pseudonym of "Sphinx," and the title of *Catch Who Can, or Hide and Seek*. A few years ago she presented to the National Gallery a portrait of Card. Fleury by Hyacinthe Rigaud. Her death occurred at Trebah on the 19th inst.

Miss ADA TREVANION died at 3 Brixton Hill Terrace, on the 11th inst., aged fifty-two. She was the third daughter of Mr. Henry Trevanion, who married, in 1826, Georgiana Augusta Leigh, the daughter of Col. George Leigh, and the half-sister of Lord Byron. This was the Augusta to whom Byron addressed the affecting lines beginning with the touching words—

"My sister! my sweet sister! If a name  
Dearer and purer were, it should be thine."

Miss Trevanion herself published in 1858 a small volume of poems.

THE Rev. William Henry Ridley, the Rector of Hambledon, and one of the many able and indefatigable clergymen in the diocese of Oxford, died at Brighton, on the 17th inst., after a lingering illness. He was a prolific writer of tracts and sermons, the titles of his works occupying seventeen pages of the British Museum Catalogue. Some of his works were very popular; of one more than thirty thousand copies were issued. Although a man of strong theological views, which he did not shrink from expressing, Mr. Ridley was much respected by the members of the various religious bodies with whom he came in contact.

## MAGAZINES AND REVIEWS.

LADY MARTIN's letters, in *Blackwood's Magazine*, on "Shakespeare's Female Characters" grow in interest with each new instalment. In "Juliet"—a more ambitious and sustained effort than either "Desdemona" or "Portia"—the writer analyses not merely the character of the heroine, but the entire play. For the details of this analysis; for the delicate insight with which Lady Martin discerns the finest shades of feeling and breeding; for the tact with which she appreciates Tybalt, Mercutio, the elder Capulets, and even the secondary *dramatis personae*; above all, for the gift of imaginative realisation which enables her to divine things spoken, and thought, and done outside the mere action of the play as it is presented to the audience, we can only refer our readers to the pages of *Blackwood*. Certain it is that, notwithstanding all that has been done in the way of Shakespeare commentary by English and German writers of the highest authority, Lady Martin has succeeded in adding a really important contribution to the critical literature of "Romeo and Juliet." That this contribution should be due to the pen of "one who has personated" so many of Shakespeare's heroines, and made their fame her own, adds largely to its value from a psychological, as well as from a merely literary, point of view. The attraction of autobiography is great; and Lady Martin is

never more delightful than when she "calls up remembrance of things past"—telling of her interview, when a child, with Edmund Kean; of the joys and terrors of her *début* at Richmond; of the phial which she crushed in her hand, unconscious of the pain and absorbed in the passion of the part; and of the real horror which so invariably possessed her at the close of the fourth act that even so lately as 1871, when playing Juliet for the last time, she fainted on the bed after swallowing the sleeping draught. These "Juliet" letters, written more than a year ago at the request of the late Mrs. S. C. Hall, are very feelingly and tenderly inscribed to her memory. "Portia" and "Desdemona" were, if we remember rightly, written to gratify another friend, then very ill, and now also passed away. Perhaps it adds to the unaffected charm of Lady Martin's essays that they have been made for one or two, rather than for the public. We thought we heard a rumour some time ago that "Imogen" and "Rosalind" were in contemplation. They will be welcome when they come.

## THE SECOND PART OF THE SUNDERLAND SALE.

THE second part of the interesting and important Catalogue of the Sunderland Library, compiled by Mr. John Lawler for Messrs. Puttick and Simpson, is not inferior to the first, either in the conscientious care of its preparation or in the interest of the books it describes. Anyone could have anticipated that, as Cicero and Dante must be included in it, much that was rare and precious would be announced; but there are other treasures which almost take the fancier's breath away when he sees them announced for sale. Under *Codex* comes a palimpsest of the gospels in uncials, as well as in cursive characters, which is a beautiful specimen of that sort of curiosity. We had it here in Dublin for some time, and all the pages of uncial writing are deciphered, as appears from the list inserted and noticed by the cataloguer. The readings of this text, which comprises considerable fragments of all the four gospels, are not of peculiar interest, and the most disputed passages are unfortunately not in the fragments preserved; but the writing, a fine but late uncial, is very interesting. Three or four pages contain an eleventh-century hand (early parts of St. Luke's Gospel) so effaced that it is only by holding the book almost horizontally in a bright sunlight that the characters are even visible. The fortunate occurrence of the word *παράκλημα* in a vacant spot led me to the clue of the passage (Luke i. 64), which determined this second erased hand to be also a copy of the gospels. As a patch of uncial is glued on to a page which contains a passage in duplicate, there must have been three copies used in preparing this volume. But there is besides a tenth-century hand, containing some ecclesiastical matter, such as lives of the saints, over which the fifteenth-century is written line for line, so that we could not decipher it. A blank page at the beginning contains sufficient traces for a scholar versed in this kind of literature to identify it. As regards the editions of Cicero, the Mayence copies of the *de Officiis* (1465), besides their other interest, afford the earliest attempts known to me to represent Greek characters in type. In many books of later date gaps are left for the fresh citations, which were to be filled in by MS. Here an attempt, and a very bad one, is made to print the words *καθήκον* and *κοιρόβημα*. The earliest occurrence of proper Greek type appears to have been in 1469, when Sweynheim and Pannartz printed both Aulus Gillius and Cicero *ad Fam.*, with the Greek quotations explained in Latin with an *id est*. Whether the edition of 1467 has Greek type I do not

remember. The splendid Aulus Gillius of 1469, which the Catalogue justly calls one of the most beautiful books in the sale, has a whole leaf (two pages) in Greek, and is no doubt the earliest specimen of the kind. Books issuing about the same date from Venice and elsewhere have gaps for the Greek. The rare four plays of Euripides in capitals and on vellum is also announced, and the *princeps* of the remainder (Aldus, 1503), except the *Electra*, of which the first edition (Florence, 1540), strange to say, is not in the library. The collection of old Chronicles, especially in the history of France, seems very wonderful, but would require a specialist to comment upon it. Indeed, in such a treasure each man can only appreciate a very small fraction from his own knowledge. But I am glad to contradict an impression produced by the daily papers during the last sale, that the books were not in good preservation. The contrary is the case, and the majority, even of the bindings, is excellent and well preserved.

J. P. MAHAFFY.

## THREE UNPUBLISHED LETTERS OF SIR HORACE WALPOLE.

I HAVE found among some family papers three letters of Horace Walpole addressed to my grandfather, and send you copies, supposing that possibly the readers of the ACADEMY might be interested by them.

I may add that Walpole makes mention of the acquaintance, with a kindly account of his correspondent, in a letter to Mann of August 9, 1784 (*Letters*, ed. Cunningham, 1880, viii. 493, 494). M. François de Soyres had come to England in 1781 with an introduction to Walpole from the Prince de Bauffremont, and was recommended by Walpole to the Mount Edgcombe family as tutor to the son, whom he accompanied in a "grand tour" of two years' duration. I have omitted some passages of the letters referring to matters connected with the Edgcombes of no general interest.

JOHN DE SOYRES.

I.

"Berkeley Square.

"March 27 1784.

"I am much obliged to you for your letters, Sir, and must not run farther into your Debt, as I am already in arrears for two. . . . At present our whole Island is in the ferment of a new Election of a House of Commons, and of all Themes I know not one so tiresome as That of a contested Election. I do not interest myself in a single one, & as much as possible keep out of the Sound of all. I wish myself at my own house in the Country, but We have at present so bitter a codicil to a most severe Winter, that Berkeley Square was as much covered with Snow this morning as it was two months ago. Indeed We have not suffered such havoc as you describe at Vienna & as we hear from many parts of the Continent. . . . We are going to have a Solemn Jubilee at Westminster abbey in honour of Handel, whom We adopted, & who is revered as the Patriarch of our Music. Indeed our Taste is a little deviated to the branch of Dancing, which we possess in a perfection that rivals Paris. It is very seldom that I go to the Theatre now, but I was at the Opera last week, & saw seven such dancers on the Stage at once, as cannot, I believe, be matched in Europe; there were Le Pique, young Vestris, Dauberval, & Slingsby, the Simonet, the Theodore, & the Rossi. It does not much become my age to talk of Dancers,—& yet I should make no apology for having been to see Charles XII<sup>th</sup> or Kouli Kan, who deserved to be looked at only with horror. My countrymen have acted with more rationality in paying great distinction to your countryman, Monsieur de Bouillé, who is here, & whose humanity in the late War was equal to his bravery. I am Sir with great regard

"y<sup>r</sup> obedient

"humble Ser<sup>t</sup>

"HORACE WALPOLE.

"To Mr de Soyres."

## II.

"Strawberry hill.

aug. 9<sup>th</sup> 1784.

"... I cannot pretend, Sir, to repay your Parisian news with any interesting events from an English Village. We do hear even here of air-balloons; nay, by chance I saw a Lilliputian one over Richmond hill. I am not young enough to run after fashions; and too old to commence experimental Philosophy. I shall be gone before aerial navigation is perfected, or ranked with the Philosopher's Stone! Animal Magnetism has not yet made much impression here. These Disquisitions are at least preferable to religious metaphysics. People had better break their necks voluntarily from a bladder in the clouds, than be burnt for not believing what they do not understand. Mons<sup>r</sup> Montgolfier is honest too than the Founders of novel Doctrines, for if he has invented a new way of going to heaven, he risked his own neck first, before he persuaded others to try if the untrodden path was practicable.

"I have the honour of being, Sir

"y<sup>r</sup> obedient"humble Ser<sup>t</sup> HOR WALPOLE.

"To Mr de Soyres"

## III.

"Berkeley Square

"March 29. 1785.

"I am again in yr Debt, Sir, for another letter of March 5<sup>th</sup> from Naples; & tho I endeavour now to acquit myself, it will be very imperfectly, & with difficulty, as I have but one hand yet free. I was confined 14 weeks; then went out for a fortnight, & have now another relapse in all my right arm; less owing even to my Disorder & my age, than to the uncommonly severe continuation of bad Weather. It snowed fast for four hours two days ago, & is still a hard frost. There have been tho' rarely, as cold winters in England, but nobody has heard of one of so long duration. Lord & Lady Mount Edgcombe have been extremely kind to me & visited me often in my confinement. I am very glad they will so soon have the satisfaction of seeing Mr Edgcombe. I was glad too to find Mr Morrice's Death was a fable. He will not, I hope, stay at Naples for health, if Vesuvius threatens an Eruption. One should dread even to be Spectator of such calamities,—nor do I know so strong a proof of the force of Habitude, as They are who continue to live on a crust of Fire! I am constantly anxious about my good Friend Sir Horace Mann, his nephew set out again a fortnight ago in haste, on receiving a letter written by his Uncle's Servant, which mentioned a return of his Disorder. I much fear the consequence.

"I am glad you was pleased with Pæstum, Sir; but should be more inclined to envy you the sight of Pompeii; as I had rather view Remains of places where the Arts had been brought to perfection, than to see the rudiments. Whatever Nations began, the Greeks were in my eyes the only People who discovered the Standard of Taste in whatever they undertook. In how few Centuries did they give the taste & last touches to Eloquence, to many kinds of Poetry, to Architecture, to Sculpture, from Colossal to the most diminutive, & I believe to Painting, for as their Authors & Roman Authors speak in equal terms of both their Statues & Pictures; & as we know & see that they did not exaggerate in their Encomiums on the former, is it credible that they could bestow equal praises on the Apollo & Venus &c and on vile daubings? Should I be told that those Authors are still more profuse of Eulogiums on their Music, which we have no reason to believe was very extraordinary; I not only should reply that the Comparison between Statues & pictures can be more justly made, but that Music must have greater effect on the passions of persons unaccustomed to it than on generations habituated to its improvements; & as we know that charming Poetry accompanied Sound, the fascination was increased. In Short, Sir, were I King of Naples, I should be inclined to turn up every acre round my Capital, where I could suppose any of the destroyed Cities had stood, lest new Earthquakes should destroy what still exists underground,—so I should at Rome, & in every part of Italy where I could go recover Grecian Works.

We are not visited by Earthquakes now, yet last night the Arts received a wound; Lord Spencer's House was burnt to the ground; & with other good pictures & valuable goods, besides the loss of the Mansion itself, I fear the very fine picture of Andrea Sacchi was consumed. I do not yet know the circumstances. My hand is tired, & you will excuse my taking leave; but I shall be very glad to renew our acquaintance at y<sup>r</sup> return, as I am with great regard

"y<sup>r</sup> obedient"humble Ser<sup>t</sup> HOR WALPOLE."

## CORRESPONDENCE.

## A CORRECTION.

London: Feb. 21, 1882.

May I correct a misconception in the paragraph published in the ACADEMY of February 11 having reference to a forthcoming novel from my pen? The novel in question, although written contemporaneously with *God and the Man*, has no connexion with it in subject, characters, scenery, or motive; nor does it contain, as you suggest, photographs of living individuals. I have simply endeavoured, in one case, to construct a fictitious personality out of the written utterances of the editor of a certain newspaper—a gentleman of whom I have little or no personal knowledge, and to whom I feel no personal animosity. I have made, in the other case, merely a passing allusion to another newspaper and its editor. In both cases my attack is not upon persons, but upon the system of personal journalism. My plot, indeed, turns upon the fatal mischief done by newspaper "gossip," recklessly and thoughtlessly scattered abroad for the gratification of a modern school for scandal. Now, as hitherto, I hate the system, not the men who live by it, who have many redeeming good qualities, and seem more or less unconscious of the ruin they daily cause to the lives and reputations of their fellow-creatures.

ROBERT BUCHANAN.

## MANUMISSIONS IN THE LEOFRIC MISSAL.

Frenshay Rectory, Bristol.

So many criticisms, suggestions, and enquiries reach me by post, as well as through your columns, that I ask to be allowed to make public the full text of fol. 8 of the Leofric Missal.

Let me premise that it is really fol. 9; but the first leaf of the Missal, being blank, has improperly been disregarded in a pagination which is now too well established by usage to admit of alteration. The leaf is an isolated one, unconnected with the preceding and following gatherings, and its present is evidently not its original position. It is worn and faded, sometimes beyond recovery, especially on the recto, which has been rubbed as if it had once been an outside page. Many hours of examination at various times, and the kindly permitted application of a chemical agent, enable me to offer the following readings. I hope that some Anglo-Saxon palaeographer, on next visiting Oxford, will decipher those words which are here represented by full stops. I have been unable to trace the opening Collect in any Latin Sacramentary. The two manumissions below it are part of the batch of tenth-century manumissions which also cover the verso of this leaf. The perpendicular bar | represents the symbol for "and."

[Fol. 8 a.]

preosta."

These entries contain important, because  
fresh, evidence as to the times, places, and  
occasions of the manumissions of serfs. I  
must not occupy your columns by dwelling on  
it, but I will conclude with a question. Mr.  
Davidson has identified the Ordgar mentioned  
in them with the important Earl of that name,  
who died in 971, who is variously described as  
"Ealdorman," "Dux Domnanie," "Comes  
Domnoniensis." Who is the lady of importance  
named "Eadgyfu," or "Eadgifu," who manu-  
mits in five of these entries, in one of them  
acting for Ordgar? We know a good deal  
about Ordgar's daughter, Ælfthryth (Queen  
Elfrida), wife of King Edgar; and about his  
gigantic son Ordulf, who is reported to have  
once treated the gates of Exeter in much the  
same way as Samson treated those of Gaza.  
Ordgar's wife's name is, I believe, not known.  
Is it just possible that we have it here in  
"Eadgyfu"?

F. E. WARREN.

#### THE ETYMOLOGY OF "PARADISE."

Cambridge: Feb. 22, 1882.

I much regret that, in the account of this  
word in my *Etymological Dictionary*, I have  
fallen into the common error of identifying it  
with the Sanskrit *paradeça*, with which it has  
no connexion whatever. The right account is  
given in Prof. Max Müller's *Selected Essays*, 1881,  
i. 130. The word is, as has always been said,  
of Old-Perisian origin. Both the Hebrew *pardes*  
and the Greek *παρδείσος* are borrowed from the  
Zend (Old-Perisian) *pairidatza*, an enclosure, a  
place walled in. This word is given, as Prof.  
Cowell kindly shows me, in Justi's *Handbuch  
der Zendsprache*, with the etymology, which is  
simple enough. It is derived from the prep.  
*pai*, around (Greek *περί*), and the root *di*, to  
mould or form, Sanskrit *dih*. As Prof. Max

Müller says, "the root in Sanskrit is DIH or  
DHIH (for Sanskrit *h* is Zend *z*), and means  
originally to knead, to squeeze together, to  
shape. From it we have the Sanskrit *dehi*, a  
wall, while in Greek the same root, according  
to the strictest phonetic rules, yielded *τοίχος*,  
wall." He then points out that the same root  
occurs in Latin *ingere* and English *dough*.  
Perhaps we may go further, and identify *τοίχος*  
with the English *dike*: see *τοίχος* in Curtius.  
*Paradise* would then, literally, mean "peri-  
dike," if one may coin the word; and the original  
*dike* was a mud wall, moulded or kneaded into  
shape. It is, in any case, certain that a *paradise*  
was originally simply "an enclosure surrounded  
with a mud wall." It has since obtained a  
more exalted meaning.

WALTER W. SKEAT.

#### THE DERIVATION OF "APHRODITE."

Munich.

It is one of the most firmly established  
results of modern archaeology that the Greek  
goddess of love, Cypris or Aphrodite Urania,  
was borrowed in early times from the East—  
from the Phœnicians. The name Cypris itself,  
taken in connexion with the recent excavations  
on the Island of Cyprus, furnishes the strongest  
proof of this fact; there are also many other  
arguments which can be found in any modern  
work on Greek mythology. The difficulty  
hitherto has been to trace the real name of the  
goddess Aphrodite (Cypris being only an  
epithet) to an Oriental (Phœnician, Babylonian,  
or even Egyptian) origin, so that scholars have  
been obliged to rest content in the opinion that  
the goddess herself was borrowed by the Greeks  
from the East, but not the name, as often  
happens in such cases, especially as a good  
Greek etymology "born of sea-foam" seemed  
to confirm this view by supplying an ade-  
quate and appropriate explanation of the  
word.

But the case is different, if it can be shown,  
as I now am able to do with the greatest  
probability, that the Greek name is borrowed  
directly from the Phœnician form of the name  
of the Asiatic goddess of love, *Athōret*. The  
sh of this word (as also in the Babylonian, non-  
Semitic, primitive form, *Ishar*) was already in  
the Babylonian and Phœnician language  
assimilated in pronunciation to the following t,  
the whole name being pronounced more like  
*Athōret* (*Athōret*) than *Ashōret*, as is proved by  
the South Arabian (Sabeen) *Athtar* (*Athtar*).  
For the Sabeans took their deity *Athtar*, as also  
another—*Sin* (the moon-god, Accadian *Zu-en*,  
Babylonian *Sin*)—directly from Babylonia. In  
basing my identification of *Aphrodite* with  
*Ashōret* upon the afore-stated pronunciation  
*Athōret*, I need only call to mind the well-  
known change of an original *th* into *f*, especially  
in borrowed words—e.g., the Russian *Fedor* for  
Theodor, &c., &c.—thus we get the form  
*Aphōret*. In reply to the possible objection  
that *φ* in the earliest time did not have the  
sound of *f*, I can only state that, since the  
Greeks had no *f* at all, *Athōret*, on account of  
its resemblance in sound to *ἀπός* (sea-foam)  
would naturally and necessarily take the form  
of *Aphōret*. The character which would best  
represent the foreign *f* would, even could, be  
only *φ*. Finally, there is another fact to be con-  
sidered, and one which is very common in  
words borrowed from another language—viz.,  
the metathesis or transposition of two adjacent  
consonants, one of which is *r*; so we come to  
the last result: *Aphrōtet*—*Ἀφροδίτη*.

FRITZ HOMMEL.

[Capt. Burton, in his *Commentary* on the  
Lusiads (i. 89) writes:—"Aphrodite, like many  
of the oldest Greek words, is Albanian; *after dita*  
= dawn, morning star, &c."]

#### IDENTICAL NAMES IN LITERATURE.

Hastings: Feb. 20, 1882.

Give me leave to say a word or two with  
reference to the obliging suggestion of your  
correspondent, Mr. E. W. West, in the last  
number of the ACADEMY. I should like to  
point out how safe writers are ultimately  
against any confusion provided they append  
their names in full to each of their published  
works. I turn, for instance, to the biographi-  
cal dictionaries, and I find no less than half-a-  
dozen writers bearing the name of Betham,  
all belonging to the Westmoreland family  
of Bethams, from which, on my mother's side,  
I take my name. Now, although several of  
these writers were Doctors of Divinity, there is  
not the slightest confusion between any of them  
—from Peter Betham, the first literary ancestor  
of whom I have knowledge, who published in  
1544 a translation of *The Precepts of Warre*,  
with a dedication to Lord Chancellor Audley,  
down to my late uncle, Sir William Betham,  
the ingenious author of *The Gael and the Cymri*,  
&c. Yet between these two came John Betham,  
D.D., chaplain and preacher to James II., the  
author of several theological works; Edward  
Betham, B.D., who contributed largely towards  
the maintenance of the Botanical Garden at  
Cambridge, and died in 1783; and the Rev. W.  
Betham, my grandfather, the laborious compiler  
of *The Sovereigns of the World*. The fact is, litera-  
ture, like music and painting, runs in families;  
but when an author's name is appended in full  
to each published work there can be no possible  
confusion concerning the various members,  
except in the minds of the most careless  
readers. I add that dictionaries of contem-  
porary biography, English and American,  
make no confusion between Miss Amelia B.  
Edwards and myself, or our respective works.

M. BETHAM-EDWARDS  
(Author of "Kitty").

#### THE ARABIC FOR "TELEGRAPH."

Spring Grove, Isleworth: Feb. 20, 1882.

In reply to Dr. Badger's letter in the ACADEMY  
of last week, I beg to state the actual facts.

The subject under discussion at the Victoria  
Institute was the meaning of certain Biblical  
names; and, as I wanted to show how cautious  
we ought to be in determining what certain  
words meant more than 3,000 years ago, I  
made the following statement:—

"We have the word telegraph in Mesopotamia,  
as the telegraph system has been introduced into  
that country as well as into some other parts of the  
East. If you go, therefore, among the Arabs of  
that country, and ask them what 'telegraph'  
means, they will tell you that it means 'to know  
by wire,' because it happens that in their Arabic  
'tel' means wire, and 'araf' to know or expound.  
The meaning of telegraph, therefore, among those  
people is to know by wire, or to obtain knowledge  
by wire. So if Europe were to be destroyed, and  
Arabic to be the only language extant, an Arab  
scholar might just as well give it as his opinion  
that the word 'telegraph' was derived from the  
Arabic words 'tel' and 'araf'!"

I am unable to understand on what grounds  
Dr. Badger takes exception to this illustration.  
If he means to state, as a fact, that the country  
Arabs do not interpret "telegraph" as "to know  
by wire," I can only repeat on my personal  
knowledge that they do. If he merely means  
that the isolated words "tel" and "araf"  
cannot be made to signify "to know by wire"  
grammatically, it does not concern me to deny  
this, for I never said or implied that they did.  
Those Arabs I spoke about use the word  
"tel" colloquially exactly as the word "wire"  
is used in this country for telegraph.

H. BASSAM.

## APPOINTMENTS FOR NEXT WEEK.

**MONDAY, Feb. 27, 5 p.m.** London Institution: "The Gods of Canaan," by Prof. A. H. Sayce.  
 7 p.m. Actuaries: "An Improved Method of approximating to the Value of Annuities involving Three or more Lives," by Mr. G. F. Hardy; "The Valuation of Policies subject to Half-yearly and Quarterly Premiums," by Messrs. T. B. Sprague and G. King; "The Rate of Interest in Annuities Certain," by Mr. G. F. Hardy.  
 8.30 p.m. Geographical: "Recent Exploration of the Sources of the Irrawaddy," by Major J. E. Sandeman.  
**TUESDAY, Feb. 28, 3 p.m.** Royal Institution: "The Mechanism of the Senses," VII., by Prof. J. G. McKendrick.  
 8 p.m. Society of Arts: "Scientific and Technical Education in Russia," by Prof. J. F. Hodgkiss.  
 8 p.m. Civil Engineers: "Steel for Structures," by Mr. Ewing Matheson.  
**WEDNESDAY, March 1, 7 p.m.** Entomological.  
 8 p.m. Society of Arts: "The Teaching of Forestry," by Col. G. F. Pearson.  
 8 p.m. British Archaeological: "Ancient Ecclesiastical Glass Painting," by Mr. W. H. Ope; "Roman Villa recently discovered at Metchford, Norfolk," by Mr. Cecil Brent.  
**THURSDAY, March 2, 3 p.m.** Royal Institution: "Geographical Distribution of Animals," III., by Dr. P. L. Selater.  
 7 p.m. London Institution: "The Storage of Power," by Prof. W. E. Ayrton.  
 8 p.m. Linnæan.  
 8 p.m. Chemical: "The Luminous Incomplete Combustion of Ether and other Bodies at Temperatures below Redness," by Mr. W. H. Perkin; "The Action of Aldehyde on Phenanthra Quinoline in Presence of Ammonia," by Messrs. F. R. Japp and F. W. Streatfield; "Application of the Aldehyde and Ammonia Reaction in determining the Constitution of Quinines," by Messrs. F. R. Japp and F. W. Streatfield.  
 8.30 p.m. Antiquaries.  
**FRIDAY, March 3, 8 p.m.** Philological: A Paper by Mr. H. Sweet.  
 8 p.m. Library Association: Discussion, "Prof. Djaltsko on the British Museum," by Mr. E. C. Thomas.  
 9 p.m. Royal Institution: "Roman Antiquities in London," by Mr. A. Tylor.  
**SATURDAY, March 4, 3 p.m.** Royal Institution: "The Iliad and the Odyssey," III., by Mr. W. Watkiss Lloyd.

## SCIENCE.

*Science and Culture, and other Essays.* By Thomas Henry Huxley. (Macmillan.)

OF the essays that have been collected by Prof. Huxley in this volume, the first four deal with some aspect of education. Most of the remainder are expositions of the results of biological research and, at the same time, illustrations of the history of scientific ideas. Some of these are among the most interesting of Prof. Huxley's contributions to the literature of science.

The address on "Science and Culture," which gives its name to the volume, is a discussion of the place of scientific and of literary training in education. The form in which the question in debate between the advocates of "science" and of "culture" is presented is not which of these two things is the more valuable, but whether the idea of complete culture does not include within itself that of scientific discipline. This way of stating the question brings out clearly the fundamental agreement that there is—if we leave out of account the devotees of "useful knowledge"—between the advocates of the classics and of physical science. For it is seen that the advocates of science admit that everyone ought to know something of literature, though they think it possible sufficiently to cultivate the sense of literary form by means of the modern languages alone; while the advocates of the classics, in maintaining that classical studies give the best possible intellectual training, admit that culture is not complete if nothing but the sense for literary form has been cultivated. The questions that are really in debate are, therefore, the subordinate ones—whether, though real intellectual as well as aesthetic education is given by the study of the classics, physical science is not the typical intellectual discipline, for

which anything else is an imperfect substitute; and whether, though some literary culture can be got out of modern books alone, a certain knowledge of the classics is not necessary as a preparation for the full appreciation of European literature in general. Prof. Huxley decides both these questions in favour of the advocates of scientific education. He suggests incidentally that modern men of science have more of the spirit of antiquity than "the modern Humanists." "We falsely pretend," he says, speaking of the Greeks,

"to be the inheritors of their culture, unless we are penetrated, as the best minds among them were, with an unhesitating faith that the free employment of reason, in accordance with scientific method, is the sole method of reaching truth."

He points out, near the end of the essay, that the higher sciences, those that deal with man and society, can only be constructed by the application of the methods of physical science. As regards the literary side of education, he expresses the opinion that "for those who mean to make science their serious occupation; or who intend to follow the profession of medicine; or who have to enter early upon the business of life; . . . classical education is a mistake." It is possible to get sufficient culture out of modern literature—perhaps out of English literature alone.

Something might be said against this last opinion, even by those who agree with Prof. Huxley entirely as to the necessity of scientific discipline as part of a complete education. But, granting that knowledge of classical literature is not an essential part of culture, there is still a difficulty about omitting Greek and Latin from education in some cases and not in others. For if the classical languages are to be taught at all, it is desirable that the study of them should begin at an earlier age than that at which a decided preference either for literature or for science usually manifests itself.

In the articles in which the development of scientific ideas is described, the name of Descartes occurs more frequently than any other. Prof. Huxley has already made his readers familiar with his view of the position of Descartes in relation to modern science. This view is further developed in the present volume. In the address on "Animal Automatism," which attracted so much attention when it was first published, Descartes is described as the founder of scientific physiology. It is further shown, in the address recently delivered at the meeting of the International Medical Congress, that "he held the strongest opinion respecting the practical value of the new conception which he was introducing"—that is, he was the first to see the true relation of physiology to medicine. And in the article on "Evolution in Biology" the lines of thought that have led to the modern theory of evolution are traced to Descartes.

The article on "Errors attributed to Aristotle" will be found interesting by all who care to know accurately the place in the history of science of those who have done most for scientific thought, even when their opinions have no bearing on problems that are still unsolved—by students, that is, who have not been misled into thinking that, because science is impersonal, its structure

has been built up in much the same way as that of a coral reef. But, in relation to this point, some remarks of Prof. Huxley that occur in another essay may be quoted here, as the best possible expression of the attitude he always adopts towards the scientific thinkers of the past.

"The growth of physical science is now so prodigiously rapid that those who are actively engaged in keeping up with the present have much ado to find time to look at the past, and even grow into the habit of neglecting it. But, natural as this result may be, it is none the less detrimental. The intellect loses, for there is assuredly no more effectual method of clearing up one's own mind on any subject than by talking it over, so to speak, with men of real power and grasp who have considered it from a totally different point of view. The parallax of time helps us to the true position of a conception, as the parallax of space helps us to that of a star. And the moral nature loses no less. It is well to turn aside from the fretful stir of the present, and to dwell with gratitude and respect upon the services of those 'mighty men of old' who have gone down to the grave with their weapons of war, but who, while they yet lived, won splendid victories over ignorance."

T. WHITTAKER.

## NOTES OF TRAVEL.

AT a special meeting of the Council of the Royal Geographical Society, the proposed Government grant of £5,000 towards the *Eira* search expedition has been supplemented by a vote of £1,000; and the remainder of the amount required will, no doubt, be easily raised without an appeal to the public. The arrangements for the expedition will be made under the superintendence of a committee, on which the Admiralty will be represented; and it is not improbable that Commander L. A. Beaumont, who served with distinction under Sir George Nares, will be appointed to command the expedition, the preparations for which will be commenced at once.

A FRENCH paper reports that M. Raffray, vice-consul of France at Massowah, has succeeded in penetrating into the country of the Gallas, hitherto inaccessible to Europeans. Even Capt. Burton turned back when he attempted to reach it in 1856-57, in company with the late Capt. Speke. This country lies south of Abyssinia, and south-east of Somali-land. M. Raffray is said to have discovered a number of monolith churches, and other traces of early Ethiopian civilisation. *Semper aliquid novi ex Africa!*

DURING the past year M. Adrianoff, of the University of St. Petersburg, went with a small party to investigate the geography and geology of the Kuznetsk region of Western Siberia; and a report on his journey has lately been made to the Imperial Geographical Society. From Kabizen M. Adrianoff crossed Lake Telets, and followed the Chulyshmann as far as the Bashkans tributary, the valley of which he ascended by a most difficult path. He afterwards crossed the Shapshal Mountains to the Jani, an affluent of the Barlyk; and then, surmounting another mountain range, he entered the Kemchik steppe, and proceeded to Minnussinsk. M. Adrianoff is said to have collected useful information regarding the Sopote nomads and Russian commerce in Western Mongolia; and his scientific collections include numerous geological, botanical, and entomological specimens.

HERR VON SCHENCK has lately returned from a second journey in Central and Equatorial America, during which his attention was mainly

directed to the State of Antiochia, in Colombia, and he is now preparing an entirely new map of it. He also surveyed a portion of the course of the Rio Magdalena.

A NUMBER of officers of the Topographical Department of the French army have lately gone out to resume the survey of Algeria which was interrupted last year.

THE *Journal* of the Royal Geographical Society, after being published annually for half-a-century, was brought to a conclusion with the volume issued last summer, as it was found that the society's new series of *Proceedings*, or *Monthly Record of Geography*, absorbed nearly all the papers previously issued in the *Journal*. The council, however, determined that in future, when elaborate memoirs of great value and more than ordinary length were received, they should be published as *Supplementary Papers* in connexion with the monthly periodical. The first of these is now nearly ready for issue, and will comprise Mr. E. Colborne Baber's travels and researches in Western China. The account of his journey of exploration in Western Szechuen will be supplemented by some portion of the well-known report on the route followed by the Grosvenor Mission through Western Yunnan, and by a very interesting and little-known memorandum on the Chinese tea-trade with Tibet, which appeared as a supplement to the *Gazette of India* in November 1879.

#### SCIENCE NOTES.

*On Contact between Civilised and Savage Life.*—An excellent number of the *Journal* of the Anthropological Institute has just been issued. Perhaps the most generally interesting of its papers is one by Sir Bartle Frere on "The Laws affecting the Relations between Civilised and Savage Life." The subject is discussed with special reference to its bearing on the dealings of colonists with aborigines; and the author's illustrations are mainly derived from his experience in South Africa. Sir Bartle concludes that simple proximity of the civilised to the uncivilised race is leading to the extinction of the savage in the case of the Bushman, but that the result is very doubtful in the case of the other Hottentot or tawny-skinned races, while there is certainly no tendency to extinction in the case of the Bantu family—comprising the Zulu, the Kaffir, and the Bechuana races—among whom a very marked advance has been made towards the European type of civilisation. To secure their continued development, he holds that the subject races must enjoy peace, with protection for life and property; that they should possess power of local legislation; that the sale of intoxicants should be restricted; and that an equitable form of civilised taxation is necessary.

DR. GILBERT is proposed by the council as President of the Chemical Society for the coming year, in succession to Prof. Roscoe.

MR. DAVID BOGUE will publish immediately *Our Common British Fossils, and Where to Find Them*, by Dr. Taylor.

THE subject of Prof. Tyndall's course of three lectures at the Royal Institution will be "Resemblances of Sound, Light, and Heat," to be given on Thursdays, March 16, 23, and 30. Prof. H. G. Seeley will give three lectures on "Volcanoes," on Saturdays, March 18, 25, and April 1.

THE Ladies' Sanitary Association has engaged Dr. B. Richardson to give a third course of lectures, nine in number, on "Practical Domestic Sanitation," to be delivered in the Lower Hall, Exeter Hall, on Saturdays, at 4 p.m., beginning on Saturday, March 4.

Tickets may be had of Miss Rose Adams, 22 Berners Street, W.C.

MESSRS. MACMILLAN have issued, in a bound volume, with the title of *Fifty Years of Science*, the presidential address delivered by Sir John Lubbock at the Jubilee meeting of the British Association at York last August.

THE valuable *Handbook of Cinchona Cultivation*, by Karel Wessel van Gorkom, formerly director of the Government cinchona plantations in Java, has been translated into English by Mr. B. D. Johnson, and will be published immediately by Mr. J. H. de Bussy, of Amsterdam. As only a limited number of copies will be printed, subscribers in England are requested to address themselves to Messrs. Trübner.

THE two volumes of Mr. F. M. Balfour's *Comparative Embryology* have been translated into German by Prof. B. Vetter, of Dresden, and published by Herr Gustav Fischer, of Jena, who has distinguished himself by making a special business of issuing works on this department of biology.

A NEW scientific monthly, entitled *L'Astronomie*, is to appear next month, under the editorship of M. Camille Flammarion. M. Gauthier-Villars is the publisher.

#### PHILOLOGY NOTES.

PROF. BUGGE, of Christiania, whose views on the origin of Norse mythology have excited so much discussion in the learned world, is said to be engaged on Etruscan investigations. His friends believe that he has completely solved the problem of the affinities of this mysterious language, having proved it to be an Indo-Germanic language, remotely allied to Latin and the other Italic dialects.

THE members of the Aryan section of the last International Congress of Orientalists will remember the striking lecture which Dr. P. Deussen, of Berlin, delivered on the Vedânta system of philosophy. Dr. Deussen is about to publish, in German, a large work on the same subject, which is to consist of five parts, dealing respectively with the theology, cosmology, and psychology of the Vedânta system, and with its doctrines regarding transmigration (Samsâra) and final emancipation (Moksha). The philosophy of the Vedântists is well known to represent, in a great measure, the creed of many educated Hindus at the present day.

MESSRS. TRÜBNER announce a translation of the celebrated Japanese romance *Genji Monogatari*, from the pen of Mr. Suyematz Kenchio, an attaché of the Japanese legation in London. The author of this work was a woman, as, indeed, were many of the classical authors of Japan.

M. A. LUCHAIRE has published a collection of texts in the ancient dialect of Gascony, taken from MSS. earlier than the fourteenth century, together with a Glossary.

AT two recent meetings of the Académie des Inscriptions, M. Oppert read a paper upon "The Chaldean Inscriptions of Gudea." His chief argument was that the inscriptions known as Sumerian are written not only in a different character, but also in a different language, to the Semitic of the ordinary cuneiform inscriptions.

M. FRISCHBIER has commenced the publication (Berlin: Enslin) of a Glossary of the dialects of East and West Prussia. The work is appearing in parts, and will fill two volumes. Its full title is, "Preussisches Wörterbuch, Ost- und Westpreussische Provinzialismen in alphabetischer Folge."

M. LOUIS LEGER, Professor at the Ecole des langues orientales, has published in a separate

form (Paris: Leroux) the paper on Slav mythology which he contributed to a recent number of the *Revue de l'Histoire des Religions*. He contends that no genuine Slav document attests the belief in a supreme deity; the primitive Slav pantheon was derived either from nature worship or from evil spirits. M. Léger will shortly publish a volume of *Contes slaves*, and a translation of the *Chronicle of Nestor*.

THE issue of the Société des anciens Textes français for 1880, of which one volume is still due, will be shortly completed by vol. v. of the *Miracles de Notre Dame*. For 1881 members are promised the *Vie de Saint-Gilles*, with a long and valuable introduction by M. Gaston Paris; probably vol. iii. of *Eustache Deschamps*, and *L'Amant rendu Cordelier à l'Observance d'Amour*, edited by M. de Montaiglon, will be the other issues. For 1882 the volumes will be chosen, as they are ready, from works now in hand—*Miracles de Notre Dame*, vol. vi., a collection of old versions of the *Gospel of Nicodemus*, edited by MM. Paris and Bos, the *Vie du Pape St-Gregoire*, a new edition of the *chanson de geste, Raoul de Cambrai*, edited by MM. Paul Meyer and Longnon, or *La Mort d'Aimeri de Narbonne*, edited by M. Couraye Duparc. The recent losses of the society do not seem to have impaired its activity.

THE *al-Jawûdîb* of January 31 ends a comprehensive review of Dr. Badger's *English-Arabic Lexicon* with these words:—

"We have examined this wonderful book, consisting of 1,240 pages royal quarto, and do not hesitate to state that the translation [of the English into Arabic] is most chaste and perspicuous, testifying to the author's consummate knowledge of the Arabic language. No less than forty years were spent in its compilation. It is our decided opinion, moreover, that there does not exist in the whole of Europe one better acquainted with Arabic than the author, or one more conversant with its modes of speech. Hence, this work excels all others of the kind which have preceded it. His painstaking labour will assuredly earn for him the eulogy of all those who appreciate perseverance, and his valuable services will exalt him in the estimation of all scholars."

#### MEETINGS OF SOCIETIES.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, Feb. 15.)

JOSEPH HAYNES, Esq., in the Chair.—Mr. Fleay read a paper on "Homer and Comparative Mythology," in which he maintained that, although the fundamental principles of comparative mythology were firmly established, the application of these principles by Prof. Max Müller, Sir George Cox, and others had led to numerous contradictions and absurdities. This, he said, arose from each mythologist identifying his own view with the powers of Nature, the Sun, the Dawn, and the Storm, and with many deities who had distinct and independent functions. Mr. Fleay then gave, in detail, his own interpretation of the chief deities of the Rig-Veda and of Homer, and showed the interpretation which would be necessary, on his hypothesis, for a large number of myths, including those of the "Iliad" and "Odyssey." He, at the same time, suggested that previous attempts in this direction involved serious inconsistencies, which it would probably take a long time to remove with complete satisfaction to the various scholars now engaged in this work.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 16.)

E. FRESHFIELD, Esq., V.-P., in the Chair.—The Rev. A. Pownall exhibited a gold ring found at Gilmorton, Warwickshire, inscribed inside, "the King's gift." It was apparently of the time of Charles I., and may have been made of a gold touch piece.—Mr. H. B. Hull exhibited a MS. list of the Royal Navy in 1660, with the name of Edward Dering, Mercator Regius, on the cover. The list gives the names of the ships, the tonnage, age, where and by whom built, and other par-

tioulars. At the end are tables of wages and allowances, weights of cables, and other useful information. One ship mentioned in it, the *Assurance*, was sunk, according to Pepys' Diary, in December 1660, and some changes of names which he mentions in the same year are noticed.—Mr. Nightingale exhibited a bronze seal found at Wyndham Park, near Salisbury, bearing the name of Wilhelm Pelhisier.—Mr. Peacock contributed an account of a presentment of a man to the Bishop of Lincoln, in 1611, for refusing to kneel at the Communion, and for naming his child Ichabod as a sign that he considered the glory had departed from the Church of England.—Sir Henry Dryden contributed some additions to a paper in *Archæologia*, vol. xxxiii., on Saxon remains at Marston St. Lawrence, in Northamptonshire.

SOCIETY OF HELLENIC STUDIES.—(Thursday, Feb. 16.)

PROF. C. T. NEWTON, V.-P., in the Chair.—Unusual interest attached to this meeting, as the Chairman was able to read extracts from a paper by Mr. W. M. Ramsay, describing some of the results of his journey into Phrygia, and to exhibit drawings by Mr. A. H. Blunt, and photographs representing some of the monuments discovered. The passages read to the meeting described Mr. Ramsay's researches on three sites in the heart of Phrygia. (1) Duganlu. The tomb of Midas existing on this site was discovered by Leake in 1820, and has several times since been visited. Mr. Ramsay explored the plateau on the side of which this tomb exists, and found a road leading to the summit, bordered by a procession of figures advancing downwards. Near the top of the road was a place of worship, with rock-altar, and a rock-cut relief representing a figure like the Greek Hermes. In this place also is a grave, and the worship connected with it seems to be that of the dead. The summit of the plateau is covered with rock-cut graves, and its sides are strengthened with walls, which make it appear to have been a strong place, perhaps the chief acropolis of the district. (2) A necropolis first discovered by Mr. Ramsay at Ayazeen. Here were a multitude of tombs, some in the fashion of that of Midas, others mere caverns in the rock. One opening in the rock was rendered remarkable by being surmounted by an obelisk, on either side of which was an enormous lion; but these lions completely differ in style from those over the gateway at Mycenæ. Mr. Ramsay found an important fragment of another similar relief in the shape of an enormous lion's head of splendid archaic work, and seven feet in diameter. (3) Kumbet. Here Sir C. Wilson and Mr. Ramsay discovered a remarkable block of stone, rudely fashioned in the shape of a ram, and having its sides covered with reliefs representing hunting scenes. These reliefs, however, were rude and much injured by time. Mr. Ramsay expresses his opinion that the publication of these and other remains in the *Journal* of the society will go far to prove that in the art of sculpture in relief the Greeks closely followed the lead of the people of Asia Minor, from whom, also, they derived many of their religious ideas.—A second paper, sent by Mr. E. L. Hicks, was read by Prof. Gardner. The writer selected several details in the descriptions of characters by Theophrastus, and showed how they could be fully understood only by a comparison with Attic inscriptions, especially monumental *stelæ*.—A third paper was read by Dr. Waldestein, wherein he traced the origin of a figure of Hermes which occurs as an *emblem* on a *patera* from Bernay, in France, to the figure of Hermes on one of the pillars from the temple of the Ephesian Artemis, in the British Museum, and drew some conclusions as to the method followed by *calatores* in antiquity.—A paper by Mr. Stuart Glennie on Samothrace and the Cabelri was put down for reading, but postponed in consequence of want of time.

NUMISMATIC SOCIETY.—(Thursday, Feb. 16.)

W. S. W. VAUX, Esq., V.-P., in the Chair.—The Rev. Canon Pownall exhibited a tin-foil impression of an Irish halfpenny, now in the collection of the Irish Academy, struck at Waterford during the reign of John, and believed to be unique. This

coin is of special interest, as it tends to confirm the attribution to John of certain coins in the English series with the *cross pommée*, but with the inscription HENRICVS REX.—M. Terrien de La Couperie read a paper on the coinage of Tibet issued during the second half of the last century and during the beginning of the present one. The coinage of Tibet during that period is of much interest, as it marks very clearly the political changes which took place in that country. Thus in 1772, when the rule of the Râjas was on the wane, we find an independent coinage for a short time; but, when the country was overrun by the Ghurkhalis of Nepal, a new period of the coinage commences, which M. de La Couperie styles Tibeto-Nepalese, and this is succeeded in turn by the Tibeto-Chinese, when China drove out the Ghurkhalis about 1793 and established the present form of government. All these changes are clearly evidenced by the coins themselves.

PHILOLOGICAL SOCIETY.—(Friday, Feb. 17.)

H. SWEET, Esq., V.-P., in the Chair.—Mr. Cayley read a paper on "Greek Pronunciation and the Distribution of the Greek Accents." He attempted to trace a revolution in the Greek sounds to the vast extension of the language under the Macedonian kings, and subsequently to large bodies of migratory Jews and Syrians who formed the nuclei of the Christian churches. Among these, he thought, a vulgar language had arisen, which was afterwards concentrated and made conspicuous at Constantinople, where literature corrected its grammatical, but not its phonetic, peculiarities; thus the sounds of  $\chi$ ,  $\theta$ ,  $\phi$ ,  $\gamma$ ,  $\delta$ ,  $\beta$  were replaced by the most ordinary (*raphe*) sounds of  $\kappa$ ,  $\tau$ ,  $\pi$ ,  $\gamma$ ,  $\delta$ ,  $\beta$ ,  $\theta$ ,  $\phi$ ,  $\gamma$ ,  $\delta$ ,  $\beta$ , for which they had previously served as makeshifts in proper names, and so on. The consonantal pronunciation of  $\alpha\upsilon$ ,  $\epsilon\upsilon$ , appeared also to be a possible Hebraism; but the diphthongs in general had been hard to pronounce, because the alternation of the acute and circumflex accents required the stress to be laid now on the first vowel and now on the second, so that our way of reading was probably more correct in *oikos* than in *oikav*. On the other hand, the tendency of the vulgar Greek had been to generalise the acute accent, and to make the second vowel the most important; hence  $\alpha\iota$ ,  $\epsilon\iota$ , are now sounded like *iota*, and  $\alpha\iota$  (which had a tendency to *ae*, as in Latin) like simple *E*. In reference to the distribution of Greek accents, Mr. Cayley thought that those which are placed nearer the end than need be tended to emphasise the whole word, and to show that it had a more important or definite meaning; he exemplified  $\pi\alpha\tau\eta\rho$  contrasted with  $\mu\eta\tau\eta\rho$ ,  $\epsilon\pi\tau\alpha$ ,  $\delta\epsilon\upsilon\iota\alpha$ , with  $\delta\upsilon\sigma$ ,  $\tau\epsilon\iota\varsigma$ , and  $\text{Ze}\upsilon\varsigma$  the nominative with  $\text{Ze}\upsilon$  the vocative, &c. He noticed more generally the varying accent of the preposition before and after the noun, and the oxytone tendencies of proper names, personal pronouns, and certain classes of adjectives, participles, and inflections of the verb and the noun.—Mr. B. Dawson read some "Notes on Translations of the New Testament." He contended (1) that the Revised Version had not always selected the best translation; (2) that, in their slavish imitation of the Greek text, the Revisers had often removed some of Tyndale's good idiomatic English phrases, and substituted for these others having a foreign ring about them; (3) that, if there could possibly be anyone who desired a strictly literal translation, the Revised Version might be made still more literal without damaging its style.

ROYAL ASIATIC SOCIETY.—(Monday, Feb. 20.)

SIR EDWARD COLEBROOKE, BART., President, in the Chair.—The Rev. Mr. Schön read a paper on "The Hausa Language," the *lingua franca* of Western Africa, of which he has published a grammar and a dictionary, texts and translations of the Holy Scriptures, having acquired his knowledge during a long residence in that part of Africa.—Mr. K. N. Cust followed with a paper on "African Scholars." Dividing Africa into three regions, each containing two distinct groups of languages, he went over the long roll-call of the names of those who had contributed to the knowledge of one or more of the scores of languages spoken on that continent, all of which are unwritten. He re-

marked that but a small portion of the necessary work had been as yet accomplished, and that till this was done it was of no use to discuss the question of the origin of languages.

FINE ART.

*Hopes and Fears for Art.* Five Lectures. By William Morris. (Ellis & White.)

If we turn from these bright pages with added despondency it is not because we hope against belief less doggedly than their author that very far ahead, beyond still deeper and more monstrous darkness yet to come, the lost lamp of beauty may one day be re-kindled to shine upon the ways of toiling men. Rather is it this, that while fear and hope for the future remain unaltered, the present seems the drearier for this voice in the wilderness crying to a generation eager to accept whatever is beautiful or moving or original in its tones, but of its message,—nothing. To the few who have learnt to think rightly, or even to care to think at all about the far future of Labour—which none of our political thaumaturgists seem to have done; to the few who know surely that the hope which Mr. Morris here holds up is the only good hope worth our striving—to them it is no light matter that words so wise and precious should fall but to charm some refined readers, confirm a few waverers, persuade perhaps two or three converts. But more than this they will hardly expect.

The five Lectures do not call for separate notice, since they all present from different points of view the same main doctrine of "art by the people and for the people, as a happiness to the maker and the user." Opinions and advice upon practical details occur mostly as illustrations. Here we usually agree with Mr. Morris as when he exposes, far too mildly, the universal stupidity of admitting light to our rooms from below instead of from above; sometimes we cannot but differ, as for instance in his severely reticent scheme of wall-decoration, in his unreasonable prejudice against paper as a material, or when he says that scarlet geraniums are "thoroughly ugly" and "bad colour altogether." But these are matters not indeed of the taste which admits of no dispute, for that is childish caprice, but of argument which would be out of place in presence of the graver issues he has to try.

Were they graver still they could suffer no indignity at his master-hand. His English is English indeed—frank, rich, grave, tuneful, at times its unaffected gentleness strengthened by a certain charm of noble uncouthness. And thus it is that the fairest and freshest pages of all, as it seemed to us, are those in the first lecture, where he speaks, as perhaps no Englishman has ever yet spoken, of England and its simple homely honest art.

It may be said that Mr. Ruskin, in the chapter on the Nature of Gothic, in his *Stones of Venice*, had long ago pointed out the function of labour as a delight to the producer as well as to the consumer. But Mr. Morris does more; he puts this truth in a foremost, almost a solitary position, he builds on it his sole hope of that little reform, the revival of art, and of that vast reform, the recovery of human contentment. What he and the rest of us are

looking for is just this: that the degradation of mechanical labour will sink lower and lower yet, till in the nether deeps of perfect baseness the nature of man, if there be anything of human left therein, will at last rebel, and the poor will choose to die rather than spend their blood on the cheap luxuries which when made are but as weariness or poison to the rich—the wealthy will sigh in vain for the ways of peace and pleasantness which their riches can no longer buy. The more rapid the tide of brutal hideousness the better: the sooner and surer will come the panic. Only in the meantime let us hide away what wrecks of tradition we may, and bethink ourselves what manner of things shall be after the deluge. To some this may seem simple enough; to many, and among them the Artists, the Art-patrons, and the Art School and Museum people, sheer blasphemy. It is then useless to condense into poorer words Mr. Morris's calm yet cruel analysis of our pretended art progress. One thing we must not omit, because it can never be too often repeated. Sympathetic historians and students of the Middle Ages, who have little knowledge of the arts, have tried in vain to minimise or explain away the misery of prevailing lawlessness and oppression, since with all the misery of it, the people, they know, were not really miserable at all. The truth then is that cloistered piety was not the sole nor the surest refuge from an evil world, that the true solace of the oppressed was the arts, chiefly the rudest, mere daily toil, but toil in those days neither hurried nor brutish nor uninteresting.

Enough has already been said of the main principles of this truly precious book to show that they lie quite outside the paltry Babel of aesthetics and the clamour of the picture auctions. Its author is no eminent hireling Artist: but simply an honest and able craftsman with special love for his own craft, and with a wider sympathy for his whole class, for the artisans of all the arts. Speaking with this authority and denouncing the hierarchy of Art, or exposing the hollowness of Art-revival, the alliance or rather conspiracy of Art and luxury, he secures our acquiescence and much more. For in truth we could almost wish the word *Art* were stamped out altogether. By it people will never mean aught else but a shadowy religion—Art for Art's sake—which is mere imposture or foolishness, or more honestly a harmless amusement for wealthy idlers, which is a villany. Let us, if we will, talk of *the arts*, meaning by them all forms of productive work wherein a man may even now delight to do his best, and wherein he may thus receive and impart the pleasure of fitness and beauty however homely; and this until the time when all work except some residue of mechanical toil—for we confess that in spite of science and machines some such must ever remain—when all work according to its varying capability and destined use will bear the self-same impress of the hand of the cunning workman. But today an artisan—what is he? A unit in the great Labour Market, a stupid little tool set in motion by the mighty wheel of Capital. And the Artist as he is called, our special and sole artificer and art-workman, what does he do for the arts and for us—this man who hired by the first chance customer paints

beautiful things, sometimes the inmost thoughts of a noble soul, upon square bits of canvas to be put in gilt frames and stuck about in patches upon the ugly walls of the rich man's ugly house? And though the rich man may love his pictures as good investments, or an amusing study, or even very often for their own loveliness, it is plain that they do him no great good, since apart from these fair patches his house and surroundings, even his life, lies still under the spell of vulgar luxury and conventional dullness. And that is why I for one have often passed but never entered nor mean to enter the doors of the Royal Academy and the other warehouses where all this costly but to me at least unprofitable merchandise is exposed for sale. Better than this surely is Cheap Art, not indeed the rubbish which Mr. Morris rightly denounces, but an art cheap because modest and simple, things which pretend to no more than they cost, and to possess which is neither extravagance in the needy nor luxury in the rich; the beauty of which things is perhaps very simple and easily understood, by no means deep or subtle, yet often most sweet and unaffected and real.

Rather let the arts die utterly, as Mr. Morris says, than that they should live only as the handmaids of luxury. But how they are to become anything better, how the artisan is to be restored to a worthy freedom, how the social revolution—for social it is rather than artistic—is to be achieved neither he nor any can yet tell. Certainly not we; for clouds which to him seem mere flecks along the dawn, for us overcast the whole sky. Granted that much of political science and economy is mere empirical fumbling, there remain some economic truths which, we fear, can never be less than truths, and which once recognised can no more be stamped out than the belief in gravitation. Mr. Morris indeed admits, but not fully enough, the real difficulty of this, as of every true social reform, that those who sow cannot expect to reap, nor even their children, but the far generations. How then shall we persuade our fellows to sow at all? The religion of humanity offers no great help. Christianity has but faintly if at all enforced our duty to the generations yet unborn. As civilisation with all its blessings—and we do not undervalue them—advances, the world grows uglier and life in it less joyous and restful; the homes and haunts of men are already far less lovely than those of their sheep and oxen; what will they be before the end? If only, as we have sometimes idly fancied, some false prophet would arise to persuade men that each must be born again and again every fourth generation, here in his own England which it was in him during each life to better or worsen, they would then build and plant and legislate against their second coming, they would be strenuous indeed to hand down purer blood, gentler instincts, a freer, fairer life to their comrades of the future. But after all, the wisdom of Time alone can forge the key which will unlock the fetters of the slaves of civilisation. The event is perhaps farther off than even Mr. Morris dares to hope, but we believe not less stoutly than he that it is sure. This at least is already as certain as if it were believed by all the world instead of by a few—

that the Utopia of the popular leaders, men so eminent in many ways as Mr. Bright and Mr. Fawcett, is but a leading of us down into the pit, that to say that "no one would work if it were not that he hoped by working to earn leisure" is to seal for ever the tomb of the arts, is to brand anew with the primitive curse the chiefest blessing of man, to raise idleness to the throne while we tread labour in the dust, to adore what of old we burned, to burn what we adored. E. PURCELL.

#### THE EXHIBITION OF THE ROYAL SCOTTISH ACADEMY.

THE exhibition of the Royal Scottish Academy is a marked contrast to that of the Glasgow Institute of the Fine Arts, which we noticed last week. In Glasgow the display is far more miscellaneous; it aims to embrace representative examples of English and foreign as well as of Scottish art, and includes many important works which have been previously exhibited in London and on the Continent. In the Edinburgh exhibition we have, as is right and fitting, a wider and fuller exposition of recent national art, while foreign pictures are hardly at all to be found on the walls. The important London works are this year fewer than usual. They, however, include Mr. F. Holl's powerful portrait of "Mr. S. Cousins," the engraver, and Mr. H. F. Lawson's "Her Father's House," one of the painter's renderings of "The Children of the Great City;" while among the works by "London-Scottish" artists are Mr. Hugh Cameron's "Child's Funeral on the Riviera," two portraits by Mr. Pettie, Mr. Archer's "Sir Theodore Martin," and a large and impressive landscape—a russet stretch of heathery moorland, painted near Pitlochrie. In the Great Room hangs Mr. MacWhirter's pleasant and sunny "Valley by the Sea," a work rich in detail, broad in effect, and full of atmosphere; and fronting it we have Mr. W. E. Lockhart's well-studied and splendidly coloured "Oid and the Moorish Kings," which figured in the Grosvenor Gallery last year.

There is some deficiency in striking and important figure pictures. Among the more ideal subjects are two graceful and dignified female personifications by Mr. Herdman, "Penelophon" and "Antigone," both of them showing fine command of form and delicate rendering of flesh. Mr. Robert Macgregor continues the series of village and rustic figures which he has exhibited in former years, and in the smaller of his two chief subjects, "Labourers Resting," attains much skilful drawing and truth of quiet tone. Mr. M'Taggart has a coast scene with children, larger than his similar subject in the Glasgow exhibition, but hardly so finished and admirable; and Mr. Leyde exhibits an important upright of children at play among the sand-hills. Mr. W. B. Hole shows increased delicacy and skill of handling in some of the figures in his "Prince Charlie's Parliament;" and among the works of the younger artists is a remarkable cottage interior by Mr. Robert Noble, admirable in texture, and very glowing and powerful—though somewhat forced and unreal—in colour.

The exhibition is particularly rich in landscape work and in portraiture. In the former department Messrs. Smart, Waller Paton, and Beattie Brown contribute largely; and among Mr. Alex. Fraser's pictures is a singularly fresh and vivid view of "Fenwick Kirk." Mr. W. D. M'Kay depicts with admirable care and delicacy the uneventful scenes which his sympathetic art makes interesting—the street of a rustic village, with its leisurely figures and its drowsy sunshine; a flock of sheep in a field green with the spring-time; or labourers at

work among the turnips in a landscape where the winter's snow yet lingers in the shaded places beside the hedgerows. Mr. Lawton Wingate shows no canvas so spacious or so poetic as his "When the Kye come Hame" of last year; but he has much that is more artistically complete. His little scene of cottage life, "Winter Twilight," is particularly excellent for its strong grasp of Nature and the poetic aspect which it gives to the commonest subject. It shows an old countrywoman pausing in her cabbage-garden, her arms filled with gathered greenery, and addressing some words of evening greeting to a workman who passes on the farther side of a out-back hedge. Above, over a distance of cottages and a corner of the village churchyard, is a delicate space of evening sky, seen through the bare impending branches of a great tree. Among the landscapes sent by Mr. George Aikman are two effective pastorals, evening subjects, with flat darkening backgrounds, and skies full of hurrying rain-clouds and the gathering night. One of them—"Coming Storm—Across the Moor"—has been vigorously etched by the artist. Mr. J. O. Noble has several river and coast scenes, characterised by force of handling and colour; Mr. A. D. Reid in his "Tay, from Kinnoul Hill" gives a mellow and harmonious rendering of ruddy autumn foliage and hazy autumn distance; and in his "Tillietudlem Castle" and his "Shade and Sunshine" Mr. D. Murray shows brilliant contrasts of light and shadow.

Among the portraits are six sufficiently representative examples of the art of the late Sir Daniel Maclise. Mr. George Reid, in addition to his "Sir Bartle Frere" and "Principal Tulloch" of last year's Royal Academy, shows an admirable little head of "Mr. Froude" and a powerful full-length of "Mr. Duncan M'Laren," late M.P. for Edinburgh. But his most notable contribution is a portrait of "Lord President Inglis," painted for the College of Justice. Lord Inglis is depicted in his ermined robes of office, seated at a table, with a red screen for background. Considered as a work of colour, the picture is a noble study in various tones of crimson, white, and black; and both for grasp of character and for daring excellence of technique it may be pronounced one of the noblest examples of recent portraiture. We hope that it will be shown in London before it finds its final resting-place on the walls of the old Scottish Parliament House. From Mr. Herdman comes a dignified full-length of "Sir William Collins," late Lord Provost of Glasgow; and Messrs. Barclay, Norman Macbeth, M'Taggart, and Gibb exhibited portraiture of varying degrees of excellence.

In the Water-Colour Room are some very clever Eastern sketches by Mr. A. Melville, especially one of a seated Arab, with a rendering of white marble Tadema-like in its purity and realism. The sculpture includes a bas-relief by Sir Noel Paton, already described in the ACADEMY, and works by Mr. W. D. Stevenson, Mr. Hutchison, the late Wm. Brodie, and Mrs. D. O. Hill. J. M. GRAY.

#### MINOR EXHIBITIONS.

MESSRS. AGNEW have, as usual, collected a number of very fine examples of English water-colours at their gallery in Bond Street. They are 244 in number; and there is none among them that does not deserve the title of "high class" in the sense of the Catalogue—that is to say, they are all well executed, and by good artists. Of John Cozens, the earliest of poetical water-colour painters in England, there are two good examples. Of these, the "Gardens of a Palace, Rome" (159), is fine, and "Castel Gondolfo" (1), finer. Both have the stamp of

original genius. The skies are luminous as no water-colour skies had been before him, the character and beauty of the trees are refined and true, and the generalisation of foliage is original and exquisite. The appearance of Turner seems less miraculous after looking at "Castel Gondolfo." Of Turner himself, there are some early blue-green drawings, Italian in subject and very skilful; copies or adaptations of other drawings in the manner of Dayes and Hearne. There is also a lovely drawing of his middle period such as no other artist ever drew. This is the "Chain Bridge over the Tees" (179), from the Bale collection, belonging to the *England and Wales* series—worth the trouble of a long journey to see. Of his contemporary, Cotman, there are also very good examples. The "Mouth of the Tagus" (278) and "Mont Blanc" are rare specimens of his sketches abroad, brilliant in colour; but they are not better than his more characteristic "Old Hulks" (102), which is perfect in its simple way. Copley Fielding is still more finely represented by a large and splendid "Stormy Day off Whitby" (120) and other smaller works.

Among the other more noteworthy contributions to the gallery are some drawings of high accomplishment and fine colour by foreign artists—Chialiva, Rotta, Bompiani; and as good as, if not better than, these, "A Doctor of the Fifteenth Century," by F. Pradilla, and "Arab Minstrels at the Alhambra," by A. Fabres; while the Dutch school is represented by charming examples of Neuhuys, Blommers, and others. It need scarcely be added that our own living school is well represented; but their works come too frequently under review to need mention here.

The visitor should not leave the gallery without noting a head of a dog by Landseer, which is called "Brutus," but is of a very different breed from the two Brutuses known to fame in connexion with the artist; and admirers of Millet will be glad to see a good example of his grave composition in a drawing in coloured chalks representing a woman tending a cow. A drawing of similar style, and in the same material, is, or was lately, to be seen at Goupil's, together with a very fine small oil painting of a peasant going to his labour. At Cottier's, in Pall Mall, the grand "Sower" and another unfinished work were lately visible; and at Messrs. Dowdeswell's, in Bond Street, there were many good but slight sketches by Millet, some of which still remain. Such opportunities of seeing Millet's own hand should not be neglected by any lover of art, as there is no artist whose character is so easily lost by translation, and some of the wood-cuts and etchings by which he is known to the British public are little better than caricatures.

As usual, Birket Foster is well represented at Messrs. Agnew's, but their show of this artist's work this year is cast into the shade by the special loan collection at Messrs. Vokin's, in Great Portland Street. The artist has never been seen in such force before. Not only is there an unprecedented number of his drawings, but some of the examples are unusually large, while others are unusually fine. The coldness of his colour has, to a great extent, disappeared—melted, it might be said, in the warmer sun of France and Italy; while his studies of character in those countries are fresh and delightful. Enjoyable as are his country scenes in England, with their picturesque cottages and figures, ducks and water, it is a change, and a pleasant one, to take a trip with him from Cologne to Mayence, and see each of the well-known hills and castles figured for us with his refined brush. This elaborate series is not grand or striking, but it is very tender and beautiful. On the other hand, unusual boldness and strength have come upon the artist when dealing

with the magnificent front of the cathedral at Rheims and the groups in the market-place at Toulon. Venice has also inspired him with finer feeling for form, and a clearer, purer sense of colour. The great technical skill shown in "The New Purchase"—a *bric-à-brac* hunter surrounded with his treasures—is another proof that this justly popular and very accomplished artist has only to seek new fields in order to conquer them.

At Messrs. Dowdeswell's, besides the Millet sketches to which we have alluded, there are other things well worth seeing. One is the superb water-colour picture just executed by Mr. Sutton Palmer from his drawing of "Mowbray Point," to which we called attention when noticing the Palmer Exhibition; the others are the first states of two etchings by M. Bracquemond, one representing a live cock and the other a dead rabbit. The thoroughly learned method of M. Bracquemond's work cannot be seen more clearly than in these unfinished plates. Though comparatively little worked, the texture of fur and feather, and the consistency of beak and comb, are perfectly indicated; and all is done with clean, separate lines, dots, and scratches, the value of each of which is apparent to the least educated eye. No doubt as the work advances it will increase in beauty, but we do not think that the skill of the artist will ever be more perceptible than in these first states. At present the plates are Japanese in the strength of their drawing and their power of black and white; to these qualities M. Bracquemond will add the European beauty of light and shade.

At Messrs. Gladwell's, in Gracechurch Street, the large picture of the House of Commons by Mr. F. Sargent is well worth seeing. The likenesses, all drawn from life, are excellent; and the difficulties of the grouping are very cleverly got over. The etching, also by Mr. Sargent, is of unusual size. It is in a forward state, and renders the expressions of the various faces with scarcely any loss.

COSMO MONKHOUSE.

#### NOTES ON ART AND ARCHAEOLOGY.

MR. LOWELL has been painted in his red doctor's gown by Mrs. Anna Lea Meritt, the American artist, who has settled here; and he has also been drawn in chalk by Mr. Sandys for the collection of one of our publishers, which already contains most of the leading literary men of the day.

MR. HOLMAN HUNT has painted an interesting full-length portrait of his little golden-haired girl, Gladys.

THE Institute of Painters in Water-Colours has elected as members Mr. Keeley Halswelle, Mr. Joseph Knight, Mr. J. MacWhirtor, and Mr. B. Caldecott.

A SERIES of six lectures in support of the Society for the Protection of Ancient Monuments is being delivered on Thursdays at the Kensington Vestry Hall. The first lecture, on "The Historical Development of the Art of Pattern Designing," was given by Mr. William Morris on February 23. The remaining lectures will be by Mr. Reginald Stuart Poole, Mr. J. T. Micklethwaite, Prof. Sidney Colvin, Prof. W. B. Richmond, and Mr. E. J. Poynter.

At the Messrs. Tooth's gallery there is on view a small collection of the landscapes of John Linnell. Few of Linnell's works are without interest at the present time, and the wonderfully passionate landscape of stormy sunset clouds overhanging the moor and the flock would at any time be interesting; but we imagine that it would have been as well to have waited for that fuller exposition of the art of the painter which is promised us for next

winter at Burlington House. Linnell's art was practised for so prolonged a time, and much of the best of it accomplished so long ago, that there are few except our older picture-seers who can pretend at this moment to any comprehensive or complete knowledge of his work. Under these circumstances, it strikes us as best not to affect to appraise the veteran artist until the show of next winter shall reveal him as he really was, during his long lifetime of labour, in portraiture as well as in landscape.

THE proposal of founding a Cambrian Academy of Art, to which we have before referred, has now taken definite shape. There lies before us a list of patrons, office-bearers, and members; and a copy of the rules. A temporary gallery has been secured in Mostyn Street, Llandudno, where the inaugural exhibition will be held from June 20 to September 20 of the present year. Whether a permanent building shall be erected in North or South Wales yet remains to be settled. Meanwhile, it is announced that all subscriptions and donations will be appropriated to the building fund. The treasurer is Mr. Anderson Hague, Tywyn, near Conway.

THE bust of the late Lord Taunton, which has just been placed in the Shire Hall of the town from which he took his title, is by Matthew Noble, who first won distinction by his "Wellington Monument" at Manchester. It is interesting to call to mind that Lord Taunton was himself a munificent supporter of rising artists, both in sculpture and painting.

A BEAUTIFUL specimen of stained glass was put up a few days since in the church of St. Mary Rawtenstall, Manchester. It is a large five-light, the gift of Mr. Worswick, of Greenbank, in memory of the late Mr. Henry Ashworth and his sister. The artists are Messrs. I. A. Gibbs and Howard, of London; and the subjects represent our Lord as the healer raising the widow's son at Nain, and Mary sitting at the feet of Jesus. The window is painted in a rich, full tone, great pains having been taken with both drawing and composition.

THE Ruskin Society of London held a *conversazione* on February 9, at the Working Men's College, Great Ormond Street. Two fine examples of Turner's earlier period, and other works, were kindly lent by Mr. Marcus Huish, of the Fine Art Society. Paintings and drawings were also contributed by Miss Jay, Mr. J. W. B. Knight, Mr. A. Macmurdo, and others.

AT the meeting of the Chemical Society on February 16, Dr. W. Flight read a paper entitled "Contributions to the Knowledge of Alloys and Metal-work, for the most part Ancient." Analyses were given of copper nickel coins from Bactria; of ancient Indian coins (*circa* 500 B.C.), containing silver, copper, lead, &c.; of a figure of Buddha, yielding four per cent. of silver-chloride; of modern *bidari* and *kaf gari* ware from India; of iron and bronze implements from the Great Pyramid; of copper spearheads from Cyprus; of a Hebrew shekel, various old Roman bronzes, &c.

IN the *Annals and Magazine of Natural History* for February, there is a note by Dr. T. Eimer on the well-known statue in the Vatican, called the "Sauroktonos." He argues that the intention of the boy is not to transfix the lizard with a dart, but to snare it with a noose of grass, according to a practice common in Italy at the present day.

THE opening of the first exhibition in Paris of the Société des Aquarellistes français has been gracefully taken advantage of by the Government to confer upon M. Vibert, the president of the society, the insignia of officer of the Legion of Honour.

## THE STAGE.

### THE COURT THEATRE.

THE play-bill at the Court Theatre has been completely changed, Mr. Gilbert's play having been withdrawn and two new pieces produced. Both are interesting, but the success of neither is likely to become historic. The piece which, if it is to be judged by its size, must be accounted the main dish of the evening is an adaptation by Mr. F. C. Burnand of the "*Mari de la Débutante*." It is necessarily a very free adaptation, and a good deal of Mr. Burnand's own humour has been introduced where the humour of the French original required to be suppressed. The piece is, in the French, a somewhat cynical, always witty, yet, at the same time, serious study of the ways and characters of the two personages whose existence is indicated by the title—first, the *mari*, and, secondly, the *débutante*. Much of the action passes in that world behind the scenes which always excites interest among the denizens of that larger world before the curtain, known to the actor as "in front." The stage is sometimes written about from the inner consciousness of novelists whose life is provincial, but in the present case it is treated by writers who know nothing if they do not know the theatre. The seamy side of stage life is not hidden in a representation that is neither sentimental nor sanguine. And if Mr. Burnand has not insisted upon this side quite so much as has his Parisian brother, he has adapted the circumstances fairly to the conditions of the English theatre, and has, by his introduction of a wholly English world that haunts the stage and circles round the professors of its art, added to the breadth of entirely innocent humour, though he has made the satire somewhat less biting and the study much less personal and intimate. The cast is a strong one. It includes, in characters for which their representatives are well fitted, Mr. G. W. Anson, Miss Linda Dietz, and Miss Lottie Venne; and while it gives Mr. John Clayton an opportunity of getting skilfully out of the difficulty of playing a very funny part in which no one would have expected to see him, it affords Miss Measor the chance of a yet more complete transformation. This young actress—seen more naturally in a character of which we shall speak below—is in Mr. Burnand's "*Manager*" a perfectly unrecognisable charwoman. The cleverness and the surprise of the assumption of low life recall Miss Lydia Cowell's quite extraordinary study of the angular fashions and acidulated speech of the flower-girl of our streets.

To many people's tastes, "*My Little Girl*"—the smaller piece in the Court play-bill—will offer the possibility of a greater attraction. Mr. D. G. Boucicault, the young actor, a son of the more famous actor and dramatist, has adapted the little play from the novel of the same name by those entertaining and original storytellers, Messrs. Besant and Rice. The adaptation is skilfully made. The theme is one that has been used in fiction, and in fiction of a more poetical order than Messrs. Besant and Rice's is wont to be, long before they used it; but that is nothing; seldom, perhaps, has it been used in a way better fitted for dramatic treatment—for transfer to the stage. The subject is the love of a middle-aged man for a girl who has reckoned herself a child beside him. In the present case he is her guardian, and she is in love with his young nephew, who has but lately presented himself in their home; the nephew asks leave to marry her and is refused, the elder man only yielding after a struggle which it is difficult for him to end in chivalrous fashion. There are many ways of treating such a theme; chiefly two, perhaps—the analytical and the picturesque. The present stage way is the picturesque. Nothing is sounded to the

bottom; nothing is dissected; no judgment is pronounced on the merits of the case—on the girl's chances of lasting happiness with younger or elder. But the emotions of the situation are "spotted" as affording an opportunity, and here is Mr. John Clayton ready to take the opportunity and to enlist our sympathies before he makes the sacrifice. Of the five *dramatis personae*, all are clearly put before us, and each has a bearing on the theme. A short-sighted clergyman, who is prepared with commonplaces for every occasion in life, is introduced as another admirer of the girl Gladys, so that the serious devotion of the guardian shall not at once appear ridiculous, or seem to have no chance of reward because only confronted by the more impulsive and confident devotion of the lad. Mr. Kemble plays this part with admirable tact and humour. We have never seen him to better advantage. Then there is an aunt, whom Miss Carlotta Addison personates, and who is the representative of sentimental propriety. A lady of uncertain age is sure to imagine that a lad is the best help-meet for a girl, and under the auspices of this lady the elder man's sacrifice is accomplished. The young man is played by Mr. Boucicault, jun., and generally with tact; but, in the scene between uncle and nephew, the actor makes a mistake in giving at once so much of vehemence, and so little of respect, to the manner of the youth when his uncle is questioning his claim. Such manner establishes fairly enough the uncle's charge of ingratitude; and in actual life the uncle would have been fully justified in withholding his sunny little ward from a young gentleman of so peppery a temper. Miss Measor, as "my little girl," satisfies more fully at the last than at the first. At the beginning her manner and voice are needlessly hard; and though she gradually gets softer, and, as the play proceeds, does produce a contrast, she is at the end still far from softest; an equal difference might be maintained between beginning and end, if she were gentler throughout. Her "little girl" is no subject for a poet's reverie, but a brisk young Miss, thoroughly modern and a trifle pert. But her performance is in many respects charmingly fresh. It is never stagey in the least, and is generally spirited. Mr. Clayton has been much associated with sacrifice ever since the success of "*All for Her*," wherein he played a character that was practically the Sidney Carton of the *Tale of Two Cities*. There he had the advantage of great situations, and of the clash of action. He is thrown more entirely on his own resources in the present little piece; has himself to find appropriate action for a considerable assemblage of doleful words. His voice, burdened with regrets always, and at times with tears, and his thoughtful, meditative gait—and these directed by judgment and quiet intelligence—enable him to realise for us very thoroughly the sorrows of the excellent gentleman whom the brisk young Miss was not prepared to marry. The adequate presentation of a piece like "*My Little Girl*," and its fairly cordial acceptance, is one of the most hopeful signs now visible for the future of the English stage. It displays the renewed interest taken in the theatre by people who want the theatre to reflect something of the life and thought of the day.

### STAGE NOTES.

"*MANOLA*" at the Strand—Mr. Farnie's adaptation of the French *libretto* furnished to M. Lecocq—will hardly, we fancy, be as popular as "*Olivette*," or one or two other pieces which have seen the light on the boards of the same theatre, though it has in it some elements of attractiveness. If the music were original, or even distinctly melodious, instead of merely tasteful and graceful, the theatre might profit

more by the presence of such excellent singing actresses as Miss Rosa Leo and Miss Irene Verona. It might then, too, be possible to see that most funny of elderly stage heroes—Mr. W. J. Hill—without regretting that he is not provided with a little more of comedy. Then, too, M. Desmonts—who does sing, while Mr. Hill does not—would be more entirely utilised. But, under the circumstances, the recent secessions from the Strand company are not a matter to which the visitor can be insensible, and there is no one now to do for "Manola" what Miss Cameron does for the "Maschette." The stage is full of bright people and busy groups, who come and go, manoeuvre and retire; there is plenty of light and colour, which, doubtless, would have satisfied that theatrical critic who pronounced music to be "the most expensive noise he knew." We are not all Théophile Gautiers, however. As a piece, "Manola" is hardly satisfactory; as a show, it is hardly disappointing.

MDME. CELESTE died very recently in Paris, aged sixty-seven. She had long left the stage; but about a quarter-of-a-century ago she was one of the most moving actresses in English melodrama. Her long stage association with Mr. Benjamin Webster is matter of theatrical notoriety.

### MUSIC.

#### RECENT CONCERTS.

THE first concert of the seventh season of the Bach Choir took place last Thursday week at St. James's Hall, and the programme contained works of great historic interest. Mr. Otto Goldschmidt first gave us three anthems as representative specimens of the English Church compositions of the seventeenth, eighteenth, and nineteenth centuries. The choice of composers was somewhat peculiar. William Byrd, although belonging rather to the sixteenth century, was chosen for the seventeenth, to the neglect of Purcell; Boyce might have been selected for the eighteenth, instead of Dr. Greene; and, with all due respect to the learned Oxford professor, Sir F. A. G. Ouseley, we think the nineteenth century ought to have been represented by S. S. Wesley, Sir Sterndale Bennett, or Sir John Goss. The great event of the evening was the first performance of Palestrina's celebrated "Missa Papae Marcelli" (six parts unaccompanied). In 1562, the Council of Trent proposed to abolish all music in the public worship save that of the Gregorian plain-chant. Profane and frivolous strains had become mixed with sacred music; even secular words had been introduced by the singers into the sacred services; and the ecclesiastical text had been disfigured and rendered almost incomprehensible by contrapuntal contortions of every kind. Palestrina was commissioned by Card. Borromeo to write a Mass; he composed three, characterised by such elevated and severe grandeur that it was decided to make no alteration in the service of the Church. Of these three compositions, the third, known as the "Missa Papae Marcelli," was considered the finest. The music is admirably written for the different voices, and the performance of the work by the Bach Choir deserves very great praise. The *sol*i parts were well rendered by Miss Robertson, Mdme. Fassett, and Messrs. Frost, Shakespeare, Kempton, and Tremere. The music would, of course, be much more impressive if heard in a cathedral, and with the proper breaks between each movement. The writing is wonderfully grand and simple, yet there is no lack of counterpoint and clever canonic imitation; everything, however, is so artistically arranged that there is no obtrusion of the scientific element, which merely serves as a means to an end. The second part of the concert included some madrigals, songs, and an Italian duet,

"Conservate," excellently sung by Miss Robertson and Mdme. Fassett, with pianoforte accompaniment cleverly arranged from Handel's figured bass by J. Brahms. The only works of Bach given at this concert were a sonata for pianoforte and flute (played by Messrs. Kemp and Swendsen) and the double chorus, "Nun ist das Heil." It only remains for us to mention that Mr. Goldschmidt conducted the whole of the programme in a careful and efficient manner. An interesting orchestral and vocal concert is announced for April 26, at which Bach's "Missa Brevis" in A will be given for the first time.

The Crystal Palace Concerts were resumed last Saturday, and the programme included the overture and ballet music from Mr. C. V. Stanford's "Veiled Prophet." This grand opera in three acts was produced at Hanover on February 6, 1881. A symphony and a festival overture by Mr. Stanford have already been heard at the Crystal Palace, and his 46th Psalm was performed last season at the Richter Concerts. Mr. Manns has done much for English art, and we have once more to thank him for giving us the opportunity of hearing a portion of what seems to be a work of merit. The overture, largely constructed of themes from the opera itself, is interesting; and, though the themes are not marked by any special individuality, the subject-matter is clearly exposed and neatly developed, and the orchestration is very pleasing and effective. It is difficult to judge of the rest of the music away from the stage. The two ballets are very quaint, and the soprano air (sung by Miss Mary Davies) is of a simple character; in the latter, the peculiar form of melody and the progression of intervals savour of the East. The second ballet, in G minor, is very charming and original. The selection was well received, and the composer had to bow his acknowledgment from the gallery. Miss A. Zimmermann gave a very fine performance of Bennett's concerto in C minor. The concert concluded with Beethoven's symphony in A.

Herr Joachim made his first appearance at the Popular Concerts last Monday, and was, of course, greeted with enthusiasm. Beethoven's quartett in F (op. 59, No. 1) was admirably interpreted by the great violinist and his co-executants, Messrs. Ries, Straus, and Piatti. There is no necessity for us to praise or notice in detail the skilful solo- and life-inspiring quartett-playing of Herr Joachim; it is sufficient to record the fact of his arrival, and the first of his artistic triumphs for this season. Mdle. Marie Krebs was the pianist, and played with great success some Chopin solos.

Mr. Geaussen gave his second concert last Tuesday, at St. James's Hall. The conductor may fairly congratulate himself upon the success of his labours. The performances of Mendelssohn's eight-part psalm, "Judge me, O God," and Mr. Hecht's vigorous and effective part-song, "Charge of the Light Brigade," were thoroughly good; and in the various items of the programme the excellent qualities of the choir were again most successfully tested. We are pleased to note that it is intended to increase the choir to 400 voices, and that three concerts are announced for next season. We must congratulate Mr. Geaussen on his "important notice" with respect to the impossibility of allowing *encores*. It is a step in the right direction. J. S. SHEDLOCK.

## LITERATURE.

*The Land of Khemi.* By Laurence Oliphant. (Blackwood.)

IN thus reprinting his recent contributions to *Blackwood's Magazine*, Mr. Oliphant has rendered good service alike to those who stay at home and those who travel. The former will thank him for an exceedingly agreeable book; while to the latter he furnishes fresh motives for wandering, and himself leads the way to pastures new. Of the ever-increasing popularity of Egypt there can be no doubt. As a health resort; as a happy hunting-ground for sportsmen, archaeologists, and speculators in antiquities; as the idler's paradise *par excellence*, that land which is "the gift of the Nile" has not its equal. Yet few even of those constant visitors who spend all their winters in the matchless climate of Egypt are acquainted with any but the beaten tracks. In more senses than one, the Nile has become, as Mr. Stanley Lane Poole describes it, "a groove in the desert;" and it is a groove which *habitués* find it difficult to get out of. Year after year they go to the same hotel, engage the same *dahabeeyah*, sell themselves body and soul to the same dragoman, make the same trip, moor at the same places, and all but eat the same sheep and shoot the same crocodiles. To such travellers as these, and to all whom it may otherwise concern, Mr. Oliphant's *Land of Khemi* opens up a new Egypt—an Egypt abounding in wood, water, and verdure; in rose-gardens and orange-groves and sylvan byways—an Egypt flowing with milk and honey, where cream-cheese and fresh butter abound, and eggs are a farthing apiece, and pigeons are eightpence the pair, and the dragoman's tinned meats are unknown. An Egypt, above all, where buried cities and unopened mummy-pits invite the antiquarian spoiler, and virgin mounds "which contain all the records of the ages seem to be crying out, 'Come and dig!'" This wonderful new Egypt, which reads like the land of Cockayne, is, of course, none other than the Fayoom; about which, till the advent of Prof. Ebers' great illustrated work, so little that was reliable had been written, and which had been almost wholly neglected by the artists who crowd every season to Cairo and Thebes.

The illustrations to Mr. Oliphant's book are below criticism; but he has a quick eye, nevertheless, for effects of light, colour, and atmosphere, and he reproduces his impressions of scenery felicitously enough in simple and straightforward language. From Medinet-el-Fayoom, the capital town of the old Arsinoite Nome, to the Labyrinth, the Birket-

el-Kurûn, the Bahe Youssef, and the sugar-growing districts of Abookeer, Nazlet, Bisheh, &c., &c., he takes us by easy stages, and shows us all that is worth seeing on the way. The pastoral beauty of the landscape is heightened by "a luxury of repose which the lowing of cattle, the wail of the water-wheels, and the hum of distant voices seem rather to enhance than disturb." Rich expanses of cultivated plain rippling all over with crops of wheat, beans, lentils, and clover, are relieved here and there by dark groves of date-palms and native villages perched high on ancient mounds. Between Medinet and the brackish waters of Lake Kurûn,

"the country is intersected by numerous swiftly running streams, which, cutting through the soft soil, often form little gorges of great beauty and luxuriance, as at the village of Fidimin, where they overflow their dams in cascades—a scenic feature unknown in any other part of Egypt. Where these dams exist, there are often little lakes embowered in palm-groves and gardens, thus giving the Feyoom a pre-eminence, as far as beauty of landscape is concerned, over every other part of the country."

The sugar districts, it seems, are connected with the town of Medinet by fifteen miles of what Mr. Oliphant calls "an agricultural line," upon which ordinary passengers may travel twice a-week during the cane-cutting season. The train consists, at starting, of only the engine and a comfortless van for passengers; but, as it proceeds on its way, the line is found to be blocked at intervals by trucks loaded with cut cane, placed there apparently in order to ensure a succession of terrific accidents. No accidents, however, occur. The trucks are simply attached to the front of the engine, which goes on again till again brought to a standstill in the same manner. In this primitive way as many as thirty loaded trucks are picked up and propelled—a mode of transport which is not favourable to rapid travelling. Rumbling thus leisurely upon its way, the train is pursued by

"a racing, scrambling crowd of boys and girls, who rush out of the adjoining villages to pick up the scatterings of sugar-cane which fall from the trucks. For at least a couple of miles we were thus pursued, old men and women joining in the race, and in their eagerness to clutch the cane, rolling over each other on the track" (p. 87).

The sugar factories, of which nine are in operation and three are closed for want of a sufficient supply of cane, barely pay their working expenses. This is in part due to defective culture, and in part to the deleterious effects produced in the long run by the nitrous soil which is excavated from ancient mounds and used as manure throughout the country. Mr. Oliphant is of opinion that the cane is not set deep enough in Egypt. The rows should be planted single instead of double, and need to be banked up, as in South America. Numerous cotton mills are also closed, and going fast to ruin, in various provinces. Accustomed from earliest youth, as he tells us, to Oriental life and manners, Mr. Oliphant is apparently able to converse fluently with the Arabs in their own tongue. The English, he says, are decidedly popular among the peasantry;

whereas the better-class Egyptians and Copts are more French in their sympathies.

"This is partly owing to the great preponderance of the French population in Egypt over the English, to the much greater proportion of employés in the Government service which belong to the former nationality, and to the fact that the official language is French. All the Arab papers in the country, but one, support the French. In fact, Egypt is becoming rapidly Frenchified morally, and, under the present contrivance of an Anglo-French administration, French influence must inevitably go on increasing. But in Egypt, as elsewhere in Eastern countries, a feeling of national independence is gradually growing."

It is well to remember that these words were written long enough before the late military movement in Egypt.

Mr. Oliphant's experiences of Egyptian society in the provinces are sketched with considerable humour. On leaving the Fayoom, he spent several weeks upon a part of the Nile which is always hurried over by travellers on their way to and from Upper Egypt. At Minieh, where he lived in "the most fashionable native set," Mr. Oliphant's time passed pleasantly enough; the magnates of the neighbourhood vying with each other in invitations to dinner-parties, "fantasias," excursions, and the like. Two Coptic weddings—one in the upper-class society of the place, and one in the lower middle-class—are very comically described; and so are the Coptic fleas. That it is impossible to visit the very ancient and interesting churches of this community without what Mr. Oliphant justly calls "a certain sacrifice of personal comfort" is a truth which comes pathetically home to all who have travelled in Egypt; and we may be unfeignedly grateful to him for pointing out, as he does, that pilgrimages to these holy places should invariably be performed early in the week. "Experience," says Mr. Oliphant,

"convinced us that on Saturday Coptic fleas are especially voracious. They have been deprived of sustenance since the previous Sunday, and rush at the unwary visitor with a ferocity which is truly appalling. On a Sunday afternoon, when they have been gorged during morning service, one may satisfy one's archaeological propensities with comparative impunity; but every day after that increases the risk" (p. 175).

Some of Mr. Oliphant's native friends placed their *dahabeeyahs* at his disposal for short trips on the river. One lent him a wonderful donkey of pure Mecca breed, which, being fed on "a diet of ham," grunted like a pig whenever he was not braying. Others took him to out-of-the-way places quite unknown to Nile travellers in general, where mounds, tombs, and hieroglyphed inscriptions may be found in any number by those who care to seek for them. At the village of Atfieh, built upon the mounds of Aphroditopolis, Mr. Oliphant found some of the present inhabitants actually living in the shells of the ancient houses. Here also he found a small sphinx; an inscribed stone bearing the cartouche of Rameses II.; and other interesting remains. At Kom el Kafara, where he was assured that no travellers had ever investigated the ruins, he was rewarded by the discovery of a curious bundle containing mummied bones and wheat

(probably part of a funereal repast), and bricks stamped with the cartouches of Menkheperra (XXIst Dynasty), the husband of Queen Isi-em-Kheb, whose mummy was found the other day at Dayr-el-Baharee. Most interesting of all, however, are his descriptions of the recent excavations at Haybee, in the neighbourhood of Feshoon. Here, in an amphitheatre of cliffs, some of which are crowned with massive fortifications, lie the mounds of Isi-em-heb—an ancient town which would seem to have been extensively added to, if not founded, by the priest-kings of the XXIst Dynasty. In this place Daninos-Bey, a European resident at Feshoon, has, with the sanction of Prof. Maspero, opened some extensive mummy-pits and a whole series of rock-cut sepulchres. As many as thirty stone sarcophagi of fine workmanship were found in a single cavern; and one of these, upon the lid of which was "a magnificently sculptured head of a man," contained the mummy of a giant. Mr. Oliphant describes the black bituminous flesh as still adhering to the huge bones, the skull being of extraordinary thickness. Some Canopic vases of alabaster were found in this tomb; but no inscriptions. In some of the mummy-pits, the bodies, "instead of being placed in stone or wooden coffins, were neatly packed in cradles made of the branches [fibres?] of palm-leaves beautifully bound together with flax string." Part of the great wall surrounding the *temenos*, or sacred grove attached to the temple, has also been laid bare; but for want of men and means M. Daninos failed to "strike" the temple itself. The bricks of this wall are stamped with the cartouches of Pinotem I. and his grandson, Menkheperra. Nothing, in short, would seem to have impressed Mr. Oliphant more deeply than the buried wealth of Egypt. "The more one sees of the country," he says, "the more one is amazed at the extent of the remains which still exist, awaiting a thorough examination." Mounds which undoubtedly cover cities and cemeteries belonging to the obscure period of the Hyksos domination, and to the VIIth, VIIIth, IXth, and Xth Dynasties, "of which no record whatever has yet been found upon any of the monuments," need only to be explored in order to restore the lost records of many centuries. The Delta does not seem as yet to have attracted Mr. Oliphant's wandering footsteps; yet it is a district which might be expected to fascinate him above all others. For in the Delta, and especially in that part of the Delta anciently known as "the land of Goshen," we have yet to seek the local history of the Hebrews in Egypt. There, and there only, will be found the solution to many a problem of universal interest; and not till we interrogate the mounds beneath which lie the cities of Goshen, of Pithom, and of Raamses will it be possible to identify with certainty either the Pharaoh of Joseph, the Pharaoh of the Oppression, or the Pharaoh of the Exodus. It is to be hoped that Mr. Oliphant's next sketches may treat of the "Arabian Nome."

Mr. Oliphant so modestly disclaims all Egyptological pretensions that it would be unfair to dwell upon the few errors which here and there impair the general accuracy of

his sketches. But before *The Land of Khemi* passes into its next edition, he would do well to observe that Usertesen I. and Amenemhat I. are personages as distinct as James I. and Charles I.; that Typhon was not the son, but the brother, of Osiris; that "Ushabti" are not the shades of the dead, but that the funereal statuettes referred to in the text (p. 244) are themselves the "Ushabti," or "respondents," who represent the deceased and perform his agricultural duties in the fields of Aahlu. Finally, the winged disk symbolises the passage of the sun in the heavens from east to west, and not "the resurrection of dawn from darkness" (p. 181).

AMELIA B. EDWARDS.

*The Liturgical Poetry of Adam of St. Victor.*  
By Digby S. Wrangham. (Kegan Paul, Trench & Co.)

It is curious how little we know of the Middle Ages, and how little curiosity we have to know more. It is twenty-two years since Gautier published forty-seven unknown sequences of the school of St. Victor, and it is only now that an English scholar has been found to work upon these new materials. There is not even a copy of Gautier's edition to be found at the British Museum. Adam of St. Victor was certainly the founder of a very popular form of poetry, which, out of Germany, soon superseded the older form of sequence which originated with St. Notker of St. Gall, whose last disciple composed a sequence for the Mass at Carolstadt's marriage. Though the Abbey of St. Victor was the great monastic school of Paris, it owed its glory to Hugh, its prior, who was a Saxon, and to his nephew Richard, and, last, not least, to Adam, who was a "Briton," which probably means a native of little Britain.

His achievement was that his wonderful metrical facility enabled him to popularise typology, and make part of the Mass as lively as any glee could be; and, when typology had gone out of fashion, the sprightly narrative of saintly legends and ecclesiastical incidents still held its ground. It is to be remembered that monks, after all, were flesh and blood, that in the twelfth century they lived, upon the whole, a hard life, and that a festival was a holiday for them, bringing a little more singing and a little better fare. In Germany they were thrifty of such enjoyments, they had no sequences in Advent, and they had none in Lent, when all the Church abstained from the song of Alleluia, of which the sequence was a prolongation, so that it is no wonder that we have no sequence of Adam's for Passion Tide; the wonder rather is that such a learned liturgiologist as Neale should have given his Passion Tide poem the form of a sequence.

Throughout the sequences ascribed to Adam there is a tone of merry-making, almost of playfulness, which is not quite compatible with seriousness. It is difficult to imagine a frame of mind in which a perfectly serious typology could have been carried through all the Old Testament without abatement of cheerfulness. Here are some specimens from a sequence for the dedication of a church which Neale notes as a pregnant instance of

the indiscreet zeal of the Council of Trent, which abolished all sequences but four:—

"*Servus bibit qui legatur  
Et camelus adaquatur  
Ex Rebecce hydrîa  
Hæc inaures et armillas  
Aptat sibi, ut per illas  
Virgo fiat congrua.*"

"*Synagoga supplantatur  
A Jacob dum devagatur  
Nimis freta littere  
Llam lippam latent multa  
Quibus Rachel videns fulta  
Pari nubit foedere.*"

"*In vivo tegens nuda  
Geminos parit ex Juda  
Tamar diu Vidua*"

*Hic Urias viduatur  
Bethsabæ sublimatur  
Sedis consors regiae."*

The best apology for such mysticism may be given in the author's own words:—

"*Adant enim nuptias  
Quarum tonat initium  
In tubis epulantium  
Et finis per psalterium."*

Surely this dates from a time when the bishop who came to consecrate a church was entertained at a solemn and noisy supper, with plenty of horn-blowing, and stayed all day and heard the vesper psalms, after which he took a quieter supper and went his way in the morning.

Even in the famous poem on St. Stephen's Day, after dilating in solemn and stately style on the glory of the protomartyr, the poet breaks down into the liveliest doggerel (there is no other word for it) on his legendary miracles. In the first of these stanzas the translation is worthy of the original.

"*That in Africa from death  
He six men to life revived  
Is a fact Augustine saith  
And one commonly believed."*

It is often the case that the metre is too strong for the thought; the thought halts while the metre runs trippingly. Here is a stanza from the first sequence for St. John the Evangelist, which Archbishop Trench cannot explain to his own satisfaction:—

"*Cajus lumen visuale  
Vultus anceps, leves alas  
Rotæ stantes in quadrigâ  
Sunt in caelo visæ prius  
Quam hic esset, vel illius  
Forma capax, vel auriga."*

The text is, as often, unsatisfactory, there is an obvious reference to the vision of Ezekiel, and there are four living creatures and four wheels, and perhaps we ought to substitute the genitive singular for nominative plural in the first half of the third line, which would only involve the change of a single letter; but this does not make the last two lines any easier. The writer means to say that the mystic eagle of the evangelist was seen in heaven before the evangelist or the Lord of the Living Chariot were born on earth; but what *illius* refers to or what *forma capax* means is quite uncertain.

So, too, in the narrative of the miracles of St. Thomas of Canterbury, it is very difficult to find out what really happened from these lines:—

"*Vir devotus in sanctorum Domini  
Zelo pravo sustractas lumen  
Sed mox datus visus acuminl."*

The story is that the devotee had his eyes torn out, and that small points formed in the sockets with which he was able to see; but the translator not unnaturally imagines that *acumini* must have something to do with sharp sight, and so translates—

"A man who in the Lord's saint took delight,  
And had his eyes put out by bigot spite,  
But soon again recovered perfect sight."

*Zelo pravo*, by-the-way, is most likely not bigot spite, but the energy of a mistaken and, perhaps, cruel judge, who condemned an innocent man upon evidence in which the writer did not believe. Of course, in this case the poet is a contemporary, and it is not surprising that he should have written more than once on the most exciting festival of the day; but it is certainly to be wished that a thorough examination should be made of the many duplicates, to settle, if possible, the question which are the real works of Adam. It is not convincing that they are all attributed to him in a MS. which passed at the Revolution from the library of St. Victor to that of the Louvre (unhappily, Mr. Wrangham has not told us whether the poems, which were in a very scattered condition, escaped the fires of the Commune). Adam was a contemporary of St. Bernard, and the MSS. of St. Bernard include many works which are not his. Nor is it likely that Adam was the only poet of his abbey; and, in fact, we have a sequence for the transportation of the Crown of Thorns to Paris, which is attributed to Adam, though Gautier and Mr. Wrangham, upon clear grounds of chronology, reject the attribution. Again, two sequences are obvious imitations of the well-known Eastertide sequence which begins,

"Victimæ Paschali laudes intonant Christiani."

Now, the oldest known MSS. of this sequence are assigned to the twelfth and thirteenth centuries, and it has been observed that it cannot be one of the oldest of the Easter sequences, as the missals in which it is found usually assign it to the middle of Easter week at earliest. The best opinion seems to be that it is an Italian work which made its way through Germany into France; and this process would take time. Now, it must have taken some time before it became so popular that it had to be imitated for the Feasts of St. Mary and St. Victor; and it would also be interesting to know whether in the twelfth century there were solemn Masses at the altars of our Lady and St. Victor, where the choir sang sequences even in Eastertide. It is true that the Franciscan rule prescribes that the community should content itself with one Mass a-day; but this is generally explained that those who happened to be priests were not to spend the morning waiting for their several turns. Again, it is curious to find no less than three sequences for St. Vincent, while there are no more for St. Victor, counting the one on the translation of his relics to the abbey. And, though it is not surprising to find three for the Feast of SS. Peter and Paul, it is hardly fanciful to detect a certain divergence of theological tone, suggestive, to say the least, of diversity of authorship. One begins

"Roma Petro gloriatur  
Roma Paulum veneretur  
Pari reverentia;"

the second,

"Gaude Roma caput mundi  
Primus Pastor in secundi  
Laudetur victoria."

Either, especially the second, is fully worthy of Adam's reputation.

We have left ourselves little space to speak of the way in which Mr. Wrangham has executed his all-but impossible task as a translator. Here are two stanzas from a sequence for the Transfiguration which show him at his best:—

"And when Christ God's Word from heaven,  
Proof to Peter thus had given  
And the Sons of Zebedes,  
Of the greatness of His glory  
Lo! they—Luke attests the story—  
Moses and Elias see."

"Matthew gives us information  
Of these holding conversation  
There with God, God's Son most high:  
Very fitting, very holy,  
Was such speech and pleasant truly  
Filled with full felicity."

Even here we miss the masterly ease of the original, and the translator confesses it is hopeless to attempt to give the effect of Adam's decasyllabics, which seem the last echo of classical choriambics. In externals, the book is charming, but there is room for improvement in a second edition in the matter of typographical accuracy.

G. A. SIMCOX.

*Noah's Ark*; or, Mornings in the Zoo: being a Contribution to the Study of Unnatural History. By Phil Robinson. (Sampson Low.)

MR. PHIL ROBINSON'S vein is still far from being exhausted. It is the besetting error of most humorists that they put all their best things into their first book, and then grow steadily more diffuse and less amusing with each successive volume. The maiden effort contains the funniest thoughts that they have been silently nursing for years; and with the prodigality of youth they squander them all on a single venture. Mr. Robinson has been more prudent, or more fortunate. *In My Indian Garden* was charming and humorous, but it lacked a little of the best literary form; the tricks of the handicraft had not yet been thoroughly learned and inwardly assimilated. *Under the Punkah* was also delightful in its way, though, to our taste, not quite so pleasantly flavoured as Mr. Robinson's earliest work. But *Noah's Ark* is certainly better than either; and that is saying a great deal. It has the same playful and graceful fancy, the same original type of humour, the same unfailing tone of wide and delicate culture, as ever; and, in addition to all these, it has likewise a studious literary finish of form which was, perhaps, a trifle wanting to its author's first trials. At the same time, the dainty fun is not a whit less genuine and spontaneous than of yore; it still wells up easily from Mr. Robinson's inexhaustible ink-bottle, and runs like water from the facile nib of his genial and inimitable crow-quill.

Of course, humour is nothing if not original. No two real humorists ever wrote alike. But it is still possible to group them broadly into classes; and Mr. Robinson's class is that

of which Charles Lamb and Oliver Wendell Holmes are past masters. He appeals to the literate and cultivated public. Having been everywhere, seen everything, and read the literature of the world generally, he is always ready with some delightful legend, some quaint allusion, or some suggestive echo of recondite Oriental and mediæval lore. Now it is an episode from the Mahabharata; now a page from some Scandinavian saga; and now, again, a dissertation on the anthropoid apes or on the extinct elephants of the Northern hemisphere. It is these latter distinctively modern touches that give so much freshness and piquancy to Mr. Robinson's style. At times we might almost fancy ourselves reading some contemporary of Elia, or even of Gilbert White; but, in the midst of what seems the pure literary essay of the last century, we come unexpectedly across some stray notion of Huxley's or Owen's, some passing notice of palæolithic man, or some generous recognition of kinship in the chimpanzee and the gorilla. It is the lightness of the pre-scientific age transplanted with unwonted dexterity into our own too earnest and too sober era. If the book were all made up of old-world reminiscences—of Timorant and Aliofernes, Kwasind and Sir Bors, the kraken and the trolls—we might, perhaps, find it a mere pretty and clever anachronism; but it is the Malthusian touches, the evolutionary philosophy, and the galvanised wire fencing that differentiate the book at once from the unmixed and extinct playfulness of a hundred years ago.

Indeed, it would be an injustice to Mr. Robinson to treat his essays entirely in the light of mere *jeux d'esprit*. They are that, it is true, but they have a certain undercurrent of something else as well. In his own way, Mr. Robinson is a true naturalist—at least, as the word was accepted a century since. He does not trouble himself much about classification, or anatomy, or histology, we must admit; but he knows the ways and habits of the beasts and birds in a fashion that can only be attained by close personal observation. Whenever he deigns to be serious, he has much to say that is really valuable about the creatures in the ark for he is a half-unconscious psychologist, and has read himself into the subjective attitude of the animals far better than many much more pretentious writers. He often catches their little traits of character with real acuteness, and interprets them with genuine sympathy. There is a certain congeniality of thought about him which enables him to see what is passing in those dumb heads by a kind of natural intuition. Indeed, he has lived familiarly with birds and animals till he has learnt to know them as men know their friends. As a rule, it is only groomers and gamekeepers who have acquired this delightful knowledge; and their power of imparting it to others is usually as defective as their psychological diagnosis is incomplete. It is seldom indeed that one can find men like Mr. Jefferies and Mr. Robinson, who have both the taste for observing and the intellect for analysing and describing. "If you would be generous," says the pretty and characteristic postscript, "do not think me too much in earnest when I am serious, or altogether in fun because I jest." But Mr. Robinson need

not appeal to the generosity of his readers; they will all recognise a debt of gratitude to him for a few hours of as pleasant reading as they are likely to get in this worky-day century.  
GRANT ALLEN.

*A Map of Eastern Equatorial Africa*, between Lat. 10° N. and 20° S. and East of Long. 25°. Compiled by E. G. Ravenstein, and published under the authority of the Royal Geographical Society. (Stanford.)

A SMALL index-map forms part of the title, and displays the division of the larger map into twenty-five sheets. I found, however, only seven sheets, and learnt, on enquiry, that the work was incomplete, the portion now issued being only the first part. This has been since expressed on the cover. The combination of the sheets altogether is rather awkwardly arranged in different sizes, but the greater number are twenty-seven inches square. A little more consideration might have been productive of greater convenience in use, and of more economy in the cost of preparation. It will be perceived that each of the square sheets is made to contain five degrees of latitude and longitude. Such an object has no practical utility. It is a mere caprice, which should never be allowed to override considerations of more importance. Everybody who makes good use of these maps will also detect the absence of any scale on the sheets in the present part. This deficiency should be supplied in the next issue. The scale is about sixteen miles to an inch. It is a subject of more serious complaint that the maps do not join properly, owing to the defects of the projection, and of the reproduction of the drawings by the autographic method. The Royal Geographical Society should not appear to be oblivious to practical points that are essential to the credit of their authority.

Mr. Ravenstein has been fortunate in persuading the council of the society to give him the little encouragement that he required to undertake this important and laborious work. It bears ample evidence of research, and of an intention to make the work a complete combination of all useful materials. The present undertaking partly overlaps a similar one on a smaller scale which was executed by Bruno Hassenstein for Petermann's *Mittheilungen* down to 1863. A map of this kind is invaluable to geographers, travellers, and explorers, especially to those of the latter who engage in surveying. It is not only useful as a record of past labour, but it also serves as a convenient vehicle for incorporating the additions to African geography which are now so rapidly accruing. At a meeting of the Royal Geographical Society only last month, two interesting routes, by the Rev. Chauncy Maples and Mr. Joseph Thomson, were described, and they form notable additions to our knowledge of the country on the south of the Rovuma River. This portion of Africa is embraced in sheet 21 of the maps under review. Some further contributions to sheet 24 may also be expected from Col. Andrada, formerly attached to the Portuguese Legation at Paris, who was recently in

London, on his return from the Manika country, on the south of the Zambeze.

The maps in the present part are sheets 15 and 19 to 25, or one-third of the whole series, and the southernmost section. They contain the Zambeze River from the coast up to Sesheké, a noted place visited by Livingstone. On the south of the great river they include part of the Matebilé country, Mashona, and Manika, the lowest point on the coast being the mouth of the Mazangzani River. On the north of the Zambeze this section extends to the Rovuma River, and Lindé on the coast. The interior takes in the greater part of Lake Nyassa, reaching as far north as Mpembe, on the west coast of the lake. Farther west is included Lake Bangweolo, with a portion of Lunda, under the potent monarch, Muata Yanvo. Sheet 15 properly belongs to the middle section, which is still in preparation. It includes the coast from Malindi to the Jub River, which was explored by Lieut. Christopher, of the Indian Navy, in 1843. I am informed that sheets 12 and 16, forming the western part of the middle section, are in the lithographer's hands; and that sheets 13, 14, 17, 18 are in a forward state, only requiring some expected information to complete them in the ensuing month. The middle section extends from Lindi to the Jub on the coast, thus embracing Zanzibar; while in the interior it displays the head of Lake Nyassa, Lake Tanganyika, and nearly the whole of Lake Victoria. The concluding section, forming the northern part of the map, does not seem to be expected immediately.

In the meantime, the published part is only supplied to subscribers paying for the complete work, the price to members of the society being twelve shillings instead of twenty-five. It appears that already a French publisher has undertaken to issue an edition on a reduced scale. It is satisfactory to add that the map will be accompanied by a Bibliographical Dictionary of African travellers, giving brief accounts of their routes, and complete lists of all the books and printed notices concerning their researches. This is already in the press.

TRELAWNEY SAUNDERS.

*Emile Zola: Notes d'un Ami. Avec des Vers inédits de Emile Zola. Par Paul Alexis.* (Paris: G. Charpentier.)

THE chief interest of this biography lies in the fact that it enables us to arrive at a just conclusion with respect to the origin of the so-called "naturalism" of M. Zola, and to reconcile in some measure the conflicting views of his youth and his maturity. It is curiously in support of his own strong belief in the doctrine of the hereditary descent of certain mental qualities that the father of the novelist should have been an engineer by profession, and, apparently, a man of no mean mathematical abilities. A Venetian by birth, the elder Zola had left his native country during the Austrian occupation subsequent to 1815; and, after assisting at the construction of some of the earliest German railroads, and after various wanderings in Holland, England, and Algeria, he married a Frenchwoman, and finally settled at Aix, in Provence. On

April 2, 1840, the future novelist was born in the Rue St-Joseph, Paris, while his father was sojourning in that city in search of official patronage for a favourite engineering scheme he was at that time projecting in Aix. M. Alexis, in a chapter that is almost touching in its Boswellian devotion, gives us a minute account of a pilgrimage he has lately made to the birthplace of the great man, in which he has shown, as in his opening chapter, not merely considerable biographical skill, but also not a little of the somewhat tedious exactitude of his master's manner. Left, at the age of seven, to the care of his grandparents and mother, Emile Zola lived the free, open-air existence of the South with but small impediments to his mental growth in the shape of vexatious restrictions. Although he was fully possessed with his father's propensity towards science, we find his youthful mind so susceptible to the romantic influences of the beautiful Provençal country that he read with fervent appreciation the writings of Victor Hugo, and himself wrote verses with strange pertinacity. To this old influence, we are inclined to think, is owing the form of illustration he afterwards chose for the enunciation of his pseudo-scientific theories of literature; and that thus their practical illustration took the shape of the Rougon-Macquart novels rather than the more rigid one of a philosophical treatise. After two years' strenuous struggle with poverty, which is related with a certain dry naturalistic strength by M. Alexis, he made his *début* in literature with the *Contes à Ninon*, and contributed many critical essays to the Paris and Lyons journals, among which were the notorious Salon articles in *L'Événement*, and the unpleasant dogmatic series afterwards collected in the volume *Mes Haines*. It is noteworthy that up to his twenty-first year he continued to plan, and partly to write, poems of a curious didactic cast, and of quite epical comprehension, in which the old reverence for the great French romancists had not entirely given way to a grudging respect. Full and interesting details of the growth of the long series of novels which have just arrived at their newest stage of notoriety in *Pot-Bouille* are given by M. Alexis, together with many particulars of the life of M. Zola at Médan that justify the agreeable irony of the parody of this biography which has recently appeared in a Parisian journal.

In the brilliant circle of literary men which had for its central figure Gustave Flaubert, and included, among others, the brothers de Goncourt and Alphonse Daudet, it is difficult to imagine the presence of the author of *L'Assommoir* without a sensation of incongruity. It is still more irreconcilable to the ordinary and natural conception of Emile Zola, as a robust, practical, and—for a romancist—strangely unimaginative character, to learn that he was once a follower of the very school he now so bitterly and unsparingly denounces, that he was an ardent admirer of Victor Hugo, and has even proceeded to the length of inditing a poem to Alfred de Musset. It is unfair to the greatest of living French poets to speak of his romanticism as being alone assailed by M. Zola, for in that truculent tract, *La République et la Littérature*,

ture, all other schools of romance come under the comprehensive expression of his scorn; and, by implication, Goethe and Rousseau—not to mention other great names—are included in his denunciations. But there are signs of the end approaching. M. Zola has so completely given himself over to that familiar daemon, his theory, that he is now tyrannised by it; and if, by its means, he is consistently carried to a logical conclusion, his ambitious series of romances must result in a *reductio ad absurdum*—a romance denuded of all the elements vital to romance, the very dry bones of literature.

J. ARTHUR BLAIKIE.

#### NEW NOVELS, ETC.

*Gehenna*; or, Havens of Unrest. By the Hon. Lewis Wingfield. In 3 vols. (Hurst & Blackett.)

*Love the Debt*. By Basil. In 3 vols. (Smith, Elder & Co.)

*Jack Urquhart's Daughter*. By Pamela Sneyd. In 2 vols. (Bentley.)

*My True Knight*. By Dora Vere. In 2 vols. (Remington.)

*Shadows of the Past: the Autobiography of General Kenyon*. Edited by J. Sale Lloyd. (W. H. Allen.)

*Riverside Papers*. By John Devenish Hoppus. In 2 vols. (Sampson Low.)

In a kind of way the Hon. Lewis Wingfield's new novel reminds one of the author of *Les Filles de Bronze* and *Les Vieux de Paris*. It is Xavier de Montepin done by an Englishman—Xavier de Montepin, that is to say, turned virtuous and a little clumsy, and equipped with a moral and a purpose. The materials are the same, but the colouring has changed, and the intention is another. Thus we have the lovely and impossible heroine; but she, though of Creole blood, rich in opportunities, and burning with the fiercest passions, is as chaste as ice and—practically at least—as pure as snow. We have the weak and halting lover; but he loves *pour le bon motif*. We have the returned convict playing moth to the heroine's star, and consumed with canine affection; we have the aged and mysterious husband, whose purposes are so deep, and whose morality is so lofty, as to place him altogether outside the pale of humanity; we have the heroic *ingénue*, the disinterested and noble *jeune premier*, the lost will, the humour of *chantage*, the elaborate scheme of fraud, the sentimental satire, injured innocence, the *deus ex machina*, triumphant virtue, and all the rest of it. So far, it will be allowed, the resemblance is pretty close. It is not for nothing, however, that the author is an Englishman and a writer for the British public. He is as extravagant as Xavier de Montepin, if you will, but he is hardly so ingenious or so daring; he is as virtuous as the other is villanous, but his morals suggest the exigencies of Mudie; he has constructed an intrigue, and kept his puppets dallying as he pleased (and not as they would, were they aught but things of cardboard and cotton wool) for close on a thousand pages, but his intrigue is

burdened with a purpose of reform; he has read Charles Dickens and Charles Reade. The effect produced is that of a Jesuit's play, or a perverted edition of *The Pilgrim's Progress*. We recognise all our old friends at a glance, but we recognise them in their own despitte, for they are doing unnatural work, and they are guilty of other morals than those for which we remember them. As they are not a bit more human than they were, and as it is always easier to believe in inordinate virtue than in ingenious vice, they seem a good deal less amusing than they used, and we are not sorry to shut the record of their adventures and be rid of them. As regards the purpose of the novel, the author, when not engaged in producing demoralised Xavier de Montepin, is deep in Blue-books and the reform of the Lunacy Laws. His maniacs, however, are rather curious than impressive; and as, in point of conduct and sentiment, there is practically little to choose between them and such of their fellows as are supposed to be sane, the moral they help to point is a trifle blunter than, perhaps, their maker intended. If we add that the style in which *Gehenna* is written is verbose and over-emphatic enough to be considered a model of its kind, and that, though remarkably dull in the main, the book is often clever and well meaning, we shall have said enough.

It is not often that the critic has to deal with so peculiar a first book as *Love the Debt*. It is full of faults, and almost as full of merits. It is brilliantly written, and extravagantly ill-made. It contains not a little admirable dialogue, some good description, many excellent essays in characterisation; but, as a piece of narrative, as a work of art, it is as little better than non-existent. It is evident that the author can tell a story when he likes; for, considered as narrative merely, his account of the career of the ruffian Spaight is really masterly. But the mischief is that he does not often like; and that no sooner does he get two people face to face with each other, or become interested in a personage or a situation, than he forgets everything except that he can write ready dialogue, or that he has a good knack of dealing with eccentricities, or that he is well acquainted with the peculiarities of provincial society. The consequence is that the impression he produces is nothing if not fragmentary and imperfect, and that his book, amusing and delightful as its pages are, is considered, as a whole, about as unsatisfactory as a pleasant book can be. It is impossible not to be grateful for such creations as Barney M'Grath and Bob Sagar and Mabel, and the M'Guckin and Miss Masters; for such episodes as those of the life and death of Spaight, the election, the death of Lawley, and the Kneeshaw presentation. On the other hand, it is equally impossible not to be angry and discontented with the manner in which all these good things are frittered away, so that in the end the book is found to have ceased to exist as a book, and to have become a mere bundle of odds and ends. With so much genuine pleasantry and humour, so clear an understanding of mind and character, such an excellent faculty of individual and telling speech, and such a thorough knowledge of

certain aspects of manners and society, "Basil" should have done infinitely better than he has allowed himself to do in *Love the Debt*. He has only to take common pains with his work to fare prosperously indeed.

The plot of *Jack Urquhart's Daughter* is sufficiently painful. Cosy Urquhart is a charming and a lovely young person; she is clever, true, warm-hearted, and strictly virtuous; but she is in love with a man who is so finely compounded of practical prig and practical donkey that he will not permit himself more than a vaguely fraternal interest in the nicest girl in the world, and cannot spy out his good fortune even when (so to speak) it is thrust under his nose. Then Cosy, a blackleg's child, anything but happy at home, accepts the first offer that is made to her, though the maker is a dullard of the first water. Of course she is not long in discovering her mistake. But the discovery comes too late. She marries the oaf, and dies—of heart disease, or something of the kind—immediately after her wedding breakfast. Are men really such fools as Ralph Dufferin? Are brilliant and beautiful girls so preposterously reticent and self-sacrificing as Cosy Urquhart? Mrs. Sneyd seems to think so, and to have written her book to prove it. It is quite possible that she is right. If she is, the less the truth is told in novel-form the happier, and better, critics and readers will be. Descending to particulars, we must admit that *Jack Urquhart's Daughter* is, in its disagreeable way, a very clever and able book. It is well and carefully written; it contains not a little good dialogue and better portraiture; it blends—and successfully—Bohemianism with respectability, and the French moralists—Vauvenargues, Joubert, Rochefoucauld, Victor Hugo even!—with both.

Of *The True Knight* there is but little to be said, except that—for what it is—it is well and correctly written. The heroine is of the usual type; her adventures are of the usual cast; her admirers are of the usual pattern. This is as much as to say that she is well born and gently nurtured, and "lithe" and impulsive; that she is capable of "standing in the firelight like a fair Greek statue;" that she has to go out as a governess; that she loves Somebody, and is beloved by Somebody Else; that, having meantime become an adopted child, she learns to love Somebody Else and to forget all about Somebody; and that in the end she and Somebody Else are happily married. She is not, it must be owned, an interesting young person; but there have been many duller than she in fiction, and there will be many more. It is a point in her favour, we take it, that she is harmless and means well. Perhaps the worst that can be said of her is that to the bitter end she tells her story in the present tense. For her, there is no past and no future. And so "the tall, lithe figure in the chair sighs wearily;" and "my head is burning, and a stifling sensation in my throat oppresses me;" and "I smile faintly;" and "he bows stiffly;" and "'Jack,' I ask;" and so forth, from the first page to the last, to the utter exasperation of the reader.

*Shadows of the Past* purports to be a kind of military novel, but is, perhaps, a compila-

tion from authentic documents—old letters and journals, and the like. Considered as a novel, it has little or nothing to recommend it. Considered as a collection of personal statements, its interest is not inconsiderable. In the one case, its hero is non-existent. In the other, he is a brave and kindly gentleman who is not very good at explaining himself, and who stands in great need of an interpreter, unless one is able to read between the lines. His career includes the storming of Ghuznee and the retreat from Cabul, the Punjab Campaign, the Sieges of Sebastopol and Delhi; his style is measured and formal; his sentiments are unexceptionable; he is much addicted to imparting useful information. More we do not need to say.

In *Riverside Papers*, with much that seems affected and forced, there are not wanting signs of earnestness and intelligence. The author was, in his way, a student of life and manners; and, though he wrote of his experiences with too much emphasis, and with the consciousness of charity and intelligence peculiar to the sentimental reporter, he was often right in his facts, and sometimes honest in his conclusions. As a rule, however, these *Riverside Papers* are unhappily suggestive of "graphic" journalism and articles in the minor magazines. In style, they are at once laboured and fluent; in matter, they are commonplace and yet recondite. They may be read with a certain interest, but without much pleasure.

W. E. HENLEY.

#### SOME BOOKS OF TRAVEL, ETC.

*Magyarland*. In 2 vols. (Sampson Low.) The author of this work—a "Fellow" of a mountain-climbing society dubbing itself "Carpathian"—is undoubtedly a lady, notwithstanding the fact that she occasionally introduces herself as *mein Herr*, or under some other masculine appellation, and generally speaks in the plural number. If her gushing dedication and enthusiastic love of babies did not betray her sex, her polyglot language would. It is unfortunate that *Magyarland*, which, despite its faults, is a work of real interest, should contain much to repel those who resort to it either for information or amusement. Those who might not be deterred by its bulk—largely due to useless padding—nor by the ludicrous way in which the stock-phrases of half-a-dozen languages are employed to express things as easily described in English, will be repelled by the atrocity of its slang. Readers who happen to open the first volume at the page containing an account of the author's arrival at the Hungarian capital, to cite one instance out of many, are not likely to be attracted by such a style as: "how astonished would the traveller be, how utterly flabbergasted and dumbfounded, were he set down suddenly at Pest without having been previously informed of his whereabouts." No one perusing these instances of vulgarity will be prepared for the pretty little vignettes of domestic life, or really charming episodes of mountain travel, which the authoress portrays even more deftly with her pen than her pencil, although many of the sketches which are so plentifully scattered through her handsome volumes are both clever and characteristic. It is a pity that a writer who can describe in such a felicitous manner "The Ice Caves," "The Snowy Tátra," and other portions of known and almost unknown Hungary should at times disfigure her work with

slang and gush. One of the most pleasing traits of her work is the sympathetic manner in which she alludes to the members of the various nationalities with whom she comes in contact on her journeys; none so lowly or degraded but she has a kindly word for them. Her account of the Jewish inhabitants of the places she visited, especially in Polish districts, will be read with deep interest at the present moment; and from her words some idea may be gained of the hatred, and its but too often just cause, with which these Hebrews are regarded by their Polish and Hungarian neighbours. That this "Fellow of the Carpathian Society" is completely ignorant of the Hungarian language was so much to be expected that we should not have deemed it necessary to draw attention to the fact but for the continuous parade she makes of her assumed acquaintance with it, and the frequent occasions on which she undertakes to instruct her readers in its niceties. When she states that Magyar is pronounced "Madyar," and that *Szekér* is "curiously enough pronounced *Shaker*," we feel inclined to doubt that she has ever heard Hungarian spoken; while the fact that she writes the names of three leading authors of the country she is describing as *Eötvoe*, *Petőfy*, and *Varósmarty* proves how limited is the knowledge she possesses of its literature. These mistakes are but typical; the author should either have acknowledged her entire ignorance of "Magyar," or have preserved a discreet silence on the subject.

*Pioneering in the Far West*. By Ludwig Verner Helms. (W. H. Allen.) Mr. Helms' reminiscences have much that is attractive about them. He writes plainly and straightforwardly, and, although a Dane by birth, and never in England until middle life, his English is excellent. The book is interesting from more than one point of view. The author's experiences date only thirty-five years back, but the changes which occurred between his earlier and later visits to places described are often remarkable. Some of his work, too, lay in out-of-the-way corners of the world which are still remote from the traveller's beaten track; while during many years, as manager, at Sarawak, of the Borneo Company, he shared the good and evil fortunes—the latter, we fear, in larger proportion—of the settlement during its earlier years. He describes very forcibly the enormous difficulties which Rajah Brooke had to encounter at the outset, and reflects sadly that most of his gallant followers passed away believing their life's labour to have been in vain. But (as he well points out) in a work of this magnitude "the labour of one lifetime is not rewarded by the fruition of success," and in reality a valuable foundation was laid for others to build upon. Mr. Helms, while recognising the Rajah's great merits as a ruler and a man, is no indiscriminate admirer, and enters at some length into the disputes between him and his eldest nephew. He admits, however, that there were faults on both sides; and, as the evidence he quotes, though candidly stated, is insufficient to decide the question, it is a pity to have raised it, seeing that no point of public interest is involved. He gives a stirring account of the Chinese attack, which nearly extinguished the settlement, and retarded its progress for years; and his discussion of the causes which led to the event is, in view of the increasing migration of Chinamen towards these regions, well worth studying. The author always speaks modestly of his own work, which seems to have been everywhere performed with judgment and perseverance. His last-recorded employment was the survey of certain ancient mines on the coast of the White Sea, and his narrative of the expedition is altogether very curious. The position of the mines appears to show a fall of three or four feet in the level of

the land since they were worked 150 years ago. The writer's account of the people struggling against the naturally severe condition of their lot, and oppressed by the extortion and monopolies of the Russians, who do nothing to develop the country, is a sad one. His own dealings with the Russian officials are very characteristic of the class; in that respect, at least, the great empire is homogeneous.

*The Diary of an Idle Woman in Sicily*. By F. Elliot. In 2 vols. (Bentley.) Mrs. Elliot's impressions of the eastern coast of Sicily are always readable, often amusing, and never profound. Other idle Englishwomen like herself will doubtless find the book a pleasant companion. They must, however, be on their guard against its historical padding, which has been derived from guide-books, and has sometimes undergone strange transformations in the borrowing. It is dangerous to attempt to spell Greek words without a previous knowledge of Greek. Many of the misprints which occur are, no doubt, covered by the excuse that the proofs have been corrected during the absence of the authoress on the Continent; but this plea cannot avail for such a persistent misspelling as "Epipoloe," or the twice-repeated assertion that Ulysses was a "Trojan" prince. Neither is the grammar always immaculate, and we cannot agree with some of Mrs. Elliot's judgments. The hotel at Messina, for instance, is by no means the uncomfortable place she represents it as being, and the description of the Anapo is a libel upon that stream. But a good story like that of Prince Wrede makes up for a host of shortcomings, and the book, as a whole, cannot fail to excite other "idlers" to visit one of the most pleasant and interesting of winter resorts.

*On and Off Duty: being Leaves from an Officer's Note-book*. By Samuel Pasfield Oliver. With Illustrations by the Author. (W. H. Allen.) Capt. Oliver, misled, perhaps, by greater writers, seems to think that whatever he has written is worth preserving. The present large volume, something between an octavo and a quarto in size, and containing nearly 400 pages, gives the journals kept by the author in three journeys made between the years 1860 and 1867. He divides his work into three principal heads, entitled Turania, Lemuria, and Columbia. His tour in China and Japan in 1860–61 comes under the first head; the second contains his travels in Mauritius, Madagascar, and Bourbon in 1862–63; and the third gives an account of a journey with Capt. Bedford Pim and Mr. John Collinson through Nicaragua, undertaken to make preliminary surveys for a railway route through that State in 1867. His journals are given in *extenso*, with all the important details of how he breakfasted and dined, where he bathed, and whom he met fifteen or twenty years ago. To make his book longer he has stuffed it with constant quotations in prose and in verse, relevant or irrelevant, in English, French, Latin, and Portuguese; as well as with extracts from his letters and articles in the *Gardener's Chronicle* and other periodicals. We are far from saying that there is nothing interesting in the book, for the author is evidently a man of observation and of much general information; but his story is an old one, and he has been anticipated by other writers. Could he have reduced his work to one-fifth of its present size by the omission of quotations and extracts, and by judicious compression, he might have produced a pleasant and readable book, as well as one which would not at the outset, by its weight, have prejudiced the reader against it.

*The Caravan Route between Egypt and Syria*, by the Archduke Ludwig Salvator of Austria, (Chatto and Windus), translated from the German by the Chevalier von Hesse-Wartegg, is the record of a journey from El Kantara to Gaza

by the short caravan road between Egypt and Syria, which, though not often chosen by travellers, is of much interest to the historian and geographer. The Archduke, however, made no considerable explorations, and, unlike Mr. Greville Chester in his recent important journey, did not diverge from the beaten track. Thus, the record of his progress offers little novelty, and the most valuable feature of the book consists in the admirable plates from drawings by the author, which make a real addition to our store of knowledge. The chief object of the journey was to enquire into the feasibility of railway communication between Syria and Egypt. The Archduke concludes that this is absolutely impracticable on account of the rolling sands.

*Percy Pomo: the Autobiography of a South Sea Islander.* (Griffith and Farran.) We may assume that the author of this book is a South Sea Islander only in the sense in which—to go a long way for simile—the author of *Hadji Baba* was a Persian. Up to a certain point he represents, perhaps, fairly enough what we may suppose to be the feelings of a once savage, and afterwards civilised, converted, and travelled, islander—an inhabitant, as we infer from one or two references to customs and traits of character, of one of the Melanesian groups. It may be regretted that the allusions to native habits, ideas, traditions, and the like bear but a small proportion to the amount of self-introspection recorded; but no doubt it is only natural to represent the new faith of the convert as the chief subject of his reflections, and the object of constant reference in the daily concerns of life. The author's self-oblivion, however, is not sufficiently complete; he cannot resist the temptation of pointing a satire or a joke, or of enforcing a moral, by allusions and sentiments inconsistent with his assumed character; and, when such character is not perfectly kept up, the simplicity of style adopted as being in harmony with it is apt to produce an effect rather childish than childlike. There is, after all, nothing in the book that might not have been derived from a study of certain missionary works, the Life of Bishop Patteson, and other accounts of the atrocities which led to the death of that distinguished man. Readers, however, who prefer a story to a missionary report or a Blue-book may learn something from this "autobiography," which opportunely includes several of these terrible experiences told in a style which is not without its simple pathos. The hero finally comes to England and marries the fiancée of his deceased father in the faith—an arrangement which he naively describes as a complete success, although primarily adopted, on both sides, only with the object of cherishing the memory of their friend!

*Prairie and Forest: a Guide to the Field Sports of North America.* By Parker Gilmore. (W. H. Allen.) The genial sportsman whom we have known from our childhood under the nom de guerre of "Ubique" is ever welcome, even though he has nothing very new to tell. Unless we are greatly mistaken, some of the chapters of the book now before us appeared in substance in a volume entitled *Encounters with Wild Beasts*, which was published only a few months ago. We read the latter book (as we can read everything by our author), but we have parted with it, and cannot now correct our memory. We do not complain that Mr. Gilmore should plagiarise from himself. In the present case, he has included within his field all the many forms of sport to be found in North America—fur, feather, and fish; and the volume fairly corresponds to its sub-title. In one or two cases we suspect that the stories are told at second-hand; but this does not make the "Guide" less valuable. The illustrations vary much in merit. Some are both lifelike

and very well cut; others are apparently from old blocks.

*Egypt: Political, Financial, and Strategic.* Together with an Account of its Engineering Capabilities and Agricultural Resources. By Griffin W. Vyse. (W. H. Allen.) As we have already announced, Mr. Vyse has resolved to reprint his book on Egypt with more regard to the rights of other authors than he has shown in the present edition. The work is only a series of cuttings from other books and newspapers, and possesses no authority and little interest. It is just as well, however, that Mr. Vyse should indicate the origin of his cuttings, instead of leaving them to be credited to himself.

# NOTES AND NEWS.

WE are glad to hear that the first edition has been sold out of the excellent *Introduction to the Study of English History* (Kegan Paul, Trench and Co.), the joint work of Prof. S. R. Gardiner and Mr. J. Bass Mullinger, which was reviewed in the ACADEMY of September 17, 1881.

MISS MARY LEWIS's paper, "Some Thoughts on the Genius of Robert Browning," which she read before the Browning Society, will appear in an early number of *Macmillan's Magazine*.

MESSRS. BENTLEY AND SON have ready *The Freres*, by Mrs. Alexander, author of "The Wooling o't," &c., which has been appearing in the pages of *Bentley's Magazine*.

FOR some little time a proposal has been under consideration to establish a high-class quarterly Review in Scotland which, while dealing mainly with matters affecting that country, will be open to the treatment of all important questions of a literary, scientific, and especially of a philosophical and theological nature. If the proposal is deemed feasible—as is now almost certain—Mr. Alex. Gardner, the energetic publisher in Paisley, will issue the Review.

WE understand that Cassell's *Concise Cyclopaedia*, the publication of which has just been commenced, is edited by the Rev. William Heaton, assisted in various departments by Messrs. Alfred J. Read, C. H. Bothamley, and Alfred Denny.

MR. W. BELL SCOTT has a volume of poems in the press, which will be published shortly, under the title of *A Poet's Harvest Home*, by Mr. Elliot Stock.

WE understand that a collection of historical and biographical essays having relation to the Forest of Knarborough, by the Rev. Thomas Parkinson, Vicar of North Otterington, will shortly appear, under the title of *Lays and Leaves of the Forest*.

SO favourable has been the reception accorded to the *édition de luxe* of "Evangeline," with Mr. Frank Dicksee's original drawings reproduced in photogravure, that we hear that Messrs. Cassell, Petter, Galpin and Co. have already been compelled to give notice to the trade of their intention to increase the price of the work.

THE same firm also gives notice of an advance in the price of the first three volumes of the *Magazine of Art*, which are now becoming scarce.

MRS. GEORGE LINNEUS BANKS is writing the serial story for the  *Fireside* for the current year. Like her other popular works, *The Manchester Man*, *God's Providence House*, &c., it is founded on fact.

IN our note last week referring to the MSS. of Charles Dickens, it should have been added that the MSS. of the "Mudfog Papers," and other short stories contributed by Dickens to

*Bentley's Miscellany*, are in the possession of Mr. Bentley.

THE book on Gujarat by Mr. Behramji Malabar which we have already announced will be published in this country by Messrs. W. H. Allen and Co. Its full title is "Gujarat and the Gujaratis: Sketches from Life." Mr. E. B. Eastwick has written a Prefatory Note. The author is a Parsi, as his name implies; a native of Surat, and now editor of the *Indian Spectator* at Bombay—a paper of which, from our own knowledge, we are able to speak favourably.

MR. WILLIAM SMITH, of Morley, will issue a third volume of *Old Yorkshire*.

THERE are, we hear, several good candidates for the Librarianship of the London Institution, vacant by the appointment of Mr. E. B. Nicholson to the Bodleian. Among these is the well-known book-lover and book-collector, Mr. Joseph Knight, one of the oldest dramatic critics and reviewers of the London Press. Mr. Knight has also been "Sylvanus Urban" of the *Gentleman's Magazine* for some years.

IN commemoration of the 500th anniversary of Wyclif's death, which will be in the year 1884, a Wyclif Society is in course of formation, to secure the publication of the great Reformer's Latin works, with English translations. Any one willing to help in this work is asked to write to F. J. Furnivall, 3 St. George's Square, London, N.W. Prof. Montagu Burrows, of Oxford, Mr. F. D. Matthew, the editor of the Early-English Text Society's *Wyclif's English Works*, and other gentlemen have promised to join the committee. It is hoped that the society will finish its work in one or two periods of five years each. It is disgraceful that the works of England's first Reformer should lie unknown in the Vienna Library.

AT the next meeting of the New Shakspeare Society, Dr. Peter Bayne is to comment on Mr. Ruskin's late characterisations of Shakspeare's chief heroes and heroines.

MR. HORACE LENNARD, better known perhaps as "The Melancholy Jacques," author of a pleasing collection of poetry published under the title of *Follies and Fancies*, is preparing for the press a new volume of poems.

THE Italian Minister of Education has given the brothers Alinari, of Florence, leave to photograph for the Browning Society Andrea del Sarto's picture of himself and his wife in the Pitti Palace. Mr. Ernest Radford will write the critical comments on this and the other photographs which the Browning Society will issue in the first part of its "Illustrations of Browning's Poems."

MESSRS. SMITH AND ELDER have remedied the only fault that hypercriticism could find in the most attractive book of the season. They have issued Caroline Fox's *Memories of Old Friends* in a new edition of two volumes, which will not fatigue the wrist of the reader and will fit more conveniently into his shelves. Some fourteen fresh letters of John Stuart Mill are added, written to Mr. Robert Barclay Fox about the time of the publication of his *Logic*, and, we may add, just before the beginning of his correspondence with Comte. There is not much in them, except to those (and we confess ourselves of the number) who value every word from his pen. There is much praise of Guizot, and there are allusions to Thirlwall and Mr. Gladstone. As to Caroline Fox herself, it has been remarked that she gives no express record of the death of John Sterling. This, and much else, may be explained if we reveal the open secret that their intimacy had ripened into an informal engagement.

THE last addition to "Bohn's Standard Library," now published by Messrs. George

Bell and Sons, is Mr. Elizur Wright's translation of the *Fables of La Fontaine*, revised with notes by Mr. J. W. M. Gibbs. Mr. Elizur Wright, whom we understand from the Preface to be still alive, was a man of some mark in his time. The first edition of this translation was published at Boston, U.S.A., in 1841.

MR. HOPE VANE, an Australian poet, now in England, is about to publish a volume of lyrics.

WE are requested to state that the publications of the Hakluyt Society, the preparation of which has hitherto, after approval of the subject and editor by the council, been left entirely between the editor and the printer, will in future be subject to the review of an editorial sub-committee before issue. The council of the society has also decided to have a new Index to the translation of the *Embassy to Abyssinia* of P. Alvarez, which was recently published, prepared at the expense of the society and issued to its members.

IN the March number of the *Journal of Education* appears a list of considerably over 300 "Historical Novels and Tales," grouped under different countries and arranged according to the periods of which they treat. The list is designed as an aid to history teaching at schools, and to school libraries generally. In order to make it as helpful as possible, the compiler, Mr. H. Courthope Bowen, asks earnestly for corrections and additions.

A WORK on "The Science of Mind," by Prof. Troitsky, of Moscow, is in the press, and will shortly be published. Prof. Troitsky is a disciple of the English school of psychology, and his work is the result of many years of labour.

VLADIMIR SOLOVIEFF, the celebrated Slavist philosopher, has commenced a course of lectures at the St. Petersburg University on "The Philosophy of History."

LAST week, instead of announcing that Mr. A. J. Munby's charming idyllic poem *Dorothy* was to be reprinted by the Robertses, of Boston, U.S.A., we might have said that it had been reprinted, for, before our paragraph appeared, the reprint had reached England; and a very handsome little quarto it is, quite putting to shame its original published here.

PROF. VESSELOFFSKY, of St. Petersburg, member of the Russian Academy of Sciences, and well known as a critic of foreign literature, is preparing for the press his new treatise on "The Laws governing Epic Composition."

M. ERNEST MARTIN has just published (Strassburg: Trübner) the first volume of an edition of the *Roman de Renart*, upon which he has been engaged for some years. In the Preface are described the MSS. that have been consulted; and the present volume gives the text of the eleven branches of the romance which the author regards as constituting part of the original. In the second volume will be given independent branches, and in a third the variants. M. Martin's aim has been to furnish materials for a critical text, rather than himself to form such a text.

AMONG the posthumous papers of the Russian novelist Pisemsky, the MS. of an unfinished tragedy entitled "Family Misery," and the first part of his autobiography, have been found. The latter was written at the request of M. Delery, who translated his works into French. It is hoped that both these MSS. will be published shortly.

COUNT LEO TOLSTOY, who is at present staying at Moscow, is at work on a very interesting commentary to the New Testament, which, however, owing to difficulties with the censorship, will be printed out of Russia.

M. LOESCHER, of Turin, has just published two important contributions to the history of the Waldenses—a new edition, being a faithful reproduction of that of 1643, of Pierre Gilles' Ecclesiastical History of the Vaudois Churches; and *The Glorious Return of the Vaudois to their Valleys*, by Henry Arnaud, pastor and colonel of the Vaudois.

M. DAUDET's last novel, *Numa Roumestan*, has appeared in an English translation in America (Boston: Lee and Shepard). Why are our English publishers so averse to undertaking translations of the best French novels? It cannot be because they are widely read here in the original.

M. EMM. DE SAINT-ALBIN has just issued, in the series of "les classiques pour tous," published by the Société bibliographique, a selection of English and Scotch ballads translated into French.

A BELGIAN bibliophile, who writes under the name of Philomneeste Junior, has published (Brussels: Gay and Douc) a second and revised edition of his *Livres perdus*, which first appeared in 1873. He gives a list of about five hundred books and booklets which have disappeared from our sight, with references to the sources of information about them.

#### ACKNOWLEDGMENTS.

WE have on our table the following:—*The Antiquary*: a Magazine devoted to the Study of the Past, Vol. IV., June—December, 1881 (Elliot Stock), the monthly numbers of which we have noticed from time to time; *Outlines of Naval Hygiene*, by John D. Macdonald, with Illustration (Smith, Elder and Co.); *Cavalry Life*; or, Sketches and Stories in Barracks and out, by J. S. Winter, in two volumes (Chatto and Windus); *Road Scrapings*: Coaches and Coaching, by Capt. M. E. Haworth (Tinsley Bros.); *From Infancy to Womanhood*: a Story of Instruction for Young Mothers, by Rhoda E. White (Sampson Low); *A History of the British Empire*, with numerous Pictorial Illustrations, Genealogical Tables, Maps, and Plans, by Edgar Sanderson (Blackie and Son); *Days Afoot and European Sketches*, by James Baker (Simpkin, Marshall and Co.); *Thoughts on Marriage*, by Elizabeth Kingsbury (Simpkin, Marshall and Co.); *The Civil Service Coach*: a Practical Exposition of the Civil Service Curriculum, and Guide to the Lower Division of the Service and its Competitive Examinations, by Stanley Saville (Crosby Lockwood and Co.); *Mechanical Industries explained*, showing how many useful arts are practised, with Illustrations, by Alexander Watt (W. and A. K. Johnston); *Elementary Physiography*, Adapted to the Syllabus of the South Kensington Science Department, by Andrew Findlater (W. and R. Chambers); *Good Cookery*: a Culinary Catechism for the use of Schools and Young Persons, by Mrs. L. D. Brown (F. E. Longley); *The Scottish Churches and the Gipsies*, by James Simpson (Baillière, Tyndall and Co.); *The Garden of Hyères*: a Description of the most Southern Point on the French Riviera, by Adolphe Smith (Fleet Printing Works); *Report of the Lightning Rod Conference*, edited by the secretary, G. J. Symons (E. and F. N. Spon); *Statistical Report of the Health of the Navy for the Year 1880* (ordered by the House of Commons to be printed); &c.

OF new editions, &c., we have received:—*Endymion*, by the Earl of Beaconsfield (Longmans); *The Ingoldsby Legends* (Bentley); *The Origin of Evil*, and other Sermons, preached in St. Peter's, Cranley Gardens, by the Rev. A. W. Momerie, Second Edition, Enlarged (William Blackwood and Sons); *On Teaching: its Ends and Means*, by Prof. Henry Calder-

wood (Macmillan); *A Sketch of the Public Career of the Earl of Beaconsfield*, by F. A. Hyndmann, with two Portraits and Autographs, Second and Third Editions, Revised (W. H. Allen); *Practical Geometry for Art Students*: a Course of Lessons on the Construction of Plane Figures and Scales, Pattern Drawing, Geometrical Tracery, and Elementary Solid Geometry, by John Carroll, Second Edition (Burns and Oates); *A History of English Literature for Junior Classes*, by Frederick A. Laing, New and Revised Edition (William Collins, Sons and Co.); *The Visitor's Guide to Oxford*, New Edition, with 110 Illustrations (Oxford: Parker); &c.

#### ORIGINAL VERSE.

THE FOUNDERING OF THE "BIRKENHEAD,"  
February 26th, 1882.

1.

THE starry heaven was calm; the tropic air  
breathed balm;  
No ripple broke the silver-mirrored deep,  
When the *Birkenhead* sailed o'er unto Afric's golden  
shore  
With her freight of English soldiers wrapt in  
sleep.  
To Kaffraria's thorny waste they were voyaging in  
haste,  
Where at war with savage neighbours, to our  
shame,  
A handful of brave men, outmatched as one to ten,  
Fought doggedly for honour till they came.

2.

Not heedless he who kept watch while his fellows  
slept  
Of the signal from the cross-trees, "Land  
ahead!"  
But the sea-chart 'neath his eye marked nought of  
danger nigh,  
And thro' soundings deep and reefless dropped  
the lead.  
—Suddenly, in the shock of a hidden spine of rock  
'Gainst the crashing iron keel, all is told!  
And the roused sleepers need no glass their fate to  
read  
But the water rushing upward from the hold.

3.

Children about their necks, pale women crowd the  
decks,  
With helpless fingers claspt and stifled moans:  
Now agonised in prayer, now fain to bid despair  
Snatch comfort from the seamen's fearless tones.  
For calm, as if by day the ship at anchor lay,  
The Captain 'mid the darkness shouts command;  
And prompt the cheery cry wherewith his men  
reply,  
And prompter still each deft and busy hand.

4.

And, blended with the crew, the soldiers labour too,  
While yet remains a chance the ship to save;  
Then, driven to their last hope, uncoil the fettering  
rope,  
And launch the fragile lifeboats on the wave.  
Three boats that scarce a score of lives avail—no  
more!  
While thirty score as dear are left to drown:  
For hour by hour more wide the leak sucks in the  
tide,  
And low and lower the hull is sinking down.

5.

But, needing no commands, soldier and sailor hands  
Lift child and woman gently off the deck;  
And as each crowded boat is safely launched afloat,  
Their hearty voices cheer her from the wreck.  
Then the Captain cries, "Each man must swim for  
life who can,  
With the boats' wake for his pilot, to yon cape;  
And if, ere he gain the shore, his strength endure  
no more,  
With a hand upon the gunwale he may 'scape!"

6.

But with a mighty shout the Colonel's voice rings out—

"Halt and hear me, lads, a moment ere too late!

The lives we sought to save would perish in the wave

If we dared to add a finger to their weight.  
Men must look Death in the face, when to shirk it would be base :

'Tis for battle that we long to reach the land ;  
Come Death when'er it will, 'tis but a battle still ;  
Let us fight it out together where we stand !"

7.

Not e'en the shadow of Death can shake his fixed faith

That his soldiers only hear him to obey.  
Albeit in act to leap headlong within the deep,  
The men recoil, and slowly turn away.

As at the bugle-call, into their ranks they fall,  
And in silence by their chief the end abide.

—A moment more ! drawn under, her timbers rent asunder,

The Birkenhead is gulphed beneath the tide !

8.

At nightfall, calm and clear in that liquid atmosphere,

The Southern Cross upon the world looks down ;  
Proclaiming to men's eyes that a death of sacrifice

On a life of noblest manhood sets the crown ;  
But never in the sight of that consecrated light

A deed so like the Christ's hath been dared,  
As when strong men yielded life unto Death without a strife

That the helpless and the weak might be spared.

HENRY G. HEWLETT.

#### MAGAZINES AND REVIEWS.

THE current number of the *Nineteenth Century* gives us the usual crowd of articles dealing with "actualities"—from the Channel Tunnel to Mr. Bradlaugh. But hidden beneath these are two of so different a character that one wonders how they ever got into such company. The Rev. E. L. Hicks writes upon "The Names of the Greeks" with a minuteness of scholarship that has not been seen in an English magazine since the golden days of the *Quarterlies*. Another clergyman, Canon Jackson, gives a no less notable example of research in that department which is common to the antiquary and the historian. Drawing his materials mainly from the MSS. preserved at Longleat, he tells the true story of "Amye Robsart," so far as it can now be ascertained. To call this a refutation of *Kenilworth* would be to misunderstand the writer, and likewise to commit an injustice to Scott. The novelist was content with the popular tradition ; the historian may be required to verify that tradition by the original documents, when good luck has brought them to light. It is enough to say here that Canon Jackson reveals a life, and hints at a mystery, which are not less pathetic than the fiction itself.

THE first number of the new volume of the *Revue de Droit international et de Législation comparée* commences with a paper from the pen of Prof. Brocher de La Fléchère, of Geneva, entitled "Les Origines de l'Impérialisme." The author introduces his subject by a new definition of the term "légitimité," which he proposes to apply to such governments only as exercise power under a system of constitutional checks, which prevent their abuse of it. Imperialism, on the other hand, is the condition towards which all governments tend from their impatience of resistance ; while revolution is the remedy to which modern societies have recourse when the burden of imperialism becomes intolerable. But revolution aggravates, for the most part, the evil, and substitutes the veiled imperialism of a majority for the overt im-

perialism of an individual, and this, again, provokes a counter-revolution, and so the vicious circle of revolution is continued for the benefit of political parties, but to the detriment of the nation. The author traces the early germs of imperialism in the Roman State, and its full development under the Caesars ; the advent of Christ and the efforts of imperialism to stifle Christianity in its cradle, dreading its corrective power ; the alliance which imperialism formed with the Christian Church when it found itself unable to suppress it. He then deals with the Papacy, which recovered its independence after the centre of the Roman Empire had been transferred to Constantinople, but could not free itself from the taint of absolutism. The author then traces the evil effect of Papal imperialism allied with regal absolutism in France, and Card. Richelieu's successful effort in establishing the ascendancy of the latter. When Louis XIV. avowed the principle of "L'Etat c'est moi," and extended his authority over spiritual matters by the edict of 1682, there remained no public organ in France which could check the abuse of power by the King's Government. The result was that the French nation, finding reform to be impossible, had recourse to revolution, and, having passed through the furnace of demagogic absolutism, itself found in the hands of a usurper the most perfect type of imperialism which the world has ever witnessed. His fall has been an express warning to mankind that the greatest human genius has not sufficient strength to support the strain of exercising power without limit, and that a government is not solid unless it is buttressed with institutions capable of controlling any tendency on its part towards excess. The Professor's paper is an able study of a most difficult problem of political science, but he does not solve it. Prof. Alberic Rolin, of Gand, the secretary of the Institute of International Law, supplies a paper upon "Les Phases du Droit pénal." Having reviewed the course of ancient and mediæval legislation in criminal matters, he directs his attention to Italy and to the treatise of Beccaria on "Offences and their Punishments," the effect of which was marvellous in awakening the conscience of the European governments to the prodigious severity of their criminal law in its use of torture and its infliction of the penalty of death for most crimes against property. Prof. Alberic Rolin omitted, however, to notice the great services rendered to the same cause by Sir Samuel Romilly by his speeches in the British Parliament. He cites the new Penal Code introduced into Belgium in 1867 as being on a level with the most improved legislation of modern European States. Dr. Molengraaff, of Amsterdam, supplies a first article on the Contract of Affreightment, which has been translated from the Dutch by M. Joseph Jitta. This is an important paper, as it touches a branch of maritime law in which all nations have an interest, and which has been a subject of discussion, with a view to its improvement, at several congresses of experts. Messrs. Engels and van Peborgh, of Antwerp, brought it forward before the Social Science Association at its conference at York in 1864. The subject has since been taken up by the Association for the Reform and Codification of the Law of Nations at its congress held in the Guildhall of the City of London in 1879, when a committee was formed consisting of Dr. E. E. Wendt, Mr. J. Glover, Mr. Richard Lowndes, Mr. Ole Muller, and others, who presented a report to the congress of Berne in 1880. The author, who is fully conversant with the subject, discusses the differences which exist between the project known as "the Sheffield Rules" and the Commercial Codes of various European States ; but, as the article is not complete, and does not state the final conclusions

of the author, further observations may be reserved for a future notice of the second portion of the paper. Prof. Louis Renault, of the Ecole Libre des Sciences politiques at Paris, contributes the fourth paper, being a review of French jurisprudence in matters of international law.

THE *Revista Contemporanea* of February 15 contains an interesting article by T. Gomez Rodriguez on the town and castle of Arevalo, formerly one of the bulwarks of Castelle, with remains of prehistoric, Roman, Arab, and mediæval sculptors and architects. The writer quotes the reply of Juan I. to the Cortes of Soria, 1380, whereby he legitimated the children of the clergy by unmarried women, and gives other instances of the licence and violence of the clergy of that period. He upholds the legitimacy of Juana Bettraneja, and, in treating of the Civil War at the succession of Isabella, attributes her victory over her rival to the purity and energy of her character, which gave men hopes of a speedy reform of the above abuses. He also mentions the imprisonment of the son of the Prince of Orange there from 1568 to 1596. In his "Diario de un Viaje a Italia en 1839," the Conde de Toreno appears as an indefatigable sight-seer. Becerro de Bengoa concludes in this number his very useful chapters on "Modern Electricity."

#### THE "ALCESTIS" AT BRADFIELD.

THE performance of the "Alcestis" of Euripides at St. Andrew's College, Bradfield, was, in certain respects, foredoomed to comparative failure. Not even Mr. Benson, Mr. Courtney, and Mr. Lawrence, of whose considerable gifts we have before had evidence, could realise to bodily eyes and ears our old and slowly formed conceptions of Apollo, Heracles, and Death ; and scarcely might man or boy give us, in due kind and measure, the pathos of the death-scene of Alcestis. Yet the courage which initiated, and the careful industry which carried out this enterprise have, on the whole, been justified. No fair estimate can be formed of the degree in which success was undoubtedly achieved without a due appreciation of the enormous difficulties with which the actors had to contend. The performance was full of interest, and remarkably free from the more avoidable blemishes. From the smallest part to that of Admetus himself there was evidence of the most thoughtful preparation, and the movements and chanting of the chorus, the grouping, and the arrangements of colour, left nothing to be desired but a better-lighted stage. A certain stateliness and measured grace and self-restraint were observable throughout ; and these qualities were not only right and Greek, but, considering the youth of some of the performers, and the absence of a tradition such as is found so valuable at Westminster, somewhat remarkable. Mr. Marriott, for instance, though he did not attain the almost impossible height of doing full justice to the 258th and following lines, was especially free from the smallest taint of vulgarity or tendency to rant. The arduous, but inspiring, part of Admetus was performed as no one but a scholar and a gentleman could have performed it ; and any lack of conventional "finish" was compensated by the absence of less desirable conventionalities. There is, in fact, no doubt that cultivated amateurs appear to the very best advantage on such occasions as this. In selecting Heracles (Mr. Courtney) for their special approval and applause, the audience were probably right. The moderation and good taste with which the half-drunken scene was given were as noticeable as the brave bearing and genial nobility which form the more attractive features of the part. Of Mr. Benson as Apollo, it was only

required that he should look well and declaim effectively, both of which requirements he was able to satisfy; and the same, in a slightly altered sense, may be said of Mr. Lawrence as Death. One only of the actors distinctly mis-conceived his part. Mr. Armstrong, in his clever and humorous representation of the slave attending on Heracles, transported us at a bound from Euripides to Terence. This was a mistake for which the human and domestic element in the "Alceste" to some extent paved the way; but Mr. Courtney's resistance of even greater temptation should have suggested a severer self-control. In Greek tragedy we do not ask for laughter with our tears. But there was much, after all, to praise and little to blame, and it is to be hoped that Bradfield, with its manifest capabilities and aspirations, is destined to become the special home of an earnest and sympathetic study of Greek.

### GEOGRAPHY OF THE NORTH-EAST COAST OF ARABIA.

THE subjoined is a translation of an article republished verbatim in the Constantinople *al-Jawdib* of February 7, from the *Jaridatu-San'a*. The fact of a native journal having been recently established at San'a, the capital of al-Yaman, is a most interesting proof of the rapid march of literary progress in Southern Arabia. In addition thereto, however, the details given of several of the principal localities on the North-east coast of Arabia form a valuable addition to our somewhat antiquated knowledge of that region.

"We have deemed it desirable to place before our readers the following geographical description of the districts of ash-Shahr, al-Makalla, Zhafar, and Hadrhamaut, which are frequently mentioned nowadays in printed publications.

"ash-Shahr is thirty-six hours distant from the Straits of Babu'l-Mandab by sea, and twenty-four from Aden. It consists of 3,000 dwellings, large and small, built of brick, and contains a population of from 8 to 10,000 souls. It is situated, like al-Hudaidah, on a small hill close to the shore, and is under the rule of the Jam'adar 'Auh-bin-'Umar, the al-Ka'ity.

"The town of al-Makalla is thirty-four hours' run from Babu'l-Mandab, and twenty-four from Aden. It consists of about a thousand houses, many of them built of brick, and the remainder of reeds. Its inhabitants number about one thousand persons. It is governed by the Nakib 'Umar-Salab, al-Kasady.

"Zhafar is a small town consisting of 200 houses built of brick, and inhabited by about 1,500 persons. It is sixty hours distant by sea from Babu'l-Mandab, and forty-eight from Aden. In its environs are five or six villages, all within half-an-hour of the town. The inhabitants are Badawin. The place is under the jurisdiction of the ruler of Maskat, Turki-bin-Sa'f.

"Hadrhamaut is not situated on the shore, but in a broad valley between two mountains. Its harbours resemble those of ash-Shahr and Makalla. Its boundary is five days distant from the former place and six from the latter. Its length is about four days' journey, and its width three days. It comprises the following fifteen principal villages:—

Villages.	Houses.	Inhabitants.
Kasm	300	1,200
'Ainât	1,000	5,000
Tarim	5,000	25,000
Sûry	300	1,200
Gharafah	200	700
Taribah	400	1,200
Bûr	250	1,000
Sîwûn	20,000	80,000
Madûrah	150	600
Tarisy	200	300
al-Ghurfa	560	3,000
Bukhairah	200	800
al-Hawâtah	80	200
Shibâm	1,200	6,000
al-Kâtin	150	500

"Besides the above, there is a large district called *Da'an*, one day and a-half distant from al-Kâtin, the last-named village in the foregoing list. In size it is twice as large as Hadrhamaut. The villages of Kâtin and Shibâm are under the jurisdiction of the Jam'adar 'Auh-bin-'Umar, al-Ka'ity, but his brother 'Abdu'llah acts as his deputy there. The villages of Kasm, 'Ainât, and Sûry are under the rule of the eminent Shaikh Ahmad-bin-'Abdu'llah. Those of Tarim, Gharafah, Taribah, Bûr, Bukhairah, Siwûn, Madûrah, Tarisy, and al-Hawâtah are under the rule of Mansûr-bin-Ghâlib, al-Kathiry, the Amir of Hadrhamaut, and the seat of his government is at the town of Siwûn. A river rises in the Valley of Barhûk, near the burial-place of the prophet Hûd (upon whom be peace!), which is situated on the north side of the town of Kasm, and about one day's journey therefrom. This river flows into the sea about two days distant from its source. As the bed through which it flows is low and the banks high, and as the inhabitants have no idea of hydraulics, they derive no advantage from the stream. Rain falls two or three times a year in Hadrhamaut, but there being numerous wells in the fields, quite sufficient for irrigation purposes, the scarcity of rain is not felt. The climate is excellent, albeit somewhat hot. Its chief product is indigo, but dates, millet, and wheat are cultivated there. Many of the inhabitants engage in trade, and some go to India and obtain appointments in the police. Their principal home industry is the weaving of dyed cloth."

In the *al-Jawdib* next following that above quoted, the editor states, in correction of the San'a paper, that Zhafar does not belong to Maskat, being under a governor appointed thereto by the Porte, which office was held recently by Fadhl Pasha, al-'Alawy, since promoted to be a Minister at Constantinople.

GEORGE PERCY BADGER.

### CORRESPONDENCE.

#### A CORRECTION.

Dublin: Feb. 26, 1882.

My memory played me an unhappy trick last week. In an article on Mr. Hall Caine's *Three Centuries of Sonnets* I quoted as Coleridge's the lines describing and exemplifying the Ovidian elegiac metre:

"In the hexameter rises the fountain's silvery column,  
In the pentameter aye falling in melody back."

These lines, as I ought to have remembered, are a translation by Coleridge (printed in *Friendship's Offering*, 1834) from Schiller.

EDWARD DOWDEN.

#### THE PORTUGUESE -Z.

San Remo: Feb. 21, 1882.

In the last number of the ACADEMY (February 18) Prince L.-L. Bonaparte has laid down the law in respect of the Basque Dictionaries, a matter of which I know nothing. But, as he has dragged in my name, may I ask for a few lines to explain a trifling matter?

I ventured to draw Capt. Burton's attention to the fact that the illustrious Diez and his worthy follower, Dr. Reinhard-Hoettner, did not accept his view that the Portuguese -z (in proper names) is of Basque origin. As Dr. Reinhard-Hoettner shows, this idea was suggested by Larramendi, who was, it appears, an estimable enthusiast of the dark ages when the science of language did not exist. Will the mere mention of his name sweep away all that Germany has done for science? And is it more likely that the guess of an unscientific enthusiast will prove correct, and not the deliberate conclusion of Diez and his followers?

The Prince also finds fault with me for terming Dr. Reinhard-Hoettner's most excellent Portuguese Grammar the "best scientific" Grammar. I never heard of the review which the Prince mentions as if it were conclusive. That this work has been found fault with by someone in a periodical I cannot get hold of is very likely; but is there a better Portuguese Grammar in existence, and how better? For my own part, I must confess that I know of none; if there be any such, my ignorance is to blame; my opinion rests on facts known to me. Will the Prince name a more scientific Grammar?

A. BURNELL.

#### JEWS IN ENGLAND IN 1643.

South View, Bromley, Kent: Feb. 27, 1882.

In a despatch of Agostini, the Venetian agent in England, of March 13, 1643, occurs a statement that many persons in London having refused to pay the parliamentary taxation their goods were seized. When these were put up for sale English purchasers could not be found, as those who had money to spend were afraid lest its production should call attention to their possession of it, so as to draw down on themselves fresh taxation. Accordingly, the writer says:—

"Si è per ciò trovato expediente di far venire alcuni Hebrei da Amsterdam, i quali vanno provvedendo di denaro et estrahendo la mercantia a parte a parte."

Is this the first appearance of Jews in England since the days of Edward I.?

SAMUEL R. GARDINER.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 5, 5 p.m. London Institution: "The Ancient Glacier Systems of Europe," by Mr. James Geikie.  
7.30 p.m. Aristotelian: Discussion, "Mind."  
8 p.m. Society of Arts: Cantor Lecture, "Hydraulic Machinery," I., by Prof. J. Perry.  
8 p.m. Victoria Institute: "The Supernatural in Nature," by Mr. T. E. Howard.  
TUESDAY, March 7, 3 p.m. Royal Institution: "The Mechanism of the Senses," VIII., by Prof. J. G. McKendrick.  
8 p.m. Civil Engineers: Discussion, "Steel for Structures," by Mr. E. Matheson.  
8 p.m. Society of Biblical Archaeology.  
8 p.m. Anthropological: "The Aboriginal Inhabitants of the Andaman Islands," by Mr. E. H. Man.  
8.30 p.m. Zoological Society: "Some Points in the Anatomy of the Great Ant-eater," by Mr. W. A. Forbes; "The Anatomy of Pterocles, with some Remarks on its Systematic Position," by Dr. Hans Gadov.  
WEDNESDAY, March 8, 8 p.m. Zetetical: "Vaccination," by Mr. W. White.  
8 p.m. Society of Arts: "Improvements in Gas Illumination," by Prof. A. V. Harcourt.  
8 p.m. Microscopical.  
8 p.m. Geological: "The Geology of Madeira," by Mr. T. S. Gardner; "The Crag Stells of Aberdeenshire and the Gravel Beds containing them," and "The Red Clay of the Aberdeenshire Coast and the Direction of the Ice Movement in that Quarter," by Mr. T. F. Jamieson; "Certain Inclusions in Granites," by Mr. T. Arthur Phillips.  
THURSDAY, March 9, 3 p.m. Royal Institution: "The Geographical Distribution of Animals," IV., by Dr. P. L. Selater.  
7 p.m. London Institution: An art lecture by Mr. W. F. Yeames.  
8 p.m. Telegraph Engineers: "Measurement in the Medical Applications of Electricity," by Dr. W. K. Stone and Dr. W. J. Friebner.  
8 p.m. Society of Arts: "Practical Hints on the Manufacture of Gelatine Emulsions and Plates for Photographic Purposes," by Mr. W. K. Burton.  
8 p.m. Mathematical: "Systems of Formulas for the  $sn$ ,  $cn$ , and  $dn$  of  $u+v+ic$ ," by Prof. W. Johnson; two notes, by Mr. C. E. Bickmore.  
8.10 p.m. Antiquaries.  
FRIDAY, March 10, 8 p.m. Royal Institution: "Electric Lighting by Incandescence," by Mr. J. W. Swan.  
8 p.m. New Shakespeare Society.  
SATURDAY, March 11, 8 p.m. Royal Institution: "The Iliad and Odyssey," IV., by Mr. W. Watkiss Lloyd.  
8 p.m. Physical.

#### SCIENCE.

##### GABELENTZ' CHINESE GRAMMAR.

*Chinesische Grammatik*; mit ausschluß der neideren Stiles und der heutigen Umgangssprache. Von Georg von der Gabelentz. (Leipzig: Weigel.)

BETWEEN three and four years ago, Prof. Gabelentz published in the *Journal* of the German Oriental Society an article on the history of Chinese Grammars, and on the best method for the grammatical treatment of the Chinese language. He was then feeling his way to that view of the subject which is developed in the magnificent volume before us.

The first Chinese Grammar (if we may give it that name) deserving our notice was the work of the Jesuit missionary, Father Prémare. It must have been composed and sent to Paris early in the last century. There it remained in the Royal Library, and supplied to M. Abel-Rémusat the materials for his *Elémens de la Grammaire chinoise*, published in 1822. Fortunately, the attention of an English nobleman, Viscount Kingsborough, was directed to it. A copy of it was made at his expense in 1825; and it was thereafter printed, also at his expense, at the press of the Anglo-Chinese College and London Missionary Society, Malacca, where it appeared, in 1831, under the title of *Notitia Linguae Sinicae*, a quarto of 260 pages. Prof. Gabelentz has well characterised it as "a wonderful book." As a treatise on the laws of Chinese speech and composition, we know no work to be

put in competition with it, unless it be this of Gabelentz himself. The *Notitia*, indeed, covers a far larger space than the *Chinesische Grammatik*, there being no exclusion from it of the lower style and the colloquial speech. Prémare occupies fully a hundred pages with the exposition of these; while it was unavoidable that the Leipzig Professor should omit them, for they could hardly be treated successfully by anyone who has not lived among the Chinese till he has become, in the use of their speech, almost as one of themselves.

The title of the earlier book, moreover, is happier than that of the later. Our author tells us correctly that Chinese has no root-words (paras. 195-98). That being the case, its verbal and syntactical phenomena are very different from those of our Aryan languages. Its written characters (the earliest of them, no doubt, pictures of objects) are now all symbols of ideas, and not representations of words. Of course the fathers of the Chinese people spoke before they wrote. At however distant a date we place the invention of writing among them, we must believe that they had words before they drew pictures or fashioned symbols; and when they had made, e.g., the picture of a horse, it was natural, not to say necessary, that they should call it *mǎ*, by the name in use among them for that animal. But no strokes in the figure contained any representation of sound. In three out of the six classes into which the Chinese have divided their characters (paras. 132-45), and which are really *Origines Scripturae Sinicae*, their meaning is quite independent of the names by which they are called; and, though there came ultimately to be a class of characters, very much more numerous than all the others together, that does contain a phonetical element, it is not of an alphabetic nature. To speak of the characters as words, and of the different parts of speech (paras. 250-53), serves only to complicate the subject. The characters are astonishingly versatile. One of them performs the part now of a substantive, now of an adjective, now of a verb, now of an adverb; another acts here as a verb, there as a conjunction, and anon as a preposition. But however few or many the functions which any one character discharges, its figure undergoes no alteration. Its tone may vary, and in a slight degree its name, but not its form; and, in studying Chinese, the more completely we dismiss the ideas of Aryan grammar from our minds the more successful we shall be. Composition in Chinese has its rules, and, as is well known, one of the most important is the relative position of the signs or symbols.

In no country do we find so great a difference between the colloquial speech and the written style as in China. At the present day, a chapter of our Scriptures, rendered idiomatically in the literary style, may be read correctly to a congregation and be hardly more intelligible to a majority of the hearers than if it were in Sanskrit or English. The scholarly part of the audience may follow it, because the names of the signs bring before them those signs themselves, and they understand not so much by the hearing of the ear as by a reading with the eye of the mind. It is an error to suppose that the Chinese

ever spoke in the condensed and artificial style of their books. It was not till their scholars began to write novels, and especially to cultivate the drama in our thirteenth century, that there came to be an approximation in their books to the spoken language; but even that dramatic writing is not acknowledged as a part of the national literature. Much less is the purely colloquial writing, according to the different dialects to be found in every province (which, unfortunately, as we venture to think, some Protestant missionaries are trying to imitate), acknowledged to be so. Rémusat, indeed, intimates his view that this is more grammatical (*Elémens*, p. 36) than the ancient and literary styles; but though some new characters are employed to suit the verbosity of speech, and different characters for different dialects, each one is indeclinable and, to use a word of Julien's, *inconjugable*, as in the oldest written models. Chinese boys at school, and foreign students under the guidance of a Chinese teacher, are not troubled with any lessons of what we understand by grammar. They learn the names of characters. By oral information or consulting dictionaries they ascertain their significance. By constant reading and committing to memory and imitating examples of approved style, the student then gradually acquires the habit of correct and elegant composition. But even when his goal in life is literary eminence and its attendant rewards, his training is in logic and rhetoric, and not in grammar.

We can think of no better model in English for an introduction to the study of Chinese, *mutatis mutandis*, than T. K. Arnold's well-known *Introduction to Latin Prose Composition*, especially as revised and edited by the late Master of University College, now Dean of Westminster. And Prof. Gabelentz' *Grammatik* is very much of this nature. It consists of three parts. In the first, after an Introduction on the nature of the Chinese language and its dialects, he treats of it both as spoken and written. Most of what has been elucidated on the subject since the time of Prémare, and especially during the present century by Marshman, Callery, Edkins, and others, is related clearly and succinctly; but, however good and valuable in itself this portion is, our previous remarks have indicated our opinion that it might be very much curtailed.

The second and third parts contain our author's analytical and synthetical systems. Here he has put forth his strength; and, despite his grammatical terms, the help which he affords to the student who has already groped his way or been guided to some considerable acquaintance with the subject is varied and great. Let such a one carefully read and leisurely digest his chapters, and he will find but little difficulty in construing any book of Chinese literature, and sufficient direction in trying to put his own thoughts into the Chinese garb.

The treatment of what are termed the "helping words"—characters discharging the duty of our indeclinable parts of speech—is searching and thorough. The idiomatic use of them is one of the most important peculiarities of Chinese composition, and is rarely

attained by the foreigner. The latest considerable work of Julien, his *Syntaxe nouvelle de la Langue chinoise*, shows the value he had come increasingly to attach to an acquaintance with these particles. They are presented in this *Grammatik* in a more systematic form than ever they were before.

Finally, we have been struck by the correctness of the translations of the very numerous examples which the author has occasion to quote. Taken from a wide range of reading, often from most difficult passages, so far as we have observed they are more to be relied on than the versions of sentences and phrases adduced in any of our Chinese-English dictionaries.

The publication of the *Chinesische Grammatik* will mark, we trust, an era in the study of Chinese on the Continent. The field of Chinese literature is vast and attractive, and thus far the surface of it has been little more than scratched, and that only in a few places.

JAMES LEGGE.

#### RECENT CONTRIBUTIONS TO OUR KNOWLEDGE OF THE MOON.

SELENOGRAPHY has lately received a valuable contribution by the publication of the sketches of portions of the moon's disc which were made by Tobias Mayer, at Göttingen, in the middle of the last century. Mayer was the first observer who constructed a general map of the moon in which the positions of the chief lunar spots were laid down from actual measurements, and not from mere eye-drafts. The intended publication of his lunar sketches at the end of the last century was frustrated by the death of Lichtenberg, who had undertaken it, and Mayer's smaller general map remained the only accessible result of his selenographical labours. To the discussion of any questions referring to physical changes on the moon's surface, the evidence, which may be derived from trustworthy sketches made at an early period, is obviously of considerable importance, and the publication of Mayer's old sketches is therefore a welcome addition to the available sources of information. There are forty sketches made between June 1748 and June 1750, and these are reproduced by photo-heliography, so that the copies are faithful representations of the originals. They are accompanied by a copy of Mayer's larger general map, of nearly fourteen inches diameter; and thus the results of his old selenographical observations, obtained with humble means, have at last become available, and a debt long due to him has been paid by the Göttingen Observatory.

Mr. Henry Henderson, of New York, has published a coloured lithograph representing the moon as the "three-days-old crescent," or as it appears three days after the time of new moon. As the ordinary lunar maps are constructed with the object of exhibiting the general topography of the whole visible surface, they do not represent, and are not intended to represent, the real aspect of the moon at any time; and it is necessary to have special maps for special phases of illumination if they are to show the shadows and other variable features which are so strikingly characteristic of the moon's appearance at different hours of the lunar day. Mr. Henderson's lithograph is such a special representation, and, as regards general resemblance and artistic effect, may be called a success. Though it does not show more than a small portion of the innumerable details which the telescope reveals, it gives a good notion of the telescopic appearance of the young moon as seen with a comparatively low power. The moon's image is

eighteen inches in diameter, the phase represented corresponding to the time when the crater Messier has emerged into the light of the rising sun. The plate is accompanied by a little descriptive handbook and an outline map. Its publication will be followed by that of five more plates, containing similar representations of five of the most interesting phases.

Experiments have repeatedly been made with the object of producing natural imitations of the craters and inequalities visible on the moon's surface, and it has been found that the figures of the lunar inequalities can be closely imitated by throwing pebbles upon the surface of some smooth plastic mass, such as mud or mortar. Mr. Meydenbauer, of Marburg, uses a basis of dextrine for the purpose, and drops small quantities of the same material from a moderate height upon that basis. A photograph of various figures which are thus produced shows a remarkable resemblance to the various inequalities visible on the moon's surface.

A. MARTH.

#### NOTES OF TRAVEL.

CAPT. CECCHI has returned from North-east Africa, and it is expected that he will shortly give an account of his travels in the Galla country, where he visited the Guragú tribe, previously unknown to Europeans. He describes them as the most handsome and intelligent of the races in Eastern Africa. They are surrounded by the Gallas, against whom they defend themselves vigorously. A tradition respecting Christianity exists among them, and further research may perhaps discover ancient Ethiopian MSS.

LIEUTS. GERBER AND SCHULTZ, who have been sent by the United States Navy Department to aid in the search for the missing survivors of the *Jeannette*, arrived at St. Petersburg on February 23, and were to proceed at once, via Orenburg, to Irkutsk, whence they will have to make a long and difficult land journey of some 2,000 miles to Yakutsk, on the Lena. At that place M. Sibirakoff will place his small steamer *Lena* at their disposal, and they will proceed down the river along the Siberian coast to the eastward, in order to search for Lieut. Chipp's party in the second cutter, of whom nothing has been heard since they were parted from the other boats during a gale. It will, we fear, be some time before anything definite can be heard of Lieut. De Long's fate, as Mr. Melville was not to begin his search for him in the wilderness on the banks of the Lena until about March 1, and it must be remembered that there is no telegraphic communication between Yakutsk and Irkutsk, which, as we have said, are some 2,000 miles apart. In consequence of the confused statements which are repeatedly being made in connexion with this matter, it may be well to mention that Irkutsk and Yakutsk are not on the same river, the former being on the Yenisei, and the latter on the Lena, and that the vast stretch of country between them is of a very difficult nature.

It is stated that the members of the expedition organised by Lieut. Steffen Szolc Rogozinski, of the Russian Navy, for the exploration of the Liba rivers of West Africa, will meet in Brussels during March before starting for the Gulf of Guinea. The party is to include Signor Bianca and Signor Licata, an Italian naturalist, two Russian officers, two Frenchmen, and some German naturalists. They propose to form a station on the coast opposite the Island of Fernando Po, and explore all the rivers, the sources of which are unknown, but which Lieut. Rogozinski believes will be found in Lake Liba. After this region has been thoroughly explored, a portion

of the party propose to continue their journey across the continent to the Uganda and Galla countries. We are not aware how the funds for this extensive expedition are to be provided, but we believe that no substantial support has been received from the principal geographical societies.

THE Russian Geographical Society is considering the propriety of organising a scientific expedition to the Tien Shan. It is proposed to place it under the command of Col. Prejevalsky, who would, no doubt, avail himself of the opportunity for penetrating again into Thibet.

THE Commercial Geographical Society of Bordeaux have awarded their great medals for this year to Capt. Gallieni for his geographical work on the Upper Niger, and to Dr. Bayol for the services he has rendered to commerce and geography by his recent journey to the Futa Jallon highlands in West Africa.

#### SCIENCE NOTES.

*Geology of Tokio.*—A comprehensive paper on "The Geology of the Environs of Tokio" has been written by Dr. David Brauns, Professor of Geology in the Daigaku or University of the Japanese empire, and has recently been issued as one of the series of *Memoirs* published by the Scientific Department of the university. The neighbourhood of Tokio forms part of a vast plain presenting but little diversity of geological features, and the monograph is consequently confined to the description of very few formations. It treats first of the Alluvial deposits; then of the Post-pliocene, or, as the German author of course terms it, the "Diluvial" formation; and finally of the Pliocene beds, equivalent to the Crags of East Anglia. Among the more interesting fossils here noticed, we may point to the fossil elephants found in the quaternary strata, and referred to the two species *E. meridionalis* and *E. antiquus*. A great number of Pliocene shells are figured, and the lithographs reflect much credit on the Japanese artists.

THE Leeds Naturalists' Club and Scientific Association proposes to issue during the coming summer a "Natural History of Leeds, Wharfedale, and Niddersdale." The first part will be devoted to the fauna, and will also contain a general description of the physical features of the district, with a map. It will give the name of every species of animal (down to microscopic forms of life) that is actually known to have occurred within the limits of the district. The work will be published at the price of five shillings per part; and subscribers should address themselves to the secretary, 12 Lilian Street, Burley, Leeds.

#### PHILOLOGY NOTES.

WE understand that the Government of India has requested the India Office to furnish twenty-six copies of Dr. Badger's *English-Arabic Lexicon*.

On February 17, M. Henri Weil was elected a member of the Académie des Inscriptions et Belles-Lettres, by a majority of only a single vote over M. Siméon Luce. M. Weil, we believe, is a Jew, as also are three of his colleagues in this branch of the Institut, MM. Bréal, J. Derembourg, and Jules Oppert.

THE Rev. J. D. Bate, Baptist missionary at Allahabad, and author of a Hindi Dictionary, proposes to issue by subscription a series of works discussing the various controversial points that separate the followers of Muhammad from the followers of Christ. The first will deal with the claims of Ishmael to the blessing promised to Abraham, which constitute the essential point of difference between Islam and Judaism,

M. MASPERO's *Contes populaires de l'Égypte ancienne* has just appeared as the fourth volume of the "Collection of Popular Literature" published by Messrs. Maisonneuve.

M. D'ARBOIS DE JUBAINVILLE, the new Professor of Celtic at the Collège de France, began his first course of lectures on February 14. The subject of his introductory lecture was the importance of a study of old Irish literature, &c., for the understanding of the language, manners, and institutions of the Celtic race.

MR. GEORGIOS KORONAIOS, of Athens, has just published a translation of the whole of Sophocles into modern Greek.

WITH reference to Mr. Clement Markham's derivation of "harpoon" from the Basque, in his paper on the Basque whale fisheries recently published in *Nature*, a correspondent writes:—"As to 'arpoi, harpoiari' being Basque, I think it is probable; but I should not trace the derivation quite so far back as the root *ar* or *har*—to take quickly. There is a Biscayan verb 'harrapatu'—to take or catch; B. Nav. 'harrapa, harrapatu'—to take, catch, gain. Thus 'harpoiari' would mean 'the man who takes or catches.' . . . If we really have got 'harpoon' from the Basques, it makes the like origin of 'Jingo' still more probable."

### MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, Feb. 9.)

PROF. SKEAT in the Chair.—Prof. A. S. Wilkins communicated a paper on a MS. of Cicero's *De Oratore* and *Orator* in St. John's College, Oxford. It seems to have been first collated by Thos. Cockman (*De Oratore*, Oxf. 1696), and Abp. Pearce, who knew it from Cockman, praises it highly. The collations of the other MSS. by Lagomarsini, Mlleodt (1840), Piderit, and Ravaisson (*Codex Albinensis*) now enable us better to estimate its value. The MS. is a small folio of twenty-eight leaves (fifty-five pages, the last blank) written in double columns in a neat and clear hand. The ink has kept its colour except on the first page. It has numerous contractions, such as the Tironian abbreviations for *et* and *con*, the misunderstanding of which latter has led copyists to change *conules* into *asinos*.—Dr. Waldstein read a paper on ἀροχρησιμὸς, Ar. Eth. N. p. 1111 (Bekk.). A painting on a vase in the possession of M. Camille Lecluyer at Paris, together with a relief published by Clarac, show this game to have been similar to one practised by boys with us, in which the fingers are interlaced, and the point is to bring the adversary to his knees by forcing back his wrist, only with the important addition that the Greeks did not begin with interlacing their hands, but stood opposite one another and strove to seize the most favourable grip of the hands, the most decisive part in the game. In this act, the one striving to seize, the other to avoid, the hand of his opponent, involuntary striking must have been a most frequent occurrence. The δειξαι βουλόμενος which, as Bernays has shown, is a *lapsus* on the part of the scribe from the fact of the same having occurred but two lines above, is to be substituted by δειξαι which Turnebus saw in several MSS.—Mr. Ridgeway suggested that δειξαι was for δειξασθαι.—Prof. Paley communicated a paper on Sophocles, O. T. 1380:

καλλιστ' ἀνὴρ εἰς ἐν γε ταῖς Θήβαις τραπέλ.

—Dr. Kennedy sent a note on the same passage, in which he said he had omitted to note in his forthcoming edition what had, however, long since struck him—viz., that when Sophocles makes Oedipus say he has lost all pleasure in gazing on

city or citadel, or of the gods

statues and temples, of which I the wretch,—

the one in Thebes at least most nobly reared—

deprived myself, &c.,

he perhaps meant by the emphasis ἐν γε ταῖς Θήβαις to express his Athenian contempt for that illiterate and unartistic character of the Thebans which gained for them the well-known proverb, acknowledged by one of themselves to whom it was

certainly inapplicable—Βοιωτὸν ἄνδρα. And the γε might hint that, though to have been bred in Corinth was better than to have been reared in Thebes, yet there was something better still, to have been educated in Athens.

ENGLISH DIALECT SOCIETY.—(Monday, Feb. 20.)

THE MAYOR OF MANCHESTER in the Chair.—In the annual Report, read by Mr. J. H. Nodal, the hon. secretary, it was stated that the receipts for the year (including a balance of £192 from 1880 and thirteen payments of subscriptions in advance) had been £472, and the payments £300, leaving £172 in hand. The sale of volumes to non-members had been larger than in any previous year. The publication for 1882 will be selected from the following:—"A Glossary of the Lancashire Dialect," part ii. (F to Z); "A Dictionary of English Plant-names," by Messrs. James Britten and Robert Holland, part iii., completing the work; "West Worcestershire Words," by Mrs. Chamberlain; "Fitzherbert's Book of Husbandrie" (1534), edited by the Rev. Prof. Skeat; "Four Provincial English Words—Clem, Lake, Nesh, and Oss—their Range, Definitions, and Etymology," by Mr. Thomas Hallam, to form No. v. of the English Dialect Miscellanies. Two proposals had been urgently pressed upon the attention of the society during the last year or two—the publication of a general dialect dictionary and the collection and publication of place-names as part of the society's work. It was considered, however, that these things do not fairly come within the society's province. Some interesting particulars were given with reference to Mr. A. J. Ellis's ascertainment of the dialectal lines which divide England into four great divisions. According to his most recent researches, the northern boundary of the Midland and Eastern counties passed (very roughly) north of Furness in Lancashire, east of Craven in Yorkshire, north of Leeds and Selby, and then suddenly dips south by the Isle of Axholme in Lincolnshire, and reaches the sea about Great Grimsby. These apparently formed the two great lines across England. The boundaries between Northern English and Lowland Scotch was (also very roughly) that of the kingdoms. This divides all English-speaking counties into four great divisions, distinguished by their treatment of the Anglo-Saxon short and long *u* in the words *some* *house*. In arriving at these conclusions, Mr. Ellis was stated to have been greatly aided by the researches of Mr. Thomas Hallam, also a member of the society, who has succeeded during the last two years in verifying the important dialectal line across England between the Midland and Southern forms or sounds of short *u* as in *up* and *but*, and between the same forms or sounds of *o*, short and medial, as in *other*, *done*, and *some*. Speaking approximately, the line passes through the counties of Salop, Worcester, Warwick, Northampton, Hunts, and Cambridge.—It was elicited in the discussion after the adoption of the Report that the work of the society would probably be completed in five or six years more.

SOCIETY OF ANTIQUARIES.—(Thursday, Feb. 23.)

A. W. FRANKS, Esq., V.-P., in the Chair.—Mr. Middleton read a paper upon consecration crosses in churches. These crosses were marked when the church was built, before the consecration, in order to show the places which the bishop would anoint with oil as part of the service. The proper number is twelve inside and twelve out, but there are few churches in England now which exhibit the complete number, though in one case—St. Mary Ottery—where the crosses are very ornamental, consisting of demi-angels holding shields surrounded by quatrefoils, additional crosses were added during the process of restoration, so that there are now thirteen outside. The usual position is about seven feet six inches from the floor, though in very early churches they occur at a less elevation. A woodcut in the *Pontificale Romanum* (1554) shows the bishop standing on a short ladder applying the oil with a brush. In a MS. at Rome, the bishop stands on a wooden stage which has been erected for the purpose. The crosses are made in three ways—paint, which is the commonest; cut in the stone; and metal, fastened to the wall. In one church, that at North Reppe, in Nor-

folk, patches of stucco were laid on the rough flint wall, and the crosses marked thereon; but, since restoration, the stucco has disappeared. The earliest form used in England was a cross botonée, and, during the transitional period, about the end of the twelfth century, a cross with expanded ends within a circle became customary. At Salisbury there are examples of out crosses, botonées, within a quatrefoil. If it was necessary for a church to be reconsecrated, new crosses were made; and at Chichester the bronze pins for affixing a new metal cross overlap the old one of the first consecration, which is painted. At Blythburgh, in Suffolk, the crosses are made by inlaying flints; and at Bagworth they are modelled in relief in plaster. The central cross at the east end was often made more elaborate than the others, and sometimes carried a crucifix.—Mr. Bailey read a paper upon some historical aspects of the law of attainder, which he illustrated by tracing the estates held by Richard Neville, Earl of Warwick, by various titles, until they finally became forfeited to the Crown by the attainder of his granddaughter, Margaret Countess of Salisbury, in 1541.

BROWNING SOCIETY.—(Friday, Feb. 24.)

PETER BAYNE, Esq., in the Chair.—Mr. J. T. Nettleship read a paper on "Fifine at the Fair," which was in three parts—(1) An analysis, section by section, which was, in short, a prose rendering of the poem; (2) a statement dividing the main subjects dealt with into three heads; (3) a synopsis of the whole poem. In the synopsis Mr. Nettleship gave the division of the poem into three heads—(1) What ought to be a married man's relations to other women than his wife; (2) what his relations to the world generally; (3) the use of these two relations towards achieving the highest form of love between husband and wife. The outcome of the whole Mr. Nettleship took to be that, from the lowest to the highest, each created being has its own individual perfection and a chance of displaying it. To achieve this individual perfection, each human soul works towards finding out the Truth, the Absolute, which lies hid under the false shows of the world. The knowledge thus gained belongs to the soul that gains it; but, as souls develop, each acquires its knowledge, does its work, for the sake of, and to be imparted to, the man or woman found in its search after truth, and loved best, towards finding and loving whom it is always striving. To try and find truth under the shows of the world, we must mix with men and not stay apart, nor ignore the laws of the world around us. By watching men and their institutions throughout a life of seventy years, now and then an exceptional man may, even now, achieve complete knowledge of the true nature of all men. And when, in the development of souls, all men have learned to know, then all knowledge and all religious beliefs will fuse into one simple belief in God, and in living our life as in His sight, and truth will display unveiled the principle of all things, highest and least.—In the discussion afterwards, Mrs. Sutherland Orr, Miss Drewry, Mr. Furnivall, Mr. Matthew, and Mr. Gustafson took part.—At the close of the discussion, the Chairman dwelt strongly on the personal element in the poem; he thought we could not dissociate it from the fact that Browning was united to perhaps the greatest woman who ever lived. The theory held by Browning as to the exalted nature of women had much to be said for it, it having been the theory of Scott, of Ruskin, and of Shakespeare.

### FINE ART.

*Ancient Scottish Weapons, &c.* A Series of Drawings by the late James Drummond, R.S.A. With Introduction and Descriptive Notes by Joseph Anderson, Custodian of the National Museum of Antiquities. (Edinburgh: George Waterston & Sons.)

THIS very handsome folio brings before the public one of the most valuable of the series of archaeological drawings executed by the late James Drummond, R.S.A. Several of these collections were acquired by the Society

of Antiquaries in Scotland at Mr. Drummond's sale; and two of them have been already published, that illustrative of the architecture of Old Edinburgh having been reproduced in 1879 by the publishers of the present volume, and *The Sculptured Stones of Iona and the Western Highlands* having been issued last year by the Society of Scottish Antiquaries as an extra volume to their fellows.

The life of Mr. Drummond may be said to have been devoted, very equally, to art and archaeology, and each of his pursuits was tinged with the influences of the other. In his paintings he dealt almost invariably with the past, all his important works, such as "Montrose," "The Return of Queen Mary," and "The Porteous Mob," have for their aim the realisation and revivification of the scenes and characters of Scottish history; and his artistic skill was a valuable adjunct to his antiquarian studies, enabling him to produce the numerous archaeological sketches which posterity will probably value as a richer legacy than any of the imaginative subjects which employed his brush. These coloured drawings of ancient Scottish arms are executed not only with the most scrupulous care and accuracy, but with the keenest and most sympathetic feeling for the artistic beauty of the objects portrayed. The graceful lines of sword-hilts, the rich embrowning of antique powder-horns and their wealth of involved and interlacing ornamentation, the picturesque tooling on old targets, and the exquisiteness of the mellow blending hues of their worn coverings of cloth and leather are portrayed with the finest relish for their visual loveliness; and Mr. Drummond's original drawings have been reproduced in the present volume with a care and skill which are rare indeed in lithographic work, and which leave nothing to be desired. They give us such an opportunity of studying antique Scottish weapons and implements as could be afforded by no collection, public or private; and the Scottish Antiquaries have done well in marking their appreciation of the value and uniqueness of the series by acquiring the original drawings for their library. The descriptions of the plates are from the pen of Mr. Joseph Anderson, whose intimate knowledge of Celtic art was amply proved by his Rhind Lectures of 1879 and 1880. Mr. Anderson also contributes an Introduction dealing with early Scottish dress and weapons, illustrating his remarks on costume by interesting quotations from Major, Leslie, Elder, Gordon of Rothiemay, and other contemporary authorities, figuring some typical specimens of armour from the sculpture stones of Iona and Kilmartin, and describing the most characteristic forms of targets, dirks, powder-horns, pistols, sporrans, &c.

Turning to the coloured plates themselves, we have first an interesting series of Highland targets, ranging from the fragments of decayed oak (plate vii., fig. 1) found in Blair Drummond Moss, and presumably a shield, and the bronze disk (plate vii., fig. 2), with its delicate adornment of concentric rings and circular rows of studs, to the later specimens in which the coverings of leather and textile fabrics are yet intact, and which form, with their rich tooling, their occasional

heraldic insignia, and their highly decorative arrangement of metal bosses, some of the most valuable examples of old Scottish art that have been preserved to us. Similarly interesting for their artistic beauty are the powder-horns figured in the volume. Here, too, as in the targets, we find the traditions of ancient Celtic art existent and potent in the wealth of varied interlacing ornament, executed in relief or in incised lines, and deriving an additional charm from the warm, mellow colour of the time-stained horn or bone, in which the play and gradation of tinting has been excellently perceived by the draughtsman, and rendered with unflinching accuracy by the lithographer. Of especial interest is a horn, in the National Museum, Edinburgh (plate xx.), supposed to have belonged to Sir George Mackenzie of Tarbert, who succeeded to the baronetcy in 1654. On one side it depicts a stag-hunt, a carving which, in the opinion of Mr. Drummond, has a distinct archaeological value as proving, by the costume of its principal figure, that the Highland trews were worn with the belted plaid. In the following plate is figured another horn, stated to have belonged to the Duke of Perth, and now preserved in the Perth Museum, with its decoration of centaur, castles, brazen serpent, and leafage, relieved in white against a red background of stained horn. Other examples, dated in, or attributed to, the seventeenth century, are interesting for their rich Celtic adornment, their quaint inscriptions, and their heraldic bearings of lion and unicorn, of thistle, rose, and double-headed eagle. Turning to the lethal weapons, we have some nineteen specimens of the basket-hilted Highland sword. An admirable and typical example from the collection of Sir Noel Paton is to be found in plate ix., fig. 2, its broad, double-edged, and very long blade being inscribed "Andreia Farara," and marked with the gold cross and ball. This weapon has also most interesting historical associations, for Alastair Macdonald wore it at Culloden, where he fell while charging the Hanoverians single-handed, his clan having refused to follow him. Then come fine examples of the great two-handed sword, the true Scottish claymore, some of them fitted with waved blades furnished with side-hooks, nearly all admirably Gothic in the broad simplicity of their hilt decorations. Plate xi., fig. 2, in particular, with its divided grip, its side-rings, and the quillons of its guard terminating in scroll-like ornaments, is a magnificent specimen of a mediæval weapon. In other illustrations we have dirks, richly carved and inlaid muskets and pistols, glaives, halberds, and Lochaberaxes, followed by antique brooches—the great circular Highland brooch, commonly of brass, worn on the shoulder, and the quaint silver "Luckenbooth brooch," the old betrothal gift, fashioned frequently in the form of a heart, and inscribed with some loving distich or with a significant reference to such a text as Ruth i. 16. Among the ancient jewellery are figured two of the balls of rock-crystal that were used as charm-stones, one of them, long in the possession of the Campbells of Ballochyle, set in a circular brooch; the other—the "Clach Dearg of Ardvorlich"—mounted in hoops of silver, with a ring for

suspension. In the plates of musical instruments we have three ancient harps—among the rest, an exquisitely coloured illustration of the famous "Queen Mary Harp," and several sketches of its rich details. It appears to date from the fourteenth, or at latest the fifteenth, century, and "the beauty and grace of its decoration is unequalled by any known specimen of Scottish wood-carving." According to tradition, it was given by Queen Mary to Beatrix Garden, who married into the family of the Robertsons of Lude, whose descendant, Mr. Stuart of Dalguise, still possesses the instrument. Of the bagpipe, the finest and earliest known example, dated 1409, is figured on plate xlvii. It is the property of Mr. R. Glen, of Edinburgh, who recently contributed to the *Proceedings* of the Scottish Antiquaries a most interesting paper on the ancient musical instruments of Scotland.

In the above notice we have only indicated a few of the rich contents of the volume, which will be a valued possession alike to the archaeologist, to the historical painter, and to the mere lover of things of beauty.

J. M. GRAY.

#### ART EXHIBITION AT LEWES.

It is with the hope of obtaining moneys sufficient to endow the School of Art in their town with such an annual income as shall place it, in their own words, "in easy circumstances" that the people of Lewes have opened the present exhibition. Albeit there is very much that might well deserve it, it is not possible within the prescribed limit to give any detailed account of collections so heterogeneous. What is here said must be confined to works of the "Masters," as the word is understood by the happy few who can take it upon their lips as a Shibboleth, and be fearless of exposure. The Catalogue which enumerates these treasures is a strange work. Besides palpable errors of attribution, for which its compilers were not responsible, there are errata of a wild kind. For Luini we find *Lantini*; Van Goyen stands written *Van Gouwen*; David Hopfer, the engraver, has become *David Hope*; Israel van Mechenen is now familiar to the children of Lewes as *Mechelun*. It would have been easy to correct errors so striking; it is a pity, as the exhibition is one of unusual interest, that some care was not taken in the compilation of its record. Col. King is the exhibitor of several fine works; but among them are some which it is hard to believe were painted by the artists to whom they are ascribed. "'The Seven Works of Mercy' by D. Teniers, Sen.," one might suppose to be a copy from a possible original by Jan Steen. Two small portraits representing Henry VIII. and Queen Elizabeth are ascribed to Holbein. Perhaps they have resemblance enough to the genuine works of this painter to explain the ascription; certainly they have not enough to justify it. An "'Old Man's Head' by Rembrandt" is in like case with these portraits "by Holbein." It would be invidious, however, to suggest that these errors are confined to the collection of Col. King, and it would also be far from the truth. There are more which, in the interest of students, might well be noted, but space will not allow. Of painting genuine and first-rate there is no lack. The lover of old Crome, which is to say the lover of landscape, has a rare treat in the "Paget" picture, the property of Mr. Huth. Perhaps the best, certainly the most pleasing, of some half-dozen works of Sir Joshua Reynolds is the portrait

of "Master Bunbury." One of the loveliest female portraits known to art is that by Gainsborough of his wife "when young," and that we find (lent by the South Kensington authorities) upon the walls of the County Hall at Lewes. I have nowhere seen a finer Van Goyen than the great "Lake of Haarlem" here exhibited. The tranquillising effect of this picture as the eye ranges over its measureless still waters is not to be described. Its want of all colour only intensifies, perhaps, its effect. The end of that artist was peace. For the rest, I can only say that the Catalogue contains the names, and the walls show noteworthy examples, of Sir Frederick Leighton, Messrs. Sidney Cooper, J. O. Hook, Frith, and other well-known living artists; and Etty's "Robinson Crusoe," two fine pictures by J. F. Herring, Sen. ("The Inn Yard" and a "Midday Rest"), and two fairly representative Morlands are among the most interesting of the works not already mentioned. A number of studies by Mr. Harrison Weir, sketches in pencil and water-colour by the late E. W. Cooke, many exquisite drawings by Stothard, a case of forty-three miniatures by Cosway, and nine cases of old Wedgwood medallions from the designs of Flaxman form special features of a very remarkable "local" exhibition.

ERNEST RADFORD.

#### ART SALE.

THAT well-known amateur, Mr. John Henderson, of Montagu Place, treated the nation so well in the matter of legacies that the sale of his remaining effects was, on the whole, disappointing. It would indeed, on the present occasion, be superfluous to append the prices realised by a collection which had lost its chosen Girtins, Coxes, Dewints, Cattermoles, and Müllers, and which will hereafter be remembered more by its contributions to the British Museum and the National Gallery than by such of its treasures as are now scattered abroad. Of the objects sold quite lately at Christie's, the Chinese and Indian carvings in jade, rock crystal, lapis lazuli, and amber were more remarkable and precious than the pictures and drawings. Nevertheless, the drawings included many excellent examples of the pencil-work of Prout, with which the public is just now very familiar, and not a few specimens of the perhaps yet more delicate pencil-work of Edridge, of whom only connoisseurs—and not either artists or the large public—know anything. There were likewise certain examples of Dewint, but these were in the main of an inferior kind—one wonderful little sketch from Nature, of course, excepted. The Henderson collection appeared to be somewhat burdened by the number and variety of its sketches of Oriental life and scenery. These, in whatsoever variety they are presented, are apt somewhat to pall upon us. It may even be questioned whether, as a theme for art, the East is not pretty much exhausted. Mr. Henderson's collection of art treasures generally had been wont to be compared in some men's minds with that of Mr. Charles Sackville Bale, a contemporary, but yet a senior, who died about a year ago. Mr. Bale bought nothing but what was of the finest quality, and all that he had was distributed after his death among the amateurs of art who attended the three weeks' sale at Messrs. Christie's auction-room. Mr. Henderson bought much that was good, and not a little that was indifferent, and, as his best things were destined by him for public show in national collections rather than for private delight in the portfolios of amateurs, it is inevitable that his sale should have been somewhat disappointing.

#### NOTES ON ART AND ARCHAEOLOGY.

THE *Magazine of Art* for March is an exceedingly good number. Articles on "The Towers of Sir Christopher Wren," by Mr. Basil Champneys; on M. Eugène Muntz's *Life of Raphael*, by Prof. Sidney Colvin; and on "Benvenuto Cellini," by Mr. T. A. Trollope, show the strength of the present staff of this excellent serial.

THE execution of the monument to Mr. Street in Westminster Abbey has been entrusted to Mr. Pearson.

MR. ALFRED TYLOR is having several very careful drawings and casts made of Mithraic signs to confirm the opinion of Mr. Franks that the letters at first supposed to be the Christian X P on the leaden case of one of the Roman remains found under Mr. Tylor's house of business at Warwick Lane are, in fact, Mithraic, and not Christian. Mr. Tylor will give a lecture on these remains at the London Institution on March 16.

MR. HORMUZZ RASSAM starts for Babylonia on March 6. He will there recommence his excavations on the site of Abu Habba, the Sippara of the classical geographers. The *Agra*, having on board the large number of tablets found last year, is expected to arrive in a day or two.

THE annual exhibition of water-colour drawings at the Dudley Gallery opens to the public to-day. The private view was on Friday, March 3.

MR. WILLIAM COX has on view in the Conduit Street Galleries a large collection of pictures by deceased British artists, from Hogarth to Henry Dawson.

MR. J. C. ROBINSON has recently drawn up, at the request of the Lord Provost of Glasgow, a report on the pictures by Old Masters preserved in the Corporation galleries, the bequest, for the most part, of Mr. MacLellan and of Mr. Graham-Gilbert, B.S.A. The collections are very miscellaneous. Mr. Robinson has specified about one hundred and ten of the paintings as worthless, and is prepared to recommend the Corporation to get rid of them; but there remain about one hundred and twenty pictures which he pronounces "valuable and authentic works of the great masters," constituting "the most interesting and valuable provincial public collection of such works in the kingdom;" and he is of opinion that the Corporation gallery, "when better known, will take rank as a collection of European importance." The pictures include "The Woman taken in Adultery," attributed by Dr. Wadgen and Mr. Robinson to Giorgione; a "Virgin and Child," formerly attributed to the same master, but probably by Giovanni Cariani, or by one of the Mantegna family; a "Virgin and Child" and a "Danaë," authentic Titians, the latter, however, greatly injured; two examples of Palma; an interesting little "Annunciation," by Botticelli; and an "Adoration of the Magi," attributed by Mr. Robinson to Antonella da Messina. The collections are rich in Dutch pictures, including a fine early work by Rubens, "An Allegory of Abundance;" five pictures by Ruysdael, three by Rembrandt, six by Berghem, five by Teniers, three by Cuyp, three by van Huysum, and one by Jan Steen.

THE next examination for certificates in needlework will be held at the London Institute for the Advancement of Plain Needlework, 2 Connaught Street, Edgware Road, on Saturday, March 25.

THE death is announced, at Bale, of Friedrich Weber, the celebrated engraver, member of the Berlin Academy, and corresponding member of the Institut. He first became known by his work for the historical galleries at Versailles,

and he was a frequent exhibitor at the Paris Salon of portraits after David, Steuben, and Winterhalter. Some of his best plates were from the masterpieces of Raphael, Holbein, and Titian.

M. TISSOT has employed himself lately in producing some *cloisonné* enamels, which, together with some new pictures and etchings, will shortly be exhibited at the Dudley Gallery.

M. JEAN BEAUDOIN, who has just died at the age of seventy-nine, was a carver in ivory, known not so much by his original work (though that is to be found in the Louvre as well as in private cabinets) as by the faithfulness with which he devoted his great talents to the restoration of objects of ancient art.

WE have received the first number of a new monthly journal, called the *Artists' Critical Record*, published by Mr. Reginald Turner. Its object is to collect in a permanent form the various criticisms on pictures, &c., that appear in the daily and weekly journals. We cannot feel any interest in the scheme.

MESSRS. WILSON AND MCCORMICK, of Glasgow, offer for sale by subscription (or, in plain English, by lottery) a marble bust of James Hogg, "the Ettrick Shepherd," by John Moesman, from a model by the late James Fillans. The bust was formerly in the possession of Mrs. Gilkison, a daughter of Hogg; and whatever sum is realised will be given to her. It is valued at £105. We confess that the end seems to us more praiseworthy than the means.

ARTICLES on David d'Angers, the sculptor, appear in the *Revue des Arts décoratifs* for February, and in *L'Art* of the 12th of that month. The last number of the latter periodical contains papers on the fine statue of Rabelais, by M. Émile Hébert, about to be erected at Chinon, the birthplace of the great satirist, and on the art treasures collected by the late M. Benjamin Fillon.

THE French Government has purchased Munkacsy's picture of "Christ before Pilate," which will probably be placed in the Luxembourg.

AMONG M. Quantin's latest publications is the first part of *Les Bords de l'Oise: Voyage artistique*, by Alphonse Lambert, with illustrations by M. Lambert, O. Daubigny père, and Karl Daubigny. The work will be complete in twenty parts.

A CORRESPONDENT at Rome writes:—"Workmen under the direction of Signor Lanciani have commenced to remove the road which crosses the Forum, near the church of San Lorenzo in Miranda; an iron bridge is to be erected in its place. Signor Lanciani expects soon to discover the remains of the arch of Fabius. The portion of the wall of Servius, opposite the Ministero delle Finanze, mentioned in the ACADEMY of February 18, has been since completely destroyed, and broken up for building purposes. Farther on, another portion of the wall has been since discovered; it is built into a mass of brickwork, faced with *opus reticulatum*. The houses at the back of the Pantheon have been bought by the Government for £18,000, and have been pulled down. A large portion of the baths of Agrippa have been laid bare. Some beautiful fragments of a rich frieze, adorned with the honeysuckle ornament between dolphins, have been discovered. Mr. Hodder E. Westropp has been giving a course of lectures on the archaeology of Rome, in connexion with the British and American Archaeological Society, on 'The Walls of Rome,' 'The Wall of Servius,' 'The Palatine,' 'The Colosseum,' 'The Baths of Caracalla.' The course will be continued after the Carnival."

AN exhibition is now open in Paris, at 24 Avenue de l'Opéra, of the pictures of Russian

artists resident in France. It has been organised by a benevolent society, of which the secretary is M. Tourguénief. It will remain open until March 20.

A FOOLISH practical joke has been played with two pictures in the Louvre, one by Bonington and the other by Clouet. In both of them occurs a portrait of Francis I., which the rascals smeared with vermilion. Luckily, the defacement was discovered before the paint was dry, and all trace of it removed without injury to the pictures.

### THE STAGE.

THE performance of *Ours*, which will probably continue at the Haymarket Theatre until April is well advanced, offers some points of interest, and is, moreover, remarkable as evidencing the great improvement made by Mrs. Langtry in the exercise of her newly adopted art. It is nightly received with what we think considerable coldness, but the abolition of a pit makes cordiality all but impossible in a theatre—the stalls are filled only by the wealthy, whom, as a rule, even "some new thing" (and Mrs. Langtry is still new as an actress) fails to wake to enthusiasm. Whatever modified approval an audience almost wholly of the opulent and the *blasé* is able to feel is felt probably by the Haymarket audience every night, and, though the eventual interests of the Theatre are not best consulted by that which tends to narrow the circles from which a *clientèle* is drawn, material prosperity cannot fail to attend the elegant and gorgeous house in the Haymarket. It has very likely been remarked elsewhere before now that Robertsonian comedy does not acquire fresh dignity or importance in a more dignified home; but we must be allowed to say for ourselves that the majesty of the new play-house somehow exposes the pettiness which exists here and there in the plays, and which the charade-like conditions of the Prince of Wales's Theatre more conveniently concealed. Moreover, time adds nothing to the charms of a dialogue from which wit is as plentifully absent as is conventionality; much of the talk in Robertson's *Ours* is dull talk, much of the action trivial action. And yet, when this has been said, the last word has by no means been said, even upon the play now produced, not to speak of the performance of it. Even into the more insignificant scenes of the play there is wrought the result of a dainty and sympathetic observation of common people; and in the second act, which is better constructed and more tersely written than the others, a note of patriotism is struck such as the stage seldom hears unless it is associated with the brag of burlesque. These qualities which we have last mentioned are qualities that do not age. Much in *Ours* has aged already; but something, we are glad to say, is as young and vivid as when the author wrote it fresh from the memory of recent national troubles. It is terribly long, however. One wearies of the first act before it is over, and one wearies again of the third. Yet how characteristic of the writer it all is—defect as well as virtue. How typical is *Ours* of the Robertsonian manner. The performance is thoroughly interesting, and it is more than interesting—it is adequate, save in one or two points which presently we may notice. Mr. Bancroft's cynicism has never been more humorous than in the part of the young idle man, who cannot be industrious because he is rich, and cannot be eminent because he is a brewer, but who makes up his mind to take his chance in the trenches because a somewhat crude young woman says she will like him so much better if he will fight. Mr. Conway, too, though he may not be quite so picturesque in this recent assumption as he was in one or two

of his earlier, deserves high praise, for, in a day in which sentiment is at a discount, he acts a lover's part as if he believed in it. The audience, we take it, by no means sympathise with a credulity so juvenile. But Mr. Conway's method is the right one. He is not afraid of his part. Again, as elder warrior, the tolerant husband of an eminently disagreeable middle-aged woman, Mr. Pinero is excellent. The ladies are, perhaps, less equal. Miss Le Thière's appearance—though there is nothing to be said against it—will not be pronounced to be typical of that of the English woman of society. Mrs. Bancroft does not essay to be typical. She is individual, or, if she represents anybody, it is the Marie Wilton of old days. The finish and subtlety with which she can deliver commonplace English is still unapproachable. Mrs. Langtry is really not to be laughed at as an amateur, though she cannot yet take great rank as a professional. But she has learnt much. Her natural gifts, which all the world recognises with a curious unanimity, are, as we pointed out when she first appeared in *She Swoops to Conquer*, of a sort that tell on the stage, and, since we last discussed her performances, she has learnt to give them additional employment. Of the lighter feelings which succeed each other rapidly, her face is singularly well expressive. Profound emotion she is as yet inadequate to do more than agreeably suggest, for at the times when the character would seem likely to be swayed by it the actress's gestures are at once too frequent and too small. At present, however, Mrs. Langtry is as little deserving of the reproach of our severer critics as of the ill-regulated raptures of a prominent daily paper. On the stage, at present, she is neither a marvel nor a failure. She gives people pleasure; and it is for pleasure that people go to the play.

MR. EDMUND ROUTLEDGE is preparing a fresh acting edition of Shakespeare's "Much Ado about Nothing," for an amateur performance at St. George's Hall in April. Mr. Routledge will adopt the valuable suggestions of the late James Spedding in the New Shakespeare Society's *Transactions* as to the points where certain now confused scenes are to leave off and fresh ones begin. He will also adopt some of the changes suggested by Schlegel.

ON February 20 M. P. Carré gave the first of his afternoon recitations at the Steinway Hall. The programme included pieces by Victor Hugo, François Coppée, Alfred de Musset, and others, which occupied a little over an hour in reciting. M. Carré's style is very pleasing; his voice is musical, and capable of a good deal of expression; he does not exaggerate in tone or gesture, avoiding dangerous attempts at realistic presentation; and our old-fashioned taste was gratified by seeing arms and hands move, not in straight lines, but in curves. We thought M. Carré, on the whole, better in the comic pieces than in the serious. The rendering of "La Bénédiction" struck us as fine; but the "Irvis Lapius" and the "Mariage manqué" were really capital. Those who care for an entertainment in which there is much feeling and refinement will join us in bidding M. Carré welcome to London.

### MUSIC.

#### RECENT CONCERTS.

AT the second Philharmonic Concert (February 23) Liszt's symphonic poem "Hungaria" was performed for the first time in England. Many musicians have been attracted by the peculiar rhythms and characteristic intervals of national Hungarian melodies; Haydn and Schubert became thoroughly imbued with its spirit, and, of living composers, we may name Hoffmann, Joachim, Brahms, and Liszt, on all of whom it

has cast its magic spell. Franz Liszt, Hungarian by birth, has devoted much time and attention to this music; besides the work now under notice, he has written fifteen *rhapsodies hongroises*, and is justly regarded as an able and authoritative exponent of this particular phase of musical art. "Hungaria" is programme-music, yet the composer has not, as in many of his pieces, given us any key beyond the title. The work contains four principal themes, besides various rhythmical motives. In the first two, of a solemn and melancholy character, dotted notes and the interval of the superfluous second play a prominent part; the third and fourth are marches; the latter (*presto giocoso*) has been used by the composer in his eighth *rhapsodie*. These themes, with their various metamorphoses, are used according to Liszt's usual mode of procedure. The wildness and extravagance of some of the passages cannot be denied, but they may perhaps be regarded as appropriate to, and typical of the wild race of, the Magyars. As a pictorial illustration, the work is clever and interesting, but as abstract music it does not, on a first hearing, satisfy either from an aesthetic or intellectual point of view. The symphonic poem had been evidently carefully rehearsed, and was very creditably performed; but at times we felt that greater contrast of tone and suppleness of rhythm were necessary in order to convey a faithful idea of the composer's intentions. Mr. Cusins deserves the thanks of the musical public for introducing one of Liszt's orchestral compositions. Quite apart from their intrinsic value, we think that all his symphonic poems should be heard in this country. In order to form an estimate of Liszt as a composer, his works must be produced; and though, owing to the efforts of Mr. Manns, Mr. Walter Bache, and Herr Richter, we have heard much, we have not yet heard either all or even his most important contributions to art. Herr Scharwenka was the pianist, and gave a brilliant, though somewhat exaggerated, performance of Schumann's pianoforte concerto in A minor. In the solos which he afterwards played he was most successful. Mendelssohn's fine fugue in E minor, written for the album "Notre Temps," was rendered with great vigour, and Chopin's *schërzo* in B minor (op. 20) with both power and delicacy. Herr Scharwenka also gave two Polish dances of his own composition. Mmes. Marie Roze and Trebelli were the vocalists.

At the Sacred Harmonic Society's concert on February 24 a "Te Deum" by Mr. W. G. Cusins was brought to a first hearing. This sacred composition consists of seven short numbers, occupying in performance about twenty-five minutes. The music is a curious mixture of ancient and modern styles; the archaic form of some of the themes, and the use of the scale without leading note, contrast strangely with the forced harmonies and peculiar progressions with which the work abounds. The soprano solo, "To Thee all angels," is pleasing; the harmonies accompanying the thrice-repeated "Holy" are novel and effective. The tenor solo, "Thou art the King of Glory," is one of the best numbers. The final fugue, "O Lord, in Thee have I trusted," opens in a bold and vigorous manner; it contains some clever contrapuntal writing, but one is glad to escape from the labyrinth of discordant sounds in the development of the subject to the simple chorale-like conclusion. The work possesses one very great merit: the composer seems to be earnestly striving to generate something new and original, and this good intention partly atones for the restless efforts which produce at times unsatisfactory results. The *sol* parts were sung by Miss Beebe, Mr. Lloyd, and Mr. F. King. Mr. Cusins conducted his own work.

The first of three orchestral concerts announced by Mr. Walter Macfarren was given

at St. James's Hall last Saturday evening. The programme included Mr. Macfarren's *Concert-stück* in E, and his overture, "King Henry V.," performed for the first time at the Norwich Festival last October. The former composition consists of an *andante espressivo* in E minor and of an *allegro assai* in E major. The various themes are extremely graceful and effectively developed; the showy pianoforte part was rendered by Miss Margaret Gyde in a careful and unpretending manner. M. Sainton played Mendelssohn's violin concerto with great taste and spirit, and well deserved all the applause given to him. One of the principal features of the concert was the excellent performance of Beethoven's C minor symphony. The time in some parts of the slow movement was hurried, but, apart from this, the careful and intelligent rendering of the whole work reflects great credit on the conductor. Miss Mary Davies and Mr. Santley were the vocalists, and contributed much to the enjoyment of the evening. Mr. W. Macfarren conducted the whole of the programme without book, and he had good reason to be satisfied with the performances of the fine band, with M. Sainton as leader. The hall was well filled, and the applause throughout the concert most enthusiastic. J. S. SHEDLOCK.

#### ROYAL COLLEGE OF MUSIC.

ON December 12, 1881, three addresses were delivered at the Free Trade Hall, Manchester, by the Duke of Edinburgh, the Duke of Albany, and Prince Christian on the subject of music in England and the proposed establishment of a college; and last Tuesday (February 28) a meeting was called by the Prince of Wales at St. James's Palace for the purpose of soliciting public support in aid of a national institution. The leading musicians and publishers of music, the most eminent musical instrument makers, and the most influential amateurs and patrons of music, also the representatives of the counties and towns in England, the dignitaries of the Church and other religious and educational bodies, distinguished colonists and representatives of foreign Powers, were invited to listen to the general outline of the scheme to found and

establish a Royal College of Music. Gratuitous education is to be one of the features of the proposed college, without, however, excluding paying pupils; thus both classes, following the same course of study, having the same teachers, the same rewards, will meet on common ground and on a footing of artistic equality. The scholars are to be selected by open competition throughout the United Kingdom. The expense of maintenance and education is estimated at about £80 a-year for each student. The Exhibition Commissioners of 1851 are prepared to grant a "sufficiency of site" on which to erect the college buildings. From £10,000 to £12,000 a-year will be required to maintain 100 pupils—the least number worthy to constitute a foundation for the college. A charter has been prepared and laid before the Privy Council, and the Prince of Wales has undertaken to be president. The institution is to be the recognised centre and head of the musical world in the United Kingdom. Such are the main features of this great national question as set forth by the Prince of Wales in his address last Tuesday.

The following resolution was proposed by the Duke of Edinburgh:—

"That this meeting approves of the proposal to establish a Royal College of Music as a national institution, and undertakes that meetings shall be called throughout the country, and the utmost exertions used, individually and collectively, to forward the movement by obtaining the necessary funds for founding and endowing a college of music for the British empire."

His Royal Highness spoke about the importance of cultivating two of the principal branches of the art—sacred and dramatic music—"differing widely in character, but each of great importance." The resolution was seconded by his Grace the Archbishop of Canterbury—who, in a short but able speech, spoke about the wonderful power of music in uniting together different religious sects—and was supported by the Earl of Rosebery and by the Lord Mayor of London.

The preliminary list of subscriptions, headed by the Queen and royal princes, amounts to over £10,000, and other sums have been promised by members of the musical profession and various musical societies.

Just published.

## THE GRAPHIC ARTS:

A Treatise on the Varieties of Drawing, Painting, and Engraving in Comparison with Each Other and with Nature.

By PHILIP GILBERT HAMERTON.

\*.\* The Edition, which is limited, has been nearly all taken up.  
1,250 Copies, Cumber 8vo, with Fifty Illustrations : : : price £5 5s.  
350 Large-paper Copies, with Proofs of the Plates : : : " 10 10s.

LONDON: SEELEY & CO., 54, FLEET STREET.

PUBLISHED MONTHLY, PRICE HALF-A-CROWN.

## THE PORTFOLIO:

An Artistic Periodical.

Edited by P. G. HAMERTON.

Also a Large-paper Edition, 100 only, with Two Impressions of each Plate, One on Japanese Paper.  
Subscription, £10 per year.

"THE PORTFOLIO" is now in the twelfth year of its existence, and Mr. Hamerton, the Editor, must be congratulated on the spirit and good taste with which it continues to appear.—*Times*.

"THE PORTFOLIO" opens the year with a number of more than usual excellence, fulfilling so far the very large promise which it makes for the volume now commenced.—*Spectator*.

"It is quite the publication *de luxe* of the art-lover."—*Literary Churchman*.

LONDON: SEELEY & CO., 54, FLEET STREET.

Just published.

## PORTRAIT OF GEORGE ELIOT.

Etched by RAJON after the Drawing by F. W. BURTON, Director of the National Gallery.

(The only authentic Portrait of the Author of "Romola.")

Proofs on Vellum, price £5 5s.; Proofs on Japanese Paper, price £3 3s.

"The likeness is, indeed, quite perfect; nothing more characteristic was ever drawn."—*St. James's Gazette*.

LONDON: SEELEY & CO., 54, FLEET STREET.

## CROSBY LOCKWOOD & CO.'S NEW BOOKS.

### THE COAL and IRON INDUSTRIES of the UNITED KINGDOM.

Comprising a Description of the Coal Fields, and of the Principal Seams of Coal, with Returns of their Produce and its Distribution, and Analyses of Special Varieties. Also, an Account of the Occurrence of Iron Ores in Veins or Seams; Analyses of each Variety; and a History of the Rise and Progress of Pig Iron Manufacture since the year 1740, exhibiting the Economies introduced in the Blast Furnaces for its Production and Improvement. By RICHARD MEADE, Assistant-Keeper of Mining Records. With Maps of the Coal Fields and Ironstone Deposits of the United Kingdom. 900 pp., 8vo, 28s., cloth. [Ready.]

**MODERN METROLOGY:** a Manual of the Metrical Units and Systems of the Present Century. By LOWIS D.A. JACKSON, A.M.I.C.E., Author of "Hydraulic Manual and Statistics," &c. Large crown 8vo. [Immediately.]

**LOCOMOTIVE ENGINE-DRIVING:** a Practical Manual for Engineers in Charge of Locomotive Engines. By MICHAEL REYNOLDS, M.S.E. Fifth Edition. With Illustrations. Crown 8vo, 4s. 6d., cloth. [Ready.]

**TRAMWAYS:** their Construction and Working. By D. KINNEAR CLARK, M. Inst. C.E. Supplementary Volume, comprising Recent Practice in Tramway Engineering. Large crown 8vo, 12s., cloth.

**TRAMWAYS.** By D. K. Clark, M. Inst. C.E. With Wood-engravings and Folding Plates. The Complete Works in 2 vols. Large crown 8vo, 30s., cloth.

**ELECTRIC LIGHT:** its Production and Use, embodying plain Directions for the Working of Galvanic Batteries, Electric Lamps, and Dynamo-Electric Machines. By J. W. URQUHART, C.E. Edited by F. C. WEBB, M.I.C.E., M.S.E. With Ninety-four Illustrations. Crown 8vo, 7s. 6d., cloth.

**NAVAL ARCHITECTS' and SHIP-BUILDER'S POCKET-BOOK of FORMULAE, RULES, and TABLES;** and Marine Engineer's and Surveyor's Handy Book of Reference. By CLEMENT MACKROW, M.I.N.A. Second Edition, Revised. 600 pp. Numerous Illustrations. Fcap. 8vo, 12s. 6d., leather.

**EVERY MAN'S OWN LAWYER:** a Handy Book of the Principles of Law and Equity. By A. BARRISTER. Nineteenth Edition, thoroughly Revised and comprising, in addition to Summaries of the New Judicature Act and the Principal Acts of the last Session of Parliament, the most recent Decisions of the Courts of Law and Equity, the whole Verified by Notes and References to the Authorities. Crown 8vo, 8s. 8d., cloth. [Ready.]

**DE FIVAS' NEW GRAMMAR of FRENCH GRAMMAR:** comprising the substance of all the most approved French Grammars extant, but more especially of the Standard Work "La Grammaire des Grammaires," sanctioned by the French Academy and the University of Paris. By Dr. V. DE FIVAS, M.A. Forty-fifth Edition, with the addition of an Appendix on the History and Etymology of the French Language. Fcap. 8vo, 3s. 6d., bound.—KEY to Same, 3s. 6d. [Ready.]

"The best and most complete Grammar of the French language ever prepared for the use of English students."—*Scotsman*.

### CIVIL SERVICE HISTORY of ENGLAND

(The) being a Fact-Book of English History, arranged for Examination Candidates, Public Schools, and Students generally. By F. A. WHITE, Esq., B.A., and H. A. DOBSON, Esq., of the Board of Trade. Fourth Edition, thoroughly Revised and brought down to the Present Time. Fcap. 8vo, 2s. 6d., cloth. [Ready.]

"We do not remember having seen anything of the kind at once so compendious, complete, accurate, and convenient for use."—*Athenaeum*.

### WEALE'S RUDIMENTARY SERIES.

NEW VOLUMES AND NEW EDITIONS.

**The Hay and Straw Measurer.** By J. Steele. Fourth Edition, Enlarged. 2s.

**The Silvermith's Handbook.** By George E. Gee. 3s.

**Civil Engineering.** By H. Law and G. R. Burnell. New Edition, thoroughly Revised and much Enlarged, by D. KINNEAR CLARK, M.I.C.E. 4s. 6d.

**Coachbuilding.** By James W. Burgess. 2s. 6d.

**Magnetic Surveying and Angular Surveying.** By WILLIAM LINTERN. 2s.

**Measures, Weights, and Monies of all Nations.** By W. S. B. WOOLHOUSE, F.R.A.S. 2s. 2d.

**Mechanical Engineering.** By Francis Campin, C.E. 2s. 6d.

**Plumbing.** By W. P. Buchan. 3s. 6d.

**Suburban Farming.** By Prof. Donaldson and R. Scott BURN. 3s. 6d.

## LITERATURE.

James Mill: a Biography.

John Stuart Mill: a Criticism, with Personal Recollections. By Alexander Bain. (Longmans.)

IN these companion volumes Dr. Bain has made an important contribution to the history of English thought. Interesting in its details as the larger volume devoted to the father undoubtedly is, its *raison d'être* is the smaller one devoted to the son. As Dr. Bain himself says of James Mill, "his greatest contribution to human progress was his son, whom he educated to be his fellow-worker and successor." Taken together, the two volumes constitute one work of great complexity on the influences, hereditary, social, and educational, which moulded the mind and character of J. S. Mill.

That philosophical doctrine and literary products cannot generally be safely studied without a knowledge of the lives of the philosophers and men of letters in question is a commonplace of the present day, the truth of which is eminently illustrated by the light that the *Autobiography* throws upon the other writings of J. S. Mill. The style of J. S. Mill is a style which expresses thought, and even feeling, in a very abstract manner; and, consequently, there are few writers who gain more by being studied concretely in connexion with life and circumstances. Dr. Bain's work may be described as an exhaustive commentary upon the *Autobiography*. The minuteness with which he chronicles events in the order of their occurrence may be thought by some readers to obscure a life which was so essentially an organic whole as that of J. S. Mill. Not, we submit, if Dr. Bain's volumes are used as a commentary on the *Autobiography*. In the *Autobiography* the life, as a whole, is presented with such masterly distinctness that Dr. Bain is clearly justified in assuming that those who are sufficiently interested in the subject to read his volumes will not, in so doing, lose the impression stamped by the *Autobiography*. To the form, in short, given by the *Autobiography*, Dr. Bain is concerned to supply new matter; and it would be irrelevant to find fault with his work for not doing what the *Autobiography* does. Such being the nature of Dr. Bain's task, it is impossible to speak too highly of the industry and thoroughness with which he has performed it. He has traced most of the numerous Review and other articles written by James Mill, in many cases giving abstracts of their contents, and has made large use of hitherto unpublished letters; while, in the second

volume, he has not only traced many early articles by J. S. Mill, and thus added considerably to the list of that author's writings, but has given interesting reminiscences and impressions of a personal intimacy, dating from 1842. An edition of all the writings of a man of J. S. Mill's eminence is surely desirable; and no one is better fitted than Dr. Bain to undertake its preparation. Some extracts from early articles seem clearly to show that important data for the study of J. S. Mill's development are in existence, although practically inaccessible to the public. For example, at the age of eighteen he writes in the *Westminster Review*:

"Hume possessed powers of a very high order; but regard for truth formed no part of his character. He reasoned with surprising acuteness; but the object of his reasonings was not to attain truth, but to show that it was unattainable. His mind, too, was completely enslaved by a taste for literature; not those kinds of literature which teach mankind to know the causes of their happiness and misery, that they may seek the one and avoid the other, but that literature which, without regard for truth or utility, seeks only to excite emotion" (*J. S. Mill*, p. 34).

At the age of twenty-two he thus expresses his view of the desiderata of logic:

"A large portion of the philosophy of general terms still remains undiscovered; the philosophical analysis of predication, the explanation of what is the immediate object of belief when we assent to a proposition, is yet to be performed; and, though the important assistance rendered by general language, not only in what are termed the exact sciences, but even in the discovery of physical facts, is known and admitted, the nature of the means by which it performs this service is a problem still to a great extent unsolved" (*J. S. Mill*, p. 36).

During the four years from his eighteenth to his twenty-second year he wrote articles on the following subjects for the *Westminster Review*:—"On 'Religious Persecution,'" "War Expenditure," "Hume's Misrepresentation of History," "Catholic Disabilities," "Commercial Crisis and Currency," and "The Reciprocity Principle in Commerce," "The Political Economy of the Quarterly," "Mignet's *French Revolution* and Sismondi's *History of France*," "The Corn Laws," "Whately's *Logic*," and "Scott's *Life of Napoleon*." Most of these articles doubtless reflected, in the main, his father's views; but, at the same time, they reveal the nature of the reflecting surface. Seldom has a second life taken up and continued a previous life so perfectly as John Stuart Mill's took up and continued James Mill's. This continuity (manifesting itself not infrequently in traits which seem to put back J. S. Mill into the eighteenth century) may doubtless be explained generally by the fact that the son received his education principally from his father. To this general explanation, however, the particular and proximate one may, we think, be added, that logic (in a very comprehensive sense) was, from an early date, an important part of that education. The father's methods of thought, explicitly and technically communicated to the son from his twelfth year, made him doubly his father's son. Dr. Bain has the following instructive remarks upon this part

of the younger Mill's education (*J. S. Mill*, p. 26):—

"The one thing, in my judgment, where Mill was most markedly in advance of his years was logic. . . . I have never known a similar case of precocity. We must remember, however, that while his father could not be expected to teach him everything, yet, in point of fact, there were a few things that he could and did teach effectually; one of these was logic; the others were political economy, historical philosophy, and politics, all of which were eminently his own subjects. On these John was a truly precocious youth; his innate aptitudes, which must have been great, received the utmost stimulation that it was possible to apply. His father put enormous stress upon logic, even in the scholastic garb; but he was himself far more of a logician than the writers of any of the manuals. In that war against vague, ambiguous, flimsy, unanalysed words and phrases, which was carried on alike by Bentham and by himself, in the wide domains of politics and ethics, he put forth a faculty not imparted by the scholastic logic; and in this higher training the son was early and persistently indoctrinated. To this were added other parts of logical discipline, that may also be called unwritten: as, for example, the weighing and balancing of arguments *pro* and *con* in every question; the looking-out for snares and fallacies of a much wider compass than those set down in the common manuals (see the beginning of the 'Bentham' article for Mill's delineation of Bentham's logic)."

Although, then, the chief interest of the first volume is due to the fact that the ideas and methods which it exhibits as ruling the father's life ruled also that of the more eminent son, yet, even in itself, the life of the author of the *History of India* could not fail to be of high interest. As a matter of course, great names and important events connect themselves closely with it in Dr. Bain's pages. "Whatever Bentham did [from 1808 to 1818] he discussed with Mill" (*James Mill*, p. 97) is enough to indicate the importance of this volume; while less distinguished names, such as those of Brougham, Ricardo, McCulloch, Grote, Austin, figure frequently. Of James Mill himself the picture becomes very clear. Dr. Bain's method of character-painting trusts to the cumulative effect produced by a multitude of details upon an interested reader. He only sums up when the reader has already anticipated the summing-up. No one can read this volume without recognising in James Mill a man not only of singular ability, but of great self-respect and public spirit. Of his self-respect (and, it may be added, good feeling), his letter to Bentham (p. 136) is a remarkable document; while every reader will agree with the judgment which Dr. Bain expresses in the following sentences:—

"The biographical narrative makes sufficiently apparent his self-denying life. While the demands upon his energies for his private needs were at the very utmost, he was an active fellow-worker with the philanthropic band that abolished slavery, ameliorated the horrors of our prisons, and began the general education of the people. He declined the public importance that his labours might have brought him in order to bestow it upon others who needed the stimulus" (*James Mill*, p. 423).

We have left ourselves little space for Dr. Bain's "criticisms" in the second volume.

It is needless to say that they are well worth the attention of students of philosophy. On p. 113 we would call special attention to the criticism of the famous view in *Utilitarianism* that there is a difference in *kind* or *quality* among pleasures. "My own decided opinion," says Dr. Bain,

"is that he ought to have resolved all the so-called nobler or higher pleasures into the one single circumstance of including, with the agent's pleasure, the pleasure of others. This is the only position that a supporter of utility can hold to."

This notice may be closed with a passage which strikes us as being of a peculiarly pleasing character (*J. S. Mill*, p. 155).

"He [*J. S. Mill*] was absolutely without any feeling of rivalry or jealousy of other men's success. His originality and fecundity of ideas would not have exempted him so completely from the dread of being anticipated in his discoveries or balked of his credit had he not possessed a fund of generosity of character for which sympathy is another name. He poured himself out in conversation, and his ideas were caught up and used, with or without acknowledgment; but he never disturbed himself one way or other. Of this part of his character I can speak absolutely, and not by a figure of speech under which we may turn a part into a whole. In other virtues he had his limits, but in this he had none."

J. A. STEWART.

#### "ENGLISH MEN OF LETTERS."

*Charles Lamb*. By the Rev. A. Ainger. (Macmillan.)

ANOTHER link has been added to the chain of associations connecting the Temple with the memory of Charles Lamb. From the place of his birth and oldest recollections, of his chosen residence—his lifelong abode, could he have had his wish—and of his regretful remembrance, we now receive his latest biography. In its composition, Mr. Ainger has not only consulted the authorities he enumerates at starting, but has also "had the advantage of communication with those who were personally acquainted with Lamb, and has received from others valuable assistance in exploring less-known sources of information." With the exception of Mr. Crossley's reminiscences, no very conspicuous addition has been made to what was already known; and, from certain omissions, I infer that Mr. Babson's *Elia* (and, perhaps, a work or two more named by Mr. Ireland in his monograph on Lamb, Hunt, and Hazlitt) has not been laid under contribution.

The succession of Lamb's chief works is closely followed, and the chronicle of his doings gives a clue to his correspondence very useful to any reader who may take up Talfourd's delightful, but devious, memorials. A four-volume edition of Lamb was published some years since. Unfortunate in some respects, it had the merit of presenting his letters in groups under the "nomination of the persons written to"—each group in strict order of date. It was then seen how Talfourd (under the pressure of divers considerations) had dealt with his material. Characteristic bits had been softened. Frag-

ments of the same letter were found in different volumes, and part might be suppressed altogether. The narrative—charming in its genial admiration of Lamb—wanted sequence and proportion.

In the present work, "order gives each thing view." The story glides easily, "without overflowing, full." Not forgetting Procter—who stands apart, and the lines of whose sketch are closely followed here and there—this *Life*, for comprehensiveness and sustained judgment, as a clear drawn-to-scale biography, is the best we possess—evidently a labour of love, and a real service to Lamb's memory. It sets a new race of readers, who know not Charles, right on their ways to due appreciation. For Lamb was, in a covert way, his own Boswell, and the more we know of him the better we shall understand the disguised autobiography in his works. Here the whole tale is unfolded, from the cramped but happy school-life at Christ's Hospital, with its glimpses of old-world country life, and the sad return to the grim home. We are told how the boy "came to age" in that terrible tragedy in whose shadow he was to walk all his life long—and how he nerved himself in fixed resolve to do his duty to the end. We are shown the course of the troubled but monotonous years; the recurring insanity of Mary, and the irksome humdrum of Charles's life at the India House. But the last was no unmixed evil. His armour against poverty might gall him now and then, but it braced him too; and when he could cast it off and "go home for ever," he soon missed its support, and sank beneath the heavier burden of too much liberty. He lived for only nine years after his release, and those years were not happy. His literary career, as far as production was concerned, nearly coincided with his clerkship. But reading was to him as the breath of life, and his last letter, only five days before the end, is an enquiry for a missing book.

The account of Lamb is adorned by a hundred unobtrusive felicities of statement and observation. To take one instance, the comment on the difficulties of the "dual loneliness;" "they wanted some strong human interests from outside to assist them to bear those of home." Then we have the vindication of the originality of the *Specimens*, the careful presentment of Coleridge's relations with Lamb, and the very happy reconciliation of the differing impressions as to Lamb's person and manner. But not every reader will forgive the acrid pomposity of Carlyle's "sorry phenomena." The wisdom of a sage who could not penetrate such appearances as Charles and Mary must itself have been rather phenomenal, and the excuse here given will not avail for the insult to one whose manner to strangers was always mild, and whom Hazlitt—not a lenient judge—declared to be "the only truly sensible woman he had ever met."

In the concluding examination of Lamb's literary and artistic judgments, there is a delicate unravelling of less obvious thoughts and connexions of thought. By this tenderly careful exposition we are led to see that Lamb's criticism is (to turn the old Puritan phrase) "heartwork," and that its loving sincerity has ensured him an ever-

lasting remembrance along with those worthies on whose work he dwelt so fondly.

One suggestion I would make in view of future editions. This book is of smaller bulk than many of its fellows in the series. Might not a few more pages be profitably assigned to additional extracts from the letters, extracts not of a gloomy complexion—*e.g.*, the interview with the Cottles, the production of Godwin's *Antonio*, and some passages anent the "Heathen"? For the effect of the main story cannot but be pathetic, and is apt to become depressing. It might be well to show, even more fully than is already shown, with what unfeigned and resolved cheerfulness Lamb did and suffered what he must. If he "stumble by day upon dark mountains," he can believe that presently "something will shine out," and so can "gather himself unto the old things" wherein he delighted. The stream of circumstance was to him a Baca whose bitter springs were divinely changed into waters of comfort—a Bethesda, troubled only by the frequent and healing touch of one greater than an angel. R. C. BROWNE.

*John Leech, and other Papers*. By John Brown, M.D., LL.D., &c. (Edinburgh: David Douglas.)

WE have here a pleasant volume of the later writings of Dr. John Brown, essays which have not in this country been previously collected from the various magazines, pamphlets, and newspapers in which they originally appeared, though several of them have been included in the *Spare Hours*, published by Messrs. Ticknor & Fields, of Boston. They have all the vivacity and genial insight which characterised the previous *Horae Subsecivae*, and made the name of Dr. Brown a kind of household word with so many of us. In Leech and Raeburn, who are dealt with in two of the most important articles, the author has found artists after his own heart—men who were both of them true humanists, a thousand times more keenly interested in the life and character which they portrayed than in the mere technicalities of their art. The paper from which the volume is titled, and its supplementary chapters of personal reminiscences by Canon Hole, form quite the best and fullest account that has yet appeared of the greatest of recent pictorial humorists; indeed, they may be regarded as a final and sufficient record of a man in whose life there was too little incident, in whose art there was too little variety, to justify the publication of a formal biography, and whose personality is most fittingly brought before us by the more or less desultory anecdotes and reminiscences of his friends. The notes that connect his art with the past of pictorial comedy among us, the few biographical facts that are needed, are given in a brief and interesting fashion, and then the wonderful designs which Leech used to pour forth week by week for our delight are described and criticised with a sympathetic insight and a humour kindred with that which created them, which entitle this part of the paper to rank with the review of the *Pictures of Life and Character*, written by Thackeray thirty years ago in the *Quarterly*. Not less

vivid and forcible is the essay on Raeburn. Dr. Brown is thoroughly at home among the old-world Scotchmen who live on Sir Henry's canvases; and the paper is really a valuable addition to our knowledge of the most famous of Scottish portraitists, for, though the biography has been founded upon Cunningham's Life, it is enriched with many new facts furnished by the friends and descendants of the painter, and with a record of his way of work contributed by one of his sitters.

The interest of a large proportion of the remaining papers in the volume is also biographical. They are the recollections of half-a-century by one who remembers Sir Walter "as he used to walk up and down Princes Street as we boys were coming from the High School;" not biographies in any elaborate or ponderous sense, but rapid and vivid character-studies, bright glimpses of the men and women of the past as they lived and moved. They are gathered from all classes of Scottish society, and range from "Jeemes the Doorkeeper" in the church of which Dr. Brown's father was clergyman, to the stately figures of Highland chieftains, to Robertson of Struan, and the late Duke of Athole—

"that living strenuous protest, in perpetual kilt, against the civilisation, the taming, the softening of mankind. . . . A genuine character, with a look and a step, a set of his glengarry, an everything all his own, and a thoroughness, cordiality, and kindness of nature, all the more delightful and unforgettable that, like the honey in Samson's lion, it took us all by surprise."

We have some vigorous portraits of old members of the Scottish bar—of Lord Eldin, with "his merciless and too often unspeakable Swiftian humour;" of Jeffrey, "keen, instant, unsparring and true as a rapier;" of Cockburn, "with his wonderful eyes;" and of Lord Robertson, with

"that spacious expanse of visage, that endless amount of face, capable of any amplitude of stare, like a hillside, and a look of intentional idiosyncrasy, at once appalling and touching, . . . while within was no end of the same rich, glorious, overtopping humour; not so much an occasional spate of it, much less a tap, or a pump—not even a perennial spring, rather say an artesian well, gushing out for ever by hogs-heads, as if glad to escape from its load of superincumbent clay."

In the midst of these sketches of quaint or potent personalities, we have two delicate studies of Scottish girl-life. One tells the short life-history of Marjorie Fleming, "Pet Marjorie," the loving, precocious child-friend of Scott, who wrote the oddest poems, diaries, and letters, and died at nine; the other records the marvellous "Mystifications" of Miss Stirling Graham, her personations of old Scottish characters which amused the Edinburgh of sixty years ago, and imposed on Jeffrey and on his contemporaries.

One very obvious characteristic of these papers is their appearance of ease and spontaneity. They impress us as the work of one full of his subject, delighted with it, and expressing quite naturally and of necessity his delight to his readers. We can believe that they were composed with something of the rapidity with which "Rab and his Friends" was written—between twelve and four of a

summer morning, as the author tells us in one of his pleasantly garrulous prefaces, in which, in true essayist's fashion, he button-holes his reader and talks with him familiarly and as with a friend. In their unlaboured ease the contents of the present volume contrast curiously with the productions of another very enjoyable Edinburgh essayist, Mr. R. Louis Stevenson. The writers are alike in this, that the most delicate and final work of each has been given us in a short story—Dr. Brown's in "Rab," and Mr. Stevenson's in his strange and fascinating "Will o' the Mill," which we hope soon to see collected from the pages of *Cornhill*, and included in a volume of the author's other interesting, though less perfect, essays in fiction. But Mr. Stevenson's writings bear on every page traces of the most conscious and careful literary art. Part is fitted to part with scrupulous exactitude, each sentence polished like a porphyry column; while Dr. Brown's essays seem to have grown rather than to have been built, their thought finding naturally its instant and inevitable embodiment in words. It is curious, too, to contrast the pungent cynicism of the younger man with the genial humour of the elder—the one tending continually to epigram, the other to racy anecdote.

J. M. GRAY.

*Old-Greek Education.* By J. P. Mahaffy. "The Education Library." (Kegan Paul, Trench & Co.)

THE reader of the 150 pages in which Prof. Mahaffy discourses upon Greek education is a little tempted to surmise that the writing of them was due less to a productive impulse on the part of the author than to the flattering importunity of an editor or publisher. We are rendered perhaps too prone to such injurious suspicions by the contents of the many periodicals of the day, and by the fact that hardly a month elapses without the starting of some new series of books. In any given instance, therefore, the suspicion may be unfounded. But, with regard to the book before us, we cannot help thinking something of the kind to be true. It is a readable book, marked by the qualities which have always distinguished its author. Possessing an unusually copious and complete knowledge of Greek life and literature, he carries his learning very lightly, and handles his subjects, not with dry precision and the heaviness of historical dignity, but with great freshness and liveliness, with independence, and with plenty of the common-sense which among learned men is not always common. In writing of Ancient Greece he thinks of the present day, and has that keen interest in real life without which the work of a historian loses all its savour. Indeed, he may be thought to carry his modern parallels and modern applications to excess. But these things cannot wholly conceal, though they may veil, the fact that a book of this kind on the subject of Greek education was hardly wanted, and that there are very meagre materials for making one up. A book for scholars would of course be a different thing, and the full discussion of many obscure points would provide abundance of matter; but for a semi-popular *résumé* of results like

the present work there is really but little reason.

The cause of this is by no means entirely the scantiness of our knowledge; it is in great measure the extreme simplicity of the system which Prof. Mahaffy has to describe. Most of our modern subjects of teaching were unknown to the Greeks, and most of the questions that perplex and divide us had not yet arisen. They had not to decide between a plan for training the faculties or forming the character, and a plan for imparting the greatest possible amount of information, because they had in reality very little information to impart. They had not to debate the respective claims of dead and living languages, because for a long time there were no literary works besides their own, and because they very seldom had occasion to speak in a strange tongue. They were not in doubt whether literature and languages on the one hand, or science on the other, should form the staple of education, for the sciences were barely in existence, and there was very little literature. History and geography were hardly taught, if taught at all; and there was next to nothing known of either. It may almost be said that, in the words of Milton, "for the book of knowledge fair" the young Greek was "presented with a universal blank." Nearly all that he had to remember was some poetry and music, a little arithmetic, and how to carry and conduct himself like a gentleman. His education was, indeed, not the school he went to and the things he was taught, but the city and the society in which he lived. Nor were the Greeks troubled by another great question of to-day—the comparative advantages of day-schools and boarding-schools, for day-schools were universal, and boarding-schools unknown.

Prof. Mahaffy goes systematically through infancy, childhood, boyhood, and adolescence, treating perhaps occasionally of things which scarcely come under the head of education—such as the management of babies and the games of little boys. He naturally dwells on the prominence of physical training. In comparing the exercises customary in Greece with the cricket and football of our English schools, he gives a decided preference to the latter, on the ground that they require more brains and more character, and also that they lead to the formation of "clubs and teams of boys, in which they choose their own leaders, and get accustomed to self-government, and a submission to the superior will of equals, or the decision of public opinion among themselves."

He indicates, but hardly professes to explain, the difficulty that may be felt about the treatment of music by Greek theorists. After devoting some space to the military training of the Ephebi, he goes on to the familiar topic of the education offered by the sophists and rhetoricians, repeating and enforcing on this point the views of Grote. The last chapter of the book gives some account of the "university life" at Athens in later days, which was more fully described a few years ago by Mr. Capes. There is also a brief review of Greek theories on education, in which Plato and Aristotle are criticised with some acerbity, and which gives rise to a

digression on the possibility of improving the breed of men.

It may be pointed out, in conclusion, that the book bears some traces of insufficient revision. "Let them appoint whomsoever they think will be most zealous" (p. 138) is a solecism; and "this is further proved by the use of protecting *ear-caps* (*ἀμφωτίδες*) in boxing, a thing which no modern boxer would dream of doing" (p. 33), cannot be called good English.

HERBERT RICHARDS.

*Victor Hugo and his Times.* By A. Barbou. Translated from the French by Ellen Frewer. (Sampson Low).

OBJECTIONS are often, and not unreasonably, made to contemporary biography. It has one drawback, which is almost insurmountable—that it must almost of necessity be either definitely hostile or definitely friendly, neither of which attitudes becomes a biographer. Still "my people loves to have it so," and it will probably be admitted generally that if anybody deserves well a biography it is the unquestioned leader of contemporary European literature, whose literary influence has been not less remarkable than his literary performance; and who, independently of letters, has played a part as to which there is room for several different opinions, but which certainly is not insignificant. There is a very considerable Hugo literature already; but it is decidedly scrappy, and the most authentic account, that of the well-known "Témoignage de sa Vie," does not bring the history down to anything like the present day. So M. Barbou was quite justified in writing his book, and Miss Frewer in translating it. For readers will find here the most complete (though there are certain eloquent little omissions), and not the least interesting, account of Victor Hugo's life-progress from Besançon to the Avenue d'Eylau. Besides, the book has a special claim. It is elaborately illustrated with portraits, with views of houses and situations, with illustrations of the Works, and last, but by no means least, with a considerable number of reproductions of the poet's own drawings; at which art, in a certain unconventional way, he is a known adept. All of these are very welcome, except some of the illustrations from, or of, the Works, which might have been omitted with a great deal of advantage. We could also have wished that the book, which is, in many respects, a very handsome one, had found a more graceful coat than its present gaudy uniform of red and gold.

Miss Frewer has done her work as translator tolerably well, but not much more than tolerably. She seems especially bothered by the proper names. Why should the merely English reader, for whom, of course, such a book is intended, be told that such-and-such a place is in "La Pouille," which it is ten to one that he will never identify with Apulia; or be informed of a Bishop of Ptolemaide, instead of Ptolemais; or, most wonderful of all, have to hear of the spite of the "Imperial Zoileans"? What, in the name of wonder, is a Zoilean? Is he a mixture of Zoilus and Boileau, with a misprint of *n* for *u*? If he is not, we frankly confess that we do not know

what to make of him. This, of course, is not M. Barbou's fault; but for not a few other weak points in the book Miss Frewer is guiltless, and M. Barbou must bear the blame. His desire to represent a great poet as not merely that, but also a great politician, a great philosopher, a great hero, and a great half-a-dozen other things, has driven him into ludicrous inaccuracies and still more ludicrous grandiloquence. We have no desire to enter into controversial topics, though it is, to say the least, odd that while the men of the 2nd December were thirsting for the poet's blood, as M. Barbou suggests, he was not only able to escape their bloodthirsty designs without the least difficulty, but also received back his sons, who were in the hands of the tyrant, without their having suffered the least damage. But, putting all this aside, what is the good of saying that, "as he knew that the sacrifice of his life could be of no benefit to anyone, he did his best to escape from the assassins"? It would certainly seem that the unfortunate absence of humour which alone prevents Victor Hugo from ranking with the three or four greatest names in literature has infected his biographer. To get away as quickly as possible from an unwelcome task, we shall only say that a biographer does but sully his pages, disgrace himself, and bring discredit on his hero by repeating the words of a private conversation in which the author of *Notre Dame de Paris* indulged in unjustifiable language about the author of *Colomba*. To talk of Mérimée's memory being "infamous" is to utter an absurd libel; to talk about his "declaiming" is to utter a still more absurd piece of miscriticism. As it happens, Mérimée never declaimed in his life; it might, perhaps, be well if other people indulged as little in that weakness. The present writer has, in his humble way, never lost an opportunity of expressing admiration for Victor Hugo's magnificent genius; he never intends to lose one; and he has no more sympathy with Bonapartism than with Republicanism. But few things can be more painful to a lover of literature to have once more forced upon his attention the attitude of the greatest contemporary writer of France towards another who, in his own department, was at least his equal. Those who know the subject know that political differences do not account for this attitude. Mérimée, as those who knew him best assert, and as his published works show, was by no means a fanatical Bonapartist; but he was, with Sainte-Beuve, the one man of commanding literary talent in France who declined to bow down before a literary dictatorship; and that, it is to be feared, was, and is, his crime in certain eyes.

As we have said, it is M. Barbou's fault, and not ours, if, from the respect due to the dead and to a *clarum et venerabile nomen* in literature, we have had to make this unpleasant digression. We shall not pursue the subject farther; nor shall we discuss M. Barbou's treatment of the expulsion from Jersey, or of the Bordeaux and Brussels businesses. It is pleasanter to repeat that we have here a full circumstantial and interesting account of the life of the poet and of the circumstances of the production of his poems. Of course, the materials are, to a great

extent, old. Dumas' *Memoirs*, Gautier's *Histoire du Romantisme* (not "du romantisme," by-the-way), and so forth, are drawn upon, as they always must be, for the history of the memorable days of 1830, when, as Villehardouin would say, no one had tried to *dépecer l'ost*; when the quest of the literary Graal engrossed Musset as well as Hugo, Sainte-Beuve as well as Mérimée, Vigny as well as Gautier; and when the "crapauds imprévus" (as Baudelaire oddly, but finely, has it in his sonnet) had not yet made their appearance. On later days not less noteworthy for their literary productiveness, if hardly as interesting in point of biography, M. Barbou has much that is curious and readable. He seems to be among the favoured few who have been permitted to rummage among the unpublished treasures of which the *Quatre Vents de l'Esprit* gave last year so splendid a sample, though, as with all such rummagers, his tongue is dumb in regard to all but the titles. All the poet's residences, from the Feuillantines to the Avenue d'Eylau, are pleasantly described, and most of them are figured in this volume. It is a pity that M. Barbou could not have inserted the graphic sketch of the Rue Royale apartments which was recently published in Dickens' *Letters*. Among the illustrations are to be reckoned portraits, not merely of the poet, but of most of those near and dear to him. The dates of the publication of his works, and, in most cases, of their composition, are given with commendable care. Perhaps not much can be said of the critical comments which accompany this information, for M. Barbou is nothing if not a *hugolâtre*. But, in truth, so long as the literary side of the matter is kept, though it is possible to praise Victor Hugo maladroitly, it is hardly possible to praise him excessively. If anybody is fretted by M. Barbou's amiable, but far from critical, devotion, let him go and take down from his shelves the *Feuilles d'Automne* or the *Légende* or the *Quatre Vents*. The breath of the lyrics and the surge of the alexandrines will very soon sweep out of his memory all feelings except those of delight. GEORGE SAINTSBURY.

*Geschichte Roms, während des Verfalles der Republik.* Von Dr. Carl Neumann. Hrg. von Dr. E. Gothein. (Breslau: Koehner.)

THIS book is of special interest for English teachers of ancient history and politics. The material is here published, just as it was put together for use, of a course of lectures delivered at Breslau University by the late Prof. Neumann. The work is necessarily incomplete, covering only half of the Roman Revolution, and written, as it seems, before the appearance of some very indispensable recent publications. But the striking fact about the book is the thoroughness of the preparation for professorial duties. These preparations for the lectures of a single semester, by a man who never used a note in the lecture-room, occupy more than six hundred pages of closely printed text, and yet show care in composition and some successful endeavour after clear and pointed

expression. They are a favourable specimen from that German workshop which is apt to supply us with timber when we ask for carpentry. If they lead us to suspect that the German professor sacrifices literature to the lecture-room by over-writing himself, they may also remind us that Englishmen might both speak and teach with greater solidity and power by examining themselves more searchingly on paper in what they are going to say.

The editor has by no means done justice to his author. He has added some references to the *Corpus Inscriptionum* and to the Handbook of Mommsen and Marquardt, but he gives neither index nor synopsis, leaving no landmarks for the reader but a few scant marginal indications and a division of the whole work into five gigantic chapters. But it is as well to put up with these not unexpected inconveniences when we meet with a German book of history written in sentences that are not cyclopean, and telling us of sensible doubts as well as doubtful conclusions. That Prof. Neumann had a clear vision and an honest mind is shown by the straightforward character of his writing, and by the absence of that frequent and ominous "ohne Zweifel" which is always suggestive of unsound reasoning, and is often the last resource of muddled brains.

Though the book may not unjustly be called a History of Rome in the earlier period of the Revolution, it is in fact just what is required in the lecture-room—a running commentary on the facts, combined with so much narration and criticism as may be needed to make the hearers understand the comments. These are often acute, if not brilliant; seldom one-sided, and never coloured by modern politics. The lecturer took, however, the prevailing view of the causes of the Revolution, and, while stigmatising the Roman oligarchy, included in his censure the feebleness of the moderate party in the Senate, from Scipio Aemilianus to Antonius and Crassus. They should have taken reform into their own hands, he says—as many have said before him. But he does not tell us what reforms were possible for men bred in that peculiar school where Roman republicanism met Greek political philosophy, and threatened by a revolution which their training gave them no clue to understand. The historical antecedents of the Roman constitutionalist are not so brought out as to explain his constitutional prejudices; nor is the State machinery taken entirely to pieces in order to illustrate the extreme danger of the breakdown which he feared. This chapter of Roman history will never be written but by an unprejudiced student of Cicero's political writings, taken in combination with Cicero's own life and with the earlier history of the constitutional party.

One other criticism may be made in this short notice of a valuable book. We should have expected a German professor to give his class some idea of the value and classification of the authorities to which he so constantly refers. His account, for example, of the tribunate of the younger Drusus (pp. 450 ff.), which is most interesting and suggestive, would rest on a surer basis if this had been done earlier in the work. But this and other

defects would doubtless have been remedied had the lecturer anticipated authorship. The work, published as it is, will not be a land-mark in the route of Roman historical research; but it is the contribution of a clear-sighted and industrious man, who must have been an admirable teacher, and might, if he had lived, have risen to a high rank as an authority.

W. WARDE FOWLER.

#### TWO BOOKS ON CHESS.

*Chess Practice.* By H. E. Bird. (Sampson Low.)

*A Complete Guide to the Game of Chess; from the Alphabet to the Solution and Construction of Problems.* By H. F. L. Meyer. (Griffith & Farran.)

MR. BIRD is well known as a player of the first class, and his book of *Chess Masterpieces*, published in 1873, is one of the best collections of fine games that has been ever made. The present work, inspired, probably, by the success of that collection, gives specimens of the manner in which the various openings have been played in actual games by the leading masters; but the examples of theory reduced to practice are not confined to the games published in the *Chess Masterpieces*, but are also gathered from the more recent contests of importance that have since taken place. The idea is a good one, for to the learner there can be no better guide to any particular opening than the manner in which it has been actually played by some great master. Of course, the best methods of attack against incorrect defences cannot be acquired by this royal road, but there can certainly be no better method of learning the correct defence in any particular opening.

As in all his other works, Mr. Bird evinces his predilection for certain *outré* openings of his own which have not obtained the sanction of the authorities on the theory of the openings, and which would probably not be as successful in other hands as they often are in his own. In truth, the very originality at which he aims affects his judgment on points of theory, a notable instance of which is afforded in a variation recommended by him for the attack in the Gionco piano (p. 42), which is, in fact, identical with the Evans gambit declined. No great player would fear to adopt the Evans gambit as first player in a match, if he were sure of its acceptance; but what gives pause to the boldest match-player is that the gambit can be declined so as to produce the very opening recommended by Mr. Bird for the attack which all other leading masters consider favourable for the defence.

Other examples of Mr. Bird's eccentricity of opinion on the openings will be found by the experienced player in *Chess Practice*, in the Introduction to which he still stands by a defence to the Bishop's gambit, invented by himself, universally recognised as dangerous, and which we think would rarely prove successful in the hands of anyone but its author. In the examples given by Mr. Bird to support his irregularities, the reader will find, however unsound may be the theory, the exposition of chess practice as brilliant as

the author's reputation would lead him to expect.

Mr. Meyer is known as a composer of chess problems, but is not generally acknowledged as an authority on the game. He would have been better advised had he confined himself to that branch of chess which he has most studied, and not aimed at universality. About one-half the book is devoted to chess play; and the third part is a collection of problems, ninety-six in number, in addition to certain curiosities of the chess-board and powers of the pieces which are more in the nature of arithmetical puzzles.

In the first two parts of the treatise devoted to chess play there is no attempt at originality, except in form, and the information afforded to an intended learner is for the most part illusory. In regard to the openings, which are dismissed in seven pages, nothing more than the names is given. Fifteen examples of games then follow, most of them already well known to chess players, though it would be difficult to explain the principle on which the selection is made. Then follows a tolerably complete classification of end games, taken from well-known authorities, and, as above stated, the book winds up with a collection of fine problems invented by authors of all times and countries.

The rules given for the game are devoid of authority, and the following extraordinary maxim is certainly unknown in all the leading chess circles:—

"30. While the hand remains upon a man, it may be moved to any square that it commands, except such squares as may have been touched by it during the deliberation on the move; but if all the squares which it commands have been so touched, then the man must be played to such of the squares as the adversary may select" (p. 51).

The spirit of the author is, in some degree, shown by the fact that, when writing on Blindfold Play, no allusion is made to the extraordinary performances of Dr. Zukertort and Mr. Blackburne, who are unquestionably the leaders in this particular branch of chess. The reader is, however, presented with a game played blindfold by the author, looking at the same time at pictures, and conversing with two bystanders. The game played under these remarkable circumstances is, however, so poorly contested by his adversary as to be absolutely unworthy of preservation.

Three specimens of brilliant play in the middle game are given—one, at p. 91, ingeniously won by Anderssen. But the author omits to inform his readers that in this position there was an easy forced mate in five moves, which was, of course, superior to the plan really adopted by the master.

Of the eighteen end games in the book, two appear to be original, one, No. 2, p. 104, being of the most elementary description.

The third part of the book contains many very beautiful problems, and here the remarks of the author may be of use to the large class of problem-solvers and young composers.

JAMES INNES MINCHIN.

## NEW NOVELS.

*It is no Wonder.* By J. Fitzgerald Molloy. In 3 vols. (Hurst & Blackett.)

*The Adventures of Halek.* By J. H. Nicholson. (Griffith & Farran.)

*Annunziata Grimani.* By T. Louis Oxley. In 2 vols. (Kerby & Endean.)

THE secondary title given by Mr. Molloy to his book, "A Story of Bohemia," is scarcely borne out by the contents. The heroine, Capri Dankers, is indeed the daughter of a raffish half-pay captain, who ekes out his income by giving fencing lessons, and lives in a shabby lodging in Euston Road, and the leading young man is a rising artist with a studio in Fitzroy Street; but we find little or nothing of the manners and customs of the "beautiful city of Prague." Not only are the persons offered to us as citizens of Bohemia made to emigrate from its territory early in the course of the story, but they have nothing whatever of the true Bohemian temperament. On the contrary, the heroine, a singularly beautiful girl of half Neapolitan blood, not only loathes the sordidness of her life and its surroundings, and craves for luxuries, but avows her belief that money, and what money can buy, is the best and highest good attainable, or even desirable. The "cheery stoicism" of the real Bohemian, nay, the actual enjoyment of the makeshifts of poverty, is entirely absent; while as for Mark Phillips the artist, he, though without Capri's thirst for gold, has every intention of becoming rich, and in the meantime is perfectly respectable. The title of the story, in accordance with a current fashion, is a poetical quotation, borrowed from Mr. Tennyson's "Beggar Maid," in which character Mark Phillips, who is passionately in love with Capri, paints her portrait. A friend who, as a rising novelist, has access to, and some influence with, Mrs. Stonex Stanning, a rich, clever, and handsome young widow of artistic tastes, brings her to see the picture in the studio, and she undertakes to secure its admission to the Grosvenor Gallery. There it achieves a success, and is bought at a liberal price by Lord Harrick, an honest, dull, and strong-willed young peer of great wealth, who has also fallen in love with Capri, whom he has often seen when he visited her father to take fencing lessons. A rich, vulgar, and good-natured American widow picks up Capri at the Gallery, and engages her as companion at a good salary. The effect of the luxuries of her new home on Capri is to confirm her desire for wealth and station; and she consequently refuses Mark, to whom she is attached by old ties, and marries Lord Harrick, for whom she does not care. After a time, Mark consoles himself with a happy marriage to Mrs. Stanning, who has won his affection by first giving him her own; while Capri, after posing for a while with triumphant success as a great lady in the world of fashion, meets her fate in Guy Rutherford, an old friend of her husband, and of all novel-readers also, as he belongs to a stock type. She elopes with him in a very treacherous fashion, but also, it must be confessed, a very unusual one, seeing that the guilty pair go down from

London to Cornwall in the Great Northern express. There they get drowned together, as she insists on accompanying him in a boat which puts out in a storm to attempt the rescue of the crew of a wreck. The book is a little crude, and the style is careless even to the extent here and there of grammatical faults, while we have such Italian offered us as "*buona journa*" and "*buona sara*;" but Mr. Molloy has some genuine literary capacity, and his defects are chiefly those of haste and inexperience, which time and pains will cure.

*The Adventures of Halek* is a book belonging to the same class of literature as the *Utopia* and the *New Atlantis*, though, as being an allegory with veiled allusions to the existing state of religion and society, it is more nearly allied to *Erewhon*. It may be most conveniently described as *The Pilgrim's Progress* rewritten from a modern standpoint and in a non-Biblical style. Heaven, earth, and hell are depicted in it under the names of Adaroni, Benuben, and Kashep; while Benuben is divided into the three provinces of Pagam, Karom, and Sahitam, differing from each other in laws, customs, and moral standard. Pagam represents the state of the natural man, prone to evil, and even taking pleasure in it, yet with capacity for preferring and choosing good; Karom is man in a higher moral condition, ameliorated by sounder views of justice and religion; while Sahitam is the abode of the saintly, who, even as dwellers in Benuben, live the life of Adaroni. Every inhabitant of Pagam who desires to reach Adaroni must become a pilgrim, and at the least pass into the district of Karom, even if he do not press forward to Sahitam. And Halek is such a pilgrim. The allegory is worked out with much ingenuity and pains, and is not without inventiveness; and though it is a little difficult to follow here and there, and, perhaps, drags occasionally, yet the former defect is due rather to the subtlety of the author's thought than to any lack of power; while the latter may fairly be ascribed to the change in literary taste which has put allegory as much out of fashion as pastorals of the Strephon and Chloe variety. Had Mr. Nicholson written his book in the last century, he would have certainly achieved a popularity which is more doubtful now. The parts of the work most likely to please his readers now are those in which he indulges in a little quiet satire against some current forms of religiosity. The "Black-whites," for instance, whose creed consists in holding that a black stone in their temple is really white, and that no one who does not confess this as a fundamental truth can possibly be saved, are a sect with plenty of congeners all around us. The "Reasoners" are equally recognisable, and here is one of their apophthegms which is not without cleverness: "The fish that doubts may go without food; but the credulous one becomes food for the angler."

*Annunziata Grimani* is a translation of *Les Uscoques*, a romance by M. Milkowsky, dealing with a now obscure episode in the history of South-eastern Europe—namely, the guerilla warfare carried on against the Turks in Bosnia at the close of the sixteenth century by the native tribes, and notably by

the Uzkoks. Mr. Oxley tells us that he has not exactly reproduced the original work, but has modified it here and there; and it would have been well if he had applied this treatment to its idioms, which are too often left unchanged into the corresponding English forms. The alteration of the title is one of his changes, probably adopted to attract a public which is used to ladies' names as titles, but would not know what to make of the Uzkoks. One or two of M. Milkowsky's scenes are drawn with some graphic power, and the narrative has a patriotic interest for all Danubian Slavs; but the hand of a master is not sufficiently visible to attract the ordinary English reader to so unfamiliar a subject, even though a love-story is thrown into the bargain. RICHARD F. LITLEDAL.

## SOME BOOKS ON THE FAR WEST.

*Hesperothen: Notes from the West. A Record of a Ramble in the United States and Canada in the Spring of 1881.* By W. H. Russell. (Sampson Low.) Dr. Russell apologises for adding one more to the ever-accumulating mountain of books on the English-speaking countries of the New World. This is unnecessary. Anything from the pen of the historian of the Crimean War is sure to obtain a respectful hearing; and, though there is a never-ceasing flow of literature on America, we cannot afford to dispense with this perpetual current of impressions, memoranda, or graver descriptions. The lands across the sea are progressing so rapidly that the traveller who visits them to-day is apt to accuse his immediate predecessor of serious inaccuracy. Cities spring up like the towns which Eastern tales describe genii as rearing in the depths of Indian jungles; and, where the explorer of a few years ago encamped in peril of his scalp, his less romantic successors may, if they so please, share the hospitalities of a palatial hotel. Hence, to enable us to keep abreast of the ever-advancing West, it is absolutely necessary for intelligent tourists to record the changes which have happened since the book which theirs is to supersede was written. Dr. Russell has many qualifications for such a task. In the first place, he has seen many countries, and is thus in a position to profitably compare one with the other, instead of, like raw sightseers, to imagine that what is new to them is new to all the rest of the world, or that something which is common to every semi-settled region is peculiar to the one visited. He also ran across the continent under good auspices. As one of the party organised by the Duke of Sutherland and other directors of the North-Western Railway Company, every facility was put in his way for viewing the places visited. Lavish hospitality waited the distinguished tourists at every turn; and a journey, not at any time very difficult, was made sybaritic by the aid of Pullman-cars, special trains, and luxury which those who, twenty years ago, fought their way in four months' weary travail across the same route must regard as akin to the gorgeous state of Lothair. But, on the other hand, the ducal party saw everything in holiday attire. Like Lord Lorne in his progress through Manitoba, the world was in gala dress for the great British nobleman and his fellow-capitalists. Everything disagreeable was, as far as possible, concealed. Bunting and washed men were plentiful; and, though it was not in the power of the hospitable Americans to prevent their guests seeing something for themselves, it was their endeavour to compel them to look at the world on either side of the railroad track through the coloured spectacles supplied them in the form

of obsequious guides. In brief, the Duke—and Dr. Russell—were subjected to the process familiarly known in America as being “put through.” However, always remembering the circumstances under which they were written, these letters give a very fair and extremely entertaining account of a well-beaten track. There is, it is true, little new in them; but the old is pleasantly told, without any effort to unduly laud the mushroom communities of the Far West, or to sneer at the oft-times reprehensible “institutions” of a region where the bowie-knife and the six-shooter have not yet ceased to be powerful factors in an argument. Indeed, if anything, these weapons occupy a greater space than the “good American,” who is getting ashamed of them, will care to acknowledge. But the New World is so large, and contains a population so varied, that to those unacquainted with its extent it is easy to produce facts in support, or in refutation, of almost any statement affecting its social, religious, or political status. Still, the impression left is not very favourable, and possibly Dr. Russell is not particularly anxious that it should be otherwise. His letters, for the most part, appeared in the *Morning Post*, and neither in style nor sentiment do they rise above the level of that highly respectable mirror of the fashionable world. Necessarily, there is a great deal about the Duke and about the Duke’s friends. There is also a chronicle of much small beer which might very conveniently have been omitted, as it really has no interest for anyone save the individuals concerned. These deletions would have reduced the book to one volume; and, with every respect for Dr. Russell and his theme, the result would have been to give *Hesperothen* a better chance in the struggle for literary existence. The best pages are those describing the changes in the South since the author first visited it as the *Times* correspondent at the outbreak of the Civil War; the least satisfactory are those on Canada and California.

*Two Years in Oregon.* By Wallis Nash. (New York: Appleton.) Mr. Nash is an English barrister who, three years ago, published an account of a trip to the “Webfoot State,” which, if we recollect aright, was rather roughly handled in certain quarters. At that time it oozed out that he was “interested” in certain waste lands in the Willamette Valley; and a censorious world is always wary about receiving the assertions of even the most respectable of Zephaniah Scadders without some allowance for their vivid imaginations. Mr. Nash’s book was agreeably written and well illustrated. It related to a part of America very little visited of late years, and known, therefore, to a comparatively small number of people even in the United States. But his evident desire not to “let the lots go too cheap” damaged him in the eyes of critics familiar with the ways of land jobbers. He was haunted, so they said, with a desire to get people to emigrate to a country which, for his own part, he preferred to admire at a distance. The effect of these jibes was not lost on the author. More amenable to the strictures of reviewers than the wont of those to whom they tender good advice, Mr. Nash *did* return to Oregon, and the present little volume is the outcome of his two years’ experiences in the vicinity of Corvallis. Of course, it praises his Eden, puffs certain railways, and abuses others. This is only what we expect from such works. But, after examining the book very carefully in the light of an intimate knowledge of the greater part of the country described, we have no hesitation in saying that it gives a generally accurate and by no means exaggerated account of an extremely pleasant part of the Union. Every chapter bears witness to the rapid progress which Oregon is making. In the memory of men still middle-aged, it was a hunting-ground of the fur traders, and a

wilderness through which roamed great bands of warlike Indians. There is still living a judge who held his first court in the then newly organised territory under a tree at Salem, and the clerk swore in a jury not one of whom could boast of any more civilised foot covering than buckskin moccasins. Thackeray classed “Oregon Centrals” with “Patagonian Debentures” among the absurd things of the Stock Exchange. We have, however, lived to see an Oregon Central Railway; and in a few years the Northern Pacific will intersect the country far beyond the Rocky Mountains. The State has many resources. But we fail to see that in any respects it is superior—the Willamette Valley and a few similar spots excepted—to British Columbia, or that the English settler would not find a better home in Manitoba and other provinces of Canada. The climate is certainly milder, but it is also wetter, and the surroundings are not such as to charm the kind of settlers who would find their way to a region so far in the outer world. Mr. Nash’s book is, nevertheless, well worth reading. In the course of three years his style has deteriorated a good deal, and almost unconsciously he uses a superfluity of Americanisms. His wood-cuts are, however, as good as ever, and, in common with those in his former book, supply the best pictorial illustrations of Oregon with which we are acquainted.

*Manitoba: its Infancy, Growth, and Present Condition.* By the Rev. G. Bryce. (Sampson Low.) Since the Red River prairies of the old Hudson’s Bay Territory have become the Latium of the Eastern Canadians, there has been a plethora of books on the new province. Speculators are rushing breathlessly to acquire and hold “for a rise” lands along the route of the railroad, and wooden “cities” are dotting the prairie where but yesterday there were only Indian lodges. The country is, however, so good, despite its extremes of temperature, that it can well bear the exaggerated praise which would ruin a less meritorious region. Prof. Bryce, who is the head of the college at Winnipeg, writes more soberly than those literary Americans, the emigration agents. Indeed, he seems attracted more by the romantic history of Manitoba’s past than by the vulgar aspects of its present feverish stage of “settling up.” In an especial degree, the efforts of Lord Selkirk to bring Scotch settlers to this remote portion of America have fired his fancy, and, for the first time, justice is done that enterprising nobleman, who to the enterprise of Raleigh added the sagacity of Baltimore. By the aid of forgotten publications, private journals, and the information of men still living, Prof. Bryce has succeeded in writing a useful History of the peopling of Manitoba, and has added a chapter on its attractions as a home for the overflow of more civilised communities. Here and there the writer, who does not appear to have had much literary experience, errs in attempting bits of fine writing or absurd rhapsody. But, take it all in all, his book is one too meritorious for the historian of colonisation to dispense with. It is very readable; though, as it, in common with Dr. Russell’s and Mr. Nash’s volumes, lacks an index, the student compelled to consult its well-packed pages will be apt to anathematise those who could permit a book to go forth to the world in such an incomplete condition.

*A Year in Manitoba: being the Experience of a Retired Officer in settling his Sons.* (Edinburgh: W. and R. Chambers.) This pamphlet is an unassuming account of a military officer’s stay in Manitoba. There is no attempt at literary grace or, so far as we can see, any effort to do more than place before the reader facts as they occurred. Hence the booklet is likely to be more useful to intending emi-

grants than a more pretentious treatise. There is, perhaps, a little irrelevancy here and there, and a tendency to get garrulous over crotchets. The author is, on the whole, favourable to Manitoba, though justly severe on the self-seeking politicians who dominate Canada, and on the very unsuitable form of government which has been granted to Manitoba. He warns settlers against accepting the representations of interested parties in this country, or about being in a hurry to buy until they can look about them. Altogether, the “Retired Officer’s” contribution to the Manitoba literature is, with its map and pretty illustrations, likely to prove more trustworthy than the highly coloured descriptions which the emigration agents and steamship companies scatter broadcast.

R. BROWN.

#### NOTES AND NEWS.

MISS BRADDON’S forthcoming three-volume novel will be entitled *Mount Royal*. The scene is placed in one of the wildest and most beautiful parts of Cornwall, although, perhaps, the least visited.

THE new Education Code just issued by the Government represents a substantial improvement in the conception formed by the Education Department of the true aims and needs of elementary instruction. Here, two points only need be noticed. So much of the public grant as is now paid to schools on “results” will no longer be assessed merely on the number of scholars who pass an examination in reading, writing, and arithmetic, but will be determined also by the success attained in teaching other subjects, and especially by the quality and intelligence of the school-work as a whole. And in regard to some of the additional subjects, notably those of geography and elementary science, greater liberty than heretofore has been most wisely given to the managers of schools to frame alternative schemes, such as may be adapted to the special industries of particular districts, or to the special knowledge and aptitudes of good teachers.

MISS CHRISTIE (Lady Lennox) has just completed for Cassells a History of England for Standard V. on the lines she laid down in her “Dry Bones of Education” in the *Fortnightly*.

SOME recent researches undertaken by Mr. James Greenstreet, in conjunction with Mr. Walford D. Selby, of the Public Record Office, with reference to a “State Paper” which appeared in the January number of the *Antiquary* under the title of “A Sketch of the Low Countries, temp. James I.,” have raised some curious points with regard to the authorship of this document. Hitherto this humorous production has been claimed by Owen Feltham, and appeared in some of the later editions of his *Resolves*. The version now first printed from the “Conway Papers” contains the important addition of an introductory letter signed by “J. S.,” and is apparently the original of the sketch printed by Feltham. If “J. S.” was really the author of this production, there are some very strong reasons for assigning it to the pen of the “ingenious and witty” poet, Sir John Suckling.

MR. W. R. MOREFILL will give a course of lectures at Oxford in 1883 on “Early Slavonic Legal Codes” at the request of the curators of the Taylor Institution.

MESSRS. BLACKWOOD are about to publish, by subscription, a work from the pen of the well-known French archaeologist, M. Francisque Michel, entitled *A Critical Enquiry into the Scottish Language, with the View of Illustrating the Rise and Progress of Civilisation in Scotland*. This title is somewhat misleading, for the author does not content himself with au-

investigation of Lowland Scotch, but seeks, by an elaborate comparison of mediæval French and Scotch social life, to prove the thesis maintained in his *Les Ecossais en France, les Français en Ecosse*—namely, that Scottish civilisation is of French origin. Five hundred copies of this book have been printed, and the price to subscribers only will be two guineas and a-half.

MESSRS. W. AND R. CHAMBERS have just issued a new edition of their *Etymological Dictionary of the English Language*, which has been in preparation for some years under the editorship of Dr. Findlater. The dictionary has been entirely rewritten, with special attention to etymology, and is practically a new work.

A NEW weekly journal of agriculture, under the title of *Farm and Home*, has reached us. It claims to be a purely practical paper, written by farmers for farmers, and will, it is said, devote a large portion of its columns to house-keeping and domestic economy. The paper is published at 27 Southampton Street, Strand.

MR. WILLIAM M'DOWALL, editor of the *Dumfries and Galloway Standard*, and favourably known as the historian of Dumfries, is preparing for the press a new edition of a volume of poetry published some twenty years ago under the title of *The Man of the Woods*. It will include a number of new poems. Mr. M'Dowall is the oldest newspaper editor in Scotland.

THE firm of E. P. Dutton and Co., of New York, well known as church and juvenile book publishers, has just admitted Mr. E. C. Swayne into partnership. Mr. Swayne has during the past few years made annual trips to England, to arrange for English books on behalf of the firm, and he is well known to many English authors and publishers. One of the objects of these yearly visits is to bring to English authors whose books Messrs. E. P. Dutton and Co. publish the amount of royalty due to them—for the firm is one of those which never publish English books without making some recognition of the author's rights.

It was stated in our issue for last week that Mr. Knight, of the *Gentleman's Magazine*, was a candidate for the post of chief librarian of the London Institution. Mr. Knight has written to us to say that, although the idea of competing for the post in question was entertained by him for a few days, it was eventually dismissed, and that he has not been an actual candidate.

At the meeting of the Clifton Shakspeare Society on February 25, the following papers were read:—"On 'A Lover's Complaint,'" by Mr. T. W. Jacques; "The Sonnets and their Story," by Mr. John Williams; "A Cursory View of the Sonnets," by Mr. J. A. Sanders; "A Plain Man's Impressions of the Sonnets," by Mr. E. Thelwall; "Remarks on the Versification of the Sonnets," by the Rev. H. P. Stokes; "Shakspeare's Allusions in the Sonnets to his own Profession," by Miss Constance O'Brien; "Echoes from Shakspeare's Sonnets in Tennyson's 'In Memoriam,'" by the Rev. H. P. Stokes; and "On the General Absurdity of the Sonnets," by a member. The meeting was then adjourned to March 4, when the following additional papers were read:—"The Sonnets before Shakspeare," by Dr. J. E. Shaw; "The Sonnets and Modern Poets," by Mr. J. W. Mills; "The Probable Dates of the Composition of the Sonnets," by Mr. J. A. Sanders; and "Nature-painting in the Sonnets," by Mr. J. W. Mills. A visitor read a paper defending Shakspeare's rapture over the physical beauty of his friend. Discussion then took place upon the Sonnets in general.

DR. C. VON HOEFLER will publish shortly, with Herr Braumüller, of Vienna, a mono-

graph, chiefly from hitherto unknown Spanish sources, on "The Luther of Spain," Don Antonio de Acuña.

THE sale of the fourth portion of the Firmin-Didot library will take place in the first fortnight of June, when the books and MSS. relating to theology, jurisprudence, science, and art, and a collection of books illustrated with wood-cuts, will be dispersed. Among the MSS. are the Missal of Monte Cassino (1404); Books of Hours with Illuminations, executed for Anne de Beaujeu, Regent of France, for Mary of Burgundy, King René of Anjou, Marguerite de Rohan (grandmother of Francis I.), Louis XII., &c.; several treatises by Leonardo da Vinci, with drawings by Poussin; &c.

It is stated by the *Börsenblatt* that Paul Lindau and Ernst Dohm are engaged on the libretto of an opera of which Johann Strauss is the composer.

ACCORDING to the *Neue Freie Presse*, Berthold Auerbach's literary remains include a fragment of a projected autobiography, of which, unfortunately, the portion relating to his ancestors is all that he was able to complete. He intended to interweave with the autobiography a series of portraits drawn from life from the post-classical period of Germany, and these are ready for publication, as well as a number of shorter collected tales similar to those recently published under the title of *Deutsche Illustrirte Volksbücher*. A social romance, entitled *Der Meister und seine Gesellen*, is in MS., and will be suppressed in accordance with the author's directions. A long and uninterrupted correspondence which he maintained for many years with his relative, Dr. Auerbach, of Frankfurt, will probably furnish the best and most authentic materials for a memoir of the deceased novelist.

A GERMAN translation of Boccaccio's *Decameron* has been prohibited as immoral by the authorities of Frankfurt-am-Main.

It is announced that M<sup>me</sup>. Louise Michel has published a story of low Paris life under the title of *Les Méprisées*.

THE number of books and pamphlets published in Germany during last year was 15,191, as against 14,941 published in 1881.

A GERMAN newspaper is about to be published in Rome under the title of *Italienische Blätter*.

W. FRIEDRICH, of Leipzig, is about to publish a sumptuous edition of *Ahasver*, the epic poem recently given to the world by the Queen of Roumania.

Two volumes of tales by Ernst Wichert will shortly be published by Carl Reissner, of Leipzig, under the title of *Aus dem Leben*.

THE latest work of Ludovic Halévy is entitled *L'Abbé Constantin* (Paris: O. Lévy).

#### ACKNOWLEDGMENTS.

OF pamphlets, &c., we have received:—*The Pantomimes, and all about them: their Origin, History, Preparation, and Exponents*, by Leopold Wagner (John Heywood); *Description of the Chemical Laboratories at the Owens College, Manchester*, by H. E. Roscoe, from the Plans of Alfred Waterhouse, Third Edition (Manchester: J. E. Cornish); *The Anatomy of the Mouth-Parts and of the Sucking Apparatus of some Diptera: a Dissertation for the Philosophical Doctorate at Leipzig*, by George Dimmock (Boston, U.S.A.: A. Williams); *Suggestions for a Grand International Exhibition to be held at Manchester in 1882*, with a Brief Historical Review of the Chief Exhibitions from 1797 to the Present Time, by Ellis Lever (Manchester: "Guardian" Letterpress Works); *England under Free Trade: an Address delivered to the Sheffield Junior Liberal Association*, by George

W. Medley, for the Cobden Club (Cassell, Petter, Galpin and Co.); *Telynegion, ar Destunau Amrywiol*, by D. S. Evans (Aberystwith: J. Morgan); *Legends of Leading Cases*, by Touchstone (Reeves and Turner); *John Sobieski, Lothian Prize Essay for 1881*, by Edward H. R. Tatham (Oxford: Shrimpton and Son); *The Jews in Europe: Address delivered at the Academy of Sciences at Munich by I. von Döllinger*, Translated by Dr. David Asher (Office of the "Jewish Chronicle"); *Hints and Suggestions on the Formation and Maintenance of Libraries and Reading Rooms in Schools*, by Oswald E. Dawson; *Synchronised Clocks: a Lecture delivered before the Society of Telegraph Engineers*, by J. A. Lund (Effingham Wilson); *The Smoke Difficulty Conquered*; with Some Observations on "the Country Parson's Grate" and other Modern Fireplaces, by Frederick Edwards (Longmans); *French and English Papers: being Materials for Translation and Reading specially arranged for Advanced Pupils*, by Marius Deshumbert (D. Nutt); *Engineering Education at Home and Abroad*, by Edward Mitchell (College of Practical Engineering, Muswell Hill); *The Catholic Church and the Ritualists*, by A Catholic Layman (William Ridgway); *A List of Writings on Determinants*, by T. Muir (extracted from the "Quarterly Journal of Pure and Applied Mathematics"); *The Faiths of the World: St. Giles' Lectures, Second Series, I. and II., "Religions of India—Brahmanism and Buddhism," by Principal Caird: III., "Religion of China—Confucianism," by the Rev. George Matheson: IV., "Religion of Persia—Zoroaster and the Zend Avesta," by the Rev. John Milne* (William Blackwood and Sons); &c.

#### "SUPPLICATION."

(A TRANSLATION OF M. SULLY PRUDHOMME'S "PRIÈRE.")

AH! did you know how the tears apace  
Fall by a lonely hearth, alas!  
I think that before my dwelling-place  
Sometimes you'd pass.

And did you know of the hopes that arise  
In wearied soul from a pure young glance;  
Maybe to my window you'd lift your eyes  
As if by chance.

And if of the comfort you only knew  
A heart may bring to a heart that is sore,  
You'd rest a while, as a sister might do,  
Beside my door.

But if you knew of the love that enwraps  
My soul for you, and holds it fast,  
Quite simply over my threshold, perhaps,  
You'd step at last.

I. O. L.

#### MAGAZINES AND REVIEWS.

IN the February and March numbers of *Blackwood* there is a story called "Pentock" which is very far above the average of magazine tales, and deserves special notice. It is a simple story of modern life among the fisher-folk in a Cornish village, told with wonderful pathos and unusual dramatic power. The author is evidently a woman, as no man could have analysed with such knowledge and subtlety the secret struggles of pain and hope in the mind of the fisher-girl who is the central figure. The story is, on the whole, a sad one, and no one could read it without being moved to strong sympathy by the fortunes of the people of the tale, especially the noble end of the outwardly rough fisherman, whose strong love for the heroine enables him to perform the doubly heroic act of concealing his love and then dying to save the woman whose sweet and noble influence has raised him into a hero. All the characters are carefully finished, and each

has a very distinct individuality, which makes it difficult to believe that they are not real living people.

*Macmillan's Magazine* is distinguished by Mr. Tennyson's new ballad "The Charge of the Heavy Brigade at Balacava," a poem the rhythmic splendour of which is equal to any of the Laureate's previous efforts, while in martial spirit it surpasses anything he has yet written, and carries the reader away in its fiery sweep. Besides this *bonne bouche* we have a valuable article by Mr. Archibald Geikie on "The Geological Influences which have affected British History," and some interesting researches of Mrs. Gunton on "Queen Elizabeth at Hatfield." In addition to these papers of permanent value, there is an interesting account of Russian politics, founded upon experience of Russian opinion, by Mr. Costelloe.

THE *Cornhill Magazine* contains a pleasant study of "The Early Life of J.-F. Millet," which is a story of much simple pathos. There is also a good popular account of the results of M. Pasteur's experiments, and their possible influence on medical science, in a paper headed "Living Death-germs." A dainty poem, "The Sleeper," by Mr. James Thomson, is the only other contribution that calls for notice in a rather weak number of the *Cornhill*.

THE *Revista Contemporanea* of February 28 is more than usually interesting. In his series of studies of "American Poets," Fernandez Merino deals with the works of Manuel Carpio, a late Mexican physician. His verse is said to be free from the empty exaggeration of many poets of Spanish-America. In his religious pieces he draws his inspiration from the Bible; his love-songs are pure and manly; and the political condition of his country afforded only too much scope for lively satire. He is put forth by his critic as a model for young writers; but the quotations given hardly bear out the eulogiums pronounced upon them. "The Spanish Expedition to Italy in 1849," by Gen. de Cordova, increases in value and interest, and, from the numerous original documents cited, forms an important contribution to the history of the whole campaign. The chapter of "Polystoria," by Tinajero Martinez, is a laudatory analysis of the *Historia de la decadencia de España*, by the late Prime Minister, Cánovas del Castillo. In "My Impressions of Travel," by Capt. Bermeje, will be found a description of the arsenal and of Whitehead's factory of torpedoes at Fiume.

THE *Euskal-Erria* of San-Sebastian of February 20 reprints a contemporary "Relation of the Festival held at Azpeitia in 1622 in Honour of the Canonisation of Ignatius Loyola." The festival lasted ten days; and, with its succession of dances, masses, bull-fights, sermons, *juegos de cañas*, processions, comedies, devotional exercises, and masquerades, forms one of the most curious mixtures of things sacred and profane which we have ever seen.

THE current number of the *China Review* opens with a critical article by Mr. Giles on the translations of the New Testament into Chinese. Like everything Mr. Giles writes, this article is very readable; and he unquestionably points out some faults of style in the work of the translators. But it will, however, be a relief to some to find that he is not able to put his finger on any mistranslation such as disfigured the early Afghan version of the New Testament, in which the verse, "Judge not that ye be not judged," was rendered, "Do not do justice lest justice should be done to you." Mr. Parker follows Mr. Giles with an interesting chapter in continuation of his "Short Journeys in Sze-ch'uen." His account of the oil-wells in Western China is very curious; and his botanical experience will be of permanent value,

for he is able to identify many trees and shrubs which have hitherto been but names to European students. Mr. Balfour's sketch of the Emperor Cheng, the founder of the Chinese empire, is ably written, and gives us probably as good an idea of the man as the scanty materials contained in the Chinese Histories render it possible to draw. A review of the new "*Dictionnaire coréen-français*, par les Missionnaires de Corée," and notices of magazines, follow, to which are added a number of Notes and Queries of more than usual interest.

PETERMANN'S *Mittheilungen* contains an article on "Explorations in Patagonia between 1873 and 1881," illustrated by a map, and embodying a vast amount of information scattered through periodicals and official reports not easily accessible. The Argentine Government is making serious efforts to colonise this vast territory, but, as really fertile tracts are met with only along the eastern foot of the Andes, it would be in vain to look forward to an immediate success. The same number of the *Mittheilungen* brings a map of Mr. St. Vincent Erskine's explorations in Gasa-land, which, in addition to his earlier routes, also shows those travelled over between 1872-75. These have not hitherto been published, the map forwarded to the Royal Geographical Society never having come to hand.

### CORRESPONDENCE.

#### LITERARY IDENTITY.

Weston-super-Mare: Feb. 28, 1882.

Will you permit a constant reader of the ACADEMY to offer a suggestion on this subject? The "Author of 'Kitty'" very justly observes, "How safe authors are, ultimately, against any confusion, provided they append their names in full to each of their published works." Would it not be well if the "Author of 'Kitty'" herself adopted her own suggestion? In cases of identical surnames, it is by the Christian name that the public distinguishes individual writers; and between Miss Matilda Betham-Edwards and Miss Amelia B. Edwards there would no longer be any possible confusion. No confusion exists in the public mind between Mr. Thomas Adolphus Trollope and Mr. Anthony Trollope.  
 E. D. BRAYSHER.

#### JEWIS IN ENGLAND.

Alyth, N.B.: March 6, 1882.

Mr. S. R. Gardiner asks if the Jews who were brought to London from Amsterdam for financial operations in March 1643 were the first that had appeared in England since the days of Edward I.

On December 27, 1410, Henry IV. issued a safe-conduct for the Hebrew, Elias Sabot, of Bologna, Doctor of Medicine (Heliam Sabot Hebrewe de Boleyn la Crase Doctorem in Artibus Medicinarum), to come to England to practise for the space of two years—Foedera, viii. 667.

On February 18, 1412, Henry issued letters of naturalisation for his physician, "David de Nigarellis," of Lucca; this man also may have been a Jew—Foedera, viii. 725.

J. H. RAMSAY.

#### SPANISH AND PORTUGUESE "EZ," "ES."

6 Norfolk Terrace, Baywater, W.: March 6, 1882.

Dr. A. Burnell asks (see ACADEMY of March 4, 1882) whether the mere mention of Larramendi's name will sweep away all that Germany has done for science. My answer is, Decidedly it will not. But why does Dr. Burnell think that all that Germany has done for science consists in the solution of the question (the only one which is before us) of the Basque or non-Basque origin of Spanish and Portuguese -ez (-es)? Why, in this special question relating to two of Larramendi's native languages, illustrated by him with excellent grammatical and lexicological works, cannot he be right and German scholars wrong? If Dr. Burnell thinks the contrary, let him support by proofs the opinion of the latter as I have by proofs supported those of the former, instead of contenting himself with insinuations, contrary to what I have said, that I wish, not by proofs, but by the mere mention of the name of this great master of the Basque language, and at the same time great Spanish and Latin scholar, whom he treats so cavalierly, to sweep away all that Germany has done for science. I have given mine and Larramendi's reasons; let Dr. Burnell give his own in support of the opinion of the authors he follows.

With regard to Dr. Burnell's favourite Portuguese Grammar, if he consider Prof. d' Ovidio's criticism inconclusive, I hope he will give his reasons for considering it such, but I invite him to read it first; and I shall be very much astonished if, after having taken into due consideration what this distinguished Italian philologist says about the German author's Portuguese Grammar, Dr. Burnell persists in calling it "the best scientific." In fact, Dr. Reinhardt's work is nothing more, as d' Ovidio remarks, than a pretty good compilation of

other works, plus several mistakes. Works really scientific on Portuguese are, for instance, those of Coelho, Michaelis, and, in my opinion, the short, but scientific, *Grammatica Portoghese*, by the same Prof. d' Ovidio, whom, no more than Dr. Reinhardtstötner, I have the honour to know personally. L.-L. BONAPARTE.

"LANINI" OR "LUINI."

London: March 7, 1882.

Will you allow me to correct an error in your review of the "Art Exhibition at Lewes" which appeared in the ACADEMY of March 4? Your correspondent says: "The Catalogue which enumerates these treasures is a strange work. Besides palpable errors of attribution, for which its compilers were not responsible, there are errata of a wild kind. For Luini we find *Lantini*," &c. Some time ago, when I was able to see, at Paris, the interesting picture now at Lewes under the name of Lanini, no name whatever was attached to it, but some critics had suggested that it might be by some Spanish artist. After careful examination, I came to the conclusion, on account of the colouring—which, in my opinion, decidedly betrays the style of the Verrelli school—and especially on account of the peculiar drawing of the infant's hand, that this is a genuine work of *Lanini*, many of whose works are to be found in the Turin gallery. I must add that I fail to see in the style of this picture any resemblance with the style of Luini, who, no doubt, is better known to most art critics than Lanini. The National Gallery contains a very fine picture by Lanini (No. 700), but no work of Luini.

J.-P. RICHTER.

COSSA'S LAST VERSES.

Fern Bank, Higher Broughton, Manchester:  
March 4, 1882.

The notices which have appeared of the life and works of the late Pietro Cossa may probably give interest to his last verses, which, although they have appeared in several Continental papers, have not, so far as I am aware, been published in this country. They were first printed in the *Secolo*, of Milan.

Ogni volta che vedo un cimitero,  
Io penso a quella povera angioletta,  
Incompresa quaggiù come un mistero,  
Ognora pensierosa, ognor soletta.

Nessuno le rivolge la parola,  
Che, sola, in terra l'anima consola.

Ed ella si consueve a poco a poco  
Siccome fiore che non ha fragranza,  
Siccome bacio che non ha più foco,  
Siccome amore che non ha speranza:

Eppure amava e il suo triste mistero  
E per sempre sepolto in cimitero.

This has been set to music by Gustavo Tofano,  
Professor at the Conservatoire of Bologna.

WILLIAM E. A. AXON.

SOME RESEMBLANCES BETWEEN THE SHETLANDIC SPEECH AND THE GOTHIC OF ULPHILAS.

Lerwick: Jan. 21, 1882.

I would like to ask the attention of scholars better versed in the special subject than I am to some resemblances between the Gothic of Ulphilas and the Shetlandic speech. These have struck me as peculiar in more ways than one, but in one specially: in many cases the Shetlandic equivalent seems to have a closer resemblance to the Moeso-Gothic word than to the Icelandic. This is not what would be expected when one considers that, like the provincial Norwegian (of Ivar Aasen, for instance), or the existing Faroic speech, the Shetlandic is

an old Northern dialect, directly derived from Icelandic.

Not to encroach too much on your space, I shall at present confine myself to St. Matthew's Gospel, and select from it some illustrations—more or less interesting—of what I wish to point out.

Matthew iii. 11. *Skaudaraip* = shoe-strings. *Raip* = cord, rope is the Sh. form, and used where string would be a more usual Eng. equivalent. The Icelandic (Odd's vers. 1540) has here *skóklævi*. So also the modern version of B. and F. Bible Society.

v. 21. *Airizam*. In Sh. we have ere-yesterday for day before yesterday; ere-oy for great-grandson. But here a peculiarity may be noted. Oy = grandson is not known in Icelandic, nor the compounds ere-oy, du-oy (= great-great-grandson); so Dr. Vigfusson lately told me. But oy is Gaelic. It is singular that in a purely Norse district, with a Norse population, Gaelic words denoting close family relationships should have so taken root. The Icel. equiv. here is *inna gömlu* (Odd's vers.), i fornöld (B. and F. B. S.).

v. 22. *Fuinis* = fire. Up to living memory, in Foula, one of our remotest isles, *funa* was used for fire. Of course it is Icelandic; but *eldz* is used in corr. passage.

v. 24. *ga-sibjon*: *sib* = relationship. So also in vii. 23, *uneibjan* = "unsib."

v. 24. *gagg* = Sh. gang. Mod. Icel. far burt. *ib. sprauto*. Sh. spirt = Eng. spirt, but with the sense also of running quickly. Icel. *snarlga*. The Gothic is nearer Eng. sprightly.

v. 29. *marrai puk* = Sh. mar thee. So if one be reckoning up, and another interrupt him, and throw his figures in confusion, he is said to "mar" him; not in the sense of Eng. mar = maim or disfigure him, but to confuse. Icel. *hneykslar* pig.

vi. 6. *jah gabukands* = Sh. and locking = closing a door, not necessarily with the sense of turning a key. So Icel. *loka*.

22. *ainfald* = æ-fald. So the older Icel. vers. *ein falt*; but the modern has, *heilskygnt*.

25. *matjaith* = meat in the sense of food.

(v. 25) Icel. *eta* = eat.

viii. 2. *gahrainjan* = rinse; Sh. *rense*. 12. *hindumisto* = extremest, hindermost. This word is now used not aspirated, and not with the sense of locality, but something equivalent to modern Eng. slang word "awful." Icel. *yztu*.

viii. 14. *Svaihron* = Eng. mother-in-law; in Sh. *Swager-breeðir* = men who have married sisters as distinguished from *güd-breeðir* = two men, one of whom has married the other's sister. So also in Mark i. 30, *Svaihro*. Icel. *móður konu haus*.

ix. 17. *baglins* = Sh. buggies, bags made of sheep-skin. Icel. *leðr-belgi*.

xxvi. 2. *Paska* = Sh. Pase.

67. *lofam slohun* = Sh. loof or luf.

74. *afdomjan* = damn. Icel. *formæla sér*.

xxvii. 6. *Skattans* = Sh. Skatt.

7. *Kajins* = Sh. Kesje, a straw basket or case. I presume this is same as Eng. case.

51. *di-skritnan* = Sh. skrit, to tear (with the sense of a harsh, grinding sound). Icel. *rifnað*.

ib. *inupro* = up through Sh. This is like the frequent use, both in modern Norse and in Shetlandic, of adverbial phrases of place, such as up-over, north-over, back-over, down-over, &c. Icel. *ofanverðu* (Odd); *ofan frá* (modern).

64. *abraba*. So in Luke xv. 14, *aber* (an aber hunger). This word is used in Shetland with the sense of keenness, greediness. Thus they apply it to a grasping, avaricious man. Icel. *mjög* (Odd).

There are many words and idioms besides

these which I might have singled out; and, if it be found of any interest, I should be glad to send additional lists from the other gospels or the rest of Ulphilas.

I might mention, before finishing, that the second pers. pron. in Sh., *pu*, with the *p* very soft, takes for the second pers. pres. indic. *is*. So in Gothic, "*pu* is Christus" (Mark viii. 29). This differs from the Icelandic, which takes *r* in the second pers.; but, if I mistake not, the older Icel. form corresponded with Moeso-Gothic and the present Sh. dialect in retaining *s*.

ARTHUR LAURENSEN.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 13, 5 p.m. Royal Institution: "The Attitudes of Animals in Motion," by Mr. M. M. M. M.

5 p.m. London Institution: "The Elements of Etching," by Mr. Seymour Haden.

8 p.m. Telegraph Engineers.

8.30 p.m. Geographical.

TUESDAY, March 14, 3 p.m. Royal Institution: "The Mechanism of the Senses," IX. by Prof. J. G. McKendrick.

8 p.m. Civil Engineers: "The Design of Structures to Resist Wind Pressure," by Mr. C. B. Rinder: "The Stability of Structures against the Wind," by M. Jules Gaudard.

8 p.m. Royal Colonial.

WEDNESDAY, March 15, 8 p.m. British Archaeological: "The Sculptured Books near Ikkley," by Mr. J. R. M. M.

THURSDAY, March 16, 3 p.m. Royal Institution: "Remembrances of Sound, Light, and Heat," I, by Prof. Tyndall.

7 p.m. London Institution: "Roman London," by Mr. Alfred Tylor.

8 p.m. Royal Historical: "The Site of the Conference on the Severn (Olney or Deerbury) between Edmund Ironsides and Canute," by Dr. J. A. M. M.

8 p.m. Chemical: "Valence," by Dr. Armstrong.

8 p.m. Chemical: "Pentathion Acid," by Mr. W. M. M.

8 p.m. Chemical: "Some Constituents of Neen Spirit," by Mr. G. H. Morris: "The Preparation of Diethylophosphamine and the Action of Sulphuric Acid on that Substance," by Mr. B. Smith.

8 p.m. Linnean: "The Action of Carbonate of Ammonia on the Root of Certain Plants," and "The Action of Carbonate of Ammonia on Chlorophyll Bodies," by Mr. C. Darwin: "The British Salmon," by Mr. J. Day: "The Breeding of the Shropshire Meres," by Mr. William Phillips.

FRIDAY, March 17, 7.30 p.m. Philological: "History and Explanation of the Consonant Shift in Grimm's Law," by Dr. J. A. H. Murray.

9 p.m. Royal Institution: "Infra-Red Rays of the Spectrum," by G. W. Abney.

SATURDAY, March 18, 3 p.m. Royal Institution: "Volcanoes," I, by Prof. H. G. Seeley.

SCIENCE.

*The Physics of the Earth's Crust.* By the Rev. Osmond Fisher. (Macmillan.)

THE author in twenty-one chapters discusses the principal facts connected with the interior heat of the earth, the elevations and depressions of its surface, and the causes and effects of volcanic action. He shows that the rate of increase of temperature, as the distance beneath the earth's surface is augmented, is, on the whole, an equable one, and may be taken to average about 1° F. for every fifty-one feet (misprinted *degrees*, p. 267) of descent. And thus at a depth of about thirty miles all known rocks would be in a state of fusion. As to the condition of the interior of the earth, we are first led to a discussion of the density. The surface density is between 2.56 and 2.75, while the mean density of the whole earth is 5.5. Thus the density considerably increases as we approach the centre of the earth. Everything points to the conclusion that the earth has once been in a molten condition; the main question for consideration is whether it is still molten within, or whether this condition has passed away, and it is now solid. It has been thought by some, however, that the interior of the earth may be "potentially hot"—that is to say, really solid on account of the enormous pressure to which it is subjected, but

ready to become fluid at any moment when the pressure is diminished or removed. Having discussed the arguments of Hopkins and of Sir William Thomson, the author asserts that the requisite great rigidity which the earth must possess in order to enable it to resist the deforming influence of the attraction of the sun and moon does not require that the earth should be absolutely solid from the centre to the circumference. A rigid nucleus nearly approaching the size of the whole globe, covered by a fluid substratum of no great thickness in comparison with the radius, with an outer crust of less density floating upon it, would meet the difficulty. "This is the supposition," says the author, "as to the condition of the earth, which appears, on the whole, to satisfy best the requirements both of geology and of physics." Thus the solid nucleus would owe its solidity to the great superincumbent pressure, while the outer crust would owe its solidity to having become cool through radiation, while the fluid substratum would remain in that condition because it would not be submitted to sufficient pressure to render it solid, while it would retain sufficient heat to render it molten. As to the density, von Waltershausen has calculated that the density at the centre of the earth is 9.59, under a pressure of 2,500,000 atmospheres, and he thinks it probable that the magma beneath the outer crust consists of felspathic materials, passing lower down into augitic, and finally at the centre into a magnetic magma.

The next problem to be discussed relates to the manner in which the heat and the gravitation of the earth have produced the elevations and depressions and puckerings of the surface. To explain this it is generally thought that, as the cooling of the earth proceeded, the interior retreated from the solidified crust, and that the latter became crumpled and contorted by the lateral pressure. The author has calculated that the pressure available for this purpose would be equal to that of a column of rock of the surface density, having the same section as the stratum, and 2,000 miles in length—a pressure equal to 830,200 tons on the square foot, and more than sufficient to perform the operations assigned to it.

Volcanic eruptions probably arise from liquid masses of the substratum gaining access to the surface, and we must conceive that the water which accompanies all volcanic phenomena must be present in the magma of the substratum. "We may look upon the state of igneo-aqueous solution," observes the author, "as one in which the water-substance is in a gaseous state, and the combination between the water-substance and the rock is probably of that kind, which has been termed 'occlusion' of gas by a liquid."

An examination of the amount of contraction which would have produced the existing inequalities of the earth's surface shows that the ocean basins are not the result solely of depressions in the upper surface only of a crust of uniform density, but that they are due to the greater density and general depression of the sub-oceanic crust.

According to the author, volcanic energy

is the cause of the compression of the earth's crust. Thus he reverses the theory of Mallet, which makes volcanic energy the result rather than the cause of compression, and he shows that the utmost conceivable amount of heat capable of being obtained by this theory is inadequate to the purpose assigned to it. He considers, moreover, that the geographical distribution of volcanoes is better explained on the supposition of a third crust and fluid substratum than upon any other.

"Their linear arrangement points to their being situated along great systems of fissures; and such systems of fissures are indicative of a thin crust. Fissures which run for long distances in nearly straight courses point either to a movement perpendicular to the fissured surface, or else to a rending pressure within the fissure itself; while, on the other hand, fissures which are caused by contraction in a direction parallel to the earth's surface would divide up an area into polygonal fissures. The former arrangement of the fissures accords best with the distribution of volcanic ranges and suggests a thin crust."

Volcanic regions are either oceanic or appertaining to the coast, and it is probable that the latter are closely connected with the elevations of the continents which they skirt, while the oceanic volcanoes are not concerned with true elevatory action. The great volcanic chain of the Pacific approximately divides the earth into two parts, one of which contains the chief proportion of land, while the other contains Australia and nearly all the ocean. And perhaps the area of Australia has been elevated within the ocean hemisphere on account of the deflection of the great Pacific line of action by the north-west line, which passes through Sumatra and the Malay Archipelago, and which meets it at the south-east corner of Asia.

Although many of the subjects discussed by Mr. Fisher must remain open questions until we are far better acquainted with the conditions of volcanic action, we think that he has cleverly argued his points, and, by the frequent application of a rigid mathematical treatment, has removed his opinions from the domain of those pure speculations which are too often applied to the explanation of obscure phenomena connected with the physics of the earth.

G. F. RODWELL.

#### SOME PHILOLOGICAL JOURNALS.

THE *Revue de l'Histoire des Religions*, in the last number (which it is to be regretted is only the number for October 1881) commences with a summary, by M. Louis Leger, of recent researches in Sklave mythology. Then follows the first part of an abridged translation of the new work by Prof. Kern, of Leiden, on the history of Buddhism. Prof. Oort, also of Leiden, contributes an article on the present position of Jewish studies, in which the recent volume of Dr. Weber, entitled *System der alt-synagogischen palästinischen Theologie* is strongly recommended. M. Maurice Vernes discusses the critical standpoint of recent French works on the life of Christ, the principal point adverted to being the divergent views on the questions whether Jesus did or did not believe himself and declare himself to be the Messiah. M. Havet, in his "Critique des Recits sur la Vie de Jésus," strongly maintains the negative. An interesting article on the Catacombs of Rome shows how much some of the most popular speculations of M. de Rossi have been

modified by the results of recent enquiry, especially as set forth in the magnificent volume of M. Théophile Roller.

A NEW quarterly historical Review has been started at Louvain, under the title of *Le Muséon Revue internationale*. It is published at Louvain (Paris: Leroux; London: Trübner, and Burns and Oates) by the local Société des Sciences et des Lettres, under the editorship of M. O. de Harlez, the distinguished Orientalist and Zend scholar, who is professor at the University of Louvain. A long list of contributors gives the names of a number of Catholic scholars in France and Belgium, but, as the title already announces, the Review is intended to be international, and the names of Profs. Bezzenberger, Tolly, and Spiegel from Germany, of Mr. West and Dr. Rhys Davids from England, and of Profs. Patkanoff and Kossowicz in St. Petersburg show that the editor has met with some success in attracting foreign help to the new venture. The programme of subjects includes archaeology, philology, jurisprudence, philosophy, and literature, each of which it is proposed to treat from the historical standpoint; and the names of the contributors afford sufficient evidence that especial attention will be devoted to the history of religious beliefs. In the first number M. François Lenormant has an ethnographical paper on Gog and Magog, which he identifies respectively with the Scythians and with Armenia. Mr. West has an interesting report on an inedited MS. of the Sassaman Farhang. There is a description, by Prof. Willems, of Louvain, of the ceremonial and procedure of the Roman Senate, and a valuable contribution by M. van den Heuvel on the origin of the English jury. The editor himself gives a translation of the Kenopaniśad, and discusses in a vigorous controversial paper the supposed hypothesis that all religions are derived from myths. He maintains, on the contrary, in a learned and conclusive argument, that the formation of myths was only possible after religious ideas were already in existence. After the original articles follow short reviews of selected works, an article on the Pāli Text Society, and a special notice of the ACADEMY as distinguished above other London journals for the interesting character of its contents, and the scientific authority of its criticisms.

THE *Indian Antiquary* for February contains a further instalment of Dr. Rudolf Hoernle's emendations of Gen. Cunningham's readings of the Pāli legends on the Bharhut Stūpa. It is impossible to praise too highly these scholarly attempts to restore the valuable but, unfortunately, corrupt inscriptions which add so much to the interest of Gen. Cunningham's great discovery, and which would remain unintelligible if trained scholars like Dr. Hoernle and M. Senart had not come to the assistance of the archaeologists. We may, however, point out an error in one of the new readings. *Nava-kammika* is not a monk "newly appointed to an office," but is a recognised term in Buddhist canon law, and one fully explained in the sixth Khandhaka, as the word for a monk specially appointed by his brethren to give to a layman who is engaged in some new building operation (*nava-kammam*) that instruction in ethics which, among the Buddhists, takes the place of the superstitious ceremonies supposed among the Hindus to ensure "good luck" to such an undertaking. As a note on former papers of the same kind by Dr. Hoernle, Mr. Deal publishes in this number of the *Antiquary* a version of an interesting account from a Chinese work on Vinaya (the title of which he does not mention) on "Rules Respecting the Erection of Stūpas," and makes some quotations from the Chinese pilgrim I-Tsing on allied matters. Among these is a short description of the

"Jātaka-mālā," which is to be edited by Prof. Kern, of Leiden, for the Pāli Text Society. The number closes with an elaborate review of Rao Saheb V. N. Mandlik's recent work on Hindu Law, in the course of which several of the learned author's translations are severely criticised.

#### NOTES OF TRAVEL.

THE second German Geographical Congress will be held at Halle from April 12 to 14. It will include an exhibition of all kinds of appliances for the study and teaching of geography.

SOME interesting particulars have lately reached Khartum respecting Dr. Junker's recent proceedings, the most important item being the announcement that he had succeeded in penetrating six days' journey to the south-west of Schweinfurth's River Welle. It may therefore be expected that he has at last solved one of the great problems of African hydrography, and full details of his explorations will be eagerly looked for.

PROF. KELLER is on his way to Suakin and Massowah with the view of making investigations into the flora and fauna of that region, and he may possibly push his researches into Abyssinia.

IN his last letter, Dr. Laws reports the removal of the head-quarters of the Scotch mission on Lake Nyassa from Cape Maclear to the more healthy and central port and promontory of Bandawé. The old settlement at Livingstonia will not, however, be entirely abandoned, as has been reported, but will be an out-station at the foot of the lake, such as Mr. James Stewart is making Maliwandu, on the new road to Tanganyika, and on the healthy uplands occupied by the Chungus.

MR. THOMPSON, formerly of Nanking, has reported to the China Inland Mission his arrival at Wuchang, and that he was to leave by boat in a few days on his journey to Szechuen. In his recent journey to Hanchung-fu, in Shensi, Mr. James Cameron, who has travelled in many districts of China for the same society, found the road through the hilly region very difficult. In one part he had to hire porters to carry his heavy baggage, as the track was said to be impracticable for laden mules; and, when the worst part of the road was passed, the load carried by his mule struck against a boulder on the hill-side, and overbalanced the unfortunate animal.

IN a recent communication from São Pedro de Caxoeira, on the Rio Purús, Lieut. Jones, R.N., mentions the curious fact that not only the Indian, but the Portuguese and Brazilian children on the Purús and in the Amazonas region generally contract a habit of eating clay, and that, in consequence, they are encouraged by their parents to smoke, with the view of destroying the appetite for clay.

News has reached Boston, U.S.A., from the American missionary expedition on its way to the Bihé plateau in West Central Africa down to the beginning of October. Messrs. Sanders and Miller, who are still at Bailunda, some 200 miles from the coast and fifty miles from Bihé, report that they are making good progress with the Ambunda language; they have formed a hopeful opinion of the people, who are found to be very willing to work whenever anything is to be gained by it, and apply themselves with hearty zeal to any tasks that may be set them. Mr. Miller expressly states that his experience of the people so far does not confirm the reports as to their being "thieves and liars."

IN the March number of the *Monthly Record of Geography*, Messrs. Peek and Delmar Morgan

give an interesting account of their experiences in Iceland last summer, and Mr. J. T. Last furnishes a paper on a journey into the Nguru country from Mamboia, a noteworthy feature of which was that he was accompanied by his wife. The map illustrating this paper is useful, as part of the region traversed was previously unknown. In the Geographical Notes, Lord Northbrook's despatch on the proposed Eira search expedition is given in full, and takes a very sensible view of the matter in pointing out that, as a rule, Government would not be justified in spending public money on the relief of explorers who embark on adventures of discovery on their own account. A succinct narrative is afterwards given of the Rev. W. G. Lawes' geographical and ethnological explorations in the mostly unknown region west of Port Moresby, New Guinea. Some interesting particulars are also furnished respecting the journey through South China, Burma, &c., on which Mr. A. B. Colquhoun started last month from Canton—a journey which promises to add very materially to our geographical knowledge, as the leader is bent on avoiding the routes of previous travellers. Through the courtesy of the Admiralty, a report is published of the proceedings of Lieut. Greely's expedition to Lady Franklin Bay, and contains much interesting information. Under New Maps, a useful note is given of Dr. Kiepert's map of Dr. Max Buchner's exploration in Central Africa in 1878-81.

#### SCIENCE NOTES.

*Geology of Sutherland.*—A valuable map of Sutherlandshire, illustrating both the geology and the mineralogy of the county, has just been issued by the Mineralogical Society. The map has been prepared by Prof. M. Forster Heddlé, the late president of the society, to accompany his series of papers on the geognosy of Sutherland. Every mineral locality is distinctly indicated, and in several other important respects it differs from all previously published maps of the county. Drawn on a scale of half-an-inch to the mile, beautifully engraved and delicately coloured, the map cannot fail to be of great interest to scientific tourists and to all who are interested in Scottish geology.

PART XIV. of Mr. G. Phillips Bevan's "Statistical Atlas" deals with the "political condition" of the United Kingdom. The maps illustrate the general elections held in 1874 and 1879. In the accompanying tables, besides giving other information, the members are described according to the "political opinions" they hold, and Northampton is stated to be represented by a "Liberal" and an "Atheist." It is quite certain that Mr. Bevan has not yet attained that state of equanimity which would enable him to deal with statistics without bias.

M. SCHUYER's astronomical observations place Fádasi in lat. 9° 48' 30" N., or no less than twenty-three miles to the north of the position assigned to that place by M. Marno. The Dutch explorer by no means intends to extend his exploration farther into Gallaland. He proposes to complete a survey of the Berta country, and then to return to Europe. In a letter to the editor of the *Mittheilungen* he states that Saka, the capital of Enarea, was taken in May last by the Abyssinians, and now pays an annual tribute of 150 slaves, fifty leopard-skins, fifty swords, and fifty pieces of cloth to the Emperor Johannes.

M. LOESCHER, of Turin, has just published the first part of a new bi-monthly scientific Review, entitled *Archives italiennes de Biologie*. The editors are Prof. Emery, of Bologna, and Prof. Mosso, of Turin.

#### PHILOLOGY NOTES.

THE Philological Society has undertaken to print the Glossary of Anglo-French words in the early statutes of the realm, the Rolls Series, the City of London charters, in Riley's *Liber Albus*, &c., that Prof. Skeat is compiling. This Glossary will be of great value for the Society's English Dictionary, as it gives the French forms of many of our words exactly as they were imported into English. Thus *original*, *collateral*, are Norman law terms before 1300 A.D.; *contract* is a common Norman form; *view* occurs in the thirteenth century; and so on. Moreover, Prof. Skeat is pretty sure to light on earlier instances of common French words than Littré has; for Littré does not profess to give the first occurrence of words in the literature, but only the earliest he has come across in a limited search; and Godefroi, in his Old-French Dictionary, excludes all the words of modern literature which Littré includes.

THE last number of the *Zeitschrift für deutsche Philologie* (vol. xiii., part ii.) contains an account and analysis of Ulrich von Türheim's *Willehalm* or *Bennewart*, by O. Kohl, and a comparison of the poem with its French sources. Doberentz concludes his essay on the *Weltchronik* of Rudolf von Hohen-Ems, and K. Regel publishes from a Gotha MS. a fragment of the *Lekenspiegel*.

THE greater part of the last number of the *Hermes* (vol. xvi., part iv.) is taken up by two elaborate and important essays—the first by Hübner, on the Roman army in Britain; the second by Mommsen, on the geographical parts of Ammian. The main authorities of the latter Mommsen supposes to have been Rufius Festus, the *notitiæ Galliarum* and *Thraciarum*, Ptolemaeus, Timagenes, and Solinus. In some notes on Hyginus, Knaack argues that Cassiodorus had before him a fuller recension of the fables of Hyginus than that which has come down to us.

#### MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Feb. 21.)

EDWARD B. TYLOR, Esq., V.-P., in the Chair.—Mr. J. E. Price read a "Note on Aggrí Beads." These beads are occasionally dug up in the Gold Coast territory, and sell for more than their weight in gold, being among the most valued of royal jewels. They have been found in various parts of England, some of those exhibited having been obtained from Colchester, where they were found associated with human remains, while others were discovered during the recent alterations at Leadenhall Market. Mr. Price thought that the appearance of these beads in England might be accounted for by the fact that when the Romans occupied the country they brought with them many African slaves, who wore necklaces with Aggrí beads, and that when these slaves died their necklaces were buried with them.—Dr. Macfarlane read a paper on the "Analysis of Relationships of Consanguinity and Marriage;" and, in the absence of the authors, the Director read a paper entitled "From Mother-right to Father-right," by Mr. A. W. Howitt and the Rev. Lorimer Fison.

SOCIETY FOR THE PRESERVATION OF THE IRISH LANGUAGE.—(Tuesday, Feb. 23.)

THE following Report was read by the Secretary of Council, and adopted:—In placing before the members of the society the Report for 1881-82, the council are enabled to state that steady progress is being made, and that considerable interest is being evinced, both at home and abroad, in the study of the Irish language. Owing, however, to the continued unrest of the public mind, the establishment of parochial and other associations has not been successful. It is to be hoped that

such associations will yet be formed; and we already see encouraging signs in the fact that some classes which had ceased working are again beginning to resume their efforts. Until such united and general action be taken, the movement cannot in any way be considered a national one, and the council therefore request the particular attention of the Irish people to this drawback, and respectfully invite their earnest co-operation. The council feel pleasure in announcing that, owing to their exertions, the quarterly fee of 2s. exacted by the Board of National Education from pupils studying Irish has been abolished. They will persevere in their endeavour to obtain permission for the children of the second class and upwards to be examined for results fees in Irish, and they will continue to use their influence with the Irish Members of Parliament to obtain this concession. The council have to note with pleasure that there was an increase of twenty-six per cent. in the number of students who passed in the programme of the Commissioners of Intermediate Education. The number that passed was 151, as against 119 last year. Among the numerous letters and varied correspondence received by the society during the year were many interesting and full reports from teachers of Irish classes and schools. New Irish classes were formed at the French College, Blackrock; at the Carmelite College, Terenure; at St. John's College, Waterford; at the Jesuits' College, Tullamore; at the Christian Brothers' Intermediate Schools, Limerick; at Ballymena; at St. Laurence's Seminary, Usher's Quay; and at Mr. Deburg's Academy, Dublin. Several classes have also been formed in London and Manchester; and Mr. Henry Sweet, the distinguished Anglo-Saxon scholar, is now engaged in studying Irish. In addition to the numerous and flourishing classes already existing in America, several new classes have been established. A new weekly journal has been started in that country, called *An Gaoidhal*, devoted to the cultivation of the Irish language. It is conducted by the Philo-Celtic Society of Brooklyn, and adds another to the list of American journals which devote their columns to the publishing of Irish literature in the Irish character. In Australia, also, the newspapers are beginning to take an interest in, and to publish, Irish literature. The *Catholic Record* of Adelaide, which has a very large circulation throughout South Australia and the neighbouring colonies, has opened an Irish department. In New Zealand a vigorous society has been organised, called the "Dunedin Gaelic Association," which, through its representative, Mr. Cotter, has been affiliated to the parent society. An interesting report of the Irish language movement in Australia has been received from Mr. Francis M'Donnell, Brisbane. The council have learned with pleasure of the recent establishment by the French Government of a Celtic chair in the College of France, and of the appointment thereto of the eminent French scholar and archivist, M. H. d'Arbois de Jubainville. This is the second Celtic chair that has lately been endowed in France. In Germany, too, an important addition has been made to the number of distinguished men interesting themselves in the study of the Irish language. Besides Prof. Windisch, of Leipzig, and Prof. Zimmer, of Berlin, Dr. Hugo Schuchardt, an eminent philologist and professor in the University of Grätz, Styria, is now earnestly occupying himself with Irish studies. He has written a long and cordial letter to the council, offering his sympathy and aid in forwarding the objects of the society, and evinces his interest in its proceedings by becoming a member. There is also Herr Kuno Meyer, of Leipzig, who has just printed in the last number of the *Revue celtique* the correct text of six pages of the "Mac Gnimhartha Fhinn" from the Oxford copy. The financial affairs of the society continue satisfactory. The balance-sheet submitted by the treasurers for the year ending December 31, 1881, shows a balance in hand in favour of the society of £61 18s. 5d., after paying off all liabilities. The number of books sold during the year amounted to 3,551, making a total issue of 59,081, or nearly sixty thousand books, exclusive of pamphlets. A pamphlet, containing the Report for 1880, by-laws, and officers, was printed and circulated. In addition to the members of council elected in accordance with the by-laws on March 17, the

following were added to the council during the year: the Rev. James Goodman, Professor of Irish, T.C.D.; M. H. d'Arbois de Jubainville, Paris; the Rev. Laurence O'Byrne, C.C., St. Laurence O'Toole's, Dublin; Dr. Hugo Schuchardt, Professor in the University of Grätz, Styria; and Mr. Daniel Lynch. In consequence of the death of their lamented patron, his Grace the Most Rev. John MacHale, Archbishop of Tuam, the council elected his Grace the Most Rev. Dr. Croke, Archbishop of Cashel, as patron of the society.

#### THE SOCIETY OF BIBLICAL ARCHAEOLOGY.

—(Tuesday, March 7.)

DR. SAMUEL BIRCH, President, in the Chair.—A paper was read by Mr. P. Le Page Renouf: "Egyptian Mythology, Mist and Cloud." The mythology of ancient Egypt, like that of the Indo-European races, has its origin, not in any religious, metaphysical, or ethical ideas, but in a child-like observation of natural phenomena. The Egyptian gods are personifications of the earth and sky, of the sun, moon, and stars, of light and darkness, and of all powers of Nature (such, for instance, as the Nile inundation) which make their appearance in regular and unvaried succession. The notion of fixed and unchangeable law is essential to the conception of the Egyptian *natar*. Hence, phenomena such as clouds, rain, wind, and storm, which did not appear to obey any fixed law, do not seem ever to have been deified. These meteorological phenomena nevertheless have their place in the mythology, and an attempt is now made for the first time to point out some of the most important myths derived from the meteorology of Egypt. The writer of this paper, after giving what he considered a more accurate view than has yet been recognised of the nature of the gods Shu, Tefnut, Isis, Nephthys, Neith, and Hathor, explained, among other matters, what is meant by the blood flowing from Rā as he hastens to his slaughter, Isis stanching the blood of Horus, the sycamore of Mafka, the olive-tree of Ptah, the sycamore of Nut, the "mystery of Osiris at Philae," the veils of Isis, Thoth, and Rā, the companions of Set, or the "looks of Typhon," the serpent on the hill of Buchat, and the great dragon Apepi. The place which Fire occupies in this mythology is very important, but the numerous texts relating to it have yet to be scientifically examined. Some interesting points, however, may even now be established.—A paper by Mr. W. Flinders Petrie, on pottery and implements collected at Gizeh and the neighbourhood, from December 1880 to June 1881, was read by the Secretary. It was stated at the commencement of these notes that (with the exception of certain pottery of the Fourth Dynasty and scraps of blue and green ware from tombs) all the specimens seen and collected dated from after the Persian conquest, and were nearly all domestic. No pottery was found that can with any reason be assigned to the period between the Fifth and the Twenty-sixth Dynasties. The reason for the late date of the pottery seemed to be that the old Egyptians inhabited the valley, and it was only from some special causes of later times that villages were placed on the hills; hence, their domestic pottery would most likely be found by deep digging under the Nile mud, in old sites such as Memphis. It would be well, Mr. Petrie thought, in considering these remains, to bear in mind that the following common criteria are not applicable here:—The rougher pottery is not the earlier; some of the best-made pottery of all is that certainly of the Fourth Dynasty, and the worst is that containing blue beads, and therefore probably made after the Psammetic tombs had been rifled. Stone implements are of a late period.—The proceedings terminated by the reading of a letter from Prof. W. Wright, calling attention to a Hebrew inscription of great interest and antiquity that forms part of a mosaic pavement in the mausoleum of the Empress Gallia Placidia at Ravenna, built by her between A.D. 432 and 440.

#### FINE ART.

*Les Amateurs de l'ancienne France.* "Le surintendant Fouquet." Par Edmond Bonaffé. (Paris and London: Librairie de l'Art.)

*Etudes sur l'Histoire de la Peinture et de l'Iconographie chretiennes.* Par E. Müntz. (Paris: Fischbacher.)

IN the opening chapter of *Les Amateurs de l'ancienne France* M. Bonaffé sketches with a light but firm hand the development of that taste for the thousand elegancies of arrangement, of decoration, and of furniture which transformed the French interior during the seventeenth century. He is inclined, perhaps, to exaggerate a little the novelty of the impulse given in this direction by Marie de Medicis and the Marquise de Rambouillet, for in truth they only continued that which the Renaissance had begun. The great halls of the Middle Ages were broken up into rooms of smaller size and greater convenience, number, and variety of purpose by the builders of Chambord and of Madrid; and the readers of Brantome will remind M. Bonaffé that maids of honour at the Courts of the Valois had their cabinet collections and their books half-a-century before Catherine de Vivonne set the fashion in the Hôtel de Rambouillet. The disastrous religious wars in which the light of the Renaissance was extinguished, and the uncertainty of the settlement obtained under Henri IV., alone prevented the steady development of that personal luxury which, encouraged by Mazarin and the Queen-mother, finally carried the day under Louis XIII.

Nicolas Fouquet, who is the special subject of the present study, was the most remarkable and brilliant illustration of the movement. "He loved," says M. Bonaffé, "letters, arts, poets, women, flowers, pictures, tapestries, books, antiques, every luxury and every elegance," and that with a thorough-going heartiness and magnificence which presents a splendid contrast to the emaculate "aesthete"—the sickly offspring of the Oxford school who stands before us as the modern representative of love of "culture" and the arts. As Minister of Finance under Mazarin, Fouquet, to say the least of it, used his opportunities of amassing wealth to their full extent; and the unlimited means at his disposal were employed with magnificent prodigality in his "lordly pleasure-houses" at St-Mandé and at Vaux-le-Vicomte. Nothing was forgotten that would conduce to the comfort or the pleasure of existence; and, as we turn over the pages in which M. Bonaffé has written the history of the collections, the library, the gardens, and the other splendid appointments of Fouquet's palaces, we cannot but admire with some enthusiasm the man of wealth whose capacity for enjoyment embraced the whole of life. Curious details as to the works executed for Fouquet by Le Brun, Anguier, Puget, Pousin, and Le Pautre add to the general interest of the book; and with the aid of the inventories—taken in September 1661, when everything was standing exactly as the unfortunate owner had left it a few days before his arrest and imprisonment—we are able to enter into the minutest details of the treasures and commodities gathered within

the walls of the palaces in which Fouquet had made his home.

The inventories themselves, enriched by the curious valuations of the different experts by whom the possessions of the fallen Surintendant were appraised, are printed in full from the MSS. preserved in the national archives. Perhaps nothing which they contain is more remarkable than the long list of tapestry hangings which were among the specially costly things secured for Louis XIV. before the public sale of the remainder of the property was proceeded with. Many of these had been made in a manufactory established at Maincy by the Surintendant for his private purposes; and from Maincy the workmen, together with their tools and the pieces actually in progress, were transported to Bièvrebache, where, the Gobelins having been bought for their reception, they were installed as "La Manufacture des Tapisseries royales." Nor, as M. Bonaffé tells us, was this all. Le Brun, Fouquet's painter-in-chief, became first painter to the King; his architect, Le Vau, first architect; even his gardeners were taken into the royal service; and Le Nôtre, who had also been in his employment, was bidden to create Versailles.

The text of M. Bonaffé's interesting and amusing study is accompanied and completed by an excellent portrait of Fouquet reproduced from the attractive picture by Le Brun; an elevation of the garden front of Vaux-le-Vicomte; a good rendering of the terminal figure of Liberty—one of those modelled by Poussin for Vaux, and now in the northern quincunxes of Versailles; and by many well-executed illustrations of minor details. The volume, it should be observed, is the first of a series of works which it is intended to bring out under the title of "Bibliothèque internationale de l'Art," and which will appear under the editorship of M. Eugène Müntz, whose excellent *Life of Raphael* we reviewed in these columns last year. The learned librarian of the Ecole des Beaux-Arts proposes to place on his list only works "d'un caractère essentiellement érudit," but he intends that erudition shall present itself under a form so agreeable as to make it almost popular. Fine paper and printing, wide margins, and numberless illustrations, a text which may almost count as light literature, will do much to make even correct information palatable to the general reader, especially if, as in the present instance, tiresome references and dull bits are dropped into the foot-notes, and all the laborious scaffolding—by which graceful results have been obtained—is packed away among "pièces justificatives" where no one except some poor lost soul of an archaeologist will ever dream of looking for it.

M. Müntz—who himself promises us, as his first contribution to the series, a work on the precursors of the Italian Renaissance—has quite recently published an interesting and important pamphlet on the history of Christian art. He notes, to begin with, that Christian art is as old as Christianity itself, and continues his critical investigations of its character down to the modifications introduced by Protestantism. He establishes the fact that early Christian art—work of that transition time which preceded the

triumph of the new Church—is wholly without that symbolical character which is usually attached to it. The new dogma at first ran quietly into the old moulds of art, for Pagan and Christian images jostled each other in the same shops, and can be proved to bear the marks of the same makers. In touching on the action of Protestantism in the domain of religious art, M. Müntz, while fully allowing for the disastrous effect of its destructive operations, does not forget that aspect of its influence which has been aptly characterised as the introduction of individualism in art. Our limits, unfortunately, do not permit us even to enumerate the many points of interest raised by M. Müntz in this learned treatise; we must be content, therefore, with giving but a hint as to the nature of its contents, which cannot fail to interest all those who are seriously occupied with the questions he discusses. E. F. S. PATTISON.

#### ADDITIONS TO THE SOUTH KENSINGTON MUSEUM.

WE owe it to Mr. J. C. Robinson's labours and good taste that the South Kensington Museum has recently acquired a number of very important additions to its already rich collection of North Italian sculpture.

The most important is a very fine tympanum from a doorway in the abbey church of the Misericordia at Venice. In the centre is a colossal standing figure of the Virgin, on whose breast is the infant Christ carved in relief within a vesica-shaped frame or glory. On each side several kneeling figures of the monks of the abbey are sheltered by the protecting folds of the Virgin's cloak. The background is ornamented with a Jesse-tree in low relief. The whole work is very bold and massive in style, combined with considerable delicacy of finish. It suffers a good deal from being placed low; the sculptor having specially designed it to suit an elevated position. It is said to be the work of Bartolomeo Bon, who carved many of the caps of the Ducal Palace; but the influence of the Pisan school is obvious.

There are also a number of very rich balcony fronts from palaces in Venice and Treviso. These are very good and characteristic specimens of the usual graceful pierced work in stone and marble, decorated with pilasters of lead inlay, like those so richly lavished on the risers of the Giants' staircase.

Two well-mouths from Murano and Venice are valuable specimens of sculptured work of the eleventh and fourteenth centuries respectively. An altar-front, sculptured in white marble, is an interesting specimen of the work of one of the Pisani—probably Niccolo. It is decorated in low relief with a series of arches, the panels being filled up with graceful foliage, symbols of St. John and St. Mark, and in the centre a seraph with radiating wings. A comparison of this seraph's head with the small figure of an angel in embroidered pallium in the upper part of Nic. Pisano's baptistery pulpit will leave little doubt as to their being the work of the same sculptor. This altar-front is stated to have come from the church of Santa Chiara at Assisi.

A monumental effigy in white marble, with life-sized recumbent figure in low relief, is an excellent specimen of a North Italian late-fifteenth-century tomb. It represents a legal personage in hood and gown, with ermine tippet. The figure is surrounded by a carved frame with cuspid Gothic arch. This piece of sculpture would have been cheap at ten times the price given for it by the Museum.

A fine large monumental tablet from the

University of Padua and some fragments of mosaic from churches near Rome are worth studying. A marble door architrave from a palace at Urbino is an excellent specimen of the delicate enriched mouldings and surface decoration which reached such perfection in the latter part of the fifteenth century.

Two large glass cases contain objects purchased for museums at Dublin and Birmingham. Among the latter are some exquisite examples of Italian metal-work, especially a very beautiful early-sixteenth-century pax, *repoussé* in high relief, with a figure of Christ upheld by angels.

The whole collection is one of great value and interest; and, if the Italians are to pull down their palaces and sell the monuments out of their churches, we may at least find some consolation in the fact that there is a museum at South Kensington ready to provide a secure resting-place for the remnants that have escaped destruction.

J. HENRY MIDDLETON.

#### DESTRUCTION OF THE OLD BUILDINGS OF THE TEMPLE.

ONE by one the picturesque old courts and houses of London are being swept away—in many cases, no doubt, necessarily, owing to the need of a more economical occupation of the ground, or the slow changes that take place in the character of a whole neighbourhood. But the destruction which has been done, and is still being threatened, among the old buildings of the Temple and other Inns of Court can plead none of these excuses. No such change has taken place in the use of the buildings, or in the requirements of their occupiers, as to necessitate a complete rebuilding of the old houses. Indeed, many of the tenants of the ugly and expensive new buildings which replace the quiet old red-brick houses complain bitterly of the high rents, and would gladly have remained in their old sets of chambers, with their moderate rental. The next part threatened is Brick Court, on the west of Middle Temple Lane, a group of buildings boasting no architectural grandeur, but simple red-brick houses, with pedimented doorways, good oak staircases, and massive external cornice. It is the presence of these quiet old buildings that gives so great a charm to the courts of the two Temples, and makes a few steps thither from the bustle and roar of Fleet Street seem like a magical escape from the feverish hurry and tear of modern life into the quiet past of the seventeenth or eighteenth century. Surely some serious protest should be made against this needless destruction of what has a real picturesque value in itself, and is linked with a thousand historical associations which ought not lightly to be obliterated and forgotten.

#### ANCIENT CEMETERIES IN THE ABRUZZI.

Rome: February, 1882.

IT is generally believed that the modern Chieti, the chief town of one of the three provinces of the Abruzzi, sprang from the ruins of the ancient Teate Marrucinorum; and numerous discoveries of antiquities have justified this theory. Teate was situated close to the river Aternaus (the modern Pescara), and was in a flourishing condition at the beginning of the Empire. It is known as having been the birthplace of Asinius Pollio, many members of whose family left their mark on the history of earlier times, when Teate was a free city. Of late years many architectural remains have been discovered within the town; a Roman wall and mosaic pavement were brought to light near the church of San Giustino, and the aqueduct built by C. Asinius Gallus, and restored by Dismia Numisilla, has been identified (*cf. Notizie degli Scavi*, 1880, p. 175).

Quite recently, some workmen employed in making a road outside the city discovered, on the Gaetani property, several tombs containing bronzes, glass-ware, coins, and other objects. Unhappily, the excavations in this portion of the cemetery of Teate were not carried out with such care and system as to prove of any scientific importance. Two complete inscriptions and fragments of another have been saved and placed in the Chieti Museum of Antiquities; of the other objects found, we should possess no record but for the care of Prof. B. Lanzillotti, classical lecturer at the Chieti liceo reale, who was present at the excavations, and was thus able to give a description of many objects which are, I fear, lost beyond recovery. Prof. Lanzillotti wrote a monograph, entitled *Di un antico Sepolcreto presso Chieti*; and the first part of this essay, which deals only with the coins, was printed by Ricci in 1881. These coins consist of bronze money of the Republic and Empire, but the latter are of no special interest beyond showing that the cemetery was in use as late as the days of Alexander Severus. I must confess that Prof. Lanzillotti's essay is disappointing; we could have wished for some account of the explorations, and not a bare catalogue of the antiquities discovered. Possibly Prof. Lanzillotti was unable, on account of the perfunctory manner in which the excavations were carried out, to furnish any reliable data as to the probable age of the different tombs. For the most part, these are built of large bricks into the shape of huts, and were found to contain bones and ashes, as well as a few antiquities of the later Empire. Some of the sepulchres consisted of a deep trench, containing coins and arms. In one tomb were discovered portions of the complete equipment of a warrior, consisting of a bronze helmet with the *bucculae*, some pieces of a breastplate and shield, a few spear-heads in bronze, and a sword. Bronze bracelets, rings, earrings, and necklaces were also found, as well as fragments of glass and several fictile vases, concerning which details are lacking. It is to be hoped that the recent discoveries at Chieti may be the means of leading to a systematic exploration of the Teate necropolis, as it must contain some very ancient tombs likely to yield dialectical inscriptions, as happened in the case of the tombs of Corfinium, where epigraphs were found that proved of great interest to scholars. The district of Rapino, whence came the celebrated bronze tablet now preserved in the Berlin Museum (*cf.* Fabretti, *Gloss. italic.* n. 2741), is not far removed from Chieti; and the same may be said of Crecchio, where was found the stone at present in the Naples Museum (*ibid.* n. 2848).

At the very time that the Teate cemetery was discovered, similar operations, undertaken for the construction of the road which is to lead from Atripalda to the railway station of Avellino, disclosed the site of the necropolis of the ancient Abellinum, a city of the Hirpini, situated on the borders of Campania. Abellinum was reckoned a city of Campania, and stood on the spot now known as "la Civita," close by Atripalda, and not on the site of the modern Avellino, the chief town of the province of Principato ultra, which has inherited its name from having been founded by those citizens who survived the destruction of Abellinum during the Greek and Lombard wars. In this city a Roman colony had been established; and, from the abundance of Latin inscriptions, we are led to infer that it must have enjoyed a fair degree of prosperity under the Empire, but we have no record as to the condition of the town before its subjection by Rome. It is very likely that systematic explorations, carried out on the spot where the tombs were found, might throw light

on the history of the original inhabitants of Abellinum. The sepulchres hitherto discovered unquestionably belong to a late period of the Empire; but there was also found underneath a branch of this same road, leading to the Sessa property, a grave consisting of a chamber built of very massive blocks of stone, which contained a sarcophagus hewn out of one single stone, rather less than eight feet in length, more than a yard in breadth, and a little over two feet in height. The lid was also of stone. It appears that one skeleton was found in the chamber, not lying in the coffin, and also several small fictile vases of poor workmanship. But it seems certain that this vault had been broken open and any objects of value carried away long since, as it is impossible to believe that so costly a structure could have been raised for the purpose of receiving the corpse of a pauper such as the skeleton found beside these miserable pieces of pottery.

The ruins of an ancient city, situated in the very heart of the district inhabited by the Hirpini, have lately been discovered. In the year 1880 several tombs were found on the estate of Cavaliere Parise by some of his labourers, near a hill called Ciano, which lies not far from Melito, on the right bank of the Ufita. The owner of the estate, who takes an interest in archaeology, determined to explore these sepulchres, and entrusted the superintendence of the works to Signor G. Pecori, inspector of excavations for the province of Salerno. The latter soon excavated some coffin-shaped tombs formed by large stone slabs, which he believes to be later than the age of the Antonines. These tombs had been placed along the road leading to Eclanum, the ruins of which are in existence, close to Mirabella. Not far from the cemetery, which extends over a considerable area, were discovered the remains of a bath, and, close by, a small temple. These buildings belong to the Roman age, and indicate a city of some importance. Fresh excavations were carried out by the Cavaliere Parise during the course of last autumn, and brought a stronger confirmation to the theory of Signor Pecori, as more large buildings were excavated, and a quantity of metal objects found belonging to the good period of art.

It remains to discover the name of the city of which the ruins near Melito formed part. In the opinion of Signor Pecori this city must have been situated to the south-east of Forum novum on the Via Traiana, which led from Beneventum through Equus Tuticus to Brundisium, and is to be identified with Oluvia. We have no historical record of this town, beyond a single passage in Livy, referring to an episode of the second Samnite war (ix. 31). During that campaign, Oluvia, after having been besieged and taken by the Samnites because its inhabitants had admitted a Roman garrison, was in turn cruelly punished by the Romans (443 A.U.C.) for some insult offered to the soldiers who had been received within its walls. We read that the consul C. Junius Bubulcus, after taking Oluvia by storm, put all the adult males to the sword, and then marched against Bovianum. The latter detail in Livy's account has led some scholars to place Oluvia in the neighbourhood of Bovianum vetus (*cf.* Romanelli, ii. 330). On the other hand, the theory of Signor Pecori is confirmed by Frontinus, who, in speaking of the Roman colony sent to Oluvia, mentions that the boundaries of the colony were fixed on the same basis as those of the neighbouring territory of the Ligures Baebiani (p. 259, ed. Laehm); now it is certain that the boundaries of the latter adjoined the district in which Signor Pecori's discoveries were made. But before we arrive at any definite conclusion it will be necessary to wait for further explorations, and these the Cavaliere Parise proposes to undertake in the coming spring.

Had I followed the map before passing from the land of the Marrucini to that of the Hirpini, I should have noticed some excavations made in the upper valley of the Sagrus, the modern River Sangro, in the land of the Samnites Caraceni. The chief town of this tribe, who were neighbours of the Peligni and Frentani, was Aufidena, which was captured by the consul Cn. Fulvius in 457 A.U.C., and, after being made a colony in the days of Caesar (*Lib. col.*, p. 259, ed. Laehm), enjoyed considerable prosperity under the Empire—a fact attested by many Latin inscriptions found in this district (*C. I. N.*, p. 268). Hitherto all topographers have agreed in placing the city of Aufidena, not on the site of Alfedena, which preserves the ancient name, but in the vicinity of Castel di Sangro, situated on the same river, a few miles below the former hamlet. This theory was originally fostered by the fact that many stones bearing inscriptions have been found utilised as building materials in the churches, houses, and other edifices of Castel di Sangro. Again, a few portions of a wall, supposed to have been the city wall, as well as some fragments of masonry of Roman origin, were excavated on a hill about five miles from the town; and this spot, situated on the left bank of the river, was assumed to have been the site of Aufidena. I am not sure as I write whether the name of this hill is mentioned by Romanelli (vol. ii., p. 486) or by Craven (*Abruzzi*, vol. ii., p. 59). Be this as it may, recent excavations carried out on a spot known as the "Campo consolino," situated rather more than five miles above Castel di Sangro, and in close proximity to the modern Alfedena, have disclosed the existence of a vast cemetery; and on a hill overlooking the "Campo" have been found the ruined remains of walls and other buildings. The "Campo consolino" necropolis puts beyond question the fact that the district of Alfedena is the lawful heir of the ancient city, and that, besides its name, it possesses its exact site.

The discovery of the cemetery took place in 1877, when, during the construction of the road from Alfedena to Scontrone, several tombs, consisting of large stone slabs built in the shape of coffers, were excavated at a depth of six feet. In the graves were found, besides skeletons, many personal ornaments in bronze, such as *fibulae*, bracelets, and girdles, a quantity of arms, and several vases of local make. But the relics found are not all the work of native craftsmen; some girdles which I had the opportunity of examining bear a close resemblance to the specimen, delineated by Rich in his *Dictionary of Greek and Roman Antiquities*, which was found in a tomb near Paestum.

Encouraged by the chance discovery of this cemetery underneath the "Campo consolino," the municipality of Alfedena resolved to continue the excavations. The fact that in 1847 some other tombs had been found on the same spot was now called to mind. Prof. Antonio de Nino, who had already made a name as an archaeologist by the zeal and intelligence he brought to the excavations of Corfinium, was appointed superintendent of the works. The proprietors of the land included in the "Campo consolino," of whom Signor Mansueto de Amicis, syndico of the commune, is the largest, formally renounced all claims to compensation, and expressed their intention of presenting to the town museum any antiquities that might be found.

Several tombs were excavated in 1877, sixty-nine in 1879, and a great many more during the course of last autumn. The cost of these works was shared between the Ministry of Public Instruction and the Council of the province of Aquila. A detailed account of last year's work, by Prof. de Nino, who has directed the excavations from the beginning, will shortly be published. So far as I am

aware, all the tombs hitherto discovered are earlier than the foundation of the Roman colony, and therefore belong to the period when Aufidena was a free city. F. BARNABEI.

#### SALE OF RARE ART BOOKS AND FIRST EDITIONS.

THE Messrs. Sotheby, Wilkinson and Hodge were engaged in selling, during three days of last week, an excessively valuable and interesting collection of artistic and other books—first editions and favourite editions—the property of a gentleman whose name did not transpire, but who must be admitted to have been one of the most “diligent” and liberal of collectors. His volumes—including some comparatively worthless ones—were, for the most part, in high-class bindings by Riviere or Bedford. Of the art books and books of poetry, some contained the most famous illustrations by Turner, Stothard, Blake, Cruikshank, Leech, Tenniel, and other esteemed designers. The first edition of the *Ingoldsby Legends*, in three volumes, illustrated by Cruikshank and Leech, sold for £17 5s. (Harvey); eleven volumes of Cruikshank's *Comic Almanack*, from 1835 to 1853, fetched £15 (Ellis); a choice set of unlettered proofs of the same master's illustrations to *The Tower of London* reached the sum of £32 (Ellis), and some of his illustrations to *Arthur O'Leary*—slight original drawings—sold for £20, while his *Omnibus* sold for £16 10s. The sum of £15 15s. was realised for the first issue of his admirable illustrations to Grimm's *German Popular Stories*—the illustrations printed in bronze-coloured ink, and of an effect incomparably finer than in any later issue.

The first edition of Burns's *Poems*, “chiefly in the Scottish dialect,” accompanied by an autograph letter from the poet in which he discourses of his difficulties, fetched no less than £73 (Richardson); the first edition of Lord Byron's *Poems* sold for £16 10s.; the first edition of Gray's *Elegy* sold for £19 (Harvey); the first edition of Campbell's *Pleasures of Hope* for £3 10s.; a volume of Hartley Coleridge's *Poems*, with an inscription by Sara Coleridge, and a sonnet in the autograph of Hartley, £8 (Ellis), and the Dedication copy to his father, with Hartley's autograph inscription, £5 15s. (Ellis). The first edition of Keats' *Poems*, a presentation copy to his friend Mr. Severn, fell to Mr. Walford's bid of £18 10s., and the first edition of *Endymion* to Mr. Toovey's bid of £6 10s. The Shelleys, of which there were many, sold for high prices, though in one or two cases not quite so high as on previous opportunities. A first edition of *Queen Mab* sold for £12 15s. (Pearson). It has been known to realise £16. But the *Adonais, an Elegy on the Death of John Keats*, a presentation copy, with the author's autograph inscription, fetched £43 (Toovey), Mr. Dew Smith's copy of the same book having fetched £42 about four years ago. The first edition of the *Cenci* was sold for £4 10s. The first edition of the *Lyrical Ballads*, Wordsworth and Coleridge (1798), fetched £6 6s. (Ellis). Among living poets of great fame, only Mr. Tennyson was represented in the collection. The *Poems by Two Brothers*, issued in 1827, and not republished, fetched £7 7s. 6d. (Richardson); another copy, less desirable for the collector, £5 15s.; *The Lover's Tale* (1833), described as the only copy known, fetched £33 (Pickering). At Mr. Pickering's sale in 1878, it had realised £41. The first edition of *In Memoriam* sold for £3 8s., and the first edition of *Maud*, with at least three autograph additions by the author, sold for £8 10s., a first edition of the same book not enriched in this wise going for £1 11s.

Among the English novelists, illustrated and without illustrations, it may be noted that the

first editions of Charles Dickens's stories fetched higher prices than have yet been given, though they have lately been a good deal in demand. *The Posthumous Papers of the Pickwick Club*, to which were somewhat ridiculously appended in the same lot some insignificant publications which traded on the name of the successful fiction, but with which Mr. Dickens had no more to do than with *Paradise Lost* or *Lady Audley's Secret*, realised £22 (Harvey); a first edition of his rare little comic opera, *Village Coquettes*, £8 10s.; and the funny little *Sunday under Three Heads*, £12 5s. These were fancy prices for work of no importance. The first edition of *Sketches by Boz*, with the illustrations by Cruikshank, fetched £15 10s. (Walford); a desirable edition of *Oliver Twist*, likewise with Cruikshank's illustrations, £7 7s.; the first edition of *Nicholas Nickleby*, £4 4s. The remarkable sum of £18 15s. was realised for a little collection of the Christmas books—five in number—*The Christmas Carol*, *The Chimes*, *The Cricket on the Hearth*, *The Battle of Life*, and *The Haunted Man*. Still more remarkable, perhaps, was the price fetched by a little publication which is stated in the sale catalogue to have escaped the notice of bibliographers of Dickens. The sum was £22 10s., and it was given for a copy of *The Story of Little Domby*. The catalogue might have added that this little book was prepared by Mr. Dickens for his readings in the year 1858; it is, in fact, the complete text of his pathetic reading from *Domby and Son*, and it was accustomed to be sold for a shilling by his servants in the public room as the audience was gathering.

Among the books more properly of Art, the various editions of Rogers's poetical writings take an important place, for upon the illustration of these the banker-poet lavished money, at a time when money commanded beautiful work. The pretty little editions with Clennell's wood-cuts after Stothard's pen-and-ink drawings realised small prices, but a most elaborately bound impression of the *Italy*, of 1830, and the yet more desirable *Poems*, of 1830, with the Turner and Stothard steel plates in their perfection, sold for £59. It is known that these works are rising in value, but the extraordinary price fetched on the present occasion was owing chiefly to the binder's extraordinary ornamentation, and to the fact that the binding had been exhibited by him as a specimen of his most intricate work. Among other Turner illustrations, India proofs of Turner's *Annual Tour* sold for £25 (Harvey), unlettered proofs of the sixteen illustrations to *Campbell*, £13 10s.; and illustrations to Sir Walter Scott's works, £27 (Harvey). A copy of the *Richmondshire*, containing proofs of the twenty illustrations after Turner, fell for £41; the identical copy having, we are informed, been sold under the hammer about eighteen months ago for the extraordinary sum of £100. The price was considered extravagant at the time. A set of *The Southern Coast*, but in the ordinary state—there being but one engraver's proof in the whole number—sold for £46. Lastly may be mentioned a really fine copy of *The England and Wales*, which, though by no means to be considered “the grandest work of the artist” as long as there exists the *Liber Studiorum* and *The Southern Coast*, is still always likely to be held in esteem. This rare and exceptional copy sold for £137 (Colnaghi). The proceeds of the entire sale amounted to over three thousand pounds.

#### NOTES ON ART AND ARCHAEOLOGY.

MR. MILLAIS has been elected a Foreign Associate of the Académie des Beaux-Arts, in place of the late sculptor, M. Dupré.

WE are glad to see that the proprietors of the *Art Journal* are about to institute a prize competition for the encouragement of wood engraving. This magazine has always been remarkable for its steady support of this useful branch of art, and anything which can be done at the present moment to stimulate the production of good work by English artists and to cultivate individual taste and character in the workman will be most valuable. What with the new methods of the American cutters and printers, the introduction of photography and other mechanical contrivances to supersede the necessity of drawing on the block, and the habit of dividing the work of one cut between two or more artists, the old art, so specially English, of Bewick and Clennell, which depended on the mind as well as the hand of the engraver, has almost disappeared. If it be too late to restore it in its integrity, it is not too late to prevent the English wood-cutter from degenerating into a mere machine, or a mere wheel of one, and this is what must happen if the Chinese practice of subdivision of artistic labour is persisted in.

THE April part of the *Magazine of Art* will contain articles on “Bells,” by the Rev. H. R. Haweis; on “The Art of Savages,” by Mr. Andrew Lang; and on “The Decoration of a Home,” by Mr. W. Cosmo Monkhouse. The frontispiece to the part will be a reproduction of J.-F. Millet's drawing for “The Angelus.”

A LARGE picture by Paul Veronese has just been sent to England for sale, and is now in the hands of Messrs. Anderson, 5 Fenchurch Avenue. The subject—“Christ at the Pool of Bethesda”—is treated in a manner very characteristic of Paul Veronese, with large, well-grouped figures, some cleverly foreshortened, in the foreground; and an architectural background formed by the long range of a classical colonnade. The picture is, on the whole, well preserved, and is a good specimen of Veronese's more finished manner; but, unluckily, two of the heads have been repainted by a very unskilful hand. No doubt this wretched daubing might be cleaned off.

A PRIZE of £10 has been offered by a gentleman for the best medal by a pupil at the Slade School. M. Legros' class for this interesting branch of art is, we understand, showing much promise.

SOME objects of art and of “high curiosity”—to use the significant expression of the French—have been visible at Mr. Thibauden's this week from the collection of the late Benjamin Fillon, one of the most esteemed antiquaries of France. The lover of graphic art may have found most interesting the few remarkable drawings—for instance, Vandyke's noble drawing for the portrait of Cornelissen, which he subsequently etched; the fine Claude drawing, from the Wellesley collection; and one of those expressive, yet restrained, pencil portraits by Ingres, in which his masterly draughtsmanship addressed itself to themes in which beauty, sometimes of visage and always of costume, was conspicuously absent. But by many the fine medals and coins—some of them ancient, and some connected with the history of France, or even that local history to which M. Fillon was devoted—will have been found more fascinating.

WE regret to hear that the Italians are again proposing to reconstruct the west façade of St. Mark's. No official information on the subject has reached England, but the presence of scaffolding against the two south bays at the west is very ominous of further injury. The levels of the new work at the sides of the cathedral do not correspond with the old lines at the west; and this appears to be the main reason for the threatened rebuilding of the west front.

It would surely be better to make any necessary alteration in the quite valueless modern work than to destroy the priceless west front, with all its mosaics, to get over a difficulty which the Italians themselves have so recently created.

It is now a considerable number of years since Mdlle. Bonheur's "Horse Fair" took our English public by storm, yet there is no falling off in the ability of her hand, or in the acuteness of her sympathy with her four-footed friends. As Landseer mainly gave himself up to painting of the more domesticated creatures of the hunting-field and drawing-room, Rosa Bonheur has remained true to the wilder natives of forest or moorland. In the ample studio and in the paddocks and cages on her domain at Fontainebleau, she has cultivated many diverse species, wild and tame, large and small, becoming so thoroughly acquainted with their characteristics and habits as to be able to depict them in a thorough and peculiar manner. Last year Mr. Lefèvre issued a print named "An Old Monarch," the portrait of a noble lion so studied; and now he has produced a companion print, which is at the same time a contrast, being no other than the dear familiar donkey, and called "A Humble Servant," engraved by the same skilful hand, that of Mr. W. H. Simmons, who has admirably represented the rough coat and smooth, sensitive nose of Mdlle. Bonheur's picture. This has been now followed by a more important pair of etchings on a large scale—"On the Alert" and "A Foraging Party"—admirably executed by Mr. A. Gilbert. The first named is a noble stag, with raised head and open nostrils, listening for a moment in absolute stillness for a repetition of the sound that has alarmed him. This simple action, perfectly expressed, has given the artist the opportunity of depicting the splendid creature in his most beautiful and characteristic position. "The Foraging Party," again, is a party of wild boars ranging among the branching ferns and broken steeples of a mountain gorge. The untameable expression of the powerful grubbing savage, with his bristly hide and small suspicious eye, is thoroughly conveyed. Both the models for these two works were her daily companions at Fontainebleau, the latter having been captured at a tender age, and brought up by her hand, till the ferocity of their full-grown powers became too difficult to manage. Mr. Gilbert has executed these large plates in pure etching, and has attained an extraordinary degree of vigour in the handling, and very great intensity and brightness in the *chiaroscuro*.

THE *Revue politique et littéraire*, which is as fond of "actualités" as our own *Nineteenth Century*, has begun a series of articles in defence of the abolished Ministry of Fine Arts, by M. Antonin Proust himself. The first deals only with its organisation.

AN instance of the inertia of Government officials in matters connected with art comes to us from Malta. The Keeper of the Public Library and Museum in Valletta by special order prepared in June and July last a report on the prehistoric and other antiquities in the island (fast undergoing injury or decay), which was intended to be printed, ready for distribution, before Christmas. Its companion report on the Roman villa at Notabile was out long ago, but this one cannot get printed even yet, for the stupid reason that the Government printing-press has not got enough paper! English consignments are long in reaching the island, it is true; but there is plenty of excellent Italian paper close at hand, if officialism could see it.

A GOOD anecdote is reported of Victor Hugo in connexion with his bust just completed by

M. Villain. He was, with difficulty, persuaded by his friends to allow it to be crowned with laurel, but it happens that David d'Angers made a bust of him when he was yet young, and so crowned it. "After all," said the great poet, "you are right, perhaps; since David d'Angers crowned me with laurels, I must not, now I am old, seem to have lost them *en route*."

THE second centenary of Murillo is about to be celebrated at Seville, his birthplace, by, among other things, a collection of his pictures.

M. GALLAIT, of Liège, has just finished a picture of "The Plague at Tournai," which the Belgian Government is said to have bought for 110,000 frs. (£4,400).

A COMPLETE collection of the works of Courbet is shortly to be exhibited at Paris.

### THE STAGE.

THE Criterion Theatre once more flourishes on its reputation as a more or less Bowdlerised Palais Royal. Within the last few days, yet another farcical comedy has been produced upon its stage in which the hero may be described as an impetuous gentleman who has gone too far and would fain retrace his steps, and the heroine as an unexceptionable young woman who will behave very prettily to him so long as the exigencies of the play will allow. Mr. Wyndham once more assumes his favourite character of a by no means entirely unworthy, but, on the whole, rather genial, person in a temporary scrape and in a permanent hurry. Mr. Wyndham's impersonation compels laughter. The graceful presence of Miss Mary Rorke lends a charm to the faintly outlined character of the heroine; and Messrs. Standing and Giddens—one of them an eccentric actor of distinct value—contribute to the success of the piece. We will not say they add to its *vraisemblance*, for no one is asked to believe in the probability of a story presented at the Criterion.

WE are glad to read, and to hear, of the successful production at Liverpool of Mr. Carr's version of the admirable novel *Far from the Madding Crowd*, and we await with interest the production of the play in London.

THE Philharmonic Theatre at Islington probably saw its best days when "Geneviève de Brabant" was drawing all London to the Northern suburb, but it has, during this week and last, been by no means unable to reward a visit. Messrs. Gordon and Pettitt's avowedly sensational drama of "The Promised Land" was produced at first amid disadvantages which obscured its claim to be considered an excellent piece of its own class. It has now, however, at the Philharmonic, been running very smoothly, and it has been acted with perhaps unusual completeness. To a popular audience, its main story is absorbing. Mr. Forrest gives a picturesque performance of the hero, Walter Mason; Mr. Barsby, as the traditional villain of melodrama—and he is a personage who sticks at nothing—is entirely successful; Mr. Sarle makes quite the most, it must be allowed, of his somewhat limited opportunities for humour, but he is found highly acceptable in a part that has in it the germs of originality. Miss Nichols is amusing as Katrine. If the character of Jacob Vandervelde were more amply presented by the dramatist, and his relations with his daughter more fully developed, both Mr. Robinson and Miss Grace Latham would have legitimate opportunities which are now wanting, and the absence of which sometimes imperils that impression of reality which, even in a sensational drama, it is necessary to produce. Miss Latham, however, by the high intelligence of her art and by remarkable gifts and graces of elocution and gesture, is able so far to impress the audience as to obtain cordial applause for the

representation of a character sketched by the dramatist only in thinnest outline. Miss Marie Lindon performs quite satisfactorily the part of the happier heroine of the melodrama, but she is seen, we think, to fuller advantage in the well-mounted and briskly acted burlesque of "Amy Robsart." This is one of the better extravaganzas of poor Andrew Halliday's time, and of his writing. He was able, it seems, to adapt Sir Walter Scott to the exigencies either of Drury Lane or of the Strand. Miss Lindon plays Leicester in this extravaganza with the true burlesque spirit, and very earnestly, and is so continually lively, as well as graceful, as almost to ensure the success of the piece wherever she presents herself in it. The enterprising management is to be congratulated on the fact that it retains, for the present, at the least two young artists who, in the natural course of things, must be seen at the West End before long.

### MUSIC.

#### RECENT CONCERTS.

MR. WALTER BACHE gave his eleventh Orchestral Concert last Thursday, in St. James's Hall, and the programme was entirely devoted to the works of his master and friend, Franz Liszt. The first piece was a bright and pleasing march composed for the festival held at Weimar in commemoration of Goethe's 100th birthday in 1849. After this came the "Mephisto-Walzer," which we noticed, and not in favourable terms, on the occasion of its performance at one of the Richter Concerts last season. Mr. Bache's object is evidently to instruct rather than to amuse his audience; hence he repeated the "Faust" symphony, one of Liszt's most interesting and elaborate compositions. To appreciate its many beauties it should be heard more than once, and great credit is due to the concert-giver for his patience and perseverance in the cause of art, for a novelty would probably for the moment have proved more attractive. The first movement of the "Faust" symphony is extremely fine, and the combinations and developments of the various motives show great skill and judgment; the second movement ("Margaret") is full of charm and poetry; but we are still inclined to think the concluding movement the least interesting of the idea. It is entitled "Mephistopheles." The themes are the same as those of the opening section of the symphony, but, through the influence of the "spirit that ever denies," they are shorn of all their grandeur and nobility. The idea is, of course, extremely ingenious, although, as we have before hinted, not quite original; but we feel that the effect becomes somewhat monotonous before the close. The work had evidently been carefully rehearsed, and the performance was good. The programme-book contained a catalogue of Liszt's works which have been performed at these concerts. Seven orchestral works, six orchestral and vocal, and three for pianoforte and orchestra are mentioned; of these, one ("Les Préludes") has been given three times, and many of the others twice.

The 172nd concert of the Cambridge University Musical Society was given in the Guildhall, Cambridge, last Tuesday evening. Dr. Joachim played Brahms' concerto in D, and his own theme and variations for violin and orchestra. The very enthusiastic welcome given to him shows in what esteem and honour he is held there, and it is but natural that he should look upon his visits to Cambridge as among the pleasantest episodes of his visit to England. The hall was well filled; both pieces were listened to with rapt attention, and received with the warmest applause. The performance of Wagner's charming "Siegfried-Idyll" was by no means free from reproach. The last piece

## LITERATURE.

*Memoirs of Prince Metternich, 1830-35.*  
Edited by Prince Richard Metternich.  
Vol. V. (Bentley.)

THE present volume of Prince Metternich's *Memoirs* is slightly different in character from the four preceding volumes. Neither congresses nor other events of great political moment required the Prince to be absent from Vienna after 1830, and hence opportunities for correspondence of public interest were not so frequent. But the *Memoirs* launch us upon a new period of great European anxiety, when, from the errors of the Bourbon government, a revolution in France had again become a possibility, and had achieved a success, which was the best evidence that the government of the Bourbons had neither the power nor the skill to strike root in France. A Masaniello may float in seeming triumph on the storm-wave of an insurrection for a few days, but a Garibaldi can only permanently succeed where the State-system which he assails is rotten to the core; and thus the Bourbon dynasty fell a second time by reason of the incapacity of its chief and his Ministers to bridge the gulf which separated the France of Napoleon I. from the France of the Capets. There was, however, an unusual feature in the July revolution of Paris, as the son of the Duke of Orleans, who had voted for the death of his kinsman, Louis XVI., stepped forward on this occasion and caught the crown as it was falling from the head of Charles X. Accordingly, the first papers of interest in the present volume are concerned with interviews between Prince Metternich and Gen. Belliard, the ambassador of Louis-Philippe, the new King of the French. We should have been glad if the editor had found it consistent with his duty to publish Count Apponyi's reports from Paris, to which the Prince alludes; but we are aware that, in spite of a lapse of fifty years, the consequences of the July revolution are not yet exhausted, although France has passed through the furnace of a Second Empire in its transition from a kingdom to a republic. The *Memoirs* are, in fact, now entering on a period, which does not belong to the dead alone, but trenches on the feelings and the interests of the living, to whom the full revelations of diplomatic confidences might, in some cases, be painful, and perhaps prejudicial. The same consideration has influenced the editor in regard to the diary of the Princess Metternich. Beginning with the year 1820, and continued day by day until a short time before her death in 1853, this diary occupies

thirty closely written volumes; and from these the editor has given extracts from time to time which afford an insight into the domestic life of the Prince, as well as into the social influence exercised by the Princess herself, whose *salon* grew to be a centre whence emanated an impulse, by which the conservative policy of continental Europe was regulated during a period of more than a quarter of a century.

The next important event which the *Memoirs* touch upon is the insurrection in the Netherlands, which followed closely on the French revolution of July. Here, indeed, an international difficulty arose, inasmuch as the separation of the Belgian provinces from the ancient provinces of Holland affected the guarantee of the Allied Powers under the treaty of July 1814; but the Prince at once appreciated the irreconcilable antipathy between the Belgian people and the Dutch, the diversity of their interests and the opposition between their religious principles, and he acceded without hesitation to the compromise proposed by the British Cabinet. Next came the attempt at revolution at Warsaw under the Dictator Chlopicki; but, as the condition and organisation of the kingdom of Poland quickly reduced the insurrection of the Poles to a mere political question to be fought out between Poland and Russia, the result was, as might be expected, not in favour of the insurgent kingdom. Then came the attempt at revolution at Modena and in the Romagna, when the sons of Louis Bonaparte, at the head of the insurgents, proclaimed the suspension of the temporal power of the Pope. The insurrection in Italy failed on this occasion through Austrian intervention, but "coming events had cast their shadow before them." Two French frigates were reported to have anchored in the harbour of Civita Vecchia, while a French expedition landed at Ancona; and, although the French Government disowned the expedition, Prince Metternich was of opinion that facts had become more important than diplomatic phrases. Then came the abortive enterprise of the Duchess of Berry on the South coast of France, which showed that, although the spirit of revolution was everywhere rife, there was a want of combustible matter to sustain the flames. The death of the Duke of Reichstadt soon followed these events, whereupon the youthful Louis Bonaparte considered himself called upon to announce that he had inherited the succession. When Cadmus, according to the Theban legend, sowed the teeth of the Dragon, armed men sprang up at once, who destroyed one another. But the revolution was content to bide its time in Italy. It sowed its dragon's teeth in the Peninsula, while Prince Metternich was in power. It was not, however, until he had resigned the reins of government, that the armed men sprang effectively to their feet.

The occupation of Ancona by the French in 1832 was the first blow to the temporal power of the Papacy. The Prince endeavoured in vain to discover a principle of stability, which might secure the sovereignty of the Holy See over the Legations; but in his confidential letter to Count Lutzow of June 29, 1832, he admits to the ambassador that the

most insuperable difficulty of all was connected with the fact, that the Papal government had no idea how to govern, while the moral and political independence of the Court of Rome was at the same time threatened by the antagonistic claims of France. Then came the June rising in Paris, which Louis-Philippe succeeded in putting down by an act of energy on his part, which caused the majority of the French people, including the capital, to support his authority. Meanwhile, the colours black, red, and gold had been unfurled for the first time as the badge of the German nation at the Castle of Hambach, in Rhenish Bavaria; while the German Republicans in Paris had celebrated the day of the Hambach festival by a great banquet, held in the Bois de Vincennes under the presidency of Gen. Lafayette.

The *Memoirs* touch upon all these varied conflicts between the old and the new forms of government, in the midst of which many ancient thrones fell or were imperilled through mistakes of administration. New kingdoms had meanwhile been created by the concert of the European Powers. The youthful Prince Otho of Bavaria had been called upon to ascend the throne of Greece, which had recently been established by the combined action of the Courts of England, France, and Russia. The choice, if we remember rightly, rested at the last moment between Prince Otho of Bavaria and Prince Paul of Wurtemberg, and the three Powers chose the immature youth, who was still in his teens, in preference to the vigorous man. This was considered by many persons at the time to have been an error of judgment on the part of the three Powers, and the result proved it to be so; but the Powers had undergone a rebuff from Prince Leopold of Saxe-Coburg, who had rejected the Hellenic crown, after he had accepted it, on the ground that the territory of the proposed kingdom ought to receive an extension nearly identical with that granted under the Treaty of Berlin. A still more striking instance of Prince Leopold's sagacity was soon afterwards shown, when he accepted the Belgian crown in the full assurance that he was invited to reign over a people whose spirit was not revolutionary, although it had revolted against the maladministration of the Dutch Government. Meanwhile, a conflict of authority had arisen between the Viceroy of Egypt and the Sultan, and a novel phase of the Eastern Question had been inaugurated by the revolt of Mehemet Ali. A confidential letter of Prince Metternich to Baron Prokesch-Osten, of January 23, 1833, deserves to be studied in the present day, at a moment when a miniature revolt against the Sultan's sovereignty may be at hand in Egypt.

The year had not concluded when we find the ball of revolution tossed back to Spain, where, for a time, the Iberian peninsula became its head-quarters. The perplexity of Louis-Philippe as to what policy he should pursue towards Spain gave rise to a most interesting conversation between the King and Prince Esterhazy at Neuilly on May 23, 1834, the day after the funeral of Lafayette. This conversation well merits perusal, as it contains Louis-Philippe's own

justification of himself for accepting the crown to the exclusion of the Duke of Bordeaux. How little could so dark a sunset be foreseen where the morn was so bright for the Orleans family. Yet there were some far-seeing spirits who anticipated the tempest which supervened.

The Prince's Memoirs disclose on two occasions the desire of the Duke of Orleans to wed an archduchess of Austria. A confidential letter of the Prince to Count Apponyi at Paris, of February 3, 1835, makes known the Austrian view of the project.

"The contemplated journey of the Duke of Orleans is an undertaking involving great risk, and is most unfortunately timed. He will be received everywhere, and especially at Vienna, as befits the son of the King of the French, with whom Austria is at peace. To expect more than this is to court disappointment; and to believe in the possibility of a marriage with us is to court disappointment over again. Our experiences have been of too melancholy a character for us to be able to forget them so soon; and I know of no archduchess who would lend herself to the experiment for a third time" (p. 460).

The volume shortly afterwards breaks off with the death of the Emperor Francis, whom the Prince had served so long and so faithfully, and whose last words commended the Prince to his son and successor as his truest servant and friend. The death of the Emperor suspended the contemplated visit of the Duke of Orleans to Vienna, the result of which is accordingly not disclosed in the present volume by the Prince's pen. We will, however, complete the narrative on the authority of a conversation with the Prince himself. The Duke came to Vienna and consulted Prince Metternich, who gently endeavoured to dissuade him from pressing his suit; but the Duke persevered. The reply of the Archduchess was kind and considerate, but decisive. "To yourself, Duke, personally, I can take no exception"—we quote the purport of her answer, not the words—"and if only personal considerations were involved in your suit, my answer to it might be favourable; but, if I were to become your spouse, I could never lay my head upon my pillow without the fear of waking up and finding the Revolution at our door." And so the projected marriage came to an end, and the Duke found an affectionate wife elsewhere, who was destined to undergo a more terrible bereavement than the Austrian Archduchess had ventured to forecast.

Our space has allowed us only to allude to the diary of the Princess Metternich. The editor has supplied select extracts from time to time, and we can only liken their effect to the opportune service of the Prince's own Johannisberger wine at a banquet at the "Trois Frères." They will enliven the spirits of the reader, who might otherwise be cast down by a *menu* of fallen thrones and exiled dynasties. There is one charming story highly illustrative of the period. At a Court ball at Vienna, the Princess Metternich wore a kind of diamond crown, when M. St-Aulaire, the French ambassador, observed to her, "Why, Princess, your head is adorned with a crown." "Why not?" was her answer; "it belongs to me; if it were not my own

property, I should not wear it." This reply was quickly caught up, and threatened for a time to produce consequences almost as momentous as those which are said to have been caused by the spilling of a glass of water on Mrs. Masham's robe in the reign of good Queen Anne. TRAVERS TWISS.

*Onesimus*: Memoirs of a Disciple of St. Paul. By the Author of "Philochristus." (Macmillan.)

DR. ABBOTT's latest work reminds us at once of Paley and of *The Clementines*. Both the subject and the treatment recal the oldest and not the dullest of historical romances. Of the two, perhaps the newer work is more readable, and the older contains more solid and independent thought; another contrast is that St. Peter is a good deal more prominent in *The Clementines* than St. Paul in *Onesimus*. The resemblance to Paley does not lie on the surface. Paley liked stating and proving definite propositions addressed to the cool judgment of plain, reasonable men; the author of *Philochristus* does not deal much in definite propositions—he certainly does not address himself to the cool judgment of his readers. But Paley resumed and popularised and superseded a large literature, and made its results accessible to all educated men; and, if Dr. Abbott has not quite superseded the literature he resumes, it is not because he has failed to make it intelligible, but partly because Englishmen are less self-reliant than they used to be, and more ready to be dazzled by foreign authorities; partly, perhaps, because there are points of view which seem plausible until they are clear.

Onesimus, it seems, was free-born, but exposed in his infancy, with his twin-brother, not by the will of his parents, but by the spite of a runaway slave, who was instigated by the heir (the author does not explain how it happened that the amulets which the mother gave her children were left round their necks); they were bought and adopted by a charitable lady of Lystra, who made a will in their favour, which was suppressed by her heir-at-law. Before this happened, Onesimus had seen St. Paul as a child, and received his blessing in the name of the heavenly Father. He resented the separation from his brother (who soon died) and was thrown into an ergastulum, where a Colchian sorcerer astonishes the slaves by predicting the death of their tyrant in an earthquake which he professes to have conjured up. In fact, the tyrant is killed (not by the earthquake), and all the slaves under his roof are put to death, while those in the ergastulum are sold. Onesimus, who was well educated, was bought by Philemon, who had a good heart and a bad liver. His liver made him superstitious, and his superstition made him selfish. He neglected his promise to emancipate Onesimus, and then, when he fell in with St. Paul and was converted, he wanted Onesimus to be converted too, and crossed his love for a much more promising convert, the daughter of a poor but honest rhetorician at Athens. She dies; Onesimus is accused of stealing books, runs away and joins himself to the strolling priests of Cybele, and afterwards works his way as a buffoon to Rome, where St. Paul converts him. On a second visit

he hears the story of St. Paul's conversion on the eve of the Apostle's martyrdom. Then he goes to Britain to see Philochristus, who can give him news of his parents, and thence to Beroea and Smyrna, where he, too, is martyred before he can carry out his plan of visiting "John the Disciple of the Lord" to ascertain whether the miracles recorded for the first time in the newly written gospels ever happened.

The author seems to have had three objects—to illustrate the comparative worth of paganism and Christianity, to demonstrate anew the absolute worth of Christianity, and to explain the process by which it came to be disfigured to an uncertain extent by unhistorical accretions. His attempt to carry out the second object is a failure. He relies mainly on the fact that the first preaching of Christianity reformed many thousands of the worst characters of the empire; the first preaching of Buddhism and Islam had also excellent effects; by the middle of the second century the demand for thorough amendment of life comes upon Hermas as a new and startling revelation. His other ground is little stronger; love and trust in the personal Lord make Onesimus (when he was tired of living on his vices) a new creature, but, as the story is told, conversion did Philemon little good; it strengthened his self-control and made him meddlesome, and otherwise left him as it found him. Of course, if the only question were what religion is able to persuade a man that he is saving his soul, the conversion of Onesimus is as decisive as he supposes it to be himself; nothing else would have given him the sense of salvation that he wanted. The criticism of Judaism and Paganism is less unsatisfactory. Philemon travelled a great deal for his health to all kinds of pagan shrines first, and afterwards, being superstitious, to Antioch and Jerusalem. He took Onesimus with him, who arrived at the conclusion that neither Paganism nor Judaism was a religion for the poor, while the wholesale butchery in the Temple on great festivals disgusted what we are meant to take for his Hellenic delicacy. The visits to Greek miraculous shrines are amusing, and the influence of the wild culture of Phrygia is delicately suggested; but all this part of the work suffers a little from the writer's resolution to use the literature of the second century to illustrate ideas which he assumes to have been in the air in the first. The one evidence of this assumption is the career of Apollonius of Tyana; and, to judge by his legend, he was rather like a Pakkīike Buddha, able to teach those who could profit by example, and unable to set forth an articulate doctrine. The most grotesque consequence of the author's mistake is that we actually find Epictetus as the mentor of Onesimus. Dr. Abbott knows perfectly well that, if Epictetus and Onesimus were contemporaries, the former must have been much the younger of the two. Now Arrian's records of his teaching date from the period of his full maturity, and excerpts from these have a very incongruous effect when put into the mouth of a lad lecturing a senior who had passed through an experience more trying than his own. The criticism of Epictetus is effective enough against his and other

forms of optimism, and not unworthy of the joint wisdom of Mr. Fitzgerald and Omar Khayam.

"For all that Epictetus had said came to this, that if we remained as a Guest [*sic*] at the Feast, each one was bound to act as if the Master was good, or else to depart from the Feast. But why was a philosopher bound to suppose something that might be false, or else to slay himself? For all the while there might be no Master of the Feast at all, but only a talk about Masters, and in reality neither Master nor Feast, but only a kind of scramble for sweetmeats. . . . And to make believe that the Master was perfectly good and wise (and all for the purpose of attaining for oneself calmness and tranquillity of mind)—this seemed a kind of flattering of the Master and deceiving of oneself, that was scarcely worthy of a philosopher."

Philemon had an Epicurean friend who advised him to try the hot baths at home before he ran to Asklepias at Pergamus and then to Trophimus at Lebadea to explain the dream which Asklepias sent, and then, perhaps, to Delphi for an interpretation of the vision which Trophimus had vouchsafed to Onesimus. Artemidorus has a double part to play in the story; he has to represent what is known of the historical objections of Celsus to Christianity; he has also to represent Dr. Abbott's conception of the higher Positivism of the first century (the lower aspects of which are represented by Metrodorus, the namesake of the dear companion of Epicurus). The one point which Artemidorus at last fails to explain to his own satisfaction is the immense personal superiority of Christ, of which the conversion of St. Paul is the decisive instance.

The correspondence between Artemidorus and Onesimus in the third book is the vehicle for much ingenious illustration of the author's views of the gradual growth of the Christian legend. Artemidorus tells a story of the grotesque exaggerations with which he first heard of the dead man whom Philip raised to life; and then Artemidorus gets hold of the resuscitated man, and hears a story no more miraculous than that of the Archbishop of Bordeaux, who narrowly escaped premature interment in his youth. Still more brilliant is the narrative (pp. 97-99) of the successive stages by which the writer imagines the legend of the Gadarene demoniacs to have formed itself. An attempted explanation of Christ's walking upon the water is less plausible. The writer is at the pains to invent a not incredible psalm about Christ's meeting the disciple tossed upon the sea of temptation; but the explanation does not fit the legend of St. Hyacinth crossing the sea on his cloak, which rests on evidence which satisfied Card. Newman. If we are to have rationalistic explanations of legends at all, it ought to be remembered that none is convincing which does not fit all the legends of a class. So, too, though the author still adheres to his unlucky explanation that the thousands in the wilderness were only fed with the bread of heaven, he hints that our narratives are coloured by the feeding of the Israelites with manna and by Elisha's feeding the prophets and multiplying the widow's oil. It is true that if the latter story were told of a Mahometan Dervish we might conjecture that the benevolent ascetic filled the vessels with water and then set the

widow to pour in oil on the top. But the feeding of a hundred men with twenty loaves, and of five thousand men with five loaves and two fishes, are stories of the same kind, and, unless we can rationalise both in the same way, it is better not to rationalise either. Still weaker is the attempt to illustrate the theory of the origin of our gospels set forth in the new edition of the *Encyclopaedia Britannica*. We might, perhaps, have been willing to follow either statement of the author's reasons for thinking that nothing was written till the churches had rest from vain hopes under Vespasian. But when Onesimus, both before and after his conversion, insists upon the broad distinction between what was and what was not in "the Tradition," as if "the Tradition" (the assumed groundwork of the Synoptics alleged to be preserved in "St. Mark") were so much more certain than the additions made by one editor or another, it is impossible not to remember that now, when the habit of writing is general, fresh and authentic details about great men continue to come to light for more than fifty years after their death. G. A. SIMCOX.

*Evenings with a Reviewer*; or, Macaulay and Bacon. By James Spedding. With a Prefatory Notice by G. S. Venables. (Kegan Paul, Trench & Co.)

To judge from Mr. Venables' interesting Preface, it appears that these *Evenings with a Reviewer*, originally printed for private circulation, were prepared for publication by the author shortly before his lamented death. Whether the book will really have the effect which the editor seems to expect, it would be hazardous to decide. No doubt there are many persons who will read two volumes, though they would resolutely turn their backs on seven; yet it may be that the form of the present work will prove as repulsive to the general reader as that of the *Life of Bacon*. It is not necessary to adopt Mr. Venables' wild statement—that the plan of Carlyle's History of Oliver Cromwell was borrowed from the cumbrous arrangement of the *Life of Bacon*, which was in reality published many years after it—in order to acknowledge that the close juxtaposition of text and comment is no slight assistance to the true understanding of both. Yet it is only the real student who will take advantage of this; while the mass will continue to think, in the language of the editor, that "it is the business of a literary artist, and especially of an historian, while he collects raw materials only for his own use, to supply finished products to others."

It is precisely this finished product which Spedding was unable to furnish. *Evenings with a Reviewer* does not give us Bacon's biography as it ought to be written. The book is composed of a series of destructive criticisms of Lord Macaulay's well-known essay, each of them leading up to the writer's own view of the transaction in question, but labouring under the defect that the very number of successful blows planted conveys a sense of weariness to the satiated reader. Even when Lord Macaulay was at the zenith of his fame, two or three such blows would have

been quite enough to dispose of his credit for accuracy; and no serious person now supposes that in matters relating at least to the first half of the seventeenth century he was anything more than a brilliant smatterer. Spedding kills him, and then goes on stabbing his carcass. The result is a book which anyone will be charmed to dip into, but which few indeed will care to read to the end.

Such a disappointing result opens the question why it was that Spedding did not rather give us a true biography of his hero. Is it not possible that the reason is to be found in the passage in which Mr. Venables tells us that "his study of philosophy or scientific method was, I think, confined to Bacon; and his knowledge of the details of history extended in neither direction beyond the times of Elizabeth and James I."? Does not this mean that he failed to conceive the events which he recounted as parts of a great whole? And did not this failure extend farther still? Each scene of Bacon's life is treated as if it stood alone. When the work is accomplished, it is flung aside, and whatever is next in order is approached. Slight indications of character are passed over because they seem unimportant in relation to each action taken by itself. The constant recurrence of such indications, which would be the very thing to strike a true biographer, is left unnoticed. At the end of the seven volumes, when the reader expects to get a picture of Bacon as a man, drawn by the hand which was most competent to portray his lineaments, he is sent away disappointed.

The qualities which prevented Spedding from being a popular biographer also prevented him from being a popular historian. He is constantly content to show that we cannot accuse men of the sixteenth or seventeenth centuries of mistakes unless we admit that many of our acts will seem as mistaken to our successors. But he hangs back from expressing a judgment on the character of those very mistakes. He throws over the judgments of feeling and of prejudice, but he has no scientific conception of history to fall back on. Yet it is precisely the craving after unity of conception which is the higher side of the popular demand for completeness of form. No doubt it is liable to be satisfied with very unlit food. Incomplete knowledge—and all knowledge must ever be incomplete—will clothe itself in hasty generalisations. But, for all that, the aim at producing a harmony which never can be produced is the divinest note of man's imperfect intellectual nature.

Such considerations are suggested by Mr. Venables' evident disappointment that his friend's work has not been better appreciated. Of that work, within the limitations imposed upon it by human nature itself, no one can have a higher appreciation than myself. No one, I should imagine, can have had a fairer opportunity of judging its value. It happened to me to be called on to study a great part of Bacon's career before Mr. Spedding's volumes were published, and in this way to be brought into a position to estimate fully their luminous intelligence.

SAMUEL R. GARDINER.

*Schwatka's Search: Sledging in the Arctic in Quest of the Franklin Records.* By William H. Gilder. (Sampson Low.)

THE narrative of Lieut. Schwatka's remarkable sledge journey in search of the Franklin records was originally published in detached letters by the *New York Herald*, and the main facts are already familiar to the public. The present volume is, nevertheless, a welcome addition to Arctic literature, as it brings the complete account within the reach of general readers, and resumes it in a convenient form for purposes of reference. It is also of considerable geographical interest, the party having marched over a large tract of unexplored country, and may be regarded as finally closing the sad history of the Franklin expedition.

The object of the enterprise was to investigate a whaler's report that some Netchillik Esquimaux knew where the journals of the Franklin expedition were hidden; and Lieut. Schwatka, of the Third United States Cavalry, who had been active in organising a party to search for the supposed cairn, was entrusted with the chief command. His companions were Col. W. H. Gilder (the author of the narrative), Henry Klutschak (a civil engineer), Frank Melms (an experienced whaler), and the well-known interpreter, "Esquimaux Joe." The party left New York on June 19, 1878, and spent the first winter at Camp Daly, near the entrance of Chesterfield Inlet, adapting themselves to the mode of life of the Esquimaux, and making preliminary reconnoitring journeys. In the course of these journeys it was ascertained that the report of the whaler had no foundation in fact; so Lieut. Schwatka determined to make a summer search in King William Land, when the snow was off the ground, "in order to find the records, if possible, or, at any rate, to so conduct the search as to make it final and conclusive of the Franklin expedition." This project was carried out in a manner that reflects the highest credit on the whole party. The expedition left Camp Daly on April 1, 1879, with three sledges drawn by forty-two dogs, which had been collected "by hard work, persistent effort, and overpowering liberality with regard to guns, ammunition, and other articles of trade." The loads weighed about 5,000 pounds at starting, but, as they consisted largely of walrus meat, they were lightened from day to day by consumption. Their supplies of "civilised food" were only expected to last about one month, as they confidently relied on finding game, and had full faith in the quality of their arms. Fortunately, their faith proved to be well founded, or the expedition would have been impossible, and very probably disastrous. Besides the four white men, the party consisted of "Esquimaux Joe" and his wife; a splendid hunter and dog-driver named Toolooah, with his wife and child; two other Inuits, or Esquimaux, with their wives and a child each; and two lads—in all, seventeen people. Passing eastward of the Hazard Hills, a precipitous range discovered by Lieut. Schwatka during his preliminary journey, they reached a branch of Back's River on May 9, and followed it for upwards of ninety miles. By that time the snow was entirely gone in many places, and the country

was so hilly and rugged that it would have been almost impossible to cross it with the heavy sledges. The estuary of Back's River was reached after nearly two months' travelling over an entirely unknown country; and, with the salt-water ice beneath them, they felt assured of reaching their destination. In an inlet west of Richardson Point they came upon a native encampment, having previously met with a small party on the Hayes River. Lieut. Schwatka collected a great deal of information from both these parties, and bought a few unimportant Franklin relics. In June, he crossed over to King William Land, and made an exhaustive search of the western shore as far as Cape Felix, the party moving like a line of skirmishers, so as to cover as much ground as possible. The summer travelling was exceedingly difficult, the dogs floundering in slush and water or scrambling over broken ice when crossing the inlets, while on shore the footing was rendered treacherous and painful by half-frozen marshes and broken, sharp-edged clay stones. During the return journey in July, their difficulties were increased by dense fogs and heavy gales, and their boots and stockings were so completely worn out that "walking was torture."

Though the details of this generous effort to throw additional light on the fate of the retreating crews of the *Erebus* and *Terror* are full of melancholy interest, they do not add any positive facts of importance to the history brought to light more than twenty years ago by Sir Leopold McClintock. But Lieut. Schwatka may be considered to have finally established the loss of the Franklin records; and he also gathered a great number of relics and tokens. The bones of Lieut. Irving, which were identified by a medal found near the grave, were sent to Scotland for interment, and all the remains found were carefully collected and reverently buried.

The homeward journey was commenced in November, and the party returned to Hudson's Bay by a route to the westward of that taken on their outward march. During the summer, the travellers had suffered much from sunburn and snow-blindness; but the privations and hardships of the winter journey were so great that only unquailing courage, resolution, and perseverance could have carried them through it in safety. The cold was so intense that, when the party was divided, the condensed breath of the dogs and people was distinctly visible at a distance of ten miles, and on every hillside the breath of the reindeer could be seen rising like clouds of steam. January was the coldest month, the mean temperature being 53° below zero (F.), while the lowest was 71° below zero, or 103° below freezing point. Reindeer meat was plentiful, but had to be eaten frozen, as the supply of blubber for cooking was almost exhausted; and the country began to swarm with wolves, which attacked the hunters, and killed some of the dogs. Altogether, the achievement of Lieut. Schwatka and his gallant companions is an extraordinary instance of what may be done by courage and determination, and in some respects their journey is without a parallel. They were absent from their base of supplies for eleven months and twenty days, and traversed 2,819 geographical or 3,251 statute miles, chiefly over unexplored country. They

travelled continuously throughout an exceptionally cold Arctic winter; and, after the first month or so, lived exclusively upon the same fare as the natives, thus confirming Capt. Hall's experience that white men can safely adapt themselves to the climate and life of the Esquimaux. They relied for subsistence entirely on the game to be found, and, besides musk oxen, polar bears, and seals, killed, during the journeys out and home, no less than 522 reindeer. The Esquimaux of the party gave invaluable aid, building snow huts, coating sledge-runners with ice, supplying foot gear and clothing, and enabling the expedition to hold communication with the wild tribes with whom they came in contact. Apart from the mere record of the journey, there are some very interesting chapters on the manners and customs of the Esquimaux; and the Appendix contains a glossary of words in general use between the natives and traders in Hudson's Bay and Cumberland Sound. The outward and homeward routes are shown on three small maps, but would perhaps have been more easily followed on one larger one. The book is thoroughly readable, and has the merit of describing in a simple, manly way many adventures which might easily have been made to assume a sensational character.

In an excellent summary of the journey and its results published in the *Proceedings* of the Royal Geographical Society, Mr. Clements R. Markham observes that "Englishmen will always cherish a feeling of gratitude for the kindly deed of the brave Americans who tenderly collected and buried some of the bones of our heroes—a task which, we well know, entailed no small amount of peril and hardship." And this verdict will no doubt be cordially endorsed by all who read Col. Gilder's interesting narrative.

GEORGE T. TEMPLE.

*Charles Lowder: a Biography.* By the Author of "The Life of St. Theresa." (Kegan Paul, Trench & Co.)

WHENEVER the religious history of England in the nineteenth century is written, more than one paragraph in it must be devoted to the life and labours of Charles Lowder. The true missionary spirit was in him. It showed itself at the outset of his career, when he desired to throw in his lot with Bishop Selwyn, and it found full scope for its exercise in the dark places and cruel habitations at the East End of London. What "Father Lowder" effected by his twenty years of self-denying labour in the most degraded quarter of our great city will never be fully known, but the outward evidences of his good influence are to be seen in the altered circumstances of those among whom he dwelt. If, as there is abundant reason to believe, the moral atmosphere of the East End is purer than it was, if respect for religious ordinances has taken the place of open insult, and light has sprung up where once was only gloom—these happy results are largely due to the agencies set on foot by Mr. Lowder and his colleagues. We may not agree with the teaching by which St. Peter's, London Docks, was distinguished, but we cannot help admiring the teacher's

life and the courage with which he carried his convictions into practice. We can quite believe Mr. Linklater when he tells us that Mr. Lowder

"was not a Ritualist at all in the modern sense of the word, after the gushing, effeminate, sentimental manner of young shopboys, or those who simply ape the ways of Rome. He had glorious ritual in his church, because he thought the service of God could not be too magnificent."

And we can understand that a beautiful and reverent service would be of priceless value to wretched beings whose lives were unrelieved by the sight of one single streak of glory. But it is impossible to read this most interesting biography without seeing that Mr. Lowder's success was due almost entirely to the daily spectacle of courage, zeal, and genuine philanthropy which his life displayed. He lived for his people, and they knew it. And so at his funeral, in the very streets where the mob had once pelted and ill-treated him, the police were obliged to keep a line amidst the crowds of weeping men who pressed forwards to see and touch the pall which covered their benefactor's coffin. It is said that hundreds, too poor to travel by rail, walked to Chislehurst to see his body committed to the earth.

"The scene on Chislehurst Common, when the trains of mourners had arrived from London, was wonderful; the men of Wapping and Shadwell, whom none will credit with extravagant religious weakness, gathered to manifest their gratitude and affection for the heroic priest who had laboured so long among them. It was computed that at least 3,000 were present, including about 200 clergy."

No higher eulogy than this could be given, and no better reason is needed for a book which, apart from the interest which attaches to its nominal subject, offers material for grave thought to all who possess the smallest "enthusiasm of humanity."

CHARLES J. ROBINSON.

*Collection de Romans grecs.* En Langue vulgaire et en Vers. Publiés pour la première fois d'après les Manuscrits de Leyde et d'Oxford par Sp. P. Lambros. (Paris: Maisonneuve.)

OWING to the indefatigable labours of such men as MM. Sathas and Legrand at Paris, of M. Lambros, of Athens, and of the late Dr. W. Wagner, of Hamburg, the publication of the texts of mediæval Greek poems proceeds apace. Throughout Europe the great libraries are being ransacked, and the specimens of this branch of literature which they are found to contain in surprising abundance are being carefully edited and printed in an attractive style. The present volume deserves especial attention in England, because so many of the MS. which M. Lambros has employed exist in our collections. It comprises four long poems, and these have the advantage of differing from one another in their subject and treatment, so that they may be regarded as representative specimens. The first, entitled *Callimachus and Chrysorrhoe*, is founded on a popular tale or fairy story, and relates the fortunes of the youngest of three princes,

who delivers a beautiful princess from the power of a dragon in an enchanted castle, but himself afterwards becomes the victim of a sorceress, who mars his happiness; his princess is then carried off by another, and the adventures of both are told, until at last he regains her. The date of this composition is doubtful, but the story is graceful, and is pleasantly told. It exists only in a single MS., which appears to have been left by Joseph Scaliger to the University of Leyden, and is still in the possession of that body. The second is an epic poem relating the life and adventures of Digenes Acritas, a Byzantine hero of romance of the tenth century. This personage is at the present day the centre of a cycle of modern Greek ballads; but little was known of him until a few years ago, when a poem corresponding to the present one was discovered at Trebizond, and was published in 1875 by MM. Sathas and Legrand; since that time, three other versions have been brought to light—one in Italy, one in the Island of Andros, and the one here printed, which belongs to the library of Lincoln College, Oxford. This poem follows the same lines as the one previously known, but nevertheless is a different composition, and is in rhyme, which the other is not. It also contains the beginning and end of the story, which are wanting in the Trebizond version. The MS. was written by a monk of the Island of Chios in the latter half of the seventeenth century; he speaks, in fact, as if he were the composer of the poem; but it is pretty clear that his work consisted in putting an earlier work into rhyme. The lineage of the hero, who is the son of a Saracen emir and a Greek lady of noble family, his exploits in combating wild beasts and brigands, and the scene of the story, which is laid in the east of Asia Minor and on the banks of the Euphrates, combine to impart to it a highly romantic tone. Then follows a specimen of those imitations of the French romances to which M. Gidel has drawn attention in his first series of *Études sur la Littérature grecque moderne*, the story of *Imberios and Margarona*—that is, *Pierre de Provence et la Belle Maguelonne*. This work has already been published several times; but, as M. Lambros found that the MS. in the Bodleian Library, which had not before been collated, is especially valuable, he thought it worth while to edit the text afresh, making this version the basis of his edition, and comparing it throughout with the better-known Vienna MS. The fourth poem, which is called a "consolatory address concerning good and evil fortune," is a story of a young man who, having suffered from misfortune all his life, sets out on an expedition to find the castle in which the goddess of Evil Fortune (*Δυστυχία*) dwells. On his way, he meets with Time, who gives him a letter to that divinity, and by her kind offices he is ingratiated with her sister, the goddess of Good Fortune (*Εὐτυχία*), who shows him the road to happiness. The moral is that the unfortunate should never despair, and that the prosperous should help those in misfortune, and remember that they themselves are exposed to change. This composition is partly allegorical, but many of the incidents

which it contains suggest that it is an adaptation of an ancient popular tale. The MS. from which it is taken is also preserved in the Bodleian. All these poems will be found easy and agreeable reading by those who have even a superficial acquaintance with mediæval or modern Greek.

In the Introduction, M. Lambros gives an interesting sketch of the rise of the mediæval Greek literature in the vulgar tongue, and notices that the poems of chivalry mainly come, as might be expected, from Cyprus and Rhodes. He also points out the errors into which persons are liable to fall in editing these compositions, and adds some valuable hints for their guidance, together with remarks on the orthography. His own editorial work appears very careful; and there is an excellent Glossary at the end of the volume.

H. F. TOZER.

#### CURRENT THEOLOGY.

*Ely Lectures on the Revised Version of the New Testament; with an Appendix containing the Chief Textual Changes.* By B. H. Kennedy, D.D. (Bentley.) The first of these sermons is interesting as having been preached more than twenty years ago, when the author had no expectation that he would ever be called on to take part in the work of revision. At that time Dr. Kennedy advocated pointing Rom. ix. 5, with a full stop after "Christ came," and the same view is further enforced in one of the Appendices to the present volume. Other important points are discussed in the remaining two sermons, one of which contains a defence of the substitution of the word "love" for the "charity" of the Authorised Version; and in the dedication (to Dr. Scrivener) there is a good practical suggestion that, after the interval of a year, when criticism shall have exhausted itself, the Revising Company should be invited to meet again, and, "while they review their reviewers, to review themselves by such light as would have been gained." The synoptical view of the more important textual corrections will be found useful.

*Forschungen zur Geschichte des neutestamentlichen Kanons und der altkirchlichen Literatur.* Von Theodor Zahn. 1. Theil: Tatian's Diatessaron. (Erlangen: Deichert.) Tatian's Diatessaron, which has been hitherto little more than a name, is here not only made the subject of an elaborate treatise, but is actually presented, in bodily form and substance, to the eye of the reader in a dress, for the most part, Latin, but, where another set of materials is employed, partly also German. Taking as his foundation Moesinger's Latin version of the Commentary of Ephraem Syrus, now extant only in Armenian, and calling to his aid all other available authorities, of which the Homilies of Aphraates, the Persian sage, are the most important, Prof. Zahn gives us Tatian's text, so far as it can now be recovered, in the form in which, if his judgment may be relied upon, it must have been known in the churches round Edessa from the end of the second to the fifth century. Its original language, he contends, was Syriac. It is shown to be closely related to the Curetonian, and, as it is improbable that a translator would follow a harmony in which he could never depend on the sequence of the original being preserved, it is plausibly argued that the latter preceded the former. In other words, there was a Syriac translation of our four gospels as early as the middle of the second century. Prof. Zahn sets a high value on Tatian's harmony, affirming that it surpasses in boldness and insight most

of those that have followed it to this day. He sees no heresy in its omission of the genealogies, though Bishop Theodoret did. The mention of the light on the Jordan at the baptism of Jesus causes him no misgiving. Some of the learned author's positions are no doubt open to dispute; but that Tatian's Diatessaron was really a harmony or digest of four gospels, either ours or closely akin to them, that it was probably written in Syriac, and that it is the work commented on by Ephraem Syrus may now perhaps be considered pretty firmly established points. The text which constitutes the second part of this treatise is preceded by a disquisition on the historical attestation to the Diatessaron, and followed by one on its origin. There is a fourth part, on the imitations in other languages, and there are two Appendices, one on the Jerusalem Evangelistary, the other on the Doctrine of Addai. The value and importance of the work will not be denied. It is intended to be but one of a series of monographs preparatory to a complete history of the Canon.

*Hermæ Pastor.* Græce e codicibus Sinaitico et Lipsiensi Scripturæ ecclesiasticorum excerptis, collatis versionibus Latina utraque et Aethiopica, libri clausula Latine addita, restituit commentario critico et adnotationibus instruxit, Elxai fragmenta adiect Adolphus Hilgenfeld. Editio libri altera emendata et valde aucta. (Lipsiæ: T. O. Weigel.) Students will welcome the second edition of Hilgenfeld's *Hermæ Pastor*. The former edition, it will be remembered, appeared in 1876 as part of his "Novum Testamentum extra canonem receptum." The present one is enlarged by the addition of nearly one hundred pages of annotations. The Prolegomena are considerably extended, and the text, which is printed in a beautiful type, is emended in many places. Hilgenfeld now defends the view, already maintained by the Comte de Champagny, but impugned by Harnack, that the *Pastor* is the work of more than one hand, and points out inconsistencies which seem to show that this is the case.

*An Introduction to the Study of the New Testament, Critical, Exegetical, and Theological.* By Samuel Davidson, D.D. Second Edition, Revised and Improved. In 2 vols. (Longmans.) In the Preface to this second edition of his *Introduction*, Dr. Davidson not unnaturally refers to the works bearing on the subject which have appeared since the publication of the first, in 1868; but he makes no mention of Dr. Abbot's remarkable article on the Gospels in the new edition of the *Encyclopædia Britannica*. Had he been acquainted with that article, he would hardly have adhered to the opinion formerly expressed that in all probability "Mark made use of his two predecessors," Matthew and Luke; for, if Dr. Abbot proves nothing else, he has at least demonstrated that hypothesis to be untenable. On some other points, as might well be expected after the lapse of so many years, we find that Dr. Davidson has modified or altered his views. Thus 2 Thess., placed first in the previous edition as the earliest book in the New Testament, is now placed after James, as only partly authentic. The Epistle to the Colossians is rejected no less than that to the Ephesians, and the 15th as well as the 16th chapter of Romans. The whole work, moreover, has been revised throughout, and nearly every page bears witness to the care and labour which have been spent upon it. It is hardly necessary to say that Dr. Davidson's views are those of the rationalistic school of New Testament criticism, or that his statement of them is learned, logical, and temperate. Graces of style are not perhaps to be looked for in a work of this kind, but it must be regretted that there are so many clumsy sentences. "Too developed to belong so early" (vol. ii.,

p. 179) is not English, and if "repetitious" (ib. p. 238) is a coinage of the author's it does not strike us as a happy one. However, Dr. Davidson's work, as being the only one of its kind in English, has already taken a high place in theological literature, and this second edition will fully maintain the author's reputation.

"Bibliotheca Rabbinica:" eine Sammlung alter Midrashim zum ersten Male ins Deutsche übertragen, von Lic. Dr. Aug. Wünsche. Dreizehnte Lieferung: *Der Midrash Echa Rabbati*. Dr. Wünsche is doing a good work in Germanising the great Midrash Rabbath, of which the present treatise is an important section. The Midrashim have an interest not only for Biblical specialists, but also for the students of general literature and history. In the words of Dr. Wünsche,

"Besides the moral-allegorical exegesis, the Midrash contains many fragments of discourses that were really delivered, poetic embellishments of Biblical events, paraphrases and amplifications of the simple text of Scripture, a great number of charming parables, fables, and legends, numerous happy sayings and pithy maxims."

The instalment before us is a portion of the "Echa Rabbati"—i.e., the Haggadic exposition of the Lamentations of Jeremiah. It may argue a want of discernment, but we fail to see any real connexion between the story of the Four Jerusalemites and their Athenian Host and "the essential elements of the *Hamlet Sage*," such as Dr. Wünsche assumes in his short but instructive Preface. We leave it to the Shaksperians to determine.

*The Second Book of Samuel.* "The Cambridge Bible for Schools." Edited by A. F. Kirkpatrick. (Cambridge University Press.) Small as this work is in mere dimensions, it is every way the best on its subject and for its purpose that we know of. The opening sections at once prove the thorough competence of the writer for dealing with questions of criticism in an earnest, faithful, and devout spirit; and the Appendices discuss a few special difficulties with a full knowledge of the data, and a judicial reserve, which contrast most favourably with the superficial dogmatism which has too often made the exegesis of the Old Testament a field for the play of unlimited paradox and the ostentation of personal infallibility. The notes are always clear and suggestive; never trifling or irrelevant; and they everywhere demonstrate the great difference in value between the work of a commentator who is also a Hebraist, and that of one who has to depend for his Hebrew upon second-hand sources. Among many other references, we notice the judicious use of a book which cannot be too widely known—Maurice's *Prophets and Kings of the Old Testament*. We may be permitted to suggest that the mention first of "the old Latin versions," and then of "the Old Latin Version" (pp. 16, 17), is not quite clear for school-boys; and that the ancient Peshitta version might well have received some notice along with the LXX. and the Targum of Jonathan.

*Geschichte des Volkes Israel.* Von Dr. Bernhard Stade. Oncken's "Allgemeine Geschichte," I. 6. Nos. 1 and 2. (Berlin: Grote.) Well printed on good paper, and furnished with first-rate illustrations and maps, Dr. Stade's History of Israel has every outward attraction, except that of completeness, which a book of this kind can possess. And although the reader might prefer to have the whole work before him, yet the richness of the contents of each number gives him an ample occupation till its successor arrives. The interest of the subject is that it reveals to us the infancy of the monotheistic religions, and the aim of the historian must be to trace the development, not so much of political events, as of the religious idea. The

period to be covered by the History is from the beginning of the monarchy to the ruin of the Jewish people (dated by Dr. Stade at the fall of Masada, A.D. 73). The method is that of historical criticism, and it must be confessed that Dr. Stade relies more upon a certain trained tact than most English readers will think desirable. He considers the Hebrew texts to have been frequently manipulated by editors, and boldly denies that the manipulators were guilty of any want of good faith; "on the contrary," he maintains, "the alterations were made in the service of truth," the idea of literary property not yet having arisen. Dr. Stade does not under-estimate the difficulties to be overcome by a historian of Israel; the Introduction even presents these difficulties in a clearer form than any current popular work (for "popular" in the best sense the historical series to which this work belongs is designed to be). The "first book" discusses the sources for the history of Israel under the kings and the traditional chronology. Full weight is given to the Assyrian inscriptions, and Dr. Stade confesses that the dates of the Israelitish kings can only bein some degree fixed when these kings are mentioned in the inscriptions. Book ii. describes the preliminary history of the Israelitish kingdoms. Dr. Stade compliments our countrymen on the trustworthiness of their topographical researches, but regrets the questionable character of their archaeological results "arising from their generally complete ignorance of Biblical criticism." He considers himself dispensed from a consideration of many problems which harass most English students. For instance, Prof. Sayce argues from Gen. xxiii. that "a branch of the Hittite race seems to have settled in the S. of Palestine;" but Dr. Stade quietly remarks, "It is a misunderstanding of the 'Grundschrift' that Hittites were also settled in the S. of Palestine." Egyptologists (not in England alone, however) have debated, and still debate, under which of the Pharaohs the Exodus is to be placed; Dr. Stade closes the discussion with the dictum, "If any Hebrew clan did once dwell in Egypt, its name is unknown, and the Egyptologists would not even discover it if they understood more of Hebrew antiquity." Our author is, indeed, very decided in his opinions. Corrections of the text or of some current rendering occur on every other page, though it must be added that the intelligibility of the text is augmented by the process. Illustrations of the early narratives also abound; one remark may be quoted on the supposed "treachery" of Jael (Judg. v.): "We ought not to find a violation of hospitality in Jael's conduct. In the sense of his power, the Canaanitish king had evidently not considered that, before entering the tent of a nomade, he should secure himself by the usual appeal for a hospitable reception." Book iii. relates to the Manassite kingdom; Gideon, we are told, is shown by the connexion of Judg. ix., to have really become king, as well as Abimelech. Saul and David are the heroes of book iv.; David alone of the first chapter of book v. The second chapter, unfinished as yet, introduces us to Solomon—to "the real Solomon," and also to "the Solomons of legend." But we have already reached our limits, and conclude by recommending this as a not irreverent, though "advanced," specimen of analytic and synthetic criticism of the Old Testament narratives. The author is perfectly master of his material, and the work may be read by serious students with pleasure.

*Gesetz und Propheten:* ein Beitrag zur alttestamentlichen Kritik. Von Lic. C. J. Bredenkamp. (Erlangen: Deichert.) The place of printing and publishing sufficiently shows the theological colour of the book. A succession of energetic orthodox teachers has made Erlangen as conspicuous in one sense as Tübingen formerly

was in another. Without recommending anyone to translate Dr. Bredenkamp's work (for it would not suit English readers, and would be the reverse of interesting), we willingly recognise its superiority to the most recent works of our own apologists. Wellhausen, a mere name to most of us, is the adversary whom Dr. Bredenkamp earnestly but, let us add, courteously opposes. Our author's conclusion is that, so far from requiring a gradual, parallel development of the law, the prophetic literature throughout assumes its existence, and the merit of Wellhausen (as the completer of the work of Graf and Kuenen) is to have shown how impossible are the older critical theories, which supposed the Levitical legislation of the great narrative work which precedes it to have arisen in the regal period. The work falls into an introduction and four chapters, treating successively of fundamental ideas and of the references to the forms and place of the authors discoverable in the prophetic literature. The author is certainly no bigot. By a happy extension of a well-known phrase he even describes the Book of Chronicles as deuterocanonical. But we fear he is not yet quite familiar with the methods and aims of that historical criticism of whose representatives he is the conscientious opponent.

*Justini Philosophi et Martyris Opera.* Ad optimos libros MSS. nunc primum aut denuo collatos recensuit, prolegomenis et commentariis instruxit, translatione Latina ornavit, indices adjecit. Io. Car. Th. Eques de Otto. Tom III. Pars 2. Editio Tertia. (Jena: G. Fischer.) This volume of the new edition of Dr. von Otto's admirable *Corpus Apologetarum Christianorum sæculi secundi* (the first volume of which appeared in 1876) brings to a conclusion the works, genuine and supposititious, that bear the name of Justin. This masterly piece of work is already known as a monument of German industry, and henceforth will be acknowledged universally as the edition of Justin Martyr.

*A History of Christian Doctrines.* By the late Dr. K. R. Hagenbach, Professor of Theology at Basel. Translated from the fifth and last German edition, with Additions from other sources. Vol. III. (Edinburgh: T. and T. Clark.) The "additions from other sources" to Hagenbach's well-known work relate chiefly to the theology of England, Scotland, and the United States, which are treated of by Hagenbach less fully than might seem desirable for English readers. The idea is good, but it has been realised here with only a moderate success. The bibliographical information is neither very full nor very accurate, and we have noticed several instances of carelessness which should not have escaped the English editor.

*Hymns for the Church and Chamber.* By the Rev. C. D. Bell, D.D. (Nisbet.) Canon Bell writes fluently, and hymns are not difficult to produce. We have met with both the thoughts and rhymes in this volume not unfrequently before. "The Land within the Veil" seems to us the most poetical of the hymns, but Faber's on the same subject is better; and in the verses on humility Canon Bell should not have left his debt to George Herbert unacknowledged in the lines

"I care not—I will light a fire  
Or, if Thou pleasest, sweep a floor."

We have also received:—*The Very Words of our Lord and Saviour Jesus Christ*, gathered from the Four Gospels, according to the Authorised Version (1611), with marginal quotations from the Revised Version, also with an Index of Passages and Subjects (Oxford University Press); *The Apocalypse*, with a Commentary and an Introduction on the Reality of Prediction, the History of Christendom, the

Scheme of Interpretation, and the Antichrist of St. Paul and St. John, by the Rev. Edward Huntingdon (Kegan Paul, Trench and Co.); *The Song of Songs*, Arranged in Twelve Canticles, and Rendered into English Blank Verse, by B. S. Clarke, with an Introduction by Horatius Bonar (James Nisbet and Co.); *Contributions to a New Revision*; or, a Critical Companion to the New Testament: being a Series of Notes on the Original Text, with a view of securing greater uniformity in its English rendering, including the chief alterations of the "Revision" of 1881 and of the American Committee, by Robert Young (Edinburgh: G. A. Young and Co.); *From the Beginning*; or, Stories from Genesis, for Little Children, by Mrs. G. E. Morton (Hatchards); *Scripture Echoes in our Church's Collects*, for Sundays and the Days connected with our Lord's History, with Hymns original and selected, by the Rev. John P. Hobson ("Home Words" Publishing Office); *Short Sketches of Fathers of the English Church*, for Young Readers, by Frances Phillips (Bemrose and Sons); *Specimen-Glasses for the King's Minstrels*, by the late Frances Ridley Havergal ("Home Words" Publishing Office); *The Larger Hope*; or, Salvation for All, including the Rejecters of the Gospel, examined in a Review of the Rev. Samuel Cox's *Salvator Mundi*, by the Rev. Thomas Powell (Kerby and Endean); &c., &c., &c.

#### NOTES AND NEWS.

MISS HAMILTON, only daughter of Sir William Hamilton, who died last week, had for some time been engaged on a translation of the late Prof. Lotze's *Mikrokosmos*, which it may be hoped will yet be published. It will be remembered that a translation of the same philosopher's *System der Philosophie*, by Prof. Green, is promised us by the Clarendon Press.

WE announced a short while since that Mr. J. A. Symonds is preparing a volume of sonnets with the title *Vagabunduli Libellus*. He has now decided to postpone the publication of this book, and will issue in its stead a collection, called *Animi Figura*, of sonnets on ethical and psychological themes. In this he will incorporate some which he has already published, together with over ninety new ones.

THE last gathering of the Oxford Browning Society, at the Rector of Lincoln's, to hear Mr. Arthur Sidgwick's paper on Browning's love poetry, was the most successful meeting the society has held. A large number of guests were present, including some from London.

MR. MASKELL has, we believe, printed for private distribution five-and-twenty copies of the "Dissertation on Ancient Service Books" prefixed to his *Monumenta Ritualia*.

THE first publications of the Wyclif Society will be the treatises *De Mandatis Dei* (on the Ten Commandments) and *De Statu Innocentie*, being books i. and ii. of Wyclif's chief work, the *Summa Theologiae*. These will be edited by Mr. F. D. Matthew, the editor of the Early-English Text Society's volume of Wyclif's English Works, and will be ready this year. The chief text for 1883 will be the treatise *De Veritate Scripturæ Sanctæ*, written in 1378 or 1379, being book vi., and the most important one, of the *Summa Theologiae*. This will be edited by Dr. Rudolf Buddensieg, of Dresden, who has now in the press a volume of Wyclif's Polemical Tracts, of which the King of Saxony will pay the cost. Dr. Lechler, the well-known editor of Wyclif's *Trilogus*, has handed over to Dr. Buddensieg all his notes and material for an edition of the *De Veritate*.

MR. W. CAREW HAZLITT has almost ready for

publication through Mr. Quaritch his "Second Series of Bibliographical Collections and Notes of Early-English Literature, 1474-1700," containing 10,000 titles and details of rare books copied by his own hand. Mr. Hazlitt has also printed a list of the forty-three works he has written or edited since the year 1858.

MISS SMITH, of Cheltenham, a member of the New Shakspeare Society, is preparing a parallel text of the First and Second Quartos of "Hamlet," with the First Folio version and a revised text. We believe that she intends to present copies of her *Parallel-Text Hamlet* to her fellow-members of the New Shakspeare Society. She will mark all differences from the Second Quarto by variations of type, so that the changes may be caught at once by the eye. Her revised text will probably be in the old spelling of the Second Quarto (1604) which Dr. Tanager argues is Shakspeare's own.

MESSRS. T. AND T. CLARK, of Edinburgh, will shortly publish a third edition of Prof. Watts' *The Newer Criticism, &c.: a Reply to W. Robertson Smith's Lectures*. The same firm have in the press a new volume of their "Bible-Class Handbooks"—viz., *St. Paul's Epistle to the Hebrews*, by the Rev. Dr. Davidson, Professor of Hebrew in the New College, Edinburgh, and author of the well-known Hebrew Grammar.

MESSRS. BEMROSE AND SONS propose to publish by subscription a new edition of Mr John Sleight's *History of the Ancient Parish of Leek, in Staffordshire*, which was published in 1862, and has long been out of print. The proposed new edition will contain much additional information, and will be issued, to subscribers sending in their names before May 1, at one guinea per copy. The same firm have in the press a Concordance to the Revised Version of the New Testament, which, it is said, has been compiled upon an original plan.

THE *Book of St. Albans*, as it is called, appeared in a sale last week, for the first time during the course of the present century. The interest attaching to the volume as the earliest English work on field sports, and as the first treatise in the language upon armorial bearings, led to an eager competition, which ended in another triumph for Mr. Quaritch, at the price of 600 guineas.

MESSRS. HURST AND BLACKETT will shortly publish a fourth and cheaper edition of *My Lord and My Lady*, by Mrs. Forrester, author of *Viva, &c.*, in one volume.

DR. F. LANDMANN, whose discovery of the Spanish origin of *Euphues* and Euphuism we have mentioned more than once, is preparing a critical edition of the first part of *Euphues*, which came out by itself, and has never been reprinted. Mr. Arber's reprint was made from a later edition, probably the first complete one of the whole book.

THE Queen has been pleased to accept a copy of Mr. W. H. Hatton's work on *The Churches of Yorkshire* for the Royal Library at Windsor. The chapters of this book first appeared in Mr. Hatton's *Bradford Times*, a paper which devotes considerable attention to local history and antiquarian subjects.

MR. JAMES CARGILL GUTHRIE, author of "Village Scenes," "Rowena," "The Vale of Strathmore," &c., has in the press a new volume of poems and songs, entitled "Woodland Echoes," which will be published early in April.

MR. CHAS. WATSON, of West Hartlepool, is about to issue a magazine to be devoted to local history, archæology, folk-lore, social topics, poetry, &c., under the title of *St. Cuth-*

bert's Magazine. The name is well chosen for a publication intended to circulate in the county of Durham.

UNDER the title of *The British Imperial Atlas*, Messrs. Letts and Son have published a series of maps that are likely to prove of great practical usefulness. By an intelligent use of colours, the publishers have, without in the least rendering the physical characteristics of the countries depicted blurred or indistinct, contrived to combine in this work all the more important features of a good physical and statistical atlas. The price is only one guinea.

A SERIES of articles written for the *Leeds Express* by Mr. William Andrews, hon. secretary of the Hull Literary Club, under the title of "Historic Yorkshire," will shortly be published in one volume.
